DEALING WITH REGIONAL HYDROLOGIC DATA-BASE LIMITATIONS. CASE EXAMPLE: THE COLUMBIA RIVER BASALTS
R. Schalla and L. S. Leonhart (Rockwell-Hanford Operations, Richland, Wash.) 1981 15 p refs Presented at the Symp. on Uncertainties Assoc. with the Regulation of the Geol. Disposal of High-Level Radioact. Waste, Gatlinburg, Tenn., 9 Mar. 1981
(Contract DE-AC06-76RL-01830)

(DE81-030086; PNL-SA-9094; CONF-810372-12) Avail: NTIS HC A02/MF A01

Limitations encountered in assembling hydrologic data for a broad geographic region, into a conceptual model of the hydrologic system may become resonant in subsequent numerical simulations of hydrologic system behavior. Such data limitations include irregular spatial distributions of data, decreases in information with increasing depth from the land surface, uncertainties about the reliability of reported hydrologic data, disparities in time dependent parameters, and lack of field verification of data. The case example of preparing a hydrologic system description for the Columbia Plateau, as required for repository siting, illustrates methods of determining the accuracy of certain data, compensating for data limitations, evaluating the need for acquiring additional data, and refining data through iterative techniques. Emphasis is placed on professional subjectivity, which has proven to be essential in data base evaluation and refinement. DOE

HYDROGEOCHEMICAL AND STREAM SEDIMENT RECONNAISSANCE BASIC DATA FOR BROKEN BOW NTMS QUADRANGLE, NEBRASKA

30 Jun. 1981 206 p refs

(Contract W-6405-eng-26)

(DE81-030295; GJBX-274-81; K/UR-154) Avail: NTIS HC A10/MF A01

Statistical data and areal distributions for uranium and uranium related variables are presented for 578 groundwater and 442 stream sediment samples. Groundwater data indicate that uranium concentrations above the 85th percentile occur primarily in the southeastern and central portion of the quadrangle. Water containing high concentrations of uranium are predominantly in the Pliocene Ogallala Formation and are also found in waters derived from the Niobrara Chalk and alluvial deposits. High uranium concentrations are associated with high values of specific conductance, boron, calcium, potassium, lithium, magnesium, sodium, strontium, and total alkalinity. Uranium concentrations above the 85th percentile occur in randomly scattered sediments, with no apparent trends visible. Sediments with high uranium value are derived primarily from glacial and alluvial deposits. Sediments with high U-FL values are associated with high values of chromium, lithium, iron, magnesium, scandium, yttrium, and zirconium. Sediments with high U-NT values are generally associated with high values of cerium, titanium, and zirconium. DOE

LONGWALL MINING OF THIN SEAMS

Ernest A. Curth 1981 22 p refs Presented at the 1st Ann. Conf. on Ground Control in Mining, Morgantown, W. Va., 27 Jul. 1981

(DE81-028042; CONF-810714-2) Avail: NTIS HC A02/MF A01

Thin seam operations pose a challenge to the ingenuity of mining engineers to overcome the factor of human inconvenience in the restricted environment and associated high cost production. Suprisingly, low seam longwalls in the Federal Republic of Germany in an average thickness of 35 in. and dipping less than 18 deg come close to achieving the average production rate of all German longwall operations. They are all plow faces, and a consistent production of 3300 tons per day and a productivity of 40 tons per man shift are reported from one of the thin seam longwalls. These results were attained by reliable high capacity equipment and roof support by shields that can be collapsed to as low as 22 inches. Maximum mining height for plow operated faces lies at 31.5 inches. Technology development for the future is discussed. DOE

MATHEMATICAL MODELLING OF SOME CHEMICAL AND PHYSICAL PROCESSES IN UNDERGROUND COAL GASIFICATION

John R. Creighton Aug. 1981 5 p Presented at the Eastern Section. The Combustion Inst. Conf., Pittsburgh, 27-29 Oct. 1981 Submitted for publication

(DE81-027941; UCRL-86518; CONF-811027-1) Avail: NTIS HC A02/MF A01

The chemical and physical processes governing underground coal gasification were conducted on laboratory scale experiments accompanied by mathematical modelling. Blocks of selected coal types are cut to fit 55 gallon oil drums and sealed in place with plaster. A 1 cm. diameter hole is drilled the length of the block and plumbing attached to provide a flow of air or oxygen/steam mixture. After an instrumented burn the block is sawed open to examine the cavity. Mathematical modelling is directed towards predicting the cavity shape. Sub models and their impact on predicted cavity shapes are examined. DOE

STUDY OF A COMBINED SATELLITE SYSTEM FOR REMOTE SENSING AND EARTH-ORIENTED RESEARCH (LOCSS) Final Report, Jul. 1980

HansJuergen Guenther, Wolfgang Gericke, Hansjoerg Klotz, Rainer Krieger, Birgit Metzgar, Joachim Nauck, Klaus Plate, Rudolf Rohr, Gernot Schmidt, and Gerhard Schneider Bonn Bundesministerium fuer Forschung und Technologie Jan. 1981 222 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-W-81-002; ISSN-0170-1339) Avail: NTIS HC A10/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 38.60

The suitability of three European satellite platforms (ERDSAT, SPAS, SPOT) for a combined satellite system (remote sensing and Earth-oriented research) is discussed. The system consists of two Sun-synchronous orbiting satellites with a combined remote sensing and Earth-oriented research payload and of a pure climatography satellite on a drift orbit. All platforms can accommodate the basic payload, but SPAS offers some advantages and is the only platform able to accommodate the extended payload. The combined three-satellite system offers cost advantages over the four-satellite system only if the space shuttle is used as launcher. Hence, SPAS should be given preference over the other platforms for such a system. The subsystem design is presented and problem areas are discussed. Data acquisition and data processing of image and climatic data are the bottlenecks in existing systems. Author (ESA)

PROJECT NOORDWIJK. PART 1: MEASUREMENTS OF THE RADAR BACKSCATTER COEFFICIENT GAMMA (SIGMA DEG) IN 1977 AND 1978

G. P. deLoor Nov. 1979 42 p refs 2 Vol.
(PHL-1979-49-Pt-1; TDCK-73426) Avail: NTIS HC A03/MF A01

Radar backscatter measurements obtained from a sea platform are compared with airborne and spaceborne observations. A short range FM radar was mounted beside a television camera and directed into the prevailing winds. Upwind and crosswind data were collected, but downwind data are scarce, and more windspeed data are required. A systematic difference is observed between airborne and ground based data. The value of gamma is dependent on windspeed; dependency differs for the specular region (low incidence angles) and the diffuse (incidence angles > 45 deg). Author (ESA)

N82-14618# Physics Lab. RVO-TNO, The Hague (Netherlands). Research Group 4: Microwaves.

PROJECT NOORDWIJK. PART 2: RESULTS OF NORTH SEA CLUTTER MEASUREMENTS IN THE I-BAND PERFORMED FROM THE PLATFORM NOORDWIJK IN SEPTEMBER/OCTOBER 1977

H. Sittrop and H. Gravesteijn Aug. 1980 79 p refs 2 Vol.
(PHL-1980-28-Pt-2; TDCK-74302) Avail: NTIS HC A05/MF A01

Radar backscatter off the sea at low incidence angles was measured. A low frequency spectral analysis method is used to show that an appreciable periodic content exists in the sea return. This component in the scintillation spectra is 0.14 Hz and is related to the sea wave period. Wind-wave interaction effects are observed for up, down and crosswind directions. The clutter patch size and the incidence angle are used as a parameter. An optimum spectral response exists for upwind observations at an incidence angle of 1 deg and pulselength 0.08 microsec. The radar cross section per unit area measured is compared with an experimental sea clutter model. For wind directions resulting in an adequate fetch over open sea, reasonable agreement is found. No significant conclusions can be drawn with respect to megaripple observations. Author (ESA)

WATER PROBLEMS AND RESEARCH NEEDS FOR NEW MEXICO

Sep. 1980 60 p refs Sponsored by Office of Water Research and Technology
(PB81-231979; W81-04319) Avail: NTIS HC A04/MF A01 CSCL 13B

New Mexico faces serious water problems in the years ahead. Surface water supplies are scarce and virtually fully appropriated, so that no further appropriations can be made unless some existing water rights are retired. Fresh groundwater seriously depleted in some parts of the State from heavy drawdown. Existing fresh water supplies will not be adequate to meet all projected demands over the next 40 years. Significant aquifer recharge occurs only in the Rio Grande Basin, where unconsolidated sand and gravel reaches a charge thickness of up to 10,000 feet. Agricultural use annually depletes about 90% of fresh water withdrawals. It is unlikely that New Mexico will discover new water resources over the next few decades, so that water conservation in agriculture is critically important. GRA

HYDROGEOLOGY OF SPOIL AT THREE ABANDONED SURFACE MINES IN ILLINOIS: PRELIMINARY RESULTS

Environmental Geology Notes, May 1981

David E. Lindorff, Keros Cartwright, and Beverly L. Herzog Apr. 1981 24 p refs
(PB81-231664; IL/SGS/EGN-98) Avail: NTIS HC A02/MF A01 CSCL 08H

The impact of surface coal mining on the geologic materials and ground water in different geologic settings is under investigation at three abandoned surface mines in Illinois. At a site near Ottawa, the overburden prior to mining consisted largely of pyritic shale; sand was the major component of the overburden and spoil at a mine near Coal City. Clays, lacustrine silts, and some shale and limestone were the predominant premining overburden materials at a mine near Harrisburg. Ground water elevations at Coal City and Harrisburg are approximately at premining levels, where at Ottawa they are near the base of the spoil. Ground water quality has deteriorated at all three sites, especially at Ottawa and Harrisburg. GRA

ALGAL ASSAY STUDIES OF THE CHOWAN RIVER, NORTH CAROLINA

Mary M. Sauer and Edward J. Kuenzler Apr. 1981 91 p refs
(Contract DI-14-34-0001-0274)
(PB81-231821; W81-04303; OWRT-B-127-NC(2)) Avail: NTIS HC A05/MF A01 CSCL 08H

Assays were conducted on water collected from three stations to investigate the presence of limiting nutrients during the summer of 1980. Two types of algal inocula were used: the laboratory cultured green alga Selenastrum capricornutum and samples of the natural Chowan River phytoplankton. Phosphorus and nitrogen simultaneously limited total algal growth in most experiments; other nutrients did not significantly limit growth. Species-specific responses to nutrient enrichment occurred. Single additions of phosphorus increased numbers of nitrogen fixing blue-green algae. Therefore, phosphorus is the more critical limiting nutrient to growth of the bloomforming genera Anabaena and Aphanizomenon. GRA

GEOCHEMISTRY OF RECENT LAKE MICHIGAN SEDIMENTS

Richard A. Cahill 1981 102 p refs
(PB81-234429; IL/SGS/CIRC-517) Avail: NTIS HC A06/MF A01 CSCL 08H

A systematic sediment sampling of Lake Michigan was conducted. Distributions are reported for concentrations of 48 chemical elements for pH and Eh, and for grain size of 286 samples. Evaluating measurements of grain size and chemical composition led to classifying Lake Michigan surficial sediments by origin, as being from either depositional or nondepositional areas. The depositional areas include a number of sub-basins that have similar sediment properties and chemical composition. The distribution of trace elements, including heavy metals of anthropogeric origin, correlates positively with the abundance of fine-grained sediment. Clay minerals and organic materials are hosts for the relative enrichment of many of the trace elements in surficial sediments of the depositional basins. GRA

SALT RELEASE FROM SUSPENDED SEDIMENTS: A

SIMULATED MODEL
Stanley R. Peterson, J. J. Jurinak, and R. J. Wagenet Dec. 1980 184 p refs
(Contract DI-14-34-0001-9047)
(PB81-231839; RR-62; W81-04304; OWRT-A-045-UTAH(1)) Avail: NTIS CSCL 08H

The effects of particle size, soil to water ratio and time on the rate of release of salts from Mancos Shale derived soils were studied by taking four different size fractions at three different dilutions of soil to water. The kinetic model was formulated using data obtained from a soil dominated by highly soluble salts (evaporites) and using dimensional analysis. The chemical equilibrium model was based on ion association theory. The requisite chemical equations programmed were solved by iterative techniques (successive approximations). The chemical model was interfaced with the kinetic model. The equilibrium model calculated the concentrations, activities, and activity coefficients for all ions and their soluble complexes. The model also predicted which salts were dissolving and by determining the saturation indices how quickly individual mineral salts approached equilibrium. GRA

FLOOD PLAIN MAPPING USING COMPUTER GRAPHICS Final Draft Report
28 May 1981 81 p refs Prepared jointly with Ideamatics, Inc., Washington, D.C.
(Contract DI-14-34-0001-9630)
(PB81-231870; W81-04308; OWRT-C-90088-G(9630)(1)) Avail: NTIS HC A05/MF A01 CSCL 13B

The feasibility of using computer graphics to specify flood limits to Federal flood insurance and local flood easement delineation was investigated and demonstrated. Complex mathematical models were adapted to computer graphics output: HEC-2 water surface profiles, a state-of-the-art computer program developed by the Corps of Engineers, was adapted for use in this program. The computer configuration consisted of a PDP 11/45 mini-computer, a Sumagraphics digitizing tablet, and a Tektronix 4014-1 display terminal with a 4631 hard copier. Nine tasks were performed, including interfacing with the user community, adapting HEC-2 to an interactive/graphical output environment, selecting the hardware system most responsive to user capabilities; coding; debugging; testing the software; writing user manuals, and conducting demonstrations. THE NUCLEAR CONTROVERSY: UNEQUAL COMPETITION IN PUBLIC POLICY-MAKING
Ian Sanderson May 1980 76 p refs
(ERG-035) Avail: NTIS HC A05/MF A01

The public policy making process as regards nuclear power is analized and the epistemological basis for such an analysis is examined. It is asserted that disputes over the development of nuclear power are not primarily about the objective facts of the matter but rather derive from differences in basic assumptions about, and evaluatory perceptions of, society, technology and the nature of progress. The balance of power in such disputes is therefore not mainly determined by the 'correctness' of the facts upon which a position rests but rather by the extent to which underlying assumptions and values accord with prevailing ideological themes. A meaningful debate can be guaranteed only through the establishment of institutional structures which provide a framework of truely democratic participation and equality of power and influence. M.G.

MARKET ASSESSMENT OF PHOTOVOLTAIC POWER SYSTEMS FOR AGRICULTURAL APPLICATIONS IN MOROCCO Final Report
Henry Steingass and Itil Asmon (ARD, Inc.) Sep. 1981 157 p refs
(Contract DEN3-180; DE-AI01-79ET-20485)
(NASA-CR-165477; DOE/NASA/0180-2; C4100-50) Avail: NTIS HC A08/MF A01 CSCL 10A

Results of a month-long study in Morocco aimed at assessing the market potential for stand-alone photovoltaic systems in agriculture and rural service applications are presented. The following applications, requiring less than 15 kW of power, are described: irrigation, cattle watering, refrigeration, crop processing, potable water and educational TV. Telecommunications and transportation signalling applications, descriptions of power and energy use profiles, assessments of business environment, government and private sector attitudes towards photovoltaics, and financing were also considered. The Moroccan market presents both advantages and disadvantages for American PV manufacturers. The principle advantages of the Moroccan market are: a limited grid, interest in and present use of PV in communications applications, attractive investment incentives, and a stated policy favoring American investment. Disadvantages include: lack of government incentives for PV use, general unfamiliarity with PV technology, high first cost of PV, a well-established market network for diesel generators, and difficulty with financing. The market for PV in Morocco (1981-1986), will be relatively small, about 340 kwp. The market for PV is likely to be more favorable in telecommunications, transport signalling and some rural services. The primary market appears to be in the public (i.e., government) rather than private sector, due to financial constraints and the high price of PV relative to conventional power sector. M.D.K.

STABILIZING PLATINUM IN PHOSPHORIC ACID FUEL CELLS Quarterly Report
Robert J. Remick Oct. 1981 19 p refs
(Contracts DEN3-208; DE-1101-80ET-17088)
(NASA-CR-165483; DOE/NASA-0208/3; IGT-61051; QR-3) CSCL 10A

A carbon substrate for use in fabricating phosphoric acid fuel cell cathodes was modified by catalytic oxidation to stabilize the platinum catalyst by retarding the sintering of small platinum crystallites. Results of 100-hour operational tests confirmed that the rate of platinum surface area loss observed on catalytically oxidized supports was less than that observed with unmodified supports of the same starting material. Fuel cell electrodes fabricated from Vulcan XC-72R, which was modified by catalytic in a nitric oxide atmosphere, produced low platium sintering rates and high activity for the reduction of oxygen in the phosphoric acid environment. DEVELOPMENT OF AN ALL-METAL THICK FILM COST AFFECTIVE METALLIZATION SYSTEM FOR SOLAR CELLS Quarterly Report, Aug. - Oct. 1980
Bernd Ross Sep. 1981 32 p refs
(Contract JPL-955688)
(NASA-CR-165044; QR-2; DOE/JPL-955688-80/2; JPL-9950-599) Avail: NTIS HC A03/MF A01 CSCL 10A

An economical thick film solar cell contact for high volume production of low cost silicon solar array modules was investigated. All metal screenable pastes using base metals were studied. Solar cells with junction depths varying by a factor of 3.3, with and without a deposited oxide coating were used. Cells were screened and fired by a two step firing process. Adhesion and metallurgical results are unsatisfactory. No electrical information is obtained due to inadequate contact adhesion. S.L.

N82-14630*# Ross (Bernd) Associates, San Diego, Calif.
DEVELOPMENT OF AN ALL-METAL THICK FILM COST EFFECTIVE METALLIZATION SYSTEM FOR SOLAR CELLS Quarterly Report, Nov. 1980 - Apr. 1981
Bernd Ross Sep. 1981 40 p refs
(Contract JPL-955688)
(NASA-CR-165043; DOE/JPL-955688-80/3; JPL-9950-604; QR-3) Avail: NTIS HC A03/MF A01 CSCL 10A

The objectives of the investigation were to provide all-metal screenable pastes using economical base metals, suitable for application to low-to-high conductivity silicon of either conductivity type and possibly to aluminum surfaces. Experiments were conducted with variations in paste parameters, firing conditions, including gas ambients, furnace furniture, silicon surface and others. A liquid medium, intended to provide transport during the carbon fluoride decomposition was incorporated in the paste with promising results. T.M.

FLAT-PLATE SOLAR ARRAY PROJECT. TASK 1: SILICON MATERIAL: INVESTIGATION OF THE HYDROCHLORINATION OF SiC1SUB4 Quarterly Report, 9 Jul. - 30 Sep. 1981
Jeffrey Y. P. Mui 1 Oct. 1981 17 p refs
(Contract JPL-956061)
(NASA-CR-165042; DOE/JPL-956061/1; JPL-9950-607) Avail: NTIS HC A02/MF A01 CSCL 10A

A two inch-diameter stainless steel reactor was designed to operate at pressure up to 500 psig and at temperature up to 600 C in order to study the hydrochlorination of silicon tetrachloride and metallurgical grade (m.g.) silicon metal to trichlorosilane. The hydrochlorination apparatus is described and operation safety and pollution control are discussed. A.R.H.

DESIGN OF AN ENERGY CONSERVATION BUILDING
Ronald N. Jensen Nov. 1981 32 p refs
(NASA-TM-83175) Avail: NTIS HC A03/MF A01 CSCL 10A

The concepts in designing and predicting energy consumption in a low energy use building are summarized. The building will use less than 30,000 Btu/sq.ft./yr. of boarder energy. The building's primary energy conservation features include heavy concrete walls with external insulation, a highly insulated ceiling, and large amounts of glass for natural lighting. A solar collector air system is integrated into the south wall. Calculations for energy conservation features were performed using NASA's NECAP Energy Program. T.M.

SATELLITE POWER SYSTEM: CONCEPT DEVELOPMENT AND EVALUATION PROGRAM. VOLUME 4: ENERGY CONVERSION AND POWER MANAGEMENT
Nov. 1981 369 p refs
(NASA-TM-58237-Vol-4) Avail: NTIS HC A16/MF A01 CSCL 10A

Additional analyses that were performed to supplement the NASA/Department of Energy (DOE) Satellite Power System (SPS) reference system concept are presented in this volume. A brief review of the reference concept is provided together with detailed descriptions of energy conversion, power distribution, and power management for solar photovoltaics (silicon and gallium arsenide), solar thermal (Brayton and Rankine cycles), and concept comparisons (solar thermal and energy conversion). Results of other studies concerning energy conversion and power management (environmental impacts, annealing, nuclear SPS concept, and thermionic) are included. The data presented were taken from the SPS Concept Definition Studies performed under the direction of NASA by Rockwell International Corporation and Boeing Aerospace Company. Author

SATELLITE POWER SYSTEM: CONCEPT DEVELOPMENT AND EVALUATION PROGRAM. VOLUME 7: SPACE TRANSPORTATION
Nov. 1981 258 p refs
(NASA-TM-58238-Vol-7) Avail: NTIS HC A12/MF A01 CSCL 10A

During the several phases of the Satellite Power System (SPS) Concept Definition Study, various transportation system elements were synthesized and evaluated on the basis of their potential to satisfy overall SPS transportation requirements and their sensitivities, interfaces, and impact on the SPS. Additional analyses and investigations were conducted to further define transportation system concepts that will be needed for the developmental and operational phases of an SPS program. To accomplish these objectives, transportation systems such as the Shuttle and its derivatives have been identified; new heavy-lift launch vehicle (HLLV) concepts, cargo and personnel orbital transfer vehicles (COTV and POTV), and intra-orbit transfer vehicle (IOTV) concepts have been evaluated; and, to a limited degree, the program implications of their operations and costs were assessed. The results of these analyses have been integrated into other elements of the overall SPS concept definition studies. Author

STUDY OF MULTI-MEGAWATT TECHNOLOGY NEEDS FOR PHOTOVOLTAIC SPACE POWER SYSTEMS. VOLUME 1: EXECUTIVE SUMMARY
D. M. Peterson and R. L. Pleasant 1 Aug. 1981 28 p refs 2 Vol.
(Contract NAS3-21951)
(NASA-CR-165323-Vol-1; Rept-111-2401-204) Avail: NTIS HC A03/MF A01 CSCL 10A

Possible missions requiring multimegawatt photovoltaic space power systems in the 1990's time frame and associated power system technology needs are examined. The following concepts for photovoltaic power approaches are considered: planar arrays, concentrating arrays, hybrid systems using Rankine engines, thermophotovoltaic and AC/DC power management approaches, battery, fuel cell, flywheel energy storage, and interactions with the electrical ion engine injection and stationkeeping system. The levels of modularity for efficient, safe, constructable, serviceable, and cost effective system design are analyzed, and the benefits of alternate approaches developed. Both manned low Earth orbit and unmanned geosynchronous Earth orbit applications were examined for technological development. Technology developments applicable to power systems which appear to have benefits independent of the absolute power level are suggested. M.D.K.

STUDY OF MULTI-MEGAWATT TECHNOLOGY NEEDS FOR PHOTOVOLTAIC SPACE POWER SYSTEMS, VOLUME 2 Final Report
D. M. Peterson and R. L. Pleasant 19 Mar. 1981 285 p refs 2 Vol.
(Contract NAS3-21951)
(NASA-CR-165323-Vol-2; GDC-AST-81-019-Vol-2) Avail: NTIS HC A13/MF A01 CSCL 10A

Possible missions requiring multimegawatt photovoltaic space power systems in the 1990's time frame and power system technology needs associated with these missions are examined. Four specific task areas were considered: (1) missions requiring power in the 1-10 megawatt average power region; (2) alternative power systems and component technologies; (3) technology goals and sensitivity trades and analyses; and (4) technology recommendations. Specific concepts for photovoltaic power approaches considered were: planar arrays, concentrating arrays, hybrid systems using Rankine engines, thermophotovoltaic approaches; all with various photovoltaic cell component technologies. Various AC/DC power management approaches, and battery, fuel cell, and flywheel energy storage concepts are evaluated. Interactions with the electrical ion engine injection and stationkeeping system are also considered. M.D.K.

PULSED POWER RESEARCH COLLOQUIUM Annual Report
M. Kristiansen, A. H. Guenther (Kirtland AFB, Albuquerque, N.M.), John Ungvarsky (AFWL, Kirtland AFB, Albuquerque, N.M.), F. C. Brockhurst (Air Force Inst. of Technology, Wright-Patterson, AFB, Ohio), R. D. Franklin (AFWAL), A. K. Hyder (AFOSR), and R. L. Gullickson (Defense Nuclear Agency) 9 Jul. 1981 10 p refs
(Grant AF-AFOSR-3675-78; AF Proj. 2301)
(AD-A105770; AFOSR-81-0686TR) Avail: NTIS HC A02/MF A01 CSCL 10/2

A Pulsed Power Lecture Series is being conducted by Texas Tech University for the U.S. Air Force. Modular instructional material for use in this lecture series is being developed. Each module is a self consistent discussion of some aspect of pulsed power technology. The contents range from the very basic (e.g. basic EM field theory) to advanced, modern topics, such as magnetic switching. The lectures are delivered every two weeks at the Air Force Institute of Technology and the Air Force Weapons Laboratory. The speakers then provide a written text of their lecture, which is edited and published in modular form by Texas Tech University. It is planned to reissue these modules in report or book form at a later date. A total of about 50 modules are planned. Some 30 lecturers have been presented, to date, and about 12 modules have been issued. Author (GRA)

EVALUATION OF COAL GASIFICATION/COMBINED CYCLE POWER PLANT FEASIBILITY AT THE SEWELLS POINT NAVAL COMPLEX, NORFOLK, VIRGINIA Final Report
Jul. 1981 235 p refs
(Contract N62470-80-C-3736)
(AD-A103674) Avail: NTIS HC A11/MF A01 CSCL 10/2

The feasibility of installing a coal gasification/combined cycle cogeneration plant at Sewells Point Naval Complex, Norfolk, Virginia is evaluated. Current gasification technology, combined cycle thermodynamics, environmental control requirements, and conventional coal fired cogeneration cycles are addressed. The utility interface, site considerations, and economic analyses are also presented. It is concluded that a coal gasification/combined cycle cogeneration plant supplying 50 MW of electric power and 290,000 lb/hr of steam is technically feasible. M.D.K.

LITHIUM BASED ANODES FOR SOLID STATE BATTERIES Final Scientific Report, 30 Sep. 1977 - 30 Sep. 1980
R. A. H. Edwards, J. R. Owen, and B. C. H. Steele 30 Jun. 1981 39 p refs
(Grant AF-AFOSR-3460-77; AF Proj. 2303)
(AD-A105518; AFOSR-81-0652TR) Avail: NTIS HC A03/MF A01 CSCL 10/3

Two previous reports are reviewed and last year's work is detailed. The latter involved the use of 'staircase wave cyclic voltammetry,' a technique designed to characterize the transport properties of an electrode material over a wide composition range. This technique was applied to the compounds Fe, Si, a glassy metal of composition (FeSi)B, and a newly found prospective negative plate material HgxLi. An analysis of composite electrodes - those containing an additional ionic conductor, e.g. a solid electrolyte, as the grain boundary phase of the charge storage material shows that the criteria initially applied to the selection of an electrode may be significantly relaxed. Experiments with the composite of lithium-aluminum alloy with the solid electrolyte polyethylene oxide-lithium trifluoromethane sulphonate have verified the analysis which can be applied to many more systems. INVESTIGATION OF THE IN-SITU OXIDATION OF METHANOL IN FUEL CELLS Final Report, Jun. 1980 - May 1981
D. A. Landsman and F. J. Luczak Sep. 1981 32 p refs
(Contract DAAK70-80-C-0049; DA Proj. 1L1-61102-AH-51)
(AD-A105947; FCR-3463) Avail: NTIS HC A03/MF A01 CSCL 10/2

Direct anodic oxidation and internal reforming were examined as ways of using methanol as fuel in a phosphoric acid fuel cell. The literature was reviewed to identify the most effective catalysts for the direct electrochemical oxidation of methanol. It is shown that, even with the best of these catalysts, anode polarization at practical current densities is 300 mV higher on methanol than on hydrogen. It was also found that unreacted methanol which diffuses across the cell can cause severe polarization of the cathode. Theoretical and experimental studies of internal reforming showed that a fuel cell will generate sufficient waste heat to sustain the methanol steam reforming reaction. Thus, thermally integrated, internal reforming is a feasible alternative to external reforming. The reforming catalyst is preferably located in separate chambers built into the stack, since this prevents phosphoric acid from attacking the reforming catalyst and methanol from migrating to the cathode. Three solar related activities: solar radiation monitoring, effects of dust accumulation on collector performance, and salt gradient solar pond analytical and experimental studies are described. Measurements of total horizontal and direct radiation are made continuously, and the data are presented in a user oriented format on an hourly basis. Diffuse radiation and total radiation on a surface tilted to the local latitude angle are calculated. The system is presently being expanded to allow measurement of several additional radiation parameters of interest as well as six meteorological parameters. The effects of atmospheric dust on radiation attenuation, as well as the clearness index, anti K/sub T/ are shown. The impact of surface dust accumulation on the performance of photovoltaic and thermal collectors is also studied. DOE

NEED FOR POWER AND THE CHOICE OF TECHNOLOGIES: STATE DECISIONS ON ELECTRIC POWER FACILITIES
Jun. 1981 221 p refs
(Contract DE-AC01-79RG-10004)
(DE81-025960; DOE/EP-10004/1) Avail: NTIS HC A10/MF A01

The decision-making processes at the state level regarding the licensing of electric generating facilities were assessed. The basic issues addressed are the need for power and choice of technology; state decisions which directly influence and affect the nation's energy supply, and the tradeoffs involved in meeting energy demand. The areas of special emphasis included the legal mechanisms and regulatory procedures used to determine and resolve these issues. The effectiveness of state decision-making was assessed, focusing on legal and administrative histories and accommodation of interests of concerned parties. Recent innovations to enhance the decision-making process were also assessed where applicable. No particular substantive results are advocated in the findings. The recommendations presented are broad in scope. DOE

PROJECTING REGIONAL POTENTIALS FOR COST-EFFECTIVE ENERGY CONSERVATION AND RENEWABLE RESOURCE APPLICATIONS: A FEASIBILITY STUDY

1980 52 p refs
(Contract DE-FG03-79CS-10045)
(DOE/CS-10045/T3) Avail: NTIS HC A04/MF A01

The feasibility is discussed of preparing an instruction manual that would enable a modeler in a particular region to set up a calculation method or predicting energy use. Such a manual would concern itself primarily with the three energy-consuming sectors most relevant to utilities' demand projections. Data requirements for each of the three sectors (residential, commercial, and industrial) are described and some initial guidance is provided as to how these needs can be filled. The methods for separate calculations of energy consumed by each end use in each sector are described. Each end use is discussed separately for the residential sector, but only in aggregate for the commercial and industrial sectors. DOE

COMPRESSED AIR ENERGY STORAGE PRELIMINARY DESIGN AND SITE DEVELOPMENT PROGRAM IN AN AQUIFER. VOLUME 5, PART 2, APPENDIX F, DYNAMIC SYSTEM COMPUTER MODEL Final Report

P. A. Berman, J. S. Bonk, W. F. Kobett, N. S. Kosanovich, L. J. Long, and D. J. Marinacci 31 Jul. 1981 489 p refs Sponsored in part by Electric Power Research Inst., Palo Alto, Calif. Prepared for Public Service Company of Indiana, Inc.
(Contracts DE-AC02-78ET-29232; ET-78-C-01-2159; EPRI Proj. 1081-3)
(DE82-000671; DOE/ET-29232/T4-Vol-5-Pt-2) Avail: NTIS HC A21/MF A01

The computer program and subroutines written to provide a general purpose modeling tool for a compressed air energy storage (CAES) power plant system are documented. The CAES plant was modeled using FORTRAN and a Control Data Corporation 7600 digital computer. The system model was developed to learn the transient response characteristics of the complete CAES plant; provide a tool for evaluating the requirements and performance of control systems proposed for the CAES plant; provide a general purpose digital-computer-based dynamic modeling tool; and provide power plant component models as FORTRAN subroutines which can be used, with appropriate parameter data, as modules in complete CAES power plant models. ANALYSIS OF POTENTIAL COGENERATION IMPACTS ON ELECTRICITY GENERATION BY THE CENTRAL MAINE POWER COMPANY

Jerry L. Gillette and Kenneth A. Hub Apr. 1981 36 p refs
(Contract W-31-109-eng-38)
(DE81-029991; ANL/CNSV-TM-76) Avail: NTIS HC A03/MF A01

Two types of cogeneration design - one utilizing a backpressure turbine, the other an extraction turbine - were studied. It was assumed that these facilities were constructed to produce electricity that could be sold to the electric utility. The analysis included a single-year study of two different capacity-purchase options under consideration by the electric utility. An extended period was also analyzed so that the effects of demand growth and additions and subtractions of capacity on the cogeneration potential could be examined. It is found that some savings of oil could be realized with coal-based cogeneration, and that the quantity of such savings are somewhat dependent on the purchase option, the demand growth rate, and the cogenerator design. It is concluded that both cogenerator designs have some economic viability, but that the backpressure turbine type has a decided advantage due to its significantly lower heat rate. T.M.

THERMAL BEHAVIOR OF AN EXPERIMENTAL 2.5-KWH LITHIUM/IRON SULFIDE BATTERY

C. C. Chen, T. W. Olszenski, and H. F. Gibbard Oct. 1981 5 p refs Presented at the Electrochem. Soc. Conf., Denver, 11 Oct. 1981 Prepared for California Univ., Berkeley. Lawrence Berkeley Lab.
(Contracts W-7405-eng-48; W-31-109-eng-38)
(DE81-029861; LBL-13076; CONF-811013-3) Avail: NTIS HC A02/MF A01

The thermal energy generation and the gross thermal energy balance in the battery systems was studied. High temperature lithium/iron sulfide batteries for electric vehicle applications were developed. The preferred battery temperature range during operation and idle periods is 400 to 500 C. Thermal management is an essential part of battery design, the battery requires a thermal insulation vessel to minimize heat loss and heating and cooling systems to control temperature. Results of temperature measurements performed on a 2.5-kWh battery module, which was built to gain information for the design of larger systems are reported. DOE

SYSTEMS ANALYSIS OF THERMAL STORAGE

R. J. Copeland Aug. 1981 8 p refs Presented at the Ann. Meeting on Thermal and Chem. Storage, Tysons Corner, Va., 14-16 Sep. 1981
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-030288; SERI/TP-253-1369; CONF-81940-2) Avail: NTIS HC A02/MF A01

Analyses were conducted on thermal storage concepts for solar thermal applications. These studies include estimates of both the obtainable costs of thermal storage concepts and their worth to a user (i.e., value). Based on obtainable costs and performance, an in-depth study evaluated thermal storage concepts for water/steam, organic fluid, and gas/Brayton solar thermal receivers. Promising and nonpromising concepts were identified. Thermal storage concepts were evaluated for a liquid metal receiver. The value of thermal storage in a solar thermal industrial process heat application was analyzed. Several advanced concepts studied, include ground-mounted thermal storage for parabolic dishes with Stirling engines. DOE

ENERGY RECOVERY FROM MUNICIPAL WASTE DEVELOPMENT PROGRAM FOR IDAHO FALLS, IDAHO Final Report

Jul. 1981 155 p refs

(Contract DE-AC01-79CS-20240)
(DE81-029999; DOE/CS-20240/1) Avail: NTIS HC A08/MF A01

The development of a demonstration facility to show that fluidized-bed technology is a viable means to recover resources from municipal wastes in Idaho Falls is described. The tasks described include: (1) evaluation of the energy market of Idaho Falls to identify potential customers for recovered energy and to determine what form of energy would be economically viable; (2) evaluation of the municipal solid waste of Idaho Falls, determining its approximate composition, heating value, production rates, and seasonal variations; (3) development of a resource recovery facility concept that will be economically attractive to the city and technically feasible; and (4) evaluation of such topics as zoning, legal limitations, and environmental aspects of the facility to determine its compatibility with the city of Idaho Falls. DEVELOPMENT OF A BIOMASS ENERGY SYSTEM FOR DRYING CORN Final Report, 1 Jul. 1979 - 30 Jun. 1981
W. F. Buchele, P. W. Claar, II, and S. J. Marley 1981 109 p refs
(Contracts DE-AS02-78CS-40059; EM-78-S-02-4816)
(DE81-029027; DOE/CS-40059/T1; COO-4916) Avail: NTIS HC A06/MF A01

A direct-combustion furnace for burning agricultural crop residue was developed. The design and operating parameters of an incinerator-type furnace were evaluated along with existing furnace types for application to burning agricultural crop residue. The design, fabrication, and evaluation of three direct-combustion, biomass-fueled furnaces were accomplished. Economic and energy analysis for the utilization of agricultural crop residue on a cornbelt farm were performed and the quantities of corn residue produced on a cornbelt farm and the effect of residue removal harvest rates on the amount of cover remaining and the resulting impact on soil erosion hazard were determined. DOE

SEMINARS FOR PRIVATE COLLEGE ADMINISTRATORS ON SOLAR APPLICATIONS FOR COLLEGE BUILDINGS
Jun. 1981 8 p
(Contract DE-AC02-79CS-30150)
(DE81-027981; MASEC-CF-81-038) Avail: NTIS HC A02/MF A01

The objective of this project was to increase the working knowledge of key private college decision makers on passive and active solar fundamentals, proven passive and active technology, and conservation means integral to these technologies in the renovation of college buildings or their energy systems, to be achieved by conducting a series of three seminars. A summary of the project activities and a brief summary of workshop evaluations are given. DOE

POTENTIAL ENERGY SAVINGS IN THE RESIDENTIAL SECTOR OF THE UNITED STATES
John Ingersoll Jun. 1981 11 p refs Presented at the Intern. Conf. on Energy Use Management, West Berlin, 26-30 Oct. 1981
(Contract W-7405-eng-48)
(DE81-028873; LBL-12862; CONF-811006-3) Avail: NTIS HC A02/MF A01

The state-of-the-art computer program, DOE 2.1, was used to simulate the hour-by-hour thermal performance of residential buildings in the four major climate zones of the United States, and a life-cycle cost analysis was applied to determine the optimal energy requirement of a typical house demonstrate that present levels of energy consumption can be reduced by a factor of two without compromising health and comfort standards. Within present technology, additional energy savings can be achieved but not yet in a cost-effective way. DOE

PROGRESS ON CATALYZED STEAM GASIFICATION OF BIOMASS
L. K. Mudge, D. H. Mitchell, S. L. Weber, L. J. Sealock, Jr., and R. J. Robertus Mar. 1981 54 p refs Presented at the 12th Biomass Thermochem. Conversion Contractors Meeting, Washington, D.C., 18-19 Mar. 1981
(Contract DE-AC06-76RL-01830)
(DE81-028198; PNL-SA-9350; CONF-810360-4) Avail: NTIS HC A04/MF A01

Operations in the process development unit (PDU) on evaluation of yields with a wood feedstock were completed at atmospheric pressure, after which modifications for operations at 10 psig were initiated. The economics of two plants for generation of methane from wood and methanol from wood were determined; evaluations were based on data from the PDU. The ASPEN computer code developed for updating process economics and for evaluating alternative processing schemes is described. Catalyst life, regeneration, and characterization for systems that generate a synthesis gas and a methane rich gas from wood are addressed. Development of a durable catalyst for the PDU and a catalyst resistant to carbon deposition was also studied. The thermal behavior of wood with and without impregnated potassium carbonate was determined from pyrolysis conditions. Wood was gasified with steam with and without a secondary nickel catalyst. Plant capacities of 2000 and 200 dry tons/day were considered. Changes in process yields and requirements resulted from contained studies in the laboratory and PDU. DOE

EDUCATION AND TRAINING IMPLICATIONS OF BIOMASS ENERGY SYSTEM USE
S. E. Bell, R. M. Gove, and J. R. Little Aug. 1981 44 p refs
(Contract DE-AC05-76OR-00033)
(DE81-029956; ORAU-182) Avail: NTIS HC A03/MF A01

Direct observations of 189 biomass-related operations combined with existing reports, feasibility studies, and expert opinion are used to assess the education and training implications of biomass energy system use. The number of permanent jobs in activities related to biomass energy production could easily reach the hundreds of thousands by the end of the century. However, national employment related to biomass energy will represent only a very small portion of the employment in any major occupational category. In addition, an analysis of occupational skill requirements suggests that the impacts on education and training institutions are likely to be minimal. Regional shortages could develop for foresters, forestry technicians, chemists, laboratory technicians, process operators, and certain engineers; but these are likely to be in response to economy-wide growth rather than biomass energy-related activity alone. REPEAT FACILITY. REPORT FOR MAY, JUNE, JULY Progress Report, May - Jul. 1981
C. Byron Winn Aug. 1981 79 p refs
(Contract DE-AS02-80CS-30259)
(DE81-028156; DOE/CS-30259/6) Avail: NTIS HC A05/MF A01

The construction of the REPEAT facility, a test facility for passive and hybrid solar heating systems is reported. The development of a simulation program for envelope type passive solar systems, constructing an envelope test cell, collecting data to validate the program, and application of the program to determine the best envelope type design are discussed. A low cost monitoring system using a dedicated microprocessor system, an inexpensive, high accuracy A/D converter, and minimum system hardware is developed. A method to determine the average temperature and the average daily temperature variation inside a passively heated solar building is presented. DOE

ELECTRODES AND DIAPHRAGMS FOR FUEL CELLS Final Report, Dec. 1979
Wolf Vielstich and Ernst Knauf Bundesministerium fuer Forschung und Technologie Feb. 1981 45 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-047; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 9.50

Nickel whisker electrodes with variations in network structure, pore size, and metal coatings were produced for use in water electrolytic cells and fuel cells. The resistance due to gas bubbles was decreased considerably by slits milled into the electrode. Platinization was optimized for use in glycol/air cells and glycol anodes with constantly good anode potentials were obtained with whisker structures by standardization of the platinization process. It is concluded that the activity of the glycol anodes depends strongly on the procedure of deposition of the noble metals and less on the whisker structure as such.

MODAL ANALYSIS OF STRUCTURES WITH PRESTRESS EFFECTS: APPLICATION TO FLEXIBLE SOLAR GENERATORS [ANALYSE MODALE DE STRUCTURES AVEC EFFETS DE RECONTRAINTE. APPLICATION AUX GENERATEURS SOLAIRES SOUPLES]

B. Boissin 20 May 1981 76 p refs In FRENCH
(CNES-81/CT/PRT/SST/SM/178) Avail: NTIS HC A05/MF A01

A model of the dynamic behavior of a flexible solar array which is part of a satellite-borne solar generator for spacecraft power supply (4 to 10kW) is presented. Results are appropriate for solving problems of spacecraft attitude control. The array is depicted as a skin covered by solar cells. Modal characterization of prestressed structures is explained for the calculation of differential rigidity. The method is demonstrated for a beam loaded at each end and for a square plate loaded along two opposite sides. Results for an array which is deployed along a telescoping mast are shown.

SOLAR-SUPPLEMENTED, NATURAL AIR DRYING OF SHELLED CORN: THE ECONOMIC LIMITATIONS

Walter G. Heid, Jr. and David F. Aldis Jun. 1981 45 p refs
(PB81-235681; TB-1654) Avail: NTIS HC A03/MF A01 CSCL 02C

It is not economically feasible to supplement natural air drying of high-moisture shelled corn by adding heat (solar and otherwise). In some cases, that drying method speeds product deterioration. A simulation analysis of the west central Great Plains determined that benefits from adding solar heat to batch-in-bin and layer-in-bin grain drying methods failed to offset the solar heat installation costs and product deterioration losses. Findings also suggest that high-speed, high-temperature drying is necessary to avoid field losses and to ensure marketable corn of high quality. GRA

SOLAR RADIATION AS A SOLE SOURCE OF ENERGY FOR PHOTOVOLTAICS IN LAS VEGAS, NEVADA, FOR JULY AND DECEMBER

Darryl Randerson Apr. 1981 23 p refs
(PB81-224503; NOAA-TM-NWS-WR-161; NOAA-81050702) Avail: NTIS HC A02/MF A01 CSCL 10B

Global radiation data represent the total direct solar radiation plus diffuse sky radiation received by a horizontal surface. The median, maximum, and minimum radiation days for both July and December are identified. In addition, the diurnal variation in the cumulative frequency distribution of the hourly global radiation data was graphed for both months. Based on photovoltaics, these charts are used to evaluate the expected solar energy supply for a given area of exposure. Example calculations are given to demonstrate how to find the total area of solar cells needed to supply the total energy demands of an all-electric home. T.M.

BILLIONS COULD BE SAVED THROUGH WAIVERS FOR COASTAL WASTEWATER TREATMENT PLANTS Report to the Congress

22 May 1981 66 p refs
(CED-81-68) Avail: NTIS HC A04/MF A01

The effectiveness of the secondary treatment waiver provision to allow effluent discharge into marine coastal waters and its administration by the Environmental Protection Agency (EPA) in achieving desired levels of environmental quality in a practical and cost effective manner are studied. It is concluded that discharges of primary treated municipal wastes are not harmful to the marine environment and that giving waivers to coastal communities in these locations so that they do not have to build Federally required secondary treatment facilities could save billions of dollars. It is recommended that the Congress and EPA should reopen, modify, and continue the waiver application process.

APPLICATION OF A GAUSSIAN MULTILAYER DIFFUSION MODEL TO CHARACTERIZE DISPERSION OF VERTICAL HCl COLUMN DENSITY IN ROCKET EXHAUST CLOUDS

G. L. Pellett and W. L. Staton Dec. 1981 74 p refs
(NASA-TP-1956; L-14715) Avail: NTIS HC A04/MF A01 CSCL 13B

Solid rocket exhaust cloud dispersion cases, based on seven meteorological regimes for overland advection in the Cape Canaveral, Florida, area, are examined for launch vehicle environmental impacts. They include a space shuttle case and all seven meteorological cases for the Titan 3, which exhausts 60% less HCl. The C(HCl) decays are also compared with recent in cloud peak HCl data from eight Titan 3 launches. It is stipulated that while good overall agreement provides validation of the model, its limitations are considerable and a dynamics model is needed to handle local convective situations.

THE CHEMICAL CHARACTERIZATION OF POLLUTANTS IN WASTE WATER FROM VOLUNTEER ARMY AMMUNITION PLANT Final Report

C. Ribaudo, C. Campbell, S. Bulusu, W. Fisco, T. Chen, H. Kramer, and T. Castonna Aug. 1981 61 p refs
(DA Proj. 1T7-62720-D-048)
(AD-A105705; AD-E400686; ARLCD-TR-81028) Avail: NTIS HC A04/MF A01 CSCL 13/2

The separation and identification of dissolved species and estimation of the concentrations of identified components are described. Inorganic pollutants were identified and estimated by spark source mass spectrometry and conventional wet chemical techniques. Organic pollutants were extracted from the waste waters with methylene chloride and the extracts were characterized by means of classical and multi-development thin-layer chromatography, gas chromatography, infrared spectrophotometry, mass spectrometry, and tandem gas chromatography mass spectrometry. The waste waters are shown to be exceedingly complex mixtures of nitroaromatic compounds derived from the TNT manufacturing process and heavy metal ions leached from the stainless steel reaction vessels. The concentration levels of many of the inorganic pollutants in the waste waters discharged into public waters exceeded the concentrations permitted by federal and state environmental pollution standards. T.M.

COAL CONVERSION SOLID WASTE DISPOSAL

C. W. Francis, W. J. Boegly, Jr., R. R. Turner, and E. C. Davis 1981 21 p refs Presented at the Am. Soc. of Civil Engr. Ann. Meeting, Vail, Colo., 3 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028567; CONF-81085-1) Avail: NTIS HC A02/MF A01

The major solid waste produced at coal conversion facilities will be gasification slag or ash. To evaluate the impact of this waste on the environment, extensive characterization and leaching studies were conducted on ash/slags that were generated in bench-scale operations, pilot plants, and/or process development units for the Cogas, British Gas/Lurgi, Grace/Texaco, U-Gas, Foster Wheeler/Stoic, SRC-I/Koppers-Totzek, SRC-II/Texaco, and Combustion Engineering gasification processes. These studies, designed to assess the consequences of disposal in landfills, showed that none of the leachates from these eight wastes exceeded the US Environmental Protection Agency's toxicity limits established as a result of the Resource Conservation and Recovery Act of 1976. The major environmental impact associated with disposal of these solid wastes appears to be the dissolution of sulfate and the potential acidification of ground water. DOE

N82-14681# Argonne National Lab., Ill.

ENVIRONMENTAL ASSESSMENT AND INDUSTRIAL COGENERATION DEMONSTRATION PLANT AT THE HOFFMANN-LA ROCHE PLANT SITE, BELVIDERE, NEW JERSEY

Jul. 1981 128 p refs
(Contract W-31-109-eng-38)
(DE81-030180; DOE/TIC-11487) Avail: NTIS HC A07/MF A01

The potential environmental, health and safety, and socioeconomic impacts of a proposed industrial cogeneration demonstration plant in Warren County, New Jersey was assessed. The proposed cogeneration system will produce steam for plant process operations. Impacts associated with the proposed action on topography and climatology, geology and soils, air quality, water resources and quality, ecological resources, socioeconomics, land use plans and policies, health and safety, utilities and services, energy resources, and cultural resources and aesthetics are detailed. It is found that the potential environmental impacts from the proposed action, the operation of the proposed industrial cogeneration demonstration project on No. 6 fuel oil as its primary energy source will have no significant impact on the human and natural environments. Any potential environmental impacts will be mitigated by application of appropriate control technology and related measures. DOE

PATTERNS OF BEHAVIOR IN LODGINGS SUBJECT TO TRAFFIC NOISE

Jacques Lambert, Francois Simonnet, and Michel Vallet Sep. 1980 165 p refs In FRENCH; ENGLISH summary
(IRT-47; ISBN-2-85782-075-5) Avail: NTIS HC A08/MF A01

Threshold values at which public services should intervene to attenuate the noise nuisance are defined. Observations were made in the field of daily life at home. Data were collected on the use of lodgings, on effects of noise on health and sleep, and on the incidence of running away from home. A correlation was also made with the equipment and noise insulation of lodgings. The results show that above 65 dB in daytime, there are behavior patterns that are extreme so far as they modify in a considerable manner the way of life of people, living both in collective housing (apartments) and in individual houses. LABORATORY STUDIES OF PRIORITY POLLUTANT TREATABILITY Final Report, Apr. 1978 - Mar. 1980

James K. Smith, Robert J. Planchet, E. Jasper Westbrook, and Frederick J. Zak Jul. 1981 138 p refs
(Contract EPA-68-03-2579)
(PB81-231235; EPA-600/2-81-129) Avail: NTIS HC A07/MF A01 CSCL 13B

Several methods currently available to reduce the level of pollutants in an industrial plant wastewater stream were investigated. Five priority pollutants were selected for testing the effectiveness of carbon adsorption, resin adsorption, and steam stripping. The results indicate high removal efficiency for these five priority pollutants by carbon adsorption and resin adsorption. Although steam stripping reduced chlorobenzene, p-dichlorobenzene and nitrobenzene concentrations by at least fifty percent, it is not effective, under the test conditions, for the priority pollutants phenol or dinitrotoluene. Cost effectiveness may favor use of carbon adsorption over resin adsorption. T.M.

Research on the seismotectonics of plate boundaries is summarized. Instrumental development and an observational program designed to study various aspects of the seismotectonics of southern California and the northern Gulf of California are described. A unique superconducting gravimeter was further developed and supported under this program for deployment and operation at several sites. Work on Earth tides is also discussed. M.D.K.

STRATOSPHERIC AEROSOLS
M. Patrick McCormick Nov. 1981 20 p refs
(NASA-TM-83217) Avail: NTIS HC A02/MF A01 CSCL 04A

The current state of information on stratospheric aerosols is reviewed. Aerosol properties such as size, size distribution, composition, refractive index, number density, extinction, optical depth, and single scattering albedo are considered and generalized as much as possible to be representative of the global aerosol in times of volcanic and nonvolcanic (background) periods. Data are presented that show the global distribution of stratospheric aerosols as measured by the stratospheric aerosol and gas experiment (SAGE) satellite system for background and volcanic (post-Mount St. Helens) conditions. In addition, lidar and dustsonde data are presented that show the changes in stratospheric aerosol over an 8-year period. A.R.H.

GRAVITY WAVES ON WATER WITH NON-UNIFORM DEPTH AND CURRENT Ph.D. Thesis
Nico Booij 19 May 1981 130 p refs
Avail: NTIS HC A07/MF A01

A mathematical model for the combined refraction-diffraction of linear periodic gravity waves on water is developed, in which the influence of inhomogeneities of depth and current is taken into account. The model is used to compute partial reflection of waves crossing a gully or an undersea slope, with influence of a current. The model is also applied to prismatic wave channels with reflecting side-walls. For a gully bounded by shallows the model predicts the decay of wave height due to radiation of energy in lateral direction. For practical application in regions with arbitrary bottom and current topography a parabolic approximation of the model is derived. This is used as a basis for numerical calculation of waves in a sea region near the coast. Author

Methods for the fractional collection of trace amounts of atmospheric ammonia gas and ammonium particles on a two staged glass fiber filter are summarized. A standard glass fiber filter washed with distilled water and dried at 120 to 130 C was used. A second filter was impregnated with a mixture of 3% boric acid and 25% glycerin solution. The blank of glass fiber filters impregnated with a mixture of the above solution was very low for ammonia, i.e. 0.06 micrograms in a filter of 47 mm in diameter. The mean concentrations of ammonia and ammonium in air at Kawasaki, a polluted area, were 7.6 and 2.3 micrograms cu m, and those at Sanriku, an unpolluted area 0.9 and 0.2 micrograms cu m, respectively. Ratios of concentration levels of ammonium to total ammonia in the atmosphere were 0.3 and 0.2 for the polluted and unpolluted areas, respectively. Ammonium salts in air at both areas were not correlated with relative humidity. Variations in time of ammonia concentrations and sources in surrounding areas are also considered. M.D.K.

Several types of seismic signal detectors were tested on NORSAR and Pinedale, Wyoming signals buried every 10 minutes in approximately 22 hours of phase scrambled noise. All plausible detectors including human analysts operate within 0.1 mb of the mean value including the present on-line 'IBM' STA/LTA detector, a 'Z' detector, detectors with fixed or optimum filters, a 'deflection' detector, the MARS detector, a detector which cascades a recursive digital filter with Walsh transforms, and human analysts viewing unfiltered Calcomp plots. The best detector was a log-Z transform aided by a recursively updated optimum sq(S/N) filter. Among the worst were human analysts when operating in the pick everything mode, the deflection detector, and a prediction error type detector. The human analyst could, however, improve to be nearly the best if sufficient care was taken. With a modest amount of care, any detector can be modified to perform well as an element of an operational system and the choice of single channel detector can be made on other grounds than pure detection such as availability or computation speed. In this report also we outline the features of the existing on-line detector at the SDAC which, in addition to pure detection, also classifies events as spikes, drop outs, regionals, and teleseisms and calculates a refined start time. The Smart processor technique and the propagation direction of regional seismic phases by operating on a comprehensive data set were evaluated. The Smart single station maximum likelihood surface wave processor relies on three component particle motion analysis, demonstrates its utility for automatic signal azimuth determination. The Smart processor maximizes the ratio of energy between components. The P-wave azimuth is determined by minimizing the transverse component, the L(g) by maximizing the transverse and the emergence cycle by finding the best rectilinear motion fit to three components of data. The F-statistic computed by these processors serves to separate poor azimuthal estimates from the population. E.A.K.

HC A03/MF A01 CSCL 04/1

The linear stability and nonlinear evolution of plasma enhancements in arbitrary ambient electric fields in the diffuse auroral F region ionosphere have been studied using analytical and numerical simulation techniques. Our results indicate that equatorward convecting plasma slabs initially limited in latitudinal extent are primarily destabilized on their poleward sides by a combination of the effects of convection and field aligned currents. Furthermore we find that the plasma enhancements break up into primary striation-like structures (elongated in the north-south direction for equatorward convection) which can form and cascade from large (approx. = 100 km) to smaller (approx. = 3 km) scale sizes on the order of an hour. The primary and associated smaller scale structures can be oriented either in the north-south or east-west (L-shell alignment) direction depending on the ambient electric field magnitude and direction. HC A03/MF A01 CSCL 04/1

The effect of large scale production of NO due to a large number of nuclear bursts on the steady state electron densities at 60 km altitude was investigated. It was found, for ionization rates of 16 and 1600 ion-pairs/cubic cm-sec, that the electron densities decreased significantly below that expected for ambient conditions for NO concentrations greater than 10 to the 9th/cubic cm. Since this is the region of maximum HF attenuation, the effects of multiburst NO production on HF communication systems could also be significant. Further calculations are planned. Author (GRA)

HC A04/MF A01 CSCL 04/1

A mathematical model has been developed for describing plasma-density irregularities responsible for radiowave scintillation produced in the auroral ionosphere, and the model has been committed to an applications-oriented computer code, WBMOD. The model characterizes the three-dimensional configuration, gradient sharpness, and height-integrated strength of irregularities represented by a power-law spatial spectrum as functions of geomagnetic latitude, time of day, sunspot number, and planetary geomagnetic activity index. Program WBMOD permits calculation of the power-law index and spectral strength (at a fluctuation frequency of 1 Hz) of phase scintillation, together with scintillation indices (variances) for phase and intensity, using a phase-screen scattering theory. The model has been calibrated and iteratively tested against phase-scintillation data from the DNA Wideband Satellite Experiment, collected at Poker Flat, Alaska. It does not account for seasonal variations in high-latitude scintillation observed in other longitude sectors. The program contains a model for middle-latitude and equatorial irregularities as well as for auroral latitudes, but only the latter has been tested extensively against high-quality scintillation data. HC A05/MF A01

The thermal conductivity was determined to be 5.8 W/m-K at about 26 C and 5.6 W/m-K at about 31 C. Because the influence of contact resistance and two-dimensional effects prevented the temperature rise from attaining the log-time linear asymptote classically used to analyze line source probe data, a new data reduction procedure using parameter estimation techniques was developed. The procedure obtains a least-squares-best-fit of a classic line source integral solution to the non-linear early time temperature data. In the fit, contact resistance and thermal conductivity are free parameters. The technique removes many of the classic assumptions that restrict the usefulness of line source probes for in situ measurements T.M

ASSESSMENT OF EFFECTIVENESS OF GEOLOGIC ISOLATION SYSTEMS: THE AEGIS GEOLOGIC SIMULATION MODEL
M. G. Foley and G. M. Petrie Feb. 1981 17 p refs Presented at the Symp. on Uncertainties Assoc. with the Regulation of the Geol. Disposal of High-Level Radioact. Waste, Gatlinburg, Tenn., 9 Mar. 1981
(Contract DE-AC06-76RL-01830)
(DE81-028007; PNL-SA-9111; CONF-810372-11) Avail: NTIS HC A02/MF A01

Assessment of the post-closure performance of a nuclear waste repository has two basic components: the identification and analysis of potentially disruptive sequences and the pattern of geologic events and processes causing each sequence, and the identification and analysis of the environmental consequences of radionuclide transport and interactions subsequent to disruption of a repository. The AEGIS Scenario Analysis Task is charged with identifying and analyzing potenially disruptive sequences of geologic events and processes. The Geologic Simulation Model (GSM) was developed to evaluate the geologic/hydrologic system surrounding an underground repository, and describe the phenomena that alone, or in concert, could perturb the system and possibly cause a loss of repository integrity. GEOLOGY AND GEOCHEMISTRY OF SAMPLES FROM LOS ALAMOS NATIONAL LABORATORY HDR WELL EE-2, FENTON HILL, NEW MEXICO
R. Laney, A. W. Laughlin, and M. J. Aldrich, Jr. Jul. 1981 33 p refs
(Contract W-7405-eng-36)
(DE81-026068; LA-8923-MS) Avail: NTIS HC A03/MF A01

A method of extracting geothermal energy from rocks of low natural permeability was investigated. The deeper part of the Precambrian section at Fenton Hill, New Mexico is composed primarily of a very heterogeneous and structurally anisotropic metamorphic complex, locally intruded by dikes and sills of granodioritic and monzogranitic composition. In borehole none of the igneous bodies approach in size the 335 m thick biotite-granodiorite body encountered at 2591 m depth beneath Fenton Hill in the other two drill holes. Contacts between the igneous and metamorphic rocks range from sharp and discordant to gradational. It is indicated that clay rich alteration zones are relatively common in the openhole portion of EE-2. These zones average about 20 m in thickness. Slickensided fault planes are present in a core taken from a true vertical depth of 4195 m. It is suggested that the faults dip steeply and trend between N.42 deg and 59 deg E. DOE

Single axis search coil magnetometers were in order to study plasma waves in the magnetosphere. The instruments are sensitive to magnetic field variations in the frequency range from 100 Hz to 5.2 kHz and complement the electromagnetic wave detector measurements. The sensor consists of a coil, a micro-metal core and a preamplifier. Analog amplifiers and filters are contained in the main electronics package. Electromagnetic interferences during payload tests are discussed. All four flights were successful, even though interferences during activation of the attitude control system deteriorated some data. The data are presented as amplitude-time diagrams and as spectra in the frequency range 200 Hz to 5 kHz (100 Hz bandwidth). Author (ESA)

STRATIGRAPHY AND DEPOSITIONAL HISTORY OF THE IOLA LIMESTONE UPPER PENNSYLVANIAN (MISSOURIAN), NORTHERN MIDCONTINENT U.S. Ph.D. Thesis
John Charles Mitchell 1981 379 p
Avail: Univ. Microfilms Order No. 8123341

The Iola Limestone, one of the best developed and most laterally extensive, yet least studied Missourian cyclic carbonates in the Midcontinent Upper Pennsylvanian, was studied. Along with adjacent shales, five members constitute the Iola cyclothem, a typical Kansas cyclothem. In ascending order these are: Chanute Shale; Paola Limestone; Muncie Creek Shale; Raytown Limestone; and Lane/Bonner Springs Shale. Although traditional interpretation of cyclothems regarded all shale as nearshore, shallow-water deposits, Iola lithology and stratigraphy support the more recent hypothesis that the cyclothem represents a single transgressive-regressive event, with maximum transgression occurring during deposition of the Muncie Creek Shale. Distribution of conodonts reflects the depositional pattern of the Iola cyclothem. Vertical variation far outweighs lateral variation in abundance and diversity. Dissert. Abstr.

A FINITE-ELEMENT SEA-BREEZE MODEL Ph.D. Thesis
Lang-Ping Chang 1981 220 p
Avail: Univ. Microfilms Order No. 8123118

A two-dimensional finite element planetary boundary layer model was developed and successfully applied to the simulation of the sea-breeze phenomenon. The model solves the horizontal equations for conservation of momentum, the hydrostatic, the thermodynamic energy, and the continuity equations by the Galerkin finite element method. Profiles of the vertical exchange coefficients for momentum and heat are obtained from the O'Brien exchange-coefficient profile, together with Deardorff's formula for computing the height of the planetary boundary layer. The Coriolis effect is built in but the gradient of any quantity except for the synoptic-scale pressure in the alongshore direction is assumed to vanish. The synoptic pressure gradient is represented by the geostrophic wind relation and is assumed to stay steady during the integration process. A modified Crank-Nicholson time differentiating scheme is used to linearize the resulting algebraic system of equations in the iterative time integration process. Dissert. Abstr.

THE DIRECTIONAL ENERGY DISTRIBUTION OF WIND GENERATED WAVES AS INFERRED FROM STEREOPHOTOGRAPHIC OBSERVATIONS OF THE SEA SURFACE Ph.D. Thesis
L. H. Holthuijsen 26 May 1981 198 p refs
Avail: NTIS HC A09/MF A01

Characteristics of the directional energy distribution of wind generated waves on the basis of observations with a relatively high resolution was determined. Approximately 75 observations are studied. They are selected from five spectra determined from stereophotographic observations of the sea surface. Three of these spectra were obtained in a so-called ideal generation situation. This is a situation where a homogeneous, stationary wind blows perpendicularly off a straight coast over deep water. The other two spectra were observed in similar situations. The difference with the ideal situation is for one spectrum that the wind was slanting across the coastline and for the other that the coastline was irregular. The observed distributions are compared with the model introduced by Longuet-Higgins et al. The differences between the observations and this model can be quantified due to the high resolution of the observations. It is found in the ideal situation that the model agrees well for most practical purposes with the observed distributions. In the other two situations it is found that the shape of the directional energy distribution is strongly influenced by the geometry of the upwind coastline. Author

MESOSCALE ASPECTS OF CONVECTIVE STORMS
T. Theodore Fujita *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 3-10 refs (For primary document see N82-14716 05-47)
(Grants NGR-14-001-008; NA80AA-D-00001; NSF ATM-79-21260)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The structure, evolution and mechanisms of mesoscale convective disturbances are reviewed and observation techniques for 'nowcasting' their nature are discussed. A generalized mesometeorological scale is given, classifying both low and high pressure systems. Mesoscale storms are shown often to induce strong winds, but their wind speeds are significantly less than those accompanied by submesoscale disturbances, such as tornadoes, downbursts, and microbursts. Mesoscale convective complexes, severe storm wakes, and flash floods are considered. The understanding of the evolution of supercells is essential for improving nowcasting capabilities and a very accurate combination of radar and satellite measurements is required. Author (ESA)

MESOSCALE WEATHER PATTERNS DURING APRIL 10-11, 1979: SEVERE WEATHER OUTBREAK IN THE SOUTH-WESTERN UNITED STATES

Dayton G. Vincent, Thomas Q. Carney, Jeffrey Homan, and Richard Fulton *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 11-16 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Mesoscale weather patterns are diagnosed for a severe weather outbreak, using surface data and a special set of upper air observations taken as part of a severe environmental storms and mesoscale experiment. The upper air network was twice as dense as normal and observations were taken at three hourly intervals. Analyses show that prior to severe weather the surface pressure falls rapidly. The advent of thunderstorm activity is accompanied by strong upward motion, heavy precipitation and an intense upper, as well as developing middle level, tropospheric jet stream. There is a rapid increase in kinetic energy which appears to be linked to deep convection. Author (ESA)

MESOSCALE DISTURBANCES CAUSING A HEAVY SNOWFALL OVER THE COASTAL AREA OF THE SEA OF JAPAN

H. Uemura *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 17-21 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Three types of mesoscale cloud systems causing heavy snowfall over the Sea of Japan, observed by meteorological satellites, are described. First, a band-shaped cloud system appearing under the intense winter monsoon, having a surface trough line along the west side of the Sea of Japan is considered. Centered along this line, a mesoscale vertical circulation system is revealed in the cold air under the inversion layer around the 700 mb level. Second, an arc-shaped cloud system, developing from the band-shaped system and characterized by anticyclonic circulation in the lower troposphere, is discussed. Third, a mesoscale cyclone with vertical cloud pattern, growing from a coupling between a stationary disturbance in the lower troposphere with a cold vortex moving eastward along the upper westerly current, is studied. The study of cloud system evolution permits the structural change to be understood. The 'nowcast' snow predictions allow a synoptic evaluation of the evolution. Author (ESA)

N82-14720# Japan Meteorological Agency, Tokyo.

SUBSYNOPTIC SCALE CLOUD SYSTEM WHICH MOVES WESTWARD AND DEVELOPS OFF THE SOUTH COAST OF JAPAN

Michio Hitsuma *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 23-28 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A cloud system revealed by satellite observations is described. After its formation, the system turned around and moved eastward, causing occasionally unexpected rain along the south coast of Japan. At first, the cloud system is identified as a simple band-shaped pattern and gradually grows into a hook or sea horse like pattern. There is a marked inversion layer at about the 700 mb level in the air mass including the cloud system and the cloud top height is confined below the layer. The cloud system develops when an upward motion area ahead of a synoptic scale upper trough approaches the system from the west. The westward motion and the development themselves were not analyzed and can not be predicted. Author (ESA)

MESOSCALE STRUCTURES IN MIDLATITUDE FRONTAL SYSTEMS

Peter V. Hobbs *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 29-36 refs Sponsored by NSF, AFOSR, US Army Research Office and NOAA (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Observational studies of the dynamics, organization and structure of clouds and precipitation on the mesoscale in extratropical cyclones are reviewed. The regions of heaviest precipitation are generally organized into large mesoscale rainbands which are classified into six types: warm frontal, warm sector, wide cold frontal, narrow cold frontal, prefrontal cold surge, and postfrontal. Often, precipitation within the rainbands is further organized on the small mesoscale. Likely mechanisms for the large and small mesoscale organizations are identified. Author (ESA)

THE INFLUENCE OF MOUNTAINS ON THE ATMOSPHERE: RECENT ADVANCES

Ronald B. Smith *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 37-41 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The theory and observation of orographic influence on the atmosphere are reviewed. The formation of orographic cirrus clouds, observations and theory of orographically disturbed surface pressure, the mechanism of severe downslope winds; orographic enhancement of precipitation; and lee cyclogenesis are discussed. Author (ESA)

N82-14723# Meteorological Office, Bracknell (England).

MESOSCALE STUDIES OF WEATHER HAZARDS TO AVIATION

W. T. Roach *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 43-47 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Mesoscale studies on the forecasting of aviation weather hazards, such as fog, icing, wind shear, and clear air turbulence (CAT), are reviewed. Mesoscale observations of the boundary layer were obtained by the deployment of minisondes at outstations. They are shown to have potential for improving the local forecasting of fog and cloud layer. The feasibility of operating a wind shear warning service and the representativeness of the wind data given by air traffic control to pilots about to land or take off are assessed. A regression analysis is presented and used to identify the combination of meteorological parameters determining CAT. Preliminary tests indicate success in forecasting CAT. Author (ESA)

ANALYSIS OF RAINFALL FROM FLASH FLOOD PRODUCING THUNDERSTORMS, USING GOES DATA

Roderick A. Scofield *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 51-58 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The use of the Scofield-Oliver GOES technique for estimating convective precipitation from flash flood producing thunderstorms is discussed. The technique is applied using imagery displayed with a digital enhancement curve. Estimates of convective rainfall are done by comparing the changes in two consecutive pictures, both infrared and high resolution visible. The method is applied to two flash flood events. The estimates as compared to the observed rainfall are good. However, a warm top modification is needed for thunderstorms whose expected anvil temperatures are warmer than -62C. Author (ESA)

N82-14725# Japan Meteorological Agency, Tokyo.

INFRARED PARAMETERS FOR NOWCASTING SEVERE RAINSTORMS

H. Yamashita, Y. Miki, N. Shibata (Meteorological Satellite Center), and N. Shimizu (Meteorological Satellite Center) *In* ESA Nowcasting: Mesoscale Observations and Short-Range Predictions Jun. 1981 p 59-62 (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The relation between convective cloud cluster and the resultant rainfall intensity was studied in order to establish a quantitative vector for information on severe convective clouds outside the radar network of local weather services. Two cases are considered. First the activity of a distant cloud cluster is quantified by the product of the standard deviation of the equivalent blackbody temperature (TBB) and the cloud cover percentage as established in coarse mesh satellite observations. This product is shown to be a good indicator for the mean rainfall rate. Second, the relation between TBB and rainfall rate in small scale areas is established, using echo maps of radar to draw isotherms of TBB in fine meshes. The colder cloud area enclosed by the isotherm of 230 K is shown to be important for the nowcasting of severe rainstorms. Author (ESA)

IMPROVEMENT OF HUMIDITY ANALYSES BY DIRECT USE OF METEOSAT WATER VAPOUR CHANNEL RADIANCES

J. R. Eyre *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 63-66 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Satellite measured radiances are compared with radiances simulated from initial estimates of atmospheric temperature and humidity fields. The calculated differences used to improve the analyses of those fields are given. This approach was applied to the analysis of humidity in the middle and upper troposphere, using Meteosat water vapor channel data. Results show that a significant gain in structure can be achieved and that few iterations are needed. Author (ESA)

A STUDY OF SUMMER THUNDERSTORMS DEVELOPING OVER EUROPE USING METEOSAT

N. R. Ward and R. W. Saunders *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 67-72 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The growth of summer thunderstorms over Europe is studied, using color-sliced sequential infrared images from METEOSAT which were Mercator projected. The images were processed and analyzed, using an interactive planetary image processing system (IPIPS). Upper level winds derived from tracking clouds and suitably enhanced water vapor features agree well with radiosonde winds. Vertical fluxes of mass and latent heat were measured from the expansion of the storm tops, and the fluxes of the largest storms are found to be of comparable magnitude to some tropical storms. The applicability of a system such as IPIPS, in conjunction with images from a geostationary satellite, to nowcasting is demonstrated. Author (ESA)

TRANSFER AND DISTORTION OF ATMOSPHERIC INFORMATION IN THE SATELLITE TEMPERATURE RETRIEVAL PROBLEM

Owen E. Thompson *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 73-76 refs (For primary document see N82-14716 05-47)
(Grant NSG-5209)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (20% others) CSCL 04B

A systematic approach to investigating the transfer of basic ambient temperature information and its distortion by satellite systems and subsequent analysis algorithms is discussed. The retrieval analysis cycle is derived, the variance spectrum of information is examined as it takes different forms in that process, and the quality and quantity of information existing at each stop is compared with the initial ambient temperature information. Temperature retrieval algorithms can smooth, add, or further distort information, depending on how stable the algorithm is, and how heavily influenced by a priori data. Author (ESA)

SATELLITE TEMPERATURE SOUNDINGS: MICROWAVE SATELLITE OBSERVATIONS

Sigmund Fritz *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 77-81 refs Sponsored in cooperation with National Environmental Satellite Service (For primary document see N82-14716 05-47)
(Grants NsG-5209; NA80AA-D-00035)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others) CSCL 04B

Tiros satellite microwave measurements together with radiosonde data are used to illustrate a method for deriving vertical temperature distributions in the atmosphere on the scale of 100 km. The method employs N equations in N unknowns. The unknowns are the N coefficients which are needed at each pressure level to multiply the measured N radiances in order to retrieve the vertical temperature distributions. As an example, the spatial variation of the tropopause characteristics is derived over a cyclone. Diurnal variations in the radiances and the consistency of radiosondes and satellite radiance data need further investigation. Author (ESA)

STRUCTURE FUNCTION ANALYSIS OF NIMBUS 5 SCR DATA AT THE MESOSCALE

G. Molnar *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 83-87 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A statistical structure function analysis of infrared satellite radiances, recorded by the selective chopper radiometer on Nimbus 5, is presented and its prospects for nowcasting purposes are assessed. From analysis of daily, lower tropospheric structure functions preceded by a noise level determination, a reasonably clear delineation is obtained between meteorologically active and nonactive days, regarding thunderstorm activity. An acceptable prediction of the occurrence of subsequent convective activity is shown possible. The results indicate that these structure functions lead to threshold values in terms of radiance, e.g., temperature gradients for nowcasting of certain types of convective activity. Author (ESA)

THE USE OF DIRECT READOUT TIROS OPERATIONAL VERTICAL SOUNDER (TOVS) DATA FROM TIRON N AND NOAA 6 SPACECRAFT TO STUDY A CUT-OFF LOW AND ASSOCIATED MESOSCALE COLD POOLS

G. A. Kelly, B. W. Forgan, P. E. Powers, and J. LeMarshall (Bureau of Meteorology, Melbourne) *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 89-98 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The capabilities offered by the high horizontal resolution of TOVS soundings for the analysis of mesoscale systems are illustrated by a detailed account on the evolution of a cut-off low and associated cold pools developing over southern Australia. The observations and retrieval analyses include cloud imagery, 1000 to 500 mb thickness analyses, temperature analyses using infrared and microwave soundings, geopotential heights, geostrophic winds, and temperature wind and potential temperature wind cross sections. In view of the successful implementation, TOVS data are routinely used. Author (ESA)

TOPOCLIMATOLOGICAL MEASUREMENTS AT BIELEFELD AND ITS SURROUNDINGS AS AN EXAMPLE OF MESOSCALE OBSERVATIONS

H. Bangert and A. Witting (Gesamthochschule Paderom, West Germany) *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 101-107 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The topoclimatological differences in Bielefeld-West were collected from point data and line data records of ground stations in order to investigate the possibility of frost forecasting. Air temperature and relative humidity were collected continuously during six months at 11 fixed stations by means of a mobile unit. Although local topology as well as the prevailing weather conditions are shown to be responsible for temperature differences of up to 10 K between the daily practice stations and the surrounding area, advance frost warning proves possible from a combination of minimum temperature prediction and the knowledge of the expected night weather. A TOTAL SYSTEM APPROACH TO A WEATHER RADAR NETWORK

K. A. Browning *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 115-122 refs Original contains color illustrations (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Members States, AU, CN and NO (+20% others)

The operational use of radar data for real time surveillance and short period forecasting of surface rain is discussed. A system is outlined which provides analyzed actual rainfall patterns and hourly forecast rainfall for 1 to 6 hours ahead over a large area, using data from a network of radars. Analytical procedures designed to cope with the intrinsic error characteristics of weather radar are described. Interpretation of radar data within a wider meteorological context, using an advanced man computer interactive image display system is judged of prime importance. The approach is presented as a radical departure from traditional methods of dealing with radar data. Author (ESA)

N82-14736# National Center for Atmospheric Research, Boulder, Colo.

NOWCASTING APPLICATIONS OF DOPPLER RADAR

James W. Wilson and Kenneth E. Wilk (National Severe Storms Lab., Norman, Okalahoma) *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 121-134 refs Sponsored in part by NSF Original contains color illustrations (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Applications of Doppler radar, color displays and interactive graphical techniques for nowcasting and short period forecasting are presented. Specific examples of weather phenomena (clear air, widespread precipitation and convective precipication) are shown with special emphasis on Doppler velocity measurement. They include: (1) vertical profiles of the horizontal and vertical wind, and divergence and deformation of the horizontal component; (2) wind shift lines; (3) horizontal divergence fields; (4) gust fronts and downbursts; (5) tornadoes; (6) wind shear and turbulence hazardous to aircraft; and (7) precipitation and rate. Intensive man machine interaction is needed to derive Doppler radar products, whereby the nowcaster must be capable of integrating Doppler, satellite, surface and upper air data and be highly skilled in mesoscale forecasting. Author (ESA)

THE ROLE OF MESOSCALE SURFACE MOTIONS IN THE LIFE OF A CONVECTIVE STORM IN A DRY CONTINENTAL CLIMATE
Andre A. Doneaud, James R. Miller, David L. Priegnitz, and Thomas Engel (Dept. of Natural Resources and Conservation, Miles City, Mont.) *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 155-160 refs (For primary document see N82-14716 05-47)
(Contract DI-8-07-83-V0009)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The role of surface wind and moisture fields in the formation of a convective storm is examined in association with synoptic scale perturbations. In order to get a better understanding of the coupling mechanism between the synoptic and mesoscale phenomena in the development of convective cloud systems, a mesoscale surface network system supported by 5 cm radar was used to observe the atmosphere at short intervals in time and space. Results show that for the storm analyzed, frontal passage plays a principal role in the formation of precipitating cells. The surface mesoscale fields of divergence and vorticity provide an estimate of storm mass and moisture transports, while the surface field of deformation provides an estimate of the superimposed frontal effect. The average size and magnitude of moisture convergence and the storm efficiency are identified as potential predictors for the total amount of rainfall. Author (ESA)

THE ROLE OF NEAR SURFACE OUTFLOW IN MAINTAINING CONVECTIVE ACTIVITY
M. Garstang (Virginia Univ.) and H. J. Cooper *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 161-167 refs Sponsored in cooperation with Dept. of Army (For primary document see N82-14716 05-47)
(Grant NSF ATM-78-08865)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others) CSCL 04B

Continuous measurements of horizontal velocity, temperature and humidity at the surface over a dense network of stations were used to examine the behavior, at the surface, of a large number of convective storms. Feedback between storm outflow at the surface and the generation of convective cells is demonstrated. The outflow is shown in the surface divergence fields once rain begins, with characteristics common to storms in distinctly different meteorological environments, such as summertime Florida and Illinois. This commencement precedes the occurence of rainfall and radar echo in the location of the cell by some tens of minutes up to more than 100 mins. Given surface measurements with a spacing of no more than 10 km, the direction of propagation, timing of the future occurence of rainfall and the intensity of the rainfall generated in the cell can be determined. SHORT RANGE PREDICTION OF PRECIPITATION
T. Taenczer *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 173-175 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Forecasts of average precipitation in a mesoscale region, having a 200 km diameter, 6 to 18 hours ahead are presented. A statistically established relation between the air state and the rainfall data is used in a 12 hour extrapolation of the air state. The wind run is computed on the actual 700 mb contour chart. The air state itself is characterized by eight parameters or predictors which include geostrophic vorticity, a moisture index derived from satellite images, and an instability index. Results show a correlation coefficient between forecasted and actual precipitation data of 0.55 with a maximum error in the forecasting of dry weather. The limitations of the methods are discussed and possible extensions are indicated. Author (ESA)

N82-14744# Washington Univ., Seattle. Dept. of Atmospheric Sciences.
THE USE OF A SINGLE DOPPLER RADAR IN SHORT RANGE FORECASTING AND REAL TIME ANALYSIS OF EXTRATROPICAL CYCLONES
Thomas J. Matejka and Peter V. Hobbs *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 177-182 refs Sponsored by NSF, AFOSR, U.S. Army Research Office and NOAA Original contains color illustrations (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A basis for interpretation and analysis of radar data on cyclones is derived and illustrated as a tool for nowcasting. The structure of extratropical cyclones is described, following the Norwegian cyclone model supplemented with a mesoscale cyclonic structure for the frontal organization, the horizontal precipitation pattern, and the structure of rainbands. Using these models, it is shown that forecasting warm frontal passages is possible by observing the decreasing height of the warm frontal surface aloft and by measuring the advancing region of fairly uniform post warm frontal winds at low levels. The cold frontal zone aloft, behind the passage of a cold front, is manifest in Doppler radar velocity scans at elevations greater than 6 deg as a layer in which the wind direction backs strongly with increasing height. It is expected that Doppler radar techniques can considerably further insight into the mesoscale structure of weather systems. Author (ESA)

COMBINING SATELLITE AND RADAR DATA FOR THE SHORT RANGE FORECASTING OF PRECIPITATION
G. L. Austin *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 183-192 refs Sponsored by Atmospheric Environment Service and Natural Sciences and Engineering Research Council of Canada (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

An algorithm was developed that yields the probability of rain in an area of 2000 x 1500 km from visible and infrared GOES satellite imagery and simultaneous radar data. The satellite image was mapped by means of a conic projection on a constant resolution cartesian grid to facilitate overlay with synoptic charts. A pattern recognition technique was then applied to 16 subareas of the entire map to track the displacement of the probability of rain contours on maps taken 1 hour apart. Results indicate that the absence of easily recognizable features or a too high coverage percentage can lead to erratic motion: suitable criteria for rejection need to be introduced. The displacements of rain zones can be successfully forecasted. The trajectories of these rain areas correlate well with 700 mb wind. Author (ESA)

SIMPLE SHORT RANGE MODELS USING SATELLITE IMAGERY DATA

H. S. Muench *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 193-197 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 120 Member States, AU, CN and NO (+20% others)

A simple model was developed, using GOES satellite imagery to make short range cloud and precipitation forecasts. The method treats imagery parameters, such as cloud reflectivity and thermal emission, as conservative and predicts future values by means of motion vectors. Algorithms, relating these parameters to cloud amount and precipitation probability, give the forecasts. Motion vector tests, conversion algorithms, and test forecasts are described. Results show that the forecasts are 20% to 40% better than persistence at 4 to 6 hours, but have weak performance at short periods because of specification errors. More complexity must be built into future models. Author (ESA)

COMBINED USE OF RADAR WITH MESOSCALE SURFACE NETWORK FOR VERY SHORT RANGE PREDICTION OF PRECIPITATION

Ryozo Tatehira, Yoshihisa Makino, and Michio Hitsuma *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 199-200 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A method for very short range forecasting of rainfall with radar data was developed. The method consists in extrapolating the initial digitized echo pattern, using the advection of 700 mb winds, followed by time integration and multiplication by calibration coefficients obtained comparing echo intensity with rain gage data. Results show that the predictions are 40% better than persistence. In order to improve the accuracy, it is suggested that the extrapolation procedure be improved by utilizing the surface wind field analyzed in a dense surface network. Combined use of radar and a surface network is proposed. Author (ESA)

OBJECTIVE RAINFALL FORECASTING USING DATA FROM THE UNITED KINGDOM WEATHER RADAR NETWORK

C. G. Collier *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 201-206 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A procedure for forecasting rainfall was developed for use with data derived from a radar network. Forecasting is based on the identification of radar echoes, using a single linkage clustering technique, and the linear extrapolation of objectively derived motion vectors. The data and algorithms used are described and the accuracy of forecasts up to 6 hours ahead together with the contribution of various errors to the overall performance of the procedure are analyzed. Ways of improving the forecasts, using objective techniques at the radar sites together with subjective quality control implemented at the network center, are proposed. Author (ESA)

THE USE OF CLIMATOLOGICAL AND SYNOPTIC DATA FOR FORECASTING OROGRAPHIC ENHANCEMENT OF RAINFALL

F. F. Hill and K. A. Browning *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 207-212 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A method is presented that applies mountain induced climatological enhancement fields to rainfall analyses and forecasts from radar and other data. A simplified orographic climatology was derived for England and Wales which is discussed in relationship with the physical mechanisms responsible for orographic rain. The fields of enhancement are held in computer as look-up tables, categorized as a function of synoptic parameters, such as low level wind velocity and humidity. After a selection by the forecaster of the appropriate synoptic category, the computer then automatically applies the enhancement to the rain forecasts derived by extrapolation of the radar rainfall pattern. The limited warning of rapidly approaching rain provided by coastal radar and the uncertainties in the forecast of low level humidity are identified. Author (ESA)

USE OF PRECIPITATION MEASUREMENTS BY RADAR IN SHORT RANGE FORECASTING OF PRECIPITATION

E. Bodolai-Jakus *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 213-219 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A diagnostic procedure and a forecasting method for mesoscale precipitation structures is described and applied to instability lines of the precipitation system of two regional cyclones and of the precipitation band at the periphery of an anticyclone. The translation speed of 30 linearly arranged precipitation systems allowed their speed of movement to be determined, for the pseudofront of the mesosystem constituted by the echoes, and not by the individual (even intense) isoechoes. THE USE OF MESOSCALE METEOROLOGICAL AND CLIMATOLOGICAL INFORMATION IN NOWCASTING AND SHORT RANGE PREDICTION

Roger A. Pielke *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 223-229 refs Sponsored by NSF (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Mesoscale atmospheric phenomena affecting nowcasting, efficient modeling in forecasting, and of procedures capable of improving dissemination of nowcast information are reviewed. A distinction is made between terrain-forced mesoscale systems, which are amenable to accurate predictions, and synoptically-forced mesoscale systems generated by highly variable synoptic circulation. Specific examples are shown of terrain-forced systems which demonstrate that even for these systems current procedures for disseminating forecast information are inadequate. Upgrading of forecasts through large scale modeling is advocated along two lines: mesoscale integration from initial and boundary conditions established one or more times daily, or archiving of typical synoptic situations with parametric classification. Procedures to improve the distribution of mesoscale information are suggested. Author (ESA)

N82-14752# Meteorological Office, Bracknell (England).

A MESOSCALE FORECAST FOR 25 AUGUST 1975: THE HAMPSTEAD STORM

M. J. Bailey, K. M. Carpenter, L. R. Lowther, and C. W. Passant *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 231-236 refs (For primary document see N82-14716 05-47)

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A three-dimensional numerical atmospheric model was used to obtain a forecast for the afternoon when an intense stationary multicell storm formed over London and produced extensive flooding. Whether early warning of that event was possible is discussed. Starting from synoptic surface pressure analysis and radiosonde ascent data, a finite difference evolution computation was carried out, involving the nonhydrostatic compressible equations of motion on a three-dimensional grid. The forecast shows a well defined area of convergence at the right place, but about 4 hours later than the actual storm. Possible explanations for this discrepancy are put forward. Shading by an observed layer of medium level cloud has an important effect on the forecast. Author (ESA)

DESCRIPTION OF AN ADVECTIVE BOUNDARY LAYER MODEL USING TRAJECTORIES
D. Blaauboer, H. A. R. deBruin, J. Reiff, and A. P. vanUlden *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jul. 1981 p 237-239 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

For short range forecasting purposes, a model of the atmospheric boundary layer (BL) was developed, including exchange of heat and water vapor at the Earth surface, entrainment at the top of the BL, and taking horizontal advection into account with a trajectory model. The evolution of temperature and height of the BL is discussed for both stable and unstable boundary layers and composed with measurements. Although the preliminary simulation results are encouraging, it is not shown whether advection is important. Further improvements are indicated. Author (ESA)

SHORT RANGE PREDICTION OF CLOUDS USING TRAJECTORIES
P. W. Rosier, J. Reiff, C. J. vanderGoot, and A. Steenhuisen *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 241-243 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Temperature and humidity profiles for 24 hours forecasting, obtained by reconstruction of the source areas of inflowing air with a trajectory method are discussed. The procedure involves wind direction prediction and trajectory derivation for the 300, 500, 850, and 1000 mbar levels and analysis of radiosonde data taken in the different source areas 24 hours ahead. The source areas arriving at different heights are situated at different geographical positions and pressure levels. Strong vertical mixing can limit the applicability of the method. Comparisons between forecast and persistency for temperature and dew point depression are given and indicate forecast improvement in 20 to 30% of the test cases. The forecasting of amount and type of clouds is also shown to be improved. Author (ESA)

IMPACT OF DATA AND INITIALIZATION PROCEDURES ON VARIATIONS OF VERTICAL MOTION AND PRECIPITATION IN MESOSCALE MODELS
Richard A. Anthes, Eirh-Yu Hsie, Daniel Keyser, and Ying-Hwa Kuo *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 245-257 refs (For primary document see N82-14716 05-47)
(Contract N00014-78-C-0775; Grant NSF ATM-78-02699)
Avail: NTIS HC A19/MF A01; ESA, PARIS FF 160 Member States, AU, CN and NO (+20% others)

The sensitivity of mesoscale models to variations in initial data was investigated. A two-dimensional model of frontogenesis that contains prognostic equations for cloud and precipitation water is used to help establish the resolution in the moisture, temperature, divergence and vorticity fields that is necessary to predict precipitation on the mesoscale. In these simulations, the precipitation forecast over a 15 hr period does not depend strongly on mesoscale detail in the initial conditions of these variables. In 12 hr forecasts using real data, the frequency and amplitude of inertia-gravity waves is insensitive to the initial divergence and temperature fields. The 12 hr forecasts of precipitation are also insensitive to the variations in initial divergence tested. Author (ESA)

THE INITIALIZATION OF A MESOSCALE WEATHER PREDICTION MODEL USING SATELLITE AND PRECIPITATION DATA
Terry C. Tarbell, Thomas T. Warner (Pennsylvania State Univ., University Park), and Stephen W. Wolcott (US Geological Survey, Albany, New York) *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 259-264 refs Sponsored in cooperation with NSF (For primary document see N82-14716 05-47)
(Grants NsG-5205; EPA-R-805669-01)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others) CSCL 04B

An analysis and initialization procedure was developed capable of utilizing mesoscale satellite and radar data to resolve features in moisture and momentum fields on a finer scale than is discernible from radiosonde observation networks. The radiosonde moisture field is enhanced, using infrared satellite imagery and precipitation data from the surface observation network (also obtainable from the radar network) while the observed mesoscale rainfall rates are also used to define the initial divergent wind component. Results show that the predicted rainfall amounts are significantly improved when these additional data are taken into account. Author (ESA)

UTILIZING SATELLITE WIND DATA IN A MESOSCALE NUMERICAL MODEL
Dong Kyou Lee and David D. Houghton *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 265-270 refs (For primary document see N82-14716 05-47)
(Grants NSF ATM-77-20231; NSF ATM-80-05369)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

High resolution satellite and surface wind data were incorporated into a mesoscale numerical prediction model of the south central United States. Mesoscale data sets approach the level of comprehensiveness for mesoscale phenomena and for their simulation by numerical techniques. Correspondence of the satellite data to rawinsonde observations is analyzed. Differences between forecasts with and without the special initial wind data identify the impact of this data. Oscillations indicative of adjustement processes with time scales of 0.5 and 3 hr are evident in the insertion cases. The primary impact of the inserted data is to alter the amplitude of mesoscale features that develop in the control forecast. Author (ESA)

THE NUMERICAL SIMULATION OF INTENSE FRONTAL DISCONTINUITIES OVER SOUTHEASTERN AUSTRALIA
D. J. Gauntlett *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 271-275 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The development and movement of an intense frontal discontinuity up the New South Wales coast of Australia using a nested, moveable fine mesh (MFM) model was studied. This model is based on full primitive equations and incorporates orographic effects, convection and relevant boundary layer fluxes. The resolution of the interior moving grid was set at 60 km. It is demonstrated that the the capacity of the MFM model simulates the essential features of the front and identifies it as a coastally trapped gravity current. Author (ESA)

A BEACH COMFORT INDEX USED BY THE NATIONAL WEATHER SERVICE IN THE NETHERLANDS
J. F. denTonkelaar *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 295-298 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The relation between the weather and the feeling of physical comfort of visitors of seaside resorts was investigated. A beach comfort index was established for forecast communication to the general public. The beach comfort index is determined on a scale from 1 to 10, relating the opinions obtained in interviews to specific combinations of effective degree of cloudiness, wind speed, and air temperature. Data recorded in diagram form. Forecasts are issued during the summer and for easy communication to the public, are phrased in descriptive terms (poor, rather poor, moderate, rather good, good, and very good). Author (ESA)

THE MODULAR AUTOMATED WEATHER SYSTEM (MAWS) CONCEPT
Donald A. Chisholm, Richard H. Lynch, and James C. Weyman *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 303-307 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A modular automated weather system (MAWS) which is a supervisory microprocessor that manages, disseminates and archives visibility, wind, temperature, and dew point measurements as well as outputs from ceilometers, transmissometers, digital alimeters, and digital clocks is discussed. Results are assessed for: (1) aviation weather elements and sensors suitable for automation; (2) sensor siting requirements for aviation critical weather elements; (3) performance potential of microprocessor components, display devices and communication systems; (4) the importance of met watch parameters in support of aviation operations; and (5) utility of short range forecast guidance based on simple statistical models. A microprocessor based MAWS system satisfies most automated observation requirements and provides an essential data base for the development of operational prototypes. Author (ESA)

THE SWISS NETWORK OF 2 DIGITAL RADARS AND 60 AUTOMATIC WEATHER STATIONS
H. P. Roesli *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 317-322 (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Two networks for mesoscale observation are presented: (1) the ANETZ system, involving some 60 automatic weather stations, and (2) a radar network of two digital weather radars. The radars are under the control of a minicomputer which generates ground plan and side views of the maximum reflectivities. The limits of operational quantitative measurements are discussed. In ANETZ, a minicomputer collects, processes and distributes the observations. Examples of access to real time data are given and their use in nowcasting is illustrated. It is shown that the networks stimulate the development of different methods in nowcasting and in display of meteorological data. Author (ESA)

A SYSTEM FOR THE COMBINED USE OF DATA FROM MULTIPLE RADARS AND SATELLITES IN THE UNITED KINGDOM
C. G. Collier *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 323-330 refs Original contains color illustrations (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A weather forecasting pilot project, consisting of a network of four weather radars along with digital facilities for receiving

satellite and conventional meteorological data is discussed. Data processing is carried out in real time within a minicomputer network, mostly over communication lines. Instantaneous fields of precipitation as well as rainfall totals integrated for short periods over areas defined by users are distributed from each radar site. At the network center, a precipitation picture and forecasts of precipitation 6 hr ahead covering a wide area are prepared. The further development of the central facilities, leading to a prototype operational interactive computer system, forecasting rain optimised using new techniques of interactive enhanced radar and satellite system (FRONTIERS) is also discussed.

THE MESOSCALE OBSERVATIONAL NETWORK IN JAPAN

Ryozo Tatehira, Michio Hitsuma, and Yoshihisa Makino *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 341-346 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Systems to analyze and forecast mesoscale weather phenomena in Japan are presented. The systems comprise: (1) a weather radar network, involving 20 sites, capable of 2 km resolution and equipped with standardized digitizers, giving composite echo patterns with a 5 km mesh; (2) an automated meteorological data acquisition system, grouping 1300 stations for precipitation monitoring and some 800 stations for surface wind, temperature and sunshine measurements; and (3) the geostationary meteorological satellite, (GMS), providing cloud images, with a resolution of 2 km in the visible channel and 7 km in the infrared channel. Because of a 40 min time lag in the reception of the GMS pictures, system (3) is not suited for nowcasting.

DESIGN OF A SHORT RANGE FORECASTING SYSTEM

Donald W. Beran and Alexander E. MacDonald *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 347-350 (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The complexity of designing a total short range forecasting system is discussed. A design methodology (PROFS program) which produces optimum specifications for operational forecast systems is proposed. In the PROFS design, data sets are drawn from all conventional synoptic scale information, a dense surface network, conventional and Doppler radar, high resolution satellite data, and continuous upper air profiles. The worth of each data set is examined in combination with others; optimum combination and communication techniques form the basis for functional design specifications.

AN ASSESSMENT OF MESOSCALE FORECAST EXPERIMENTS

H. S. Muench and D. A. Chisholm *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 363-367 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A mesoscale network which provides short range forecasting at airfield terminals, and a number of objective techniques developed in that process are described. The visibility forecast problem was treated. Objective techniques for forecasting radiation fog, advection fog and convective showers were developed and skill scores, relative to Markov, for each technique are presented. It is indicated that, although improvement over persistence can be obtained, the behavior of low visibility patterns is quite complex and can only partially be forecasted by simple extrapolation. Deployment of interactive computer graphics increases the analysis capabilities and improvements in nowcasting are expected.

AN OPERATIONAL METHOD FOR FORECASTING STRATUS AND FOG

Gustav Grandin *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 369-372 (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A short range forecast model of increase and dissolution of the cloud base of stratus, or fog, is described. Solar short wave radiation is estimated from latitude, season, and time of day. Radiation absorbed at the surface, and long wave radiation from higher clouds and moist air above the stratus are calculated. The balance between cooling, due to long wave radiation, and surface heating, caused by short wave solar radiation, determines the cloud base development. It is assumed that the cloud top has a constant height, or to increase due to an empirical function, and when the cloud base reaches cloud top it is dissolved. A mean deviation of + 11 m for a forecast time of 2 hrs, where no horizontal advections are considered is shown. It is concluded that surface albedo has little effect, but long wave radiation is crucial in cloud base development.

Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others) CSCL 04B

An analysis of a tornado outbreak in Wichita Falls, Texas was analyzed. The coupling of upper and lower tropospheric jet streaks, leading to severe storm outbreaks is illustrated. The high resolution SESAME data sets indicate that mass and momentum adjustments which couple upper and lower tropospheric jets occur within a 3 to 6 hr time frame over a 100 to 500 km domain, and establish the role of isallobaric forcing in the storm development. It is suggested that the output rate of data from the existing 12 hr network be increased to provide better temporal resolution of wind, mass and moisture data.

LIFE CYCLE OF MESOSCALE CONVECTIVE SYSTEMS

Edward J. Zipser *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 381-386 refs Sponsored by NSF (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Structural features of tropical convective systems are reviewed, and the interaction between convective clouds and associated mesoscale stratiform cloud systems which evolve with time are emphasized. A typical life cycle is illustrated, and differences between tropical and mid latitude systems are discussed. Awareness of the typical evolution of such systems can improve interpretation of a real time mesoscale data stream. Possible uses of a life cycle model in very short range forecasting are discussed.

COMBINING SATELLITE AND CONVENTIONAL DATA FOR VERY SHORT RANGE FORECASTING PURPOSES

James F. W. Purdom *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 393-400 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The importance of satellite data for nowcasting is illustrated and convection is emphasized. The clouds and cloud patterns observed in satellite images represent the integrated effect of ongoing dynamic and thermodynamic processes. The GOES system is described. Data, mesoscale applications, using GOES imagery in the areas of morning stratus and fog, and convective storms are considered. The unique capability of satellite imagery in the detection of precursor or trigger mechanisms for strong convection is emphasized.

GEM: A SIMPLE METEOROLOGICAL BUOY WITH SATELLITE TELEMETRY

R. Michael Reynolds *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 401-404 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A small, easily deployable and inexpensive buoy was developed for mesoscale research. The synthesis of the detailed parameter fields necessary for mesometeorology necessitates the deployment of a network of buoys that are less expensive than most standard designs. Vector averaged winds, scaler winds, air temperature, water temperature, and gusts are measured. Compass readings provide surface current direction. The buoy transmits data via the GOES satellite which eliminates the need for internal tape recording. Computer processing of the data is described. Proper counterbalancing and vector averaging are shown to reduce the effects of buoy motion.

A LAYERED MESOSCALE PREDICTION MODEL INITIALIZED AND VERIFIED BY SATELLITE DATA

John C. Freeman and Jill F. Hasling *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 405-410 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A mesoscale meteorological model that takes into account horizontally propagating gravity waves, vertical wind shear, moisture, variations in orography, rotation of the Earth, and friction was developed. It can be used with satellite data on clouds and precipitation. It is shown that if an area is covered with clouds for a sufficient time, there is sufficient data on cloud motion and heights to allow the development and continued computation of the full motion and cloud field over the whole area. Examples are shown on the evolution of thunderstorms behind a cold front.

OPERATIVE WARNINGS; ROUTINE SERVICES AND ONGOING EXPERIMENTAL WORK IN FINLAND

Marianne Saagbom *In* ESA Nowcasting: Mesoscale Observations and Short-Range Prediction Jun. 1981 p 413-415 refs (For primary document see N82-14716 05-47)
Avail: NTIS HC A19/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The requirements of potential users of short range weather forecasts and measures to be taken to fulfill those needs in Finland are reviewed. In addition to routine short range weather predictions, specific warning on operational effects of small scale meteorological phenomena, such as wind shear or slipperiness, is required for aviation. The importance of a specialized weather service for road maintenance was borne out on slipperiness, fog and crosswind, both economically and operationally.

MECHANISM OF ICE CRYSTAL GROWTH HABIT AND SHAPE INSTABILITY DEVELOPMENT BELOW WATER SATURATION M.S. Thesis - Univ. of Utah

Gerald Douglass Swoboda Aug. 1981 139 p refs
(Grant NSF ATM-80-04108)
(AD-A105520; AFIT-CI-81-32T) Avail: NTIS

HC A07/MF A01 CSCL 08/12

Ice phase process in supercooled clouds play dominant roles in development of updrafts and downdrafts as well as various forms of precipitation. In a supercooled cloud, an ice phase process begins normally with vapor diffusional growth of ice crystals. Consequently, the vapor diffusional growth of ice crystals is of importance in cloud physics. Starting from the concept of the wedge-shaped ice thermal diffusion chamber of Schaller and Fukuta, where ice crystals can be grown under a range of ice supersaturations at a constant temperature in quiescent, temperature-stratified air, and by considering design and operational limitations, a new wedge-shaped ice thermal diffusion chamber was designed and constructed for this study of ice crystal growth habit and shape instability. This chamber and supporting apparatus define an experimental system capable of adequately controlling the temperature and supersaturation fields around the growing crystal. In addition to the wedge-shaped chamber, apparatus defining this experimental system are the pre-chamber, ice crystal slide mechanism, lateral microscope slide mechanism, sample transfer device, and outer environmental chamber. A STATISTICAL MODEL OF WIND DISTRIBUTION IN FORCE AND IN DIRECTION: APPLICATION TO UCCLE (BRUSSELS) DATA AND VALIDITY OF THE MODEL FOR BELGIUM [UN MODELE STATISTIQUE DE LA REPARTITION DES VENTS EN FORCE ET EN DIRECTION: APPLICATION AUX DONNEES D'UCCLE (BRUXELLES) ET VALIDITE DU MODELE POUR LA BELGIQUE]

R. Sneyers 1980 21 p refs In FRENCH; ENGLISH summary Presented at 16th Congr. de Meteorol. Alpine, Aix-les-Bains, France, Sep. 1980

(PUBL-SER-B-107) Avail: NTIS HC A02/MF A01

The adjustment of a statistical model of wind so that the entire set of empirical data obtained for each of the 12 months of the year can be taken into account was studied. The resultant model can be used to determine, for whatever time of year and for whatever wind direction, the probability of the associated wind of given velocity. The distribution at Uccle of the wind speeds is represented through gamma distributions, the shape parameter of which can be considered independent of both wind direction and time of year. The mean speed thus fully characterizes each distribution. The mean speed is shown as a periodic function of the time of year as well as of the wind direction. Author (ESA)

THE ENHANCED V, A SATELLITE OBSERVABLE SEVERE STORM SIGNATURE

Donald W. McCann Mar. 1981 38 p refs

(PB81-230328; NOAA-TM-NWS-NSSFC-4; NOAA-81052202) Avail: NTIS HC A03/MF A01 CSCL 04B

Enhanced infrared satellite imagery was used to examine severe thunderstorms that display a warm spot accompanied by a signature called an enhanced V, formed when strong upper level winds are diverted around an overshooting thunderstorm top. When a storm has an enhanced V, it has a high probability of subsequently producing severe weather. Two rules for identification of an enhanced V are established. The median lead time from enhanced V identification to the first severe weather report was 30 minutes. A low false alarm ratio makes this identification technique a potential severe storm warning tool. GRA

THE EFFECT OF PRECIPITATION ON MICROWAVE SOUNDINGS IN LOW LATITUDES

Lester F. Hubert, Norman C. Grody, Andrew Timchalk, and William C. Shen Apr. 1981 43 p refs

(PB81-225062; NOAA-TR-NESS-82; NOAA-81051405) Avail: NTIS HC A03/MF A01 CSCL 04B

The use of the Scanning Microwave Spectrometer (SCAMS) data to derive atmospheric temperature profiles in tropical latitudes was studied. A cold low which passed to the south of Hawaii, Feb. 1976, is investigated. SCAMS clear atmosphere and cloud cluster retrievals with nearby rawinsonde temperatures are compared. It is suggested that either the area of active cloud convection contains vigorous updrafts over much more than 5% of the cloud area or that liquid water densities in the upper part of the clouds are much greater than 2.0 g/cu m. It is indicated that precipitation induced errors in the microwave retrievals are greatest and most frequent in convective cloud areas. GRA

VARIABILITY OF SEASONAL PRECIPITATION OVER THE CONTERMINOUS UNITED STATES, 1948-1976 Ph.D. Thesis

Marie Rose Popp Klugman 1981 192 p

Avail: Univ. Microfilms Order No. 8123329

The variability of seasonal precipitation for 104 climatological stations in the conterminous United States was investigated. A statistically sound procedure for testing the significance of precipitation variations which was outlined and circulation anomalies which are related to precipitation extremes or use in seasonal forecasting were identified. A variance components model was used to test the significance of the precipitation variability for each of the four seasons at each station. A chain-dependent model which incorporates Markov chains was used to model the daily data. The Schwarz Bayesian Criterion was employed to determine the order of Markov chain dependence in the daily data. The source of anomalous component of the airflow into areas with significant precipitation variability was traced to land areas and cold oceans in low precipitation years and to warm water bodies in high precipitation years. These relationships can be used as the basis for predicting anomalous seasonal preciptation amounts. Dissert. Abstr.

REMOTE SENSING OF SEA STATE BY LASER ALTIMETERS

B. Tsai and C. S. Gardner Dec. 1981 51 p refs

(Grant NsG-5049)

(NASA-CR-165049; RRL-Publ-514) Avail: NTIS HC A04/MF A01 CSCL 08C

The reflection of short laser pulses from the ocean surface was analyzed based on the specular point theory of scattering. The expressions for the averaged received signal, shot noise and speckle induced noise were derived for a direct detection system. It is found that the reflected laser pulses have an average shape closely related to the probability density function associated with the surface profile. This result is applied to estimate the mean sea level and significant wave height from the receiver output of the laser altimeter. T.M.

GLOBAL OCEAN TIDES. PART 4: THE SEMIDIURNAL ELLIPTICAL LUNAR TIDE (N2). ATLAS OF TIDAL CHARTS AND MAPS Final Report
E. W. Schwiderski May 1981 88 p refs
(ZR00001 01)
(AD-A105949; NSWC/TR-81-218-Pt-4) Avail: NTIS HC A05/MF A01 CSCL 08/3

In Part I (Schwiderski, 1978a) of this report, a unique hydrodynamical interpolation technique was introduced, extensively tested, and evaluated in order to compute partial global ocean tides in great detail and with a high degree of accuracy. This novel method has been applied to construct the semidiurnal elliptical lunar (N2) ocean tide with a relative accuracy of better than 5 cm anywhere in the open oceans. The resulting tidal amplitudes and phases are tabulated on a 1 deg x 1 deg grid system in an atlas of 42 deg x 71 deg overlapping charts covering the whole oceanic globe. A corresponding atlas of global corange and cotidal maps is included to provide the reader with a quick general overview of the major tidal phenomena. The specifying hydrodynamical parameters of the model are listed along with quoted sources of empirical tide data, and significant tidal features are explained and discussed. The semidiurnal N2 ocean tide is found to resemble closely the semidiurnal M2 and S2 tides (compare Parts II and III). As mentioned in Parts II, III, IV, and V only qualitative similarities are displayed between the semidiurnal and diurnal ocean tides. Author (GRA)

THE NSWC GLOBAL OCEAN TIDE DATA TAPE (GOTD), ITS FEATURES AND APPLICATION: RANDOM-POINT TIDE PROGRAM
E. W. Schwiderski and L. T. Szeto Jun. 1981 41 p
(ZR00001 01)
(AD-A105974; NSWC/TR-81-254) Avail: NTIS HC A03/MF A01 CSCL 08/3

In the following report, the authors highlight briefly the major qualitative and quantitative features of the NSWC ocean tide models, which now include the nine components (M2, S2, N2, K2), (K1, O1, P1, Q1), and Mf with models for Mn and Ssa nearing completion. Special characteristics of those models are pointed out, which require indispensable attention in various applications particularly in coastal areas with rapidly varying tides. Since the tide models interpolate hydrodynamically empirical tide data at over 2000 continental and island stations, certain simple corrections in the numerical procedures are presented. Plans for more extensive local and perhaps global refinements and improvements of the tide models are mentioned. In the final part of this report, the authors describe the NSWC Global Ocean Tide Data (GOTD) tape including the data arrangement and the standard format. The report ends with a program that computes from the taped harmonic tidal constants instantaneous oceanic and geocentric tides at specified random points and instances in the Random-Point Tide (RPTIDE) program. INBORN ANEMIAS IN MICE Progress Report, 1 Aug. 1980 - 1 Jun. 1981
Seldon E. Bernstein, Jane E. Barker, and Elizabeth S. Russell Jun. 1981 36 p
(Contract DE-AC02-76EV-03264)
(DE81-029128; DOE/EV-03264/20) Avail: NTIS HC A03/MF A01

Four macrocyctic anemias, five hemolytic anemias, nonhemolytic microcytic anemia, transitory siderocytic anemia, sex-linked iron-transport anemia, an alpha-thalassemia, and a new target-cell anemia were studied. Each of these blood dyscrasias is caused by the action of a unique mutant gene, which determines the structure of different intracellular molecules, and thus controls a different metabolic process. The potential for uncovering different aspects of hemopoietic homeostatic mechanisms in the mouse is considered. Each anemia is studied through: (1) characterization of peripheral blood values, (2) determinations of radiosensitivity under a variety of conditions, (3) measurements of iron metabolism and heme synthesis, (4) histological and biochemical study of bloodforming tissue, (5) functional tests of the stem cell component, (6) examination of responses to erythroid stimuli, and (7) transplantation of tissue between individuals of differently affected genotypes. REPAIR OF RADIATION DAMAGE IN MAMMALIAN CELLS
R. B. Setlow 1981 16 p refs Presented at the NATO CNEN Conf., Rome, 24 Aug. 1981
(Contract DE-AC02-76CH-00016)
(DE81-030824; BNL-30056; B10-3766; CONF-810873-2) Avail: NTIS HC A02/MF A01

The responses as survival, mutation, and carcinogenesis, of mammalian cells and tissues to radiation which are dependent not only on the magnitude of the damage to macromolecular structures (DNA, RNA, protein, and membranes) but on the rates of macromolecular syntheses of cells relative to the half lives of the damages are discussed. Cells possess a number of mechanisms for repairing damage to DNA. The effects of radiation and the repair of radiation damage can be explained by epidemiological data which allows the construction of dose response curves for humans. The shapes of such curves or the magnitude of the response depends on repair. Radiation damage is emphasized because: (1) radiation dosimetry is excellent compared to chemical dosimetry; (2) a number of cancer prone diseases show defects in DNA repair and radiation results in more chromosomal damage in cells from such individuals than in cells from normal individuals; (3) specific radiation products in DNA have been correlated with biological effects, and (4) many chemical effects seem to mimic radiation effects. It is indicated that damages to DNA can be the initiating events in carcinogenesis. DOE

INFLUENCE OF DISPLAY AND CONTROL COMPATIBILITY ON PILOT-INDUCED OSCILLATIONS
Marvin C. Waller, Randall L. Harris, Sr., and Lee H. Person, Jr. Dec. 1981 40 p refs
(NASA-TP-1936; L-14364) Avail: NTIS HC A03/MF A01 CSCL 05I

The differences in techniques used by seven pilots to acquire information from an advanced display for instrument approaches to and landings on a runway were investigated. A fixed base simulator programmed with dynamics resembling the terminal configured vehicle (TCV) was studied. It is shown that the seven pilots can be divided into two groups which used the display with distinctly different strategies for controlling the airplane. A related pattern of performance differences resulted. It is found that pilots who primarily use raw flight path information experience longitudinal oscillations while pilots using attitude information did not. E.A.K.

INITIATION INTO THE UTILIZATION OF PROGRAMMABLE INDUSTRIAL ROBOTS: GRAFCET [INITIATION A L'UTILISATION DES AUTOMATES PROGRAMMABLES INDUSTRIELS]

P. Krzesinski Mar. 1981 25 p refs In FRENCH
Avail: NTIS HC A02/MF A01

A technique for expressing automation problems, i.e., graph of command stage and transition (GraFcet), is presented. It is intended as a methodological tool which aids in the communication of automated systems specifications between client and contractor. The language GraFcet comprehends two levels of specification. The first level describes the behavior of the command part of a system in relation to the operating part (functional specifications). The second level sets technological and environmental specifications with which the command part of a system must operate (operational specifications). Fundamental notions and the practical use of GraFcet are explained. Author (ESA)

A TUTORIAL ON THE CARE III APPROACH TO RELIABILITY MODELING Interim Report

Kishor S. Trivedi and Robert M. Geist Washington NASA Dec. 1981 63 p refs
(Grant NAG1-70)
(NASA-CR-3488) Avail: NTIS HC A04/MF A01 CSCL 14D

The CARE 3 reliability model for aircraft avionics and control systems is described by utilizing a number of examples which frequently use state-of-the-art mathematical modeling techniques as a basis for their exposition. Behavioral decomposition followed by aggregration were used in an attempt to deal with reliability models with a large number of states. A comprehensive set of models of the fault-handling processes in a typical fault-tolerant system was used. These models were semi-Markov in nature, thus removing the usual restrictions of exponential holding times within the coverage model. The aggregate model is a nonhomogeneous Markov chain, thus allowing the times to failure to posses Weibull-like distributions. Because of the departures from traditional models, the solution method employed is that of Kolmogorov integral equations, which are evaluated numerically. R.J.F.

DATA COMMUNICATIONS SUPPORT FOR THE ATC COMPUTER REPLACEMENT PROGRAM (1988-1996) Final Report

Washington FAA Nov. 1981 200 p refs
(Contract DOT-FA79WA-4335)
(DOT/FAA/RD-81/104; FR-303H.01) Avail: NTIS HC A09/MF A01

A 'look-ahead' is provided to the data communicatons capabilities needed during the FAA's enroute computer replacement program. The support of normal ATC functions and the planned advanced enroute automation functions are considered in addition to the computer replacement requirements themselves. A mixture of packet-switched and dedicated networks utilizing both terrestrial and satellite facilities was found to be the most attractive approach to provide such support. The terrestrial packet-switched network should be highly interconnected with switches in each center and should provide virtual circuit and alternate routing capabilities between all centers. Concentrating or multiplexing should also be considered at major air terminals. Results of this task also provide feedback on the data communications impact of the concepts related to center backup and terminal consolidation. A.R.H.

ANALYSIS AND DESIGN OF FAULT-TOLERANT COMPUTER SYSTEMS Final Technical Report, 1 Jul. 1977 - 30 Jun. 1981

John P. Hayes 15 Aug. 1981 26 p refs
(Grant AF-AFOSR-3352-77; AF Proj. 2304)
(AD-A105491; AFOSR-81-0671TR) Avail: NTIS HC A03/MF A01 CSCL 09/2

This is the final report of a four-year investigation of fault-tolerant computer systems. A comprehensive theory of fault tolerance for a class of computer interconnection networks called beta-networks was developed. Reconfiguration and recovery strategies in multiprocessor systems were studied using graph theoretical models. The testing requirements of bit-sliced computers were investigated, and a new approach to the design of easily testable bit-sliced systems was developed. The testing of complex LSI/VLSI systems was examined using a high-level and expandable representation of test data called vector sequences. Author (GRA)

FUNCTIONALLY SPECIALIZED MULTI-PROCESSOR ARCHITECTURES Final Report

15 Aug. 1981 19 p ref
(Contract N00014-76-C-0914)
(AD-A105662) Avail: NTIS HC A02/MF A01 CSCL 09/2

This report summarizes the results obtained in the various areas of research as well as some of the key publications that resulted from the work. The research strategy pursued areas where, in our opinion, fundamental generalizations of the current knowledge base for computing system design was required. The areas in question are as follows: Data management, Resource management, Network management, and CPU architectures. GRA

A LOWER BOUND FOR THE TIME TO ASSURE INTERACTIVE CONSISTENCY

Michael J. Fischer (Yale Univ.) and Nancy A. Lynch Sep. 1981 10 p refs
(Contracts DAAG29-79-C-0155; N00014-79-C-0873; N00014-80-C-0221; Grants NSF MCS-77-25628; NSF MCS-77-02474; NSF MCS-80-03337)
(AD-A105946; GIT-ICS-81/13; ARO-16451.12-EL) Avail: NTIS HC A02/MF A01 CSCL 09/2

The problem of 'assuring interactive consistency' is defined in (PSL). It is assumed that there are n isolated processors, of which at most m are faulty. The processors can communicate by means of two-party messages, using a medium which is reliable and of negligible delay. The sender of a message is always identifiable by the receiver. Each processor p has a private value sigma(p). The problem is to devise an algorithm that will allow each processor p to compute a value for each processor r, such that (a) if p and r are nonfaulty then p computes r's private value sigma(r), and (b) all the nonfaulty processors compute the same value for each processor r. It is shown in (PSL) that if n < 3m + 1, then there is no algorithm which assures interactive consistency. On the other hand, if n > or = 3m + 1, then an algorithm does exist. The algorithm presented in (PSL) uses m + 1 rounds of communication, and thus can be said to require 'time' m + 1. An obvious question is whether fewer rounds of communication suffice to solve the problem. In this paper, we answer this question in the negative. That is, we show that any algorithm which assures interactive consistency in the presence of m faulty processors requires at least m + 1 rounds of communication. Author (GRA)

FABRICATION OF A PROCESSOR ADAPTED TO NUMERICAL FILTERING [REALISATION D'UN PROCESSEUR ADAPTE AU FILTRAGE NUMERIQUE]

Nadia Karouche and Denis Jelsh 1981 121 p refs In FRENCH
(TEL/KAR/81) Avail: NTIS HC A06/MF A01

A fast universal processor able to carry out numerical filtering operations in real time was designed and built. Two filtering algorithms were considered: transversal filtering (finite impulse response); and recursive filtering (infinite impulse response). The feasibility of such a universal structure demonstrated. However, only the transversal filter could be realized, based on a microprocessor architecture. Performance of the filter is satisfactory. SYNTHESIS AND OPTIMIZATION OF PROGRAMMABLE LOGIC ARRAYS Ph.D. Thesis

Sungho Kang 1981 228 p
Avail: Univ. Microfilms Order No. 8124091

Programmable logic arrays minimization algorithms are discussed based on products, inputs and outputs. A heuristic produce minimization algorithm based on iterative improvement is analyzed and the improvement of its efficiency is studied. The algorithm proposed is efficient enough to accept large switching functions whose minimization is inconceivable with previous algorithms. Several input and output minimization techniques and algorithms are discussed in detail. PLA partitioning algorithms are discussed and results show that by replacing a large PLA by several smaller PLA's, a reduced chip area can be achieved. The algorithms presented are heuristic and based on the concept of independence of internal PLA patterns. An automatic PLA synthesis procedure from a register transfer level language was developed. The synthesis procedure proposed uses a PLA for implementing the control circuit of the system. Dissert. Abstr.

COMPUTER AIDED DESIGN AND RELIABILITY OF A GENERAL LSI LOGIC STRUCTURE FOR CUSTOM VLSI Ph.D. Thesis

Michael Wayne Sievers 1981 214 p
Avail: Univ. Microfilms Order No. 8122838

The design and reliability issues to be faced in very large scale integration (VLSI) systems are investigated. A highly regular array, called a general logic structure, is presented as a means for not only simplifying the design problem but also as a means to limit failure mechanisms to a well defined set. This lattice attribute is essential for the design of testable or fault tolerant VLSI. A computer aided design system is also presented for the structure. Dissert. Abstr.

SPECIFICATION OF PARALLEL PROCESSING USING PRODUCTION SYSTEMS Ph.D. Thesis

Mohammed G. Gazaly 1982 276 p
Avail: Univ. Microfilms Order No. 8124328

The use of production systems as a model of parallel processing was investigated in an effort to provide a suitable medium within which parallel processing systems can be systematically specified, analyzed, and designed. Some existing models of parallel processing are reviewed. Production systems are formally defined and their computation power demonstrated. Production system specification of synchronization policies of access to shared resources is systematically analyzed for compatibility, liveness and fairness. Systematic design procedures for specifying systems of competing concurrent processes which are guaranteed to be compatible, live and fair are developed. The property of maximal compatibility is investigated and a systematic procedure to derive implementations of the synchronization policy specifications within production systems is presented. Production systems are compared to the other parallel processing models. The interactions between the different properties of synchronization policies, namely, maximal compatibility, liveness, and fairness are also investigated. Dissert. Abstr.

REAL TIME SIMULATION OF COMPUTER-ASSISTED SEQUENCING OF TERMINAL AREA OPERATIONS Final Report, Jul. 1978 - Jan. 1981
Roger G. Dear 31 Jan. 1981 115 p refs
(Contract NCA2-OR253-801)
(NASA-CR-166195) Avail: NTIS HC A06/MF A01 CSCL 09B

A simulation was developed to investigate the utilization of computer assisted decision making for the task of sequencing and scheduling aircraft in a high density terminal area. The simulation incorporates a desision methodology termed Constrained Position Shifting. This methodology accounts for aircraft velocity profiles, routes, and weight classes in dynamically sequencing and scheduling arriving aircraft. A sample demonstration of Constrained Position Shifting is presented where six aircraft types (including both light and heavy aircraft) are sequenced to land at Denver's Stapleton International Airport. A graphical display is utilized and Constrained Position Shifting with a maximum shift of four positions (rearward or forward) is compared to first come, first serve with respect to arrival at the runway. The implementation of computer assisted sequencing and scheduling methodologies is investigated. A time based control concept will be required and design considerations for such a system are discussed. Author

GRID SYSTEMS FOR EARTH RADIATION BUDGET EXPERIMENT APPLICATIONS
David R. Brooks Dec. 1981 42 p refs
(NASA-TM-83233; L-14843) Avail: NTIS HC A03/MF A01 CSCL 09B

Spatial coordinate transformations are developed for several global grid systems of interest to the Earth Radiation Budget Experiment. The grid boxes are defined in terms of a regional identifier and longitude-latitude indexes. The transformations associate longitude with a particular grid box. The reverse transformations identify the center location of a given grid box. Transformations are given to relate the rotating (Earth-based) grid systems to solar position expressed in an inertial (nonrotating) coordinate system. The FORTRAN implementations of the transformations are given, along with sample input and output. Author

(Contract NAS9-14880)
(NASA-CR-167478-Vol-2) Avail: NTIS HC A09/MF A01 CSCL 09B

The set of computer programs described allows for data definition, data input, and data transfer between the LSI-11 microcomputers and the VAX-11/780 minicomputer. Program VAXCOM allows for a simple method of textual file transfer from the LSI to the VAX. Program LSICOM allows for easy file transfer from the VAX to the LSI. Program TTY changes the LSI-11 operators console to the LSI's printing device. Program DICTIN provides a means for defining a data set for input to either computer. Program DATAIN is a simple to operate data entry program which is capale of building data files on either machine. Program LEDITV is an extremely powerful, easy to use, line oriented text editor. Program COPYSBF is designed to print out textual files on the line printer without character loss from FORTRAN carriage control or wide record transfer. A.R.H.

COMPUTER PROGRAM TO SUPPORT REMOTE MANIPULATOR SYSTEM FLIGHT PLANNING ANALYSIS
[1982] 161 p
Avail: NTIS HC A08/MF A01 CSCL 09B

The basic flight control software functions for the Remote Manipulator Flight Control System (RMS) were programmed for the Hewlett-Packard desk top computer mode HP-9845. This provides an engineering analysis tool for flight planning as well as to support the generation of level C flight parametes. The logic described is intended for onboard computer code but is also used for the flight planning/level C parameter generation exercises. The Kinematic Data Generation (KDG) function calculates point of resolution (POR) position and rate components from joint angles and rates. The Inverse Trigonometric Function (ITF) logic solves for a set of angles from a given POR position vector and a set of attitude angles. The analysis strategy starts with a desired end of trajectory position and orientation of the end effector nd uses the ITF logic to find the end of trajectory values at the six joint angles. Then with the help of a set of initial joint angles, the time history of desired joint angles is calculated which moves along a desired trajectory using the KDG logic. R.D.F.

VOICE RECOGNITION AS AN INPUT MODALITY FOR THE TACCO PREFLIGHT DATA INSERTION TASK IN THE P-3C AIRCRAFT M.S. Thesis
John Laughlin Taggart, Jr. and Charles Darwin Wolfe Mar. 1981 150 p refs
(AD-A105568) Avail: NTIS HC A07/MF A01 CSCL 09/2

An experiment was conducted to compare accuracy and entry speed capabilities of a standard keyboard with the Threshold Technology T-600 voice recognition unit in the performance of an operational data entry task in the P-3C aircraft. A computer program was written to simulate the data entry capabilities of the P-3C operational software. Thirteen military officers executed a P-3C Tactical Coordinator's preflight task of entering data into the Stores Management and Navigation Preflight tableaux. Overall, voice entry was found to be faster for the Stores Management data entry task and slower for the Navigation Preflight tableau task, with comparable accuracy. But, for subjects with prior voice input experience, voice input was faster than keyboard entry for both tableaux. Author (GRA)

COMPUTER PROGRAM FOR SOLVING AN INVERSE PROBLEM WITH ONE VARIABLE: PART 1: METHODOLOGY [LOGICIEL DE RESOLUTION D'UN PROBLEME INVERSE A 1 VARIABLE. 1: EXPOSE DES METHODES]
C. Delannoy, F. Lefeuvre, and C. R. P. E. Orleans Mar. 1981 42 p refs In FRENCH 2 Vol.
(CRPE-NT-80-Vol-1) Avail: NTIS HC A03/MF A01

A nonnegative real function of one real variable is determined, using computer programming that integrates a certain number of known linear functionals. The program wants a maximum entropy solution. An approximation is made either through discretization or by finding a mean solution, i.e. the Dirichlet kernel. The program is capable of four operations: finding a discrete solution; finding a mean solution; finding a maximum entropy solution, initiated by and finding a maximum entropy solution, user interactively initiated. Random electromagnetic wave fields were analyzed with good results. Author (ESA)

THE DESIGN, SPECIFICATION, AND IMPLEMENTATION OF OBJ-T: A LANGUAGE FOR WRITING AND TESTING ABSTRACT ALGEBRAIC PROGRAM SPECIFICATIONS Ph.D. Thesis
Joseph John Tardo 1981 269 p
Avail: Univ. Microfilms Order No. 8122865

The application of algebraic techniques to the problem of generating formal program specifications is investigated. The design, implementation, and application of OBJ-T, a formal language for writing and testing abstract algebraic program specifications is described. A conceptually simple and elegant semantic foundation for OBJ-T which reflects the simplicity of its syntax is used. The language is based upon a data oriented, initial algebra model f computation. The mathematical foundations of this algebraic model are described and then used to characterize the mathematical semantics of OBJ-T. Dissert. Abstr.

AN INVESTIGATION INTO THE CURRENT ATTITUDES AND PERCEPTIONS HELD BY EDUCATORS TOWARD COMPUTER-ASSISTED-INSTRUCTION Ph.D. Thesis
Diedrus Uvonne Brown 1981 164 p
Avail: Univ. Microfilms Order No. 8123303

In order to determine the current attitudes and perceptions of educators toward computer assisted instruction (CAL), an instrument which consisted of eight questions was designed to ascertain background information on each participant, and the extent of CAL use in their particular school. Also, the survey instrument consisted of forty carefully scrutinized ideas, opinions, and/or conclusions found in the relevant literature in this area. It was concluded that educators, regardless of position, hold similar attitudes and perceptions toward CAL, that age had no significant bearing on how educators view CAL, and that if, in fact, there were varying attitudes, it would be in the general area of how CAL and/or computers affect students and how educators themselves view CAL and/or computers.

Avail: NTIS HC A11/MF A01 CSCL 09B

An Airborne Data Analysis/Monitor System (ADAMS), a ROLM 1666 computer based system installed onboard test airplanes used during experimental testing is evaluated. In addition to the 1666 computer, the ADAMS hardware includes a DDC System 90 fixed head disk and a Miltape DD400 floppy disk. Boeing designed a DMA interface to the data acquisition system and an intelligent terminal to reduce system overhead and simplify operator commands. The ADAMS software includes RMX/RTOS and both ROLM FORTRAN and assembly language are used. The ADAMS provides real time displays that enable onboard test engineers to make rapid decisions about test conduct thus reducing the cost and time required to certify new model airplanes, and improved the quality of data derived from the test, leading to more rapid development of improvements resulting in quieter, safer, and more efficient airplanes. The availability of airborne data processing removes most of the weather and geographical restrictions imposed by telemetered flight test data systems. A data base is maintained to describe the airplane, the data acquisition system, the type of testing, and the conditions under which the test is performed. M.D.K.

SOFTWARE ERROR DETECTION
Wolfgang Buechler and A. Gilliam Tucker *In* NASA. Langley Research Center Ruggedized Minicomputer Hardware and Software Topics, 1981 Dec. 1981 p 109-114 refs (For primary document see N82-14829 05-62)
Avail: NTIS HC A11/MF A01 CSCL 09B

Several methods were employed to detect both the occurrence and source of errors in the operational software of the AN/SLQ-32. A large embedded real time electronic warfare command and control system for the ROLM 1606 computer are presented. The ROLM computer provides information about invalid addressing, improper use of privileged instructions, stack overflows, and unimplemented instructions. Additionally, software techniques were developed to detect invalid jumps, indices out of range, infinte loops, stack underflows, and field size errors. Finally, data are saved to provide information about the status of the system when an error is detected. This information includes I/O buffers, interrupt counts, stack contents, and recently passed locations. The various errors detected, techniques to assist in debugging problems, and segment simulation on a nontarget computer are discussed. These error detection techniques were a major factor in the success of finding the primary cause of error in 98% of over 500 system dumps. M.D.K.

ARTS BETA TESTING REPORT
Michael C. McCune *In* NASA. Langley Research Center Ruggedized Minicomputer Hardware and Software Topics, 1981 Dec. 1981 p 115-132 (For primary document see N82-14829 05-62)
Avail: NTIS HC A11/MF A01 CSCL 09B

The advanced real time system (ARTS) was tested utilizing existing commercial system hardware and software which has been operating under advanced operating system (AOS) for several years in a multitasking, multiprocessing, and multiple computer environment. Experiences with ARTS in terms of compatibility with AOS, ease of transmission between AOS and ARTS, and functional areas of ARTS which were tested are discussed. Relative and absolute performance of ARTS versus AOS as measured in the system environment are also presented. S.L.

REAL TIME SOFTWARE TOOLS AND METHODOLOGIES
M. J. Christofferson *In* NASA. Langley Research Center Ruggedized Minicomputer Hardware and Software Topics, 1981 Dec. 1981 p 133-149 ref (For primary document see N82-14829 05-62)
Avail: NTIS HC A11/MF A01 CSCL 09B

Real time systems are characterized by high speed processing and throughput as well as asynchronous event processing requirements. These requirements give rise to particular implementations of parallel or pipeline multitasking structures, of intertask or interprocess communications mechanisms, and finally of message (buffer) routing or switching mechanisms. These mechanisms or structures, along with the data structure, describe the essential character of the system. These common structural elements and mechanisms are identified, their implementation in the form of routines, tasks or macros - in other words, tools are formalized. The tools developed support or make available the following: reentrant task creation, generalized message routing techniques, generalized task structures/task families, standardized intertask communications mechanisms, and pipeline and parallel processing architectures in a multitasking environment. Tools development raise some interesting prospects in the areas of software instrumentation and software portability. These issues are discussed following the description of the tools themselves. S.L.

USE OF SOFTWARE TOOLS IN THE DEVELOPMENT OF REAL TIME SOFTWARE SYSTEMS

Robert C Garvey *In* NASA Langley Research Center Ruggedized Minicomputer Hardware and Software Topics, 1981 Dec 1981 p 151-169 ref (For primary document see N82-14829 05-62)
Avail: NTIS HC A11/MF A01 CSCL 09B

The transformation of a preexisting software system into a larger and more versatile system with different mission requirements is discussed. The history of this transformation is used to illustrate the use of structured real time programming techniques and tools to produce maintainable and somewhat transportable systems. The predecessor system is a single ground diagnostic system; its purpose is to exercise a computer controlled hardware set prior to its deployment in its functional environment, as well as test the equipment set by supplying certain well known stimulas. The successor system (FTE) is required to perform certain testing and control functions while this hardware set is in its functional environment. Both systems must deal with heavy user input/output loads and a new I/O requirement is included in the design of the FTF system. Human factors are enhanced by adding an improved console interface and special function keyboard handler. The additional features require the inclusion of much new software to the original set from which FTF was developed. As a result, it is necessary to split the system into a duel programming configuration with high rates of interground communications. A generalized information routing mechanism is used to support this configuration. S.L.

ROLM COMPUTERS IN THE FLIGHT TESTING OF THE FOKKER F29 AIRCRAFT
P. J. Manders *In* NASA Langley Research Center Ruggedized Minicomputer Hardware and Software Topics, 1981 Dec 1981 p 171-192 (For primary document see N82-14829 05-62)
Avail: NTIS HC A11/MF A01 CSCL 09B

The design, development, installation and operation of the test equipment (MRVS) is discussed. The main feature of the MRVS is continuous recording on an instrumentation recorder data of up to 1500 parameters with a total sample rate of up to 10,000 samples per second. In order to compress the evaluation and calibration time period, the following additional requirements were set for two test systems: (1) recording of selected parameters, time tagged on computer compatible tape (CCT); (2) recording of selected high bandwidth signals and ad hoc parameters on analog tape; (3) onboard presentation of calibrated parameter data, in engineering units, in numerical as well as graphical form for: system checkout during pre-, in- and post-flight, and quick look analysis during in-flight; (4) real time presentation on the ground by telemetry for: flight monitoring, takeoff and landing measurements, and noise measurements; and (5) data processing on the ground on the Fokker-NLR computer network. DESCRIPTION OF A DUAL FAIL OPERATIONAL REDUNDANT STRAPDOWN INERTIAL MEASUREMENT UNIT FOR INTEGRATED AVIONICS SYSTEMS RESEARCH
W. H. Bryant and F. R. Morrell *In its* Ruggedized Minicomputer Hardware and Software Topics, 1981 Dec 1981 p 209-217 refs (For primary document see N82-14829 05-62)
Avail: NTIS HC A11/MF A01 CSCL 09B

An experimental redundant strapdown inertial measurement unit (RSDIMU) is developed as a link to satisfy safety and reliability considerations in the integrated avionics concept. The unit includes four two degree-of-freedom tuned rotor gyros, and four accelerometers in a skewed and separable semioctahedral array. These sensors are coupled to four microprocessors which compensate sensor errors. These microprocessors are interfaced with two flight computers which process failure detection, isolation, redundancy management, and general flight control/navigation algorithms. Since the RSDIMU is a developmental unit, it is imperative that the flight computers provide special visibility and facility in algorithm modification. S.L.

MIKE: A NETWORK OPERATING SYSTEM FOR THE DISTRIBUTED DOUBLE-LOOP COMPUTER NETWORK Ph.D. Thesis
Duen-Ping Tsay 1981 151 p
Avail: Univ. Microfilms Order No. 8121864

A network operating system called Multicomputer Integrator Kernel (MIKE) and its supporting architecture is proposed for use in distributed systems in general and in the Distributed Double Loop Computer Network in particular. The system provides system transparent operation for users and maintains cooperative autonomy among local hosts. Its underlying architecture provides additional hardware/firmware mechanisms to support the logical structure of MIKE. Modern operating system design principles used to cope with complexity and vulnerability include data abstraction, capability based addressing, and domain based protection. The use of these concepts contributes to several characteristics whose presence is essential in a distributed environment. Among these characteristics are extensibility/configurability, reliability/robustness, system transparency, and local autonomy. Dissert. Abstr.

SCHEME OF ATTRIBUTES IN MULTILEVEL DESIGN OF COMPUTER SYSTEMS Ph.D. Thesis
Antonio Benedito Coimbra Sampaio 1981 456 p
Avail: Univ. Microfilms Order No. 8122835

Abstraction and checking methods which are supported by a scheme called the scheme of attributes are defined. The methods can be used to enhance design methodologies towards producing correct computer systems. The abstraction method is similar to data abstraction techniques currently used to specify, design, and verify programs. The abstraction method is used to formally specify hardware building blocks (a multiplexer AM25LS157 and the microprocessor AM2930) and to illustrate composition of hardware systems from building blocks. The basic strategy of the check method is to identify primitive attributes of computer structures and the rules regulating their use, so that inconsistencies can be uncovered early by detecting rule violations when operating on attributes used in the design of a system. The check method also uses the notion of synthesized and inherited attributes of Knuthian semantics in order to derive attributes of a computer structure from attributes associated with computer structures at the same level or at lower levels, therefore allowing multilevel checks. Dissert. Abstr.

FLOW CONTROL IN STORE-AND-FORWARD COMPUTER NETWORK Ph.D. Thesis
Chong-Wei Tseng 1981 109 p
Avail: Univ. Microfilms Order No. 8122871

The broad area of flow control and sequencing in computer communication networks was studied. A special case of message sequencing is shown to reduce a Markov process. An end-to-end flow control scheme is shown for use in computer communication networks that can be modeled as a closed network of queues.

A flow control scheme based on limiting the permit generation rates is also analyzed. This effective scheme involves essentially no computational complexity thus enabling measurement and adjustment of the network performance with little difficulty. The simplicity also allows incorporaton of more realistic aspects of network protocols such as piggy-back acknowledgement, time-out, and gate functions in analysis. Two simple but effective distributed dynamic flow control schemes are proposed and analyzed. With either of these two schemes, a network is shown to respond well to the dynamically changing environment. Dissert. Abstr.

C2 RELEVANCE OF SELECTED ARTIFICIAL INTELLIGENCE SYSTEMS. BRIEF EXAMINATION OF SEVERAL EXISTING AL SYSTEMS FOR USE IN FUTURE COMMAND AND CONTROL APPLICATIONS Interim Report, 1 Oct. 1980 - 30 Apr. 1981
R. J. Bechtel 7 Jul. 1981 26 p refs
(XF21241100)
(AD-A105876; NOSC/TR-706) Avail: NTIS HC A03/MF A01 CSCL 09/2

This report provides a very brief examination of several existing artificial intelligence systems which have been judged to be worth further investigation for use in future command and control applications. It represents the current state of an ongoing process which began with a much longer list of artificial intelligence systems. Each system on the long list was given a very quick evaluation on scales measuring availability, applicability, and maturity. Within each broad category of artificial intelligence effort (e.g. natural language, inference) the highest ranking systems were selected for further examination. This is the result of that examination. Author (GRA)

NORMAL FORMS, VERSAL DEFORMATIONS AND QUADRATIC INTEGRALS OF LINEAR HAMILTONIAN SYSTEMS Ph.D. Thesis
Huseyin Kocak 1980 171 p
Avail: Univ. Microfilms Order No. 8123242

Equivalence classes of time independent, linear, real Hamiltonian systems can be identified, up to canonical transformations with the orbits of the adjoint action of the real symplectic group on its Lie albegra. A set of representatives, also called normal forms, for those orbits is given. Versal deformations of systems in normal form are constructed. Bifurcation diagrams of system in general position with small codimension are calculated. Also centralizers of elements of the real symplectic algebra are explicitly found. Finally, a proof of a theorem of Williamson is presented: any linear real Hamiltonian set of differential equations is completely integrable with quadratic integrals. Dissert. Abstr.

APPLICATION OF INTEGRATION ALGORITHMS IN A PARALLEL PROCESSING ENVIRONMENT FOR THE SIMULATION OF JET ENGINES
Susan M. Krosel and Edward J. Milner 1982 25 p refs To be presented at the 15th Ann. Simulation Symp., Tampa, Fla., 17-19 Mar. 1982
(NASA-TM-82746; E-1059) Avail: NTIS HC A02/MF A01 CSCL 12A

The application of Predictor corrector integration algorithms developed for the digital parallel processing environment are investigated. The algorithms are implemented and evaluated through the use of a software simulator which provides an approximate representation of the parallel processing hardware. Test cases which focus on the use of the algorithms are presented and a specific application using a linear model of a turbofan engine is considered. Results are presented showing the effects of integration step size and the number of processors on simulation accuracy. Real time performance, interprocessor communication, and algorithm startup are also discussed. B.W.

BLOCK ITERATIVE METHODS FOR ELLIPTIC AND PARABOLIC DIFFERENCE EQUATIONS
Seymour V. Parter and Michael Steuerwalt (Los Alamos Scientific Lab.) Sep. 1981 45 p refs
(Contracts W-7405-eng-36; N00014-76-C-0341; NR Proj. 044-356)
(AD-A105898; CSTR-447; LA-UR-812576) Avail: NTIS HC A03/MF A01 CSCL 12/1

Direct iterative methods for solving the linear system AX = Y split A into a difference M-N. By viewing N as a weak multiplication operator, the convergence rates of block direct iterative methods for elliptic and parabolic difference equations may be determined. The difference equations may arise from very general partial differential equations on general domains in m space dimensions. GRA

COMPACT COVARIANCE OPERATORS
Charles R. Baker and Ian W. McKeague Aug. 1981 10 p refs
(Contract N00014-75-C-0491)
(AD-A105658) Avail: NTIS HC A02/MF A01 CSCL 12/1

The study of covariance operators is a major component in the theory of probability measures on Banach spaces. The covariance operators of a strong second-order measure is always compact however, the covariance operator of a weak second-order measure need not be compact. In this paper we first characterize series representations of covariance operators, and then give a set of necessary and sufficient conditions for a covariance operator to be compact. The classical Mercer's theorem can be obtained as an immediate corollary These results are then applied to extend a result of Prohorov and Sazanov on relative compactness of probability measures from Hilbert space to Banach space. OPTIMIZATION OF REINFORCEMENT FOR A CLASS OF OPENINGS IN PLATE STRUCTURES Interim Report, Oct. 1980 - Aug. 1981
Surendra K. Dhir Sep. 1981 21 p refs
(AD-A105718; DTNSRDC/CMLD-81-25) Avail: NTIS HC A02/MF A01 CSCL 12/1

A numerical/analytical procedure has been developed which yields the optimum amount of reinforcement for a given hole shape in a large elastic plate under prescribed boundary stresses. This procedure is based on determining the usual two complex potentials which describe the entire stress field, constructing the strain energy density function in terms of the unknown amount of reinforcement, integrating this function around the opening boundary, and finally minimizing this integral with respect to the reinforcement. The method is first developed for a general hole shape and then demonstrated in some detail for a circular and a square-like opening. Author (GRA)

EXACT AND APPROXIMATION ALGORITHMS FOR A SCHEDULING PROBLEM
Gregory Dobson Jul. 1981 42 p refs
(Contracts N00014-75-C-0267; DE-AM03-76SF-00326; DE-AT03-76ER-72013; Grants NSF MCS-76-81259; NSF MCS-79-26009; NSF ECS-80-12974)
(AD-A105881; SU-SOL-81-9) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper discusses problems that arose in calendaring cases for an appellate court. The first problem is to distribute cases among panels of judges so as to equalize work loads. We give a worst case analysis of a heuristic for this NP-complete problem. For a given distribution denote by z the heaviest work load. We wish to minimize z. The ratio of the heuristic value z-bar to that of the true optimum z^* is shown to be z-bar/z^* < or = (k + 3)/(k + 2) where all the case weights in (0, (1/k)z^*), generalizing a result of Graham on multiprocessor scheduling. Under a restrictive assumption on the case weights, some generalizations of this scheduling problem are solved. Characterizations for feasible calendars and polynomial algorithms for finding these feasible solutions are given. Algorithms are given for choosing an optimal subset of the backlogged cases that can be calendared. Author (GRA)

A FURTHER INVESTIGATION OF EFFICIENT HEURISTIC PROCEDURES FOR INTEGER LINEAR PROGRAMMING WITH AN INTERIOR

Frederick S. Hillier Aug. 1981 66 p
(Contract N00014-76-C-0418; Grant NSF MCS-76-81259)
(AD-A106027; SU-SOL-81-11) Avail: NTIS HC A04/MF A01 CSCL 12/1

Some heuristic procedures for seeking a good approximate solution of any pure integer linear programming problem are evaluated. It was found that the procedures are extremely efficient, being computationally feasible for problems having hundreds of variables and constraints. Furthermore, they proved to be very effective in identifying good solutions, often obtaining optimal ones. Thus, the procedures provide a way of dealing with the frequently encountered integer programming problems that are beyond the computational capability of existing algorithms. For smaller problems, they also provide an advanced start for accelerating certain primal algorithms, including the author's Bound-and-Scan algorithm and Faaland and Hillier's Accelerated Bound-and-Scan algorithm. In addition, Jeroslow and Smith have found that imbedding the first part of one of these procedures inside the iterative step of a branch-and-bound algorithm can greatly improve the latter's efficiency in locating solutions whose objective function value is within a specified percentage of that for the optimal solution. OPTIMIZATION OF UNCONSTRAINED FUNCTIONS WITH SPARSE HESSIAN MATRICES: QUASI-NEWTON METHODS

Mukund N. Thapa Aug. 1981 40 p refs
(Contracts N00014-75-C-0267; DE-AM03-76SF-00326; DE-AT03-76ER-72018; Grants NSF MCS-76-81259; NSF MCS-79-26009; NSF ECS-80-12974)
(AD-A106028; SU-SOL-81-12) Avail: NTIS HC A03/MF A01 CSCL 12/1

Newton-type methods and quasi-Newton methods have proven to be very successful in solving dense unconstrained optimization problems. Recently there has been considerable interest in extending these methods to solving large problems when the Hessian matrix has a known a priori sparsity pattern. This paper treats sparse quasi-Newton methods in a uniform fashion and shows the effect of loss of positive-definiteness in generating updates. These sparse quasi-Newton methods coupled with a modified Cholesky factorization to take into account the loss of positive-definiteness when solving the linear systems associated with these methods were tested on a large set of problems. The overall conclusions are that these methods perform poorly in general-the Hessian matrix becomes indefinite even close to the solution and superlinear convergence is not observed in practice. LINEAR AND GEOMETRIC NONLINEAR ANALYSIS OF SHELLS BY AN ISOPARAMETRIC THREE DIMENSIONAL DEGENERATED ELEMENT Ph.D. Thesis [ANALYSE LINEAIRE ET NON LINEAIRE GEOMETRIQUE DES COQUES PAR ELEMENTS FINIS ISOPARAMETRIQUES TRIDIMENSIONNELS DEGENERES]

G. Fezans (Ecole Nationale Superieure de l'Aeronautique et de l'Espace) Jan. 1981 256 p refs In FRENCH; ENGLISH summary
(Rept-140) Avail: NTIS HC A12/MF A01

The performances of quadratic and cubic, Serendip and Lagrange elements with normal and reduced integration are compared through plate and shell examples. The performances of these elements in the analysis of thin structures and the problems of numerical conditioning induced by their utilization in this domain are emphasized. The geometric nonlinear formulation of the isoparametric threedimensional degenerated elements is presented. A total Lagrangian formulation was used. The nonlinear problem is solved by a modified Newton-Raphson method with incremental loading. Examples of highly nonlinear problems demonstrate the effectiveness of the element.

FLOATING-POINT ON-LINE ARITHMETIC FOR HIGHLY CONCURRENT DIGIT-SERIAL COMPUTATION: APPLICATION TO MESH PROBLEMS Ph.D. Thesis

Osaaki Watanuki 1981 165 p
Avail: Univ. Microfilms Order No. 8122880

Quasi-normalization, floating point algorithms for on-line arithmetic operations are presented. The properties of redundant number system in mantissa representation are studied and the range of redundant mantissa is derived by a method of error analysis. From the range of mantissa and the absolute error of on-line operations, the maximum relative representation error is defined and analyzed for redundant floating-point numbers. The developed floating point on-line algorithms were applied to a linear iterative method for solving the elliptic partial differential equations. It is shown that the bandwidth of the routing network of the array of processors is reduced by the digit serial computation using on-line arithmetic without degrading the performance. The performance is analyzed using speedup and effectiveness measures. Dissert. Abstr.

PROPER BAYES MINIMAX ESTIMATORS FOR A MULTIVARIATE NORMAL MEAN WITH UNKNOWN COMMON VARIANCE UNDER A CONVEX LOSS FUNCTION

Pi-Erh Lin and Amany Mousa Sep. 1981 31 p refs
(Contract N00014-80-C-0093)
(AD-A105746; FSU-STATISTICS-M593; TR-155-ONR) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper considers the estimation of Mu relative to a convex loss function. Two classes of minimax estimators are obtained for the estimated Mu when p > or = 3; the first is a new result and the second is a generalization of a result of Strawderman. A proper Bayes estimator is also obtained which is shown to satisfy the conditions of the second class of minimax estimators. The paper concludes by discussing the estimation of Mu relative to another convex loss function. GRA

SOME ADVANCE THOUGHTS ON THE DATA ANALYSIS INVOLVED IN CONFIGURAL POLYSAMPLING DIRECTED TOWARD HIGH PERFORMANCE ESTIMATES

John W. Tukey 16 Mar. 1981 20 p Prepared in cooperation with Bell Labs., Murray Hill, N.J.
(Contract DAAG29-79-C-0205)
(AD-A105906; TR-189-SER-2; ARO-16669.8-M) Avail: NTIS HC A02/MF A01 CSCL 12/1

Using configural polysampling to identify high-performance estimates proceeds in two phases: (1) estimating the best compromise to make at each configuration polysampled, and (2) choosing a generally-defined estimate whose performance comes close to that of this estimated optimum. In the first

step, shadow pricing of the criteria for the difference situations involved is helpful. In the second step, whether one uses a regression or selection-by-sectors approach, or combine both, the same shadow prices are useful. This report sketches some of the approaches to the two steps that seem natural.

KINDS OF POLYCONFIDENCE INTERVALS FOR CENTERS, AND SOME THOUGHTS ON IDENTIFICATION AND SELECTION OF CONFIDENCE PROCEDURES USING CONFIGURAL POLYSAMPLING
John W. Tukey 16 Apr. 1981 34 p Prepared jointly with Bell Telephone Labs., Murray Hill, N.J.
(Contract DAAG29-79-C-0205)
(AD-A105907; TR-190-SER-2; ARO-16669.9-M) Avail: NTIS HC A03/MF A01 CSCL 12/1

If we deal initially only with single situations, monoconfidence intervals can be either required only to be weak, to have proper confidence when averaged over all configurations, or to be strong, when they must have the appropriate properties conditionally for each configuration. Assuming location-and-scale invariance throughout both for situations and confidence intervals. When one considers a plot involving several situations, three kinds of polyconfidence intervals seem worth mention: (1) doubly-strong, whose properties hold separately for each combination of a situation and a configuration, (2) weak, whose properties hold on average for each situation, (3) singly strong, where the properties hold, first on average for each situation and, second, for each configuration and one situation. These notions, as well as that of balance in a conservative sense, are explored in the framework of configurations.

SOME COMPUTATIONAL DETAILS OF CONFIGURAL SAMPLING METHODS
Katherine Bell and Daryl Pregibon 30 Mar. 1981 39 p
(Contract DAAG29-79-C-0205)
(AD-A105932; TR-191-SER-2; ARO-16669.10-M) Avail: NTIS HC A03/MF A01 CSCL 12/1

Numerical evaluation of the optimum estimate via configural sampling involves evaluation of several double integrals. These integrals represent expectations over a distribution conditioned on the observed configuration. Theoretically, any location-scale invariant definition of the configuration will suffice, though numerically, some choices are better than others. A related concern is the change-of-variables used to map the region of integration, originally the half-plane, onto a fixed region, such as the unit square. This report is of use to the reader both as a guide to the pitfalls and curiosities of the computations presently recommended.

ASSESSING THE BEHAVIOR OF ROBUST ESTIMATES OF LOCATION IN SMALL SAMPLES: INTRODUCTION TO CONFIGURAL POLYSAMPLING
Daryl Pregibon and John W. Tukey Mar. 1981 16 p refs
(Contract DAAG29-79-C-0205)
(AD-A105956; TR-182-SER-2; ARO-16669.6-M) Avail: NTIS HC A02/MF A01 CSCL 12/1

Configural polysampling offers an effective alternative to both usual Monte Carlo techniques and small sample asymptotics in studying and improving robust estimates. Attention here is restricted to location estimators that are location and scale invariant. The methods are applicable to both simple and compound sampling situations. Several possible aspects of such studies include: (a) the determination of the minimum attainable variance in each sampling situation, (b) the determination of the maximum attainable polyefficiency over several sampling situations, (c) the fine-tuning of robust estimates with the intent of increasing their polyefficiency for small n, and (d) the identification of data configurations where one can a priori expect poor performance with certain estimators.

A SIMPLIFIED APPROACH TO SPECTRUM ESTIMATION OF STOCHASTIC PROCESSES Ph.D. Thesis
Mukta Lal Kar 1981 113 p
Avail: Univ. Microfilms Order No. 8123164

A simple approach to spectrum estimation for randomly sampled data was investigated. This approach is based on the Fourier series and the method of modified least squares fit to estimate the Fourier coefficients. The estimator is algebraically very simple and produces an alias free spectrum if a sufficient number of data points are available. This is true even if the mean sampling rate is less than the Nyquist rate required for spectral computation when using equi-spaced data samples. Detailed statistical and error analysis are presented for the estimator. A statistical analysis shows the estimator to be asymptotically unbiased and consistent. Also, a number of simulation experiments were conducted using both computer generated data and the data acquired in practial laboratory setups. For some cases the same data were input to other algorithms for comparison. The experimental results verify the analytic solutions in the majority of the cases.

ESTIMATION AND TESTING PROCEDURES FOR THE PARAMETERS OF THE NEGATIVE BINOMIAL DISTRIBUTION Ph.D. Thesis
Linda Jean Willson 1981 107 p
Avail: Univ. Microfilms Order No. 8123476

The parameterization of a negative binomial distribution was studied. Where Mu is the single unknown parameter, three sequential procedures designed to estimate Mu with a desired level of precision were developed: (1) estmating Mu with a specified coefficient of variation of the estimate 'C' (2) estimating Mu within a proportion 'p' of Mu with confidence 1 - alpha, and (3) estimating Mu within 'd' units with confidence 1 - alpha. A nonparameteric, sequential procedure is developed to estimate the mean with a specific coefficient of variation of the estimate 'C'. For the two-parameter negative binomial distribution, a multistage procedure for estimating 'k' is proposed and compared, by the use of simulation, with the methods of moments and maximum likelihood estimators. The weighted regression approach to estimation and testing for a common 'k' is investigated and compared with one based on the maximum likelihood estimator and the likelihood ratio test. There are indications that the likelihood-based procedure produces more precise estimates and has greater power than the weighted regression method.

BAYESIAN FORECASTING FOR SWITCHING REGRESSION AND AUTOREGRESSIVE PROCESSES Ph.D. Thesis
Margaret Foster Land 1981 60 p
Avail: Univ. Microfilms Order No. 8123840

Bayesian predictive density for switching regression models and for autoregressive processes was developed and investigated. For the switching regression with variance known, switch point known, and vague priors, the resulting predictive density was a normal. If the switch point was unknown, then the predictive density was a mixture of normal densities. If the variance was unknown then the predictive density involved a univariate general density if the switch point was known and a mixture of general densities if the switch point was unknown. For the linear model, all parameters unknown, and conjugate priors, the predictive density was a mixture of matrix densities. For an m-th autoregressive process with vague priors, the predictive density of the

next k future values was derived. This is the most general case.

INFLUENCES ON FACTORIAL ACCURACY: A MONTE CARLO INVESTIGATION Ph.D. Thesis
Thomas Joseph Fahey, Jr. 1981 152 p
Avail: Univ. Microfilms Order No. 8123150

Twenty-seven population correlation matrices were randomly generated with specified numbers of factors, proportions of common variance, ratios of the numbers of variables to the numbers of factors. The correct numbers of factors in these 27 population correlation matrices were extracted via the principal axes factoring procedure using the true population communalities in the diagonals. The correct numbers of factors were rotated via the normalized Varimax procedure. Sixteen hundred and twenty sample correlation matrices with different ratios of observations per variable were randomly generated from the 27 population correlation matrices. Mean accuracy indices were compared via dependent sample tests for the conditions of overfactoring versus underfactoring. Results indicate that far fewer observations are needed than were previously throught, and that overfactoring is superior to underfactoring. When there are few factors, many variables, and a high proportion of common variance in the population, samples can be based on fewer observations than variables and still be highly replicable. VALUE TREE ANALYSIS OF ENERGY SUPPLY ALTERNATIVES
William G. Stillwell, Detlof vonWinterfeldt, and Richard S. John Jun. 1981 41 p refs
(Contract MDA903-80-C-0194)
(AD-A105629; SSRI-81-2) Avail: NTIS HC A03/MF A01 CSCL 05/10

The use of value trees in multiattribute evaluations of energy supply alternatives was examined. A value tree relating general values and concerns to specific value relevant attributes was constructed to compare three energy options: nuclear, coal, and a combined geothermal and conservation package. Both hierarchical and non-hierarchical weighting procedures were used to rate the energy options. Several additive multiattribute models were constructed and compared with holistic rankings and ratings of the three options. Three basic findings were: (1) hierarchical weights were steeper than non-hierarchical weights; (2) groups identified by their holistic first choice showed substantial agreement in their assessment of attribute weights; (3) convergence of MAU model parameters resulted in a 'common model', consistent with holistic evaluations of the pro-conservation group, and generally inconsistent with those of the pro-nuclear group. This differential consistency between model composites and holistic evaluations is interpreted as a result of weight parameter distortions due to social desirability and a neglect to consider attribute value ranges when making weight judgments. A FUNCTIONAL TECHNIQUE FOR DECOMPOSING THE COMPLEXITY OF REQUIREMENTS ANALYSIS
Pamela Zave Aug. 1981 25 p refs
(Contract F49620-80-C-0001; AF Proj. 2304)
(AD-A105517; AFOSR-81-0663TR) Avail: NTIS HC A02/MF A01 CSCL 09/2

This paper is based on an 'operational' approach to requirements specification for embedded systems, in which a requirements specification is an executable model of the proposed system interacting with its environment. The operational model is described in terms of asynchronously interacting digital processes. This paper addresses directly the question: How can such specifications for complex systems be developed? The proposed technique exploits an identification of intuitively recognizable system functions with processes in the formal specification of that system, so that its process structure can be determined during early analysis. Since the formal language supports incremental development of a specification, one process at a time, the requirements analyst can then elaborate the requirements one function at a time. Since the elaboration of each function entails quite a number of decisions, significant decomposition of complexity is achieved. The technique is illustrated within the domain of process-control systems, but its extensibility to other applications is argued. The specifications produced are good with respect to several important criteria, including modifiability and representation of performance constraints. Author (GRA)

NEAR AND FAR FIELD TECHNIQUES IN THE ANALYSIS OF NOISE GENERATION MECHANISMS. PART 1: LOCALIZATION LEVELS AND METHODS OF REPRESENTING SOURCE FIELDS, INTUITIVE INTRODUCTION TO NEAR FIELD ANTENNAE
L. Gaudriot and M. Mercusot Sep. 1981 34 p refs Transl. into ENGLISH of 'Tech. de champ proche et lointain pour l'anal. des mecanismes de creation du bruit. Premiere partie: Niveaux de localisation et modes de representation de champs sources; introduction intuitive aux antennes de champ proche' (france)
(DRIC-T-6338; BR80434) Copyright. Avail: Issuing Activity

A technique for analyzing acoustic fields, using double layer microphones, was developed. Near field antennas were used since they permit work in an externally noisy environment to the extent that the proximity effect favors the source being studied. They can also be mounted on mobile vehicles. Wave equations were solved for vibration waves at casing surfaces and for internal stress waves in machines. Good representations of the acoustic field at the source, and of the far field, are obtained.

A STUDY OF THE VISCOUS DISSIPATION AND SURFACE LOADING ON A VIBRATING SURFACE Progress Report
John E. Yates Washington NASA Dec. 1981 51 p refs
(Contract NAS1-16365)
(NASA-CR-3499; ARAP-451) Avail: NTIS HC A04/MF A01 CSCL 20A

The energy dissipated by viscosity at the edge of a vibrating flat plate is calculated and compared to the radiated acoustic energy. A correction to the Kirchhoff integral estimate of the noise is derived. For Helmholtz number of order unity and smaller the dissipation can be comparable to or greater than the acoustic energy. A viscous compressible theory of the load distribution on a vibrating two dimensional body is developed. First it is shown that load calculations based on potential theory and the Newmann uniqueness condition (continuity of potential or pressure on the surface) are not in agreement with experiment or the more correct viscous theory. For a flat plate airfoil the eigensolution of potential theory is indeterminant while viscous theory yields a unique solution that has square root singularities at the edges. It is also shown that for compact surfaces the far field acoustics depend only on the magnitude of the eigensolutions of potential theoy and so will be uniquely determined by the viscous theory. It is suggested that the general viscous theory of vibrating surfaces with cross sectional geometry will lead to results in agreement with expermentally measured load distributions. Author

EXPERIMENTAL STUDY OF NOISE REDUCTION FOR AN UNSTIFFENED CYLINDRICAL MODEL OF AN AIRPLANE FUSELAGE

Conrad M. Willis and Edward F. Daniels Dec. 1981 36 p refs
(NASA-TP-1964; L-14878) Avail: NTIS HC A03/MF A01 CSCL 20A

Noise reduction measurements were made for a simplified model of an airplane fuselage consisting of an unstiffened aluminum cylinder 0.5 m in diameter by 1.2 m long with a 1.6-mm-thick wall. Noise reduction was first measured with a reverberant field pink-noise load on the cylinder exterior. Next, noise reduction was measured by using a propeller to provide a more realistic noise load on the cylinder. Structural resonance frequencies and acoustic reverberation times for the cylinder interior volume were also measured. Comparison of data from the relatively simple test using reverberant-field noise with data from the more complex propeller-noise tests indicates some similarity in both the overall noise reduction and the spectral distribution. However, all of the test parameters investigated (propeller speed, blade pitch, and tip clearance) had some effect on the noise-reduction spectra. Thus, the amount of noise reduction achieved appears to be somewhat dependent upon the spectral and spatial characteristics of the flight conditions. Information is also presented on cyclinder resonance frequencies, damping, and characteristics of propeller-noise loads. Author

PREDICTION OF FLYOVER JET NOISE SPECTRA FROM STATIC TESTS

Ulf Michel and Alfons Michalke (Technische Univ., Berlin) Dec. 1981 27 p refs Presented at the 100th Meeting of the Acoust. Soc. of Am., Los Angeles, Nov. 1980
(NASA-TM-83219; L-14953) Avail: NTIS HC A03/MF A01 CSCL 20A

A scaling law is derived for predicting the flyover noise spectra of a single-stream shock-free circular jet from static experiments. The theory is based on the Lighthill approach to jet noise. Density terms are retained to include the effects of jet heating. The influence of flight on the turbulent flow field is considered by an experimentally supported similarity assumption. The resulting scaling laws for the difference between one-third-octave spectra and the overall sound pressure level compare very well with flyover experiments with a jet engine and with wind tunnel experiments with a heated model jet. MODE PROPAGATION IN NONUNIFORM CIRCULAR DUCTS WITH POTENTIAL FLOW

Y. C. Cho and K. U. Ingard (MIT) 1982 15 p refs Presented at the 20th Aerospace Sci. Conf., Orlando, Fla., 11-14 Jan. 1982
(NASA-TM-82776; E-1086; AIAA-Paper-82-0122) Avail: NTIS HC A02/MF A01 CSCL 20A

A previously reported closed form solution is expanded to determine effects of isentropic mean flow on mode propagation in a slowly converging-diverging duct, a circular cosh duct. On the assumption of uniform steady fluid density, the mean flow increases the power transmission coefficient. The increase is directly related to the increase of the cutoff ratio at the duct throat. With the negligible transverse gradients of the steady fluid variables, the conversion from one mode to another is negligible, and the power transmission coefficient remains unchanged with the mean flow direction reversed. With a proper choice of frequency parameter, many different modes can be made subject to a single value of the power transmission loss. A systematic method to include the effects of the gradients of the steady fluid variables is also described. B.W.

VARIABILITY OF ACOUSTIC TRANSMISSIONS IN A SHALLOW WATER AREA

Erik Sevaldsen 1 May 1981 52 p refs
(AD-A103278; SACLANTCEN-SR-46) Avail: NTIS HC A04/MF A01 CSCL 20/1

A series of experiments on the variability of acoustic transmissions in a shallow water area is described. The variables considered are time (short period and seasons), frequency of transmission (1 to 6 kHz), and space (location and depth of source, depth of receiver). The variables are studied mainly in terms of transmission loss fluctuations and spreading in frequency and delay of phase coherent pulse signals. Short period transmission loss fluctuations were found to be within + or - dB of the mean, with some few significant exceptions in summer. Delay spreading (3 dB) was found to be rather small, mostly near 5 ms, because there was usually only one strong arrival/arrival cluster. The measured frequency spreading is classified in two groups, one showing very little spreading, delta f epsilon (0.05 to 0.1) Hz, the other showing much more spread, delta f > 1 Hz. This is interpreted as the result of internal wave action under the existing sound propagation conditions. Author

ON THE DESIGN OF AN ACOUSTICALLY ISOLATING BUBBLE SCREEN FOR THE CARR INLET ACOUSTIC RANGE M.S. Thesis

Kenneth William Marr Jun. 1981 93 p refs
(AD-A105830) Avail: NTIS HC A05/MF A01 CSCL 20/1

The theoretical acoustic behavior of an underwater bubble screen is examined using Rayleigh reflection theory. A microcomputer model simulates the acoustic impedance mismatch at the interfaces of an ideal, bubble screen. A sensitivity analysis indicates that the angle of incidence of sound energy and the speed of sound in the layer are the most important screen properties for predicting the insulating capability of a bubble screen. Frequencies for which the screen thickness is an integral number of half wavelengths, the interference results in a reduced reflection coefficient and a corresponding increase in transmission through the screen. For a broad band spectrum wide enough to cover a number of such frequencies, the attenuation to be expected exceeds 10 dB only over about 90 percent of the spectrum. Author

(ZF11111003)
(AD-A105554; NOSC/TR-694) Avail: NTIS
HC A03/MF A01 CSCL 20/1

This report contains an analysis of the potential of using a noncoherent two dimensional filter technique to extract a ridge-like signal from a two dimensional surface. The two dimensional surface consists of the signal plus white Gaussian noise. It is demonstrated that the technique shows promise both in visual ridge detection and in automatic energy ratio detection. It is suggested that a more elegant form of the filter used here (complex coefficient) be used to further enhance the ridge-like signal structure. Author (GRA)

THE EFFECT OF SCATTERING AND ABSORPTION ON NOISE FROM A CAVITATING NOISE SOURCE IN THE SUBSURFACE OCEAN LAYER M.S. Thesis

Yngvar Dag Tronstad Jun. 1981 177 p refs
(AD-A105758) Avail: NTIS HC A09/MF A01 CSCL 20/1

When investigating the detection performance of a passive homing torpedo used against shallow draft surface ships, certain environmental factors such as the rough sea surface and the bubble dominated inhomogeneous layer near the sea surface have to be considered. This thesis attempts to gain some insight into the behavior of a homing torpedo system during its critical attack phase, as well as getting some indications of the relative importance of the scattering mechanisms and the induced tactical limitations. An idealized propagation model was used as reference of comparison. For a given sea state and target speed the results stress the importance of low operating frequency as well as a high maximum turn rate. They also point to the importance of having a search depth below the bubble-dominated subsurface layer, and a variable speed capability during the torpedo's attack phase. Author (GRA)

(AD-A105534) Avail: NTIS HC A04/MF A01 CSCL 20/1

Spherical targets. In acoustic scattering from elastic objects, resonances features appear in the returned echo at frequencies where the objects eigenfrequencies are located, which are explained by the excitation of interior creeping waves. Corresponding resonance terms may be split off from the total scattering amplitude, leaving behind an apparently nonresonant background amplitude. This is demonstrated here for scatterers of spherical geometry, and in the following companion paper also for scatterers or arbitrary geometry, using the T-matrix approach. For the case of near-impenetrable spheres, it is subsequently shown that the background amplitude can be split further into specularly reflected contributions, plus highly attenuated resonance terms which are explained by the excitation of exterior (Franz-type) creeping waves. The singularity structure of the scattering function is shown mathematically, using the R-matrix approach of Nuclear scattering theory, as that of a meromorphic function without any additional 'entire function' (as had been postulated by the Singularity Expansion Method). HC A13/MF A01 CSCL 20/1

In this dissertation, the design of transmit and processing waveforms is used to maximize the signal-to-interference ratio (SIR) to improve the detectability of a doubly spread target return in the presence of volume and/or surface reverberation plus white Gaussian noise. The SIR is dependent upon target and reverberation scattering functions and the cross-ambiguity function of the transmit and processing waveforms. Volume reverberation, target, and surface reverberation scattering functions are derived. Volume reverberation is modelled as the spatially uncorrelated scattered field from randomly distributed point scatterers in deterministic plus random translational motion. A single scattering approximation is used and general, frequency dependent transmit and receive arrays are included in all derivations. The doubly spread target is modelled as a linear array of discrete highlights in deterministic translational motion. A target scattering function is obtained from the general bistatic volume reverberation scattering function by appropriately specifying the volume density function of the discrete point scatterers for a monostatic geometry. THE EFFECT OF THE MID-ATLANTIC RIDGE ON LONG RANGE SOUND PROPAGATION

R. F. LaPlante, P. D. Koenigs, and D. G. Browning 1 Oct. 1981 16 p Presented at the 101st Meeting of the Acoust. Soc. of Am., Ottawa, 20 May 1981
(AD-A105747; NUSC-TD-6555) Avail: NTIS
HC A02/MF A01 CSCL 20/1

This document contains the oral and visual presentation given at the 101st Meeting of the Acoustical Society of America, 20 May 1981, Ottawa, Canada. Previous long range acoustic experiments show that the Mid-Atlantic Ridge, a major topographic feature rising to the deep sound channel axis can have a significant effect on SOFAR propagation. (R. J. Urick, J. Acoust. Soc. Am. 35(9), 1413, 1963.) In order to quantify this effect, data have been analyzed from a recent SOFAR experiment that deployed SUS charges during several transits across the Ridge. The signals were received on a hydrophone located near Bermuda, a distance of approximately 2500 km. These results are comapared with data from Atlantic seamounts of similar height and ridges in other oceans. (K. M. Guthrie, J. Acoust. Soc. Am., 68(S1), S52(A), 1980.) The enhancement or shadowing of SOFAR propagation is presented as a function of source depth and frequency for various geometries. Author (GRA)

MEASUREMENTS OF THE LOW-FREQUENCY WIND-GENERATED AMBIENT NOISE IN THE DEEP OCEAN

R. W. Bannister, R. N. Denham, K. M. Guthrie, and D. G. Browning 1 Oct. 1981 15 p Presented at the 101st Meeting of the Acoust. Soc. Am., Ottawa, Canada, 21 May 1981
(AD-A105748; NUSC-TD-6565) Avail: NTIS
HC A02/MF A01 CSCL 20/1

This document presents the oral and visual presentation entitled 'Measurements of the Low-Frequency Wind-Generated Ambient Noise in the Deep Ocean,' presented at the 101st Meeting of the Acoustical Society of America, 21 May 1981, in Ottawa, Ontario, Canada. Southern Hemisphere oceans provide unique conditions for the measurements of low-frequency wind-generated ambient noise due to their relatively low shipping densities. Results (10-500 Hz) for a single location in the South Fiji Basin supported the two principal noise generation mechanisms that have been suggested: turbulence, bubbles and spray. For a given local wind speed, higher noise levels were observed than have been reported for the North Atlantic Ocean. This paper is an analysis of wind-generated noise data from additional sites throughout the Tasman Sea-Fiji Basin region. Variation in measured level is compared to wind speed, sea state, and propagation conditions. It appears that local wind speed is not an absolute indicator of wind generated ambient noise level. GRA

A DATA REDUCTION PROCEDURE FOR CAVITATION NOISE FROM AN OSCILLATING HYDROFOIL

Robert D. Pierce Jul. 1981 40 p refs
(AD-A105719; DTNSRDC/CID-81/2) Avail: NTIS HC A03/MF A01 CSCL 20/1

An improved computerized technique has been used to analyze nonstationary cavitation noise from an oscillating hydrofoil. Combined analog and digital signal processing procedures were developed that use ensemble averaging techniques to quantify the average sound pressure variance as a function of the foil's angle of attack. The averages provide a quantitative basis for comparing cavitation noise produced by this hydrofoil under a finite spectrum of specific test conditions. Author (GRA)

ULTRASOUND CHARACTERIZATION OF DISTURBED FLOW PATTERNS Ph.D. Thesis

Lionel Joseph DLuna 1981 348 p
Avail: Univ. Microfilms Order No. 8123639

Techniques to observe flow patterns using pulsed RF Doppler ultrasound were investigated and experimental measurements on disturbed vortex shedding flows carried out. Vortex structure and the possible characteristics that are manifest in the Doppler signals were analyzed. It was found that the best geometry is to observe the flow pattern with the ultrasound beam normal to the flow direction. A realistic acoustic scattering model was developed from which the Doppler signals pertaining to a known Karman vortex velocity field are simulated. Experimental measurements were made on steady channel flows and the ability of the ultrasonic techniques to detect isolated vortices was determined. In vitro bio-fluid flows were studied under steady and pulsatile conditions. Stenosis sections of fifty percent and seventy-five percent occlusion were introduced into a tube flow and the flow patterns distal to the stenoses are measured. Dissert. Abstr.

NEUTRINO, MAXWELL AND SCALAR FIELDS IN CYLINDRICAL AND SPHERICAL RELATIVISTIC SPACES Ph.D. Thesis

David Frank Cattell 1981 226 p
Avail: Univ. Microfilms Order No 8124556

The quantum-mechanical theory of neutrino, Maxwell and zero-mass scalar fields treated as test fields in two different fixed background spacetimes representing respectively spatial cylindrical and spherical symmetries are discussed. The metrics for these spacetimes are exact solutions of the Einstein gravitational field equations. In the first case the background metrics is that of the static, cylindrically symmetric magnetic or plasm universe whose theory has been given by Melvin. In the second case the background metric is that of the Schwarzschild geometry external to an isolated spherically-symmetric source of gravity. An analogy between the plasm universe and a dielectric medium (or wave guide) is made for the case of electromagnetic waves (with m = o) traveling at an angle with respect to the plasm universe z-axis; these waves are shown to be transverse in the radiation zone. Dissert. Abstr.

CERENKOV RADIATION PRODUCED BY 100 MeV ELECTRONS M.S. Thesis

David Earl McLaughlin Jun. 1981 49 p refs
(AD-A105864) Avail: NTIS HC A03/MF A01 CSCL 20/8

It is proposed that electromagnetic radiation of a specified frequency can be produced as a result of stimulated Cerenkov radiation in a dielectric resonator excited by a superluminal electron beam. The frequency generated is a function of three physical parameters. They are the electron energy, the thickness of the dielectric resonator and its index of refraction. This work provides a theoretical derivation for predicting the frequency of stimulated Cerenkov radiation in a dielectric slab. The first experimental results using extremely relativistic electrons are reported, and the problems encountered are outlined with some suggestions for improvements. The results of this validation show that the observed frequency differs from the predicted frequency by less than 1.5%. Incidental to the conduct of this experiment, ordinary Cerenkov radiation in the usual cone was observed in air at microwave frequencies. A possible application of the stimulated Cerenkov process as an electron beam monitor is briefly discussed. Author (GRA)

NUCLEAR STRUCTURE FROM RADIOACTIVE DECAY Annual Progress Report

J. L. Wood 30 Sep. 1981 13 p refs
(Contract DE-AS05-80ER-10599)
(DE82-000423; DOE/ER-10599/T1) Avail: NTIS HC A02/MF A01

The neutron-deficient nuclei around the Z = 82 shell closure is studied, with special emphasis on the levels of the odd-mass Pt, Au, Hq and Tl isotopes. The low-energy structural features of sequences of isotopes (and isotones) were examined over many adjacent mass numbers. This has a two-fold purpose. First, it enables one to build up a very complete picture of nuclear structure that connects the regions of stable nuclei (where, e.g., transfer reactions and Coulomb excitation permit the measurement of detailed spectroscopic properties) with regions far from stability, where detailed spectroscopic information is very limited. Second, it provides a map of the excitation degrees of freedom as a function of the changing proton and neutron number over broad mass regions. DOE

ENVIRONMENTAL READINESS DOCUMENT. ADVANCED ISOTOPE SEPARATION PROGRAM
Aug. 1981 56 p refs
(Contract DE-AC01-79EV-10292)
(DE81-029952; DOE/EP-0029) Avail: NTIS HC A04/MF A01

The uncertainties to be resolved through research development and those that constitute a limit on the confidence that can be placed in the conclusions are addressed. The conclusions are presented, giving the probabilities of an adverse finding resulting from further environmental research. The impacts and concerns are treated without reference to specific sites or location. The technology from which the environmental concerns emerge is described. Drawn from the technology program office and the Environmental Development plan for the Advanced Isotope Separation Program (AIS) is provided. The likelihood of adverse findings concerning the environmental acceptability of the technology, the problems and uncertainties stemming from current or anticipated environmental regulation, and the environmental and control considerations is examined. On this basis, an assessment is offered of the existing or potential barriers to commercialization. Environmental control research is discussed and associated costs are addressed. The impact of environmental-related costs on the cost of enriching uranium by the AIS techniques is also addressed. Current and possible new standards related to this technology are identified. Estimates of relative chemical hazards are provided. The feed and product associated with the current nuclear fuel cycle facilities and the changes that may be required by introduction of AIS into the enrichment enterprise are characterized. A glossary is included. DOE

EFFECT OF ORGANIC COMPLEXANTS ON THE MOBILITY OF LOW-LEVEL WASTE RADIONUCLIDES IN SOILS: STATUS REPORT
J. L. Swanson Sep. 1981 33 p refs
(Contract DE-AC06-76RL-01830)
(DE81-030409; PNL-3927) Avail: NTIS HC A03/MF A01

The effects of some organic complexants on the sorption by soil of some elements typical of those present in low-level wastes are evaluated and procedures are developed to efficiently obtain valid sorption data. Data were obtained with Hanford soil and the elements europium, nickel, cobalt, cesium, and strontium. Complexants studied include: ethylenediaminetetraacetic acid (EDTA), diethylenetriaminepentaacetic acid (DTPA), and humic acid. The sorption of cesium and strontium was found to be affected very little by EDTA or DTPA. These complexants were found to greatly reduce the sorption of europium, nickel, or cobalt by the soil. The Eu/EDTA system was found to be well behaved, and the effect of the complexant on the sorption by soil was quantified. With nickel and cobalt kinetic problems were encountered, and the effects of complexants on the sorption by soil have not yet been quantified. DOE

TEMPERATURE DEPENDENCE OF H SATURATION AND ISOTOPE EXCHANGE
B. L. Doyle, W. R. Wampler, and D. K. Brice 1981 5 p refs
Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(DE-AC04-76DP-00789)
(DE81-026633; SAND-81-0291C; CONF-810831-34) Avail: NTIS HC A02/MF A01

The retention, release, and isotope exchange of ion implanted hydrogen and deuterium in carbon and TiC were investigated as a function of temperature. The implantations were performed both at room and elevated temperatures. In addition, samples implanted at room temperature were annealed isochronally to measure the thermal release of hydrogen. The results of the experiments indicate that both the saturation and isotopic exchange properties of hydrogen have significant temperature dependence. DOE

ELECTRON TRANSFER IN WEAKLY INTERACTING SYSTEMS
Norman Sutin and Bruce S. Brunschwig 1981 33 p refs
Presented at Symp. on Inorganic Reaction Mechanisms, Detroit, 10 Jun. 1981
(DE81-026134; BNL-29895; CONF-8106139-3) Avail: NTIS HC A03/MF A01

A recently proposed semiclassical model, in which an electronic transmission coefficient and a nuclear tunneling factor are introduced as corrections to the classical activated-complex expression, is described. The nuclear tunneling corrections are shown to be important only at low temperatures or when the electron transfer is very exothermic. By contrast, corrections for nonadiabaticity may be significant for most outer-sphere reactions of metal complexes. The rate constants for electron exchange reactions predicted by the semiclassical model are in very good agreement with the observed values. The implications of the model for optically-induced electron transfer in mixed-valence systems are noted. DOE

DESIGN AND PERFORMANCE OF TIME-FREQUENCY-CODED SIGNALS FOR SPREAD-SPECTRUM SYSTEMS Ph.D. Thesis
Khiem Van Cai 1981 222 p
Avail: Univ. Microfilms Order No. 8123615

A fundamental problem in multiple-access communication systems employing spread-spectrum signals is that of designing a large set of signals that have uniformly small crosscorrelation properties. The uniformly small crosscorrelation property is necessary to permit the signals to be detected with matched filters and a threshold operation. The size of the signal set should be as large as possible in order that the greatest number of potential users, each having a uniquely assigned signal, can be accommodated by the system. Dissert. Abstr.

REPRESENTATION OF THE NEUTRON CROSS SECTIONS OF SEVERAL FERTILE AND FISSILE NUCLEI IN THE RESPONSE REGIONS
G. deSaussure and R. B. Perez Sep. 1981 42 p refs
(Contract W-7405-eng-26)
(DE82-000504; ORNL/TM-7945; ENDF-312) Avail: NTIS HC A03/MF A01

Several problems related to the measurement, analysis and evaluation of the neutron cross sections of the main fertile and fissile nuclides in the resonance region are reviewed. In particular, the ENDF/B-V representation of these cross sections are discussed. In recent years little progress has been made in improving knowledge of the resolved resonance parameters of the fertile nuclei. It is suggested that this absence of progress is due to a lack of adequate methodologies to deal with the systematic errors arising from uncertainties in the analysis of the measurements. The ENDF/B treatment of the unresolved resonance is discussed, and the validation of the unresolved resonance range evaluations with appropriate transmission and self-indication measurements is recommended. DOE

ATA INJECTOR-GUN CALCULATIONS

A. C. Paul 3 Aug. 1981 54 p refs
(Contracts W-7405-eng-48; N60921-81-LT-W0009; N60921-81-LT-W0026; DARPA Order 3718)
(DE82-001149; UCID-19197) Avail: NTIS HC A04/MF A01

ATA is a pulsed, 50 ns 10 KA, 50 MeV linear induction electron accelerator at LLNL. The ETA could be used as an injector for ATA. However the possibility of building a new injector gun for ATA, raised the question as to what changes from the ETA gun in electrode dimensions or potentials, if any, should be considered. In this report the EBQ code results for the four electrode configurations are reviewed and an attempt is made to determine the geometrical scaling laws appropriate to these ETA type gun geometries. Comparison of these scaling laws will be made to ETA operation. The characteristic operating curves for these geometries will also be presented and the effect of washer position determined. It will be shown that emittance growth will impose a limitation on beam current for a given anode potential before the virtual cathode limit is reached. DOE

CHARACTERIZATION OF MATERIALS FOR WASTE-CANISTER COMPATIBILITY STUDIES

H. McCoy and J. E. Mack Oct. 1981 33 p refs
(Contract W-7405-eng-26)
(DE82-000902; ORNL/TM-7917) Avail: NTIS HC A03/MF A01

Sample materials of severn radioactive waste forms and fifteen canister materials were procured for compatability tests. A test capsule was designed for the tests in which disks of a single waste form were contacted with duplicate samples of canister materials under modest spring compression. The program involved long-term tests at 100 C and 300 C temperatures typical of storage, and tests at 800 C to simulate temperatures that might occur as a result of a fire in a transportation accident. DOE

N82-14908# Battelle Pacific Northwest Labs., Richland, Wash.

APPLICATION OF A SITE-BINDING, ELECTRICAL, DOUBLE-LAYER MODEL TO NUCLEAR WASTE DISPOSAL

J. F. Relyea and R. J. Silva Sep. 1981 28 p refs
(Contract DE-AC06-76RL-01830)
(DE81-030231; PNL-3898) Avail: NTIS HC A03/MF A01

A site-binding, electrical, double-layer adsorption model was applied to adsorption of Cs for both a montmorillonite clay and powdered SiO2. Agreement between experimental and predicted results indicates that Cs(+) is adsorbed by a simple cation-exchange mechanism. Further application of a combination equilibrium thermodynamic model and site-binding, electrical, double-layer adsorption model was made to predict the behavior of U(VI) in solutions contacting either the montmorillonite clay or powdered SIO2. Given the existing information about the probable U solution species, it was possible to determine that UO2(+2) is most likely adsorbed by cation-exchange at pH 5. At higher values (pH 7 and 9), it was shown that UO2(OH)2(0) is probably the most strongly adsorbed U solution species. It was also found that high NaCl solution concentrations at higher pH values lowered U concentrations. DOE

BEHAVIOR OF RADIOACTIVE IODINE AND TECHNETIUM IN THE SPRAY CALCINATION OF HIGH-LEVEL WASTE

C. A. Knox and R. K. Farnsworth Aug. 1981 22 p refs
(Contract DE-AC06-76RL-01830)
(DE81-028405; PNL-3741) Avail: NTIS HC A02/MF A01

The Remote Laboratory-Scale Waste Treatment Facility (RLSWTF) was designed and built as a part of the High-Level Waste Immobilization Program (now the High-Level Waste Process Development Program) at the Pacific Northwest Laboratory. In facility, installed in a radiochemical cell, is described in which installed in a radiochemical cell is described in which small volumes of radioactive liquid wastes can be solidified, the process off gas can be analyzed, and the methods for decontaminating this off gas can be tested. During the spray calcination of commercial high-level liquid waste spiked with Tc-99 and I-131 and 31 wt% loss of I-131 past the sintered-metal filters. These filters and venturi scrubber were very efficient in removing particulates and Tc-99 from the the off-gas stream. Liquid scrubbers were not efficient in removing I-131 as 25% of the total lost went to the building off-gas system. Therefore, solid adsorbents are needed to remove iodine. For all future operations where iodine is present, a silver zeolite adsorber is to be used. DOE

COMPARISON OF POTENTIAL RADIOLOGICAL CONSEQUENCES FROM A SPENT-FUEL REPOSITORY VERSUS NATURAL-URANIUM DEPOSITS

M. O. Cloninger and O. J. Wick Dec. 1980 15 p refs Presented at the ANS Waste Management Conf., Tucson, Ariz., 23-26 Feb. 1981
(Contract DE-AC06-76RL-01830)
(DE81-028232; PNL-SA-8881; CONF-810217-19) Avail: NTIS HC A02/MF A01

The long term hazard from spent fuel in a geologic repository is found to be comparable to that of a large ore deposit, although the specific nuclide concentration in an individual fuel element is not duplicated in nature. A repository constructed within reasonable constraints present no greater hazard than a large ore deposit. The natural hazard due to some observed radioactive releases to the biosphere in the United States far exceeds any that could reasonably be expected from a spent-fuel repository. Use natural ore deposits as a basis for criteria for nuclear waste repositories is so variable that it does not allow a specific criterion to be stated in absolute terms. If the naturally radioactive environment is to be used as a criterion for repositories, the radiological quality of the environment in the immediate region of a specific repository, and an acceptable potential increase in that radiological content due to the existence of the repository should be considered. THIRD ORDER ABERRATIONS OF CLASSICAL MIRROR LENSES WITH SPHERICAL SURFACES

Ludvik Canzek Aug. 1981 17 p refs Transl. into ENGLISH from Optik, West Germany, v. 57, no. 1, 1980 p 1-8
(DRIC-T-6359; BR80027) Copyright. Avail: Issuing Activity

The Seidel analysis of third order aberrations is proposed as an aid for correcting geometric aberrations. The Seidel aberrations are shown to be functions of the central obstruction only where the focal point coincides with the apex of the primary mirror. Catadioptric lenses are regarded, for correction purposes as classical mirror systems supplemented with lenses. This is illustrated by considering Newton, Cassegrain, and Swarzschild systems. The Swarzschild combination provides an exceptional means of correction and exhibits minimal zonal aberration.

STUDIES OF RESONANCE-LIGHT PRESSURE Ph.D. Thesis

Juha Javanainen 1980 23 p refs
(ISBN-951-45-2131-5) Avail: NTIS HC A02/MF A01

A Fokker-Planck equation for the projection of the atomic velocity distribution onto the wave vector direction of a plane wave of light is presented. The formula is also applied to the cooling of gases. The isotope separation by selective deflection of the desired isotope out of an atomic beam is investigated. The laser cooling of an ion trapped in a parabolic potential well, and the three dimensional problem of a trapped ion with an arbitrary direction of the incident laser beam are examined. The center of mass motion of the ion is analyzed in the representation of the harmonic oscillator eigenstates. The rate equations presuppose that either the intensity is low, or that the frequency of the mechanical oscillator exceeds the power broadened linewidth of the transition.

A POLARIZER FOR VACUUM ULTRAVIOLET

D. L. Steinmetz, W. G. Phillips, M. Wirick, and F. F. Forbes *In* CNES FOC F/96 Polarizers 17 Sep. 1980 4 p refs Repr. from Appl. Opt., v. 6, no. 6, Jun. 1967 p 1001-1004 Revised Sponsored by NASA (For primary document see N82-14915 05-74)
Avail: NTIS HC A06/MF A01 CSCL 20F

An MgF2 double Rochon prism, useful as a polarizer or analyzer in wavelengths longer than 1300A is described. Measurements of MgF2 transmission and of polarizer angular beam deviation from 1150 to 2900A are presented. The prism is comprised of 2.25 mm, MgF2 depolarizers, optically contacted. At normal incidence, a 4% transmission gain was measured from 6000 to 2200A, compared with air spaced elements. One depolarizer was vibrated to 40 g from 20 to 3500 Hz without deterioration in optical contact. Transmissions below 1400A are not good. In thin samples, surface loss is twice absorption loss in the range 1150 to 1500A. Refraction indices and a computer ray trace were used in processing photographic beam divergence data. If care is taken to remedy scattering effects, the prism is an efficient on-axis polarizer in the 1300 to 3000A range.

ANOMALOUS DISPERSION OF BIREFRINGENCE OF SAPPHIRE AND MAGNESIUM FLUORIDE IN THE VACUUM ULTRAVIOLET

V. Chandrasekharan and H. Damany *In its* FOC F/96 Polarizers 17 Sep. 1980 5 p refs Repr. from Appl. Opt., v. 8, no. 3 Mar. 1969 p 671-675 (For primary document see N82-14915 05-74)
Avail: NTIS HC A06/MF A01

Previous measurements of the birefringence of sapphire and magnesium fluoride were extended to their respective limits of transparency, revealing anomalous dispersion effects at short wavelengths, e.g. a change of birefringence sign after passing through zero, in the case of MgF2. Applications of these effects are proposed. The stationary nature of retardation near lambda g, 1390A for MgF2 and 1555A for sapphire, is equivalent to achromatism which can be exploited over a limited domain of about 40A near lambda g. Near lambda 0, 1194 and 1426A, phase retardation change arises from the rapid variation of delta n, 0.0143 and 0.0130. The various orders are closely spaced, so relatively thin plates of MgF2 could be used as birefringent Lyot filters to study a weak line in the presence of a strong line from 1140 to 1250A. In optical pumping experiments on atomic hydrogen, a quarter wave MgF2 phase retarder is more practical than reflection by Al mirrors at 45 deg azimuth.

DUST CLOUD MODELS: SENSITIVITY OF CALCULATED TRANSMITTANCES TO VARIATIONS IN INPUT PARAMETERS Final Report

Melvin G. Heaps Jun. 1981 57 p refs
(DA Proj. 1L1-601102-B-53-AB)
(AD-A103310; ERADCOM/ASL-TR-0090) Avail: NTIS HC A04/MF A01 CSCL 20/6

The modeling of the transmission of visible an infrared radiation through artillery produced dust clouds depends on several quantities, processes, and assumptions which are parameterized either as scaling laws and multiplicative factors or are specified directly as input values. Several parameters from the different phases of dust cloud transmission problems are varied within appropriate ranges. The more important parameters which can cause wide variations in the calculated transmittance are: the fraction of the actual crater mass remaining airborne, which affects the degree of obscuration; wind direction, which affects the position of the cloud with respect to the transmisssion line of sight; and the dust particle size distribution within the cloud, which affects the wavelength dependence of the obscuration.

This report covers manufacturing methods and technology program for ruggedized tactical fiber optic cable. The scope of this effort, as reported herein, includes the following tasks and achievements: (a) Cable process optimization -- (1) Produce trial runs of confirmatory; (2) Complete lay length samples (two lays); (3) Perform optical and mechanical tests on trial confirmatory samples; and (4) Produce samples and evaluate polyurethanes (three types). (b) Use of facilities -- (1) Operate high speed strander, Kevlar braider, and extruder at production speeds. (c) Secondary performance -- (1) Evaluate low temperature performance.

Holographic beamsplitter spherical mirrors have been introduced in the Pancake Window visual simulators as a low-cost and low-weight substitute for the classical glass beamsplitter spherical mirrors. The goal of this project was the production of a three-channel visual simulator consisting of a mosaic of three holographic Pancake Windows in which these beamsplitter spherical mirrors are used. The field of view of the complete display is 45 deg vertical and 140 deg horizontal and will be used to demonstrate a dynamic, unprogrammed visual simulation imagery generated by T.V. camera/model and gantry image generator. Prior to the production of the holograms, holographic research was carried out to investigate and resolve problems which have affected the quality and the repeatability of the final product. Specific attention was given to holographic ghost images which seriously impaired the contrast and the resolution of the images produced by the holographic Pancake Window and to the effects of environmental controls. The final production of the holographic beamsplitter was delayed by a stability problem in the wet cell used to support the holographic plate during the holographic exposure. The phosphors in the CRT displays were originally designed to be P-44 narrow band phosphors but were later changed to a wide-band emission phosphor. The reason for this was a wavelength peak response shift of the holograms with large field-of-view angles. The use of a wide-band phosphor, although it penalized the transmission of the holographic Pancake Window, required less stringent wavelength peak location in the manufacture of these holographic beamsplitter mirrors. EVALUATION OF FIBER OPTICS FOR IN-LINE PHOTOMETRY IN HOSTILE ENVIRONMENTS
M. L. Bauer, D. A. Bostick, and J. E. Strain 1981 12 p refs Presented at the 25th Ann. Intern. Tech. Symp. and Exhibit of the Soc. of Photo-Opt. Instrumentation Engr., San Diego, Calif., 24-28 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028139; CONF-810810-21) Avail: NTIS HC A02/MF A01

Commercial fiber optics cables, both bundled and single-fiber, are evaluated for application in an in line photometer being developed for monitoring uranium and plutonium concentrations in high radiation environments in nuclear fuel reprocessing plants. The relative attenuation of the optical signals due to both the radiation damage and to the couplings between lengths of optical cable was determined for specimen cables. An ultraviolet enhanced fiber bundle demonstrated good radiation resistance to a total dose of one hundred million rads, which is the dose estimated to be received during a 1-y lifetime of the in cell portion of the photometer. The photometer is designed to use a single fiber optical cable with adequate radiation shielding. DOE

STATISTICAL MEASUREMENT OF THE 1978 LIDAR MEASUREMENTS
C. W. Lamberts Nov. 1980 64 p refs Document includes a microfiche supplement
(Contract A78/KL/121)
(PHL-1980-41; TDCK-75026) Avail: NTIS HC A04/MF A01

Analysis for combined lidar aerosol and meteorological measurements are presented. The data are used for the remote deduction of atmospheric parameters. Analytical relations are based on statistics, not on physical laws. Results show that wind direction has an important influence on visibility, backscatter, and extinction. Extinction is difficult to calculate, especially when visibility is good, so a large range of measured extinction is shown. An increasing spread in backscatter is present at high visibility due to aerosol distribution properties. Aerosol properties can be deduced from meteorological and/or lidar measurement. Author (ESA)

PLASMA CONDITIONS REQUIRED FOR ATTAINMENT OF MAXIMUM GAIN IN RESONANTLY PHOTO-PUMPED Al 12 AND Ne 9
J. P. Apruzese (Science Applications, Inc., McLean, Va.), J. Davis, and K. G. Whitney 9 Oct. 1981 25 p refs Sponsored in part by Defense Nuclear Agency
(AD-A105779; NRL-MR-4618) Avail: NTIS HC A02/MF A01 CSCL 20/9

We present a detailed analysis of the plasma conditions required to optimize gain in two proposed X-ray lasing schemes using resonant photo-pumping. In one proposed configuration, the Si XIII line 1s2-1s2p1P at 6.650 A pumps Al XII 1s2-1s3p1P at 6.635 A, inverting the Al XII n=3 and N=2 levels which are separated by 44 A. A similar approach which utilizes the Na X 1s2-1s2p1P line at 11.00 A to pump the Ne IX 1s2-1s4p 1P line at 11.001 A would invert the n=3 and n=2 levels of Ne IX, separated by 82 A. Conditions in the pumped neon and aluminum plasmas, and in the pumping silicon plasma, are calculated using a multistage, multilevel atomic model with multi-frequency radiation transport. Temperatures required to maximize gain in the pumped plasmas are found to be 50 eV and 100 eV, for neon and aluminum, respectively. Plasmas of lower temperature do not contain enough of the active ion species, whereas at higher temperatures the photon pumping of the upper levels results in excessive ionization from these levels to the hydrogen-like species. Finally, since the pumping silicon and pumped aluminum lines are slightly off resonance, we have investigated the effect of streaming the plasmas toward each other at various velocities to offset some or all of the wavelength difference. MIROWAVE ENERGY DEPOSITION, BREAKDOWN AND HEATING OF NITROGEN AND AIR
C. L. Yee (Mission Research Corp., Alexandria, Va.) and A. W. Ali 16 Oct. 1981 37 p refs
(WF34388501)
(AD-A105749; NRL-MR-4617) Avail: NTIS HC A03/MF A01 CSCL 09/3

A comprehensive code is developed for the microwave energy deposition in N2 to describe the breakdown and heating of nitrogen. The microwave absorption and reflection from a nitrogen plasma is based on wave optics. The ionization and the deionization of N2, however, is described in detail by an N2 chemistry code (CHEM-N2) which provides plasma diagnostics capabilities by calculating emission intensities of the second positive and the first negative band systems of N2 and N2+. The code is applied to breakdown calculations in N2 and the results are in reasonable accord with experimental data. The wave optics code for energy deposition is also coupled to an air chemistry code (CHMAIR) to describe the breakdown off a reflecting surface. An insight is provided into the plasma absorption by using a simple lab density profile for the electrons. This models roughly the profile expected in air breakdown off a reflecting surface. Simulation results show a steep localized electron density profile at the interference maximum. GRA

Experiments were undertaken to determine electron impact cross sections of atoms in metastable states. One or two electron guns were used to first produce atoms in metastable states, then further excite these atoms to other levels. Limits on certain cross sections of helium atoms were obtained, but the detection limits of the apparatus prevented exhaustive study. Excitation functions and cross sections of xenon were obtained in the wavelength range from 3000 A to 9000 A. GRA

Two different commercially available microwave applications were used to excite plasmas in electrodeless discharge tubes. Plasmas in a variety of gases and gas mixtures were investigated, including mercury, mercury bromide, xenon and hydrogen chloride, thallium iodide and mercury, thallium iodide and xenon, and sulfur. Approximately 35% of the total emission from tubes containing mercury and metallic halide additives occurred in the ultra-violet (220-350 nm). However, extensive self-trapping occurred, and the emission was greatest in tubes with low partial pressures, about 100 Torr of the component materials. Pulsed discharges in mercury bromide produced emission from mercurous bromide, but the application of continuous microwave power resulted in total dissociation and the observed emission was due to atomic mercury. Pulsed microwave discharges in tubes containing xenon and hydrogen chloride resulted in emission from two bands of the xenon chloride excimer. No excimer emission was seen from discharge tubes containing xenon and thallium iodide, or mercury and thallium iodide. In both cases, the density of the volatile component could not be increased with the available equipment to the value necessary for excimer formation. Discharges in tubes containing sulfur resulted in emission from diatomic sulfur which extended from 280 nm to 500 nm. GRA

A fourier transform infrared spectrometer was used to identify infrared absorption spectra of impurities that might be present in carbon dioxide laser discharges. Spectral regions free from interference from the primary constituents and common impurities such as water vapor were identified for several of the nitrogen oxides, and the detection sensitivities were determined. This information was used in a study of impurity buildup during discharges in an electron-beam excited closed cycle (EBCC) system and in a TEA CO2 laser. It was found that after an hour of irradiation in the continuous EBCC system, the oxides of nitrogen had built up to the ten parts per mission range while the carbon monoxide concentration was of the order of a few hundred parts per million. When the initial gas mix contained oxygen, the concentration of carbon monoxide and the nitrogen oxides increased. The addition of hydrogen to an oxygen free gas mix was found to produce water vapor at about ten percent of the initial hydrogen concentration, increase the production of N2O and of CO, and decrease the production of NO and NO2. A technique has been developed for determining the rotational temperature and vibrational population distribution of non-homonuclear molecules under nonequilibrium conditions. The technique was applied to carbon monoxide under the conditions present in an electrical discharge. GRA

FIELD ERRORS IN EBT AND THEIR EFFECTS ON THE AMBIPOLAR POTENTIAL
T. Uckan, F. M. Bieniosek (Rensselaer Polytechnic Inst., Troy, N.Y.), and L. Solensten (Rensselaer Polytechnic Inst., Troy, N.Y.) Oct. 1981 36 p refs
(Contract W-7405-eng-26)
(DE82-000828; ORNL/TM-7912) Avail: NTIS HC A03/MF A01

Because the ELMO Bumpy Torus (EBT) is a closed field line device, it is very sensitive to small magnetic field asymmetries - field errors (RADICAL) B/B less than or equal to 1.5 x 10(+4)). Such field errors are unavoidable due to minute coil misalignments (0.25 mm) and the ubiquitous Earth's field (B approx. 5 x 10(+5) T). If the inherent error field of the device is large enough, it causes: (1) a distortion of the poloidal symmetry of the potential profile and even a total disappearance of the ambipolar potential well, leading in turn to a deterioration of the plasma confinement parameters; (2) the establishment of a toroidal current and, therefore, enhancement of fluctuations; and (3) an opening of the confined closed drift surfaces that increase particular diffusion. DOE

REVIEW OR RECENT EBT COUPLED RING-CORE STABILITY THEORY
D. A. Spong Oct. 1981 32 p refs
(Contract W-7405-eng-26)
(DE82-000880; ORNL/TM-8021) Avail: NTIS HC A03/MF A01

During the past several years Elmo Bumpy Torus (EBT) stability calculations have evolved with respect to treatment of ring-core plasma coupling effects. This evolution began with recognition of the important role of ring compressibility and paramagnetic effects on core beta limits. Since then, models have continued to increase in sophistication, incuding ring-core frequency coupling, velocity space and hot electron distribution function effects, and radially dependent models. Some of these features resulted in wide variations in predicted plasma performance limitations. A number of the models are reviewed and assumptions to which they are particularly sensitive are discussed. DOE

DARK-GROUND ILLUMINATION: A QUANTITATIVE DIAGNOSTIC FOR PLASMA DENSITY Ph.D. Thesis
Stephen Frederick Paul 1981 175 p refs
(Contract DE-AS02-76ET-53016)
(DE82-000442; DOE/ET-53016/74) Avail: NTIS HC A08/MF A01

Radial electron density profiles of a toroidal belt pinch plasma were obtained by a single measurement. Collimated ruby laser light, incident on the plasma, is focused to a diffraction limited spot (100 (SIGMA)m). The technique, a variation of the dark-ground microscope, involves masking the center of the plasma diffraction pattern with a thin wire. Undiffracted light is blocked by a thin wire, whereas light diffracted by the plasma passes around the wire and onto a photoplate. The resulting interference generates a high contrast fringe pattern whose intensity varies as 1-cosine (RADICAL) phi, where (RADICAL) phi is the phase shift induced by the plasma. The fringes are recorded on Polaroid type 46L transparency film. Using this technique, radial density profiles of the plasma produced in the Columbia Torus 1 belt pinch have been measured. The plasma minor cross section is elliptical with a approx. 2 cm, Beta approx. 30 cm and < n(0) > approx. 3 x 10 to the 16th power/cu cm (3) . Average densities as low as 2 x 10 to the 15th power/cu cm (3) were measured. DOE

INVESTIGATION OF METHODS FOR FABRICATING, CHARACTERIZING AND TRANSPORTING CRYOGENIC INERTIAL-CONFINEMENT-FUSION TARGETS

James J. Fanning and Kyekydon Kim Jan. 1981 94 p refs
Prepared for California Univ., Berkeley Lawrence Berkeley Lab.
(Contract W-7405-eng-48)
(DE81-029737; UCRL-15360; Rept-1-81) Avail: NTIS HC A05/MF A01

A microprocessor-based data acquisition system was built that converts a complete target image to digital data, which are then analyzed by automated software procedures. The low temperatures required to freeze the hydrogen isotopes contained in a target is provided by a cryogenic cold chamber capable of attaining 15 K. A method for target manipulation and positioning is studied that employs molecular gas beams to levitate a target and an electrostatic quadrupole structure to provide for its lateral containment. Since the electrostatic target-positioning scheme requires that the targets be charged, preliminary investigation has been carried out for a target-charging mechanism based on ion-bombardment. DOE

STUDY OF METASTABLE STATES OF ATOMIC NITROGEN IN LUMINESCENT DISCHARGES [ETUDE DES ETATS METASTABLES DE L'AZOTE ATOMIQUE DANS DES DECHARGES LUMINESCENTES]

G. Cernogora Jan. 1981 202 p refs In FRENCH
(LP-185) Avail: NTIS HC A10/MF A01

For the first and second metastable states of nitrogen atoms, the diffusion coefficient and the coefficient of occurrence of these states due to electronic collisions were determined. The kinetic behavior of these metastable atoms was established by optical absorption measurement in the far UV. Results show that the coefficients of electronic excitations can be deduced from measurements of the concentration of these states in a luminescent discharge. The diffusion coefficient is found by analyzing the evolution of their concentration in a post-discharge. The saturation limit at which concentration of metastable states no longer increases with electron density is also identified. Author (ESA)

STUDY OF A DISCHARGE CAUSED BY A SURFACE WAVE [ETUDE D'UNE DECHARGE CREEE PAR UNE ONDE DE SURFACE]

M. Chaker, P. Nghiem, E. Bloyet, P. Leprince, and J. Marec May 1981 159 p refs In FRENCH
(LP-190) Avail: NTIS HC A08/MF A01

A plasma generation theory is elaborated which is based on surface wave propagation characteristics and the hypothesis that the energy absorbed from the wave is proportional to the number of electrons in the plasma, the proportionality factor being independent of the power. Experimentally, the validity of this hypothesis was verified in a rare gas cavity resonator. Direct application of this model makes possible calculation of the effective collision frequency for each experimental condition (excitation frequency). From the collision rate, the mean electron temperature is deduced, assuming a Maxwell distribution. An approximation of losses in the plasma is obtained. Author (ESA)

KINETICS STUDIES ON THE NUCLEATION AND GROWTH OF SILICON VIA CHEMICAL VAPOUR DEPOSITION Ph.D. Thesis

Wilhelmus Antonius Petrus Claassen 27 Feb. 1981 178 p refs
Avail: NTIS HC A09/MF A01

The grain size in polycrystalline silicon layers is subject to various external conditions among which the initial nucleation of silicon on the substrate may play a decisive role. This article describes experiments with silicon on SiO2 and Si3N4 substrates in the SiH4-HCl-H2 system for temperatures between 925 and 1200 C. The saturation cluster densities are determined as a function of gas phase composition and temperature and could be varied between 10 to the fourth power - 10 to the eleventh power per sq cm. The experimental results are compared with predictions of existing nucleation theories using analysis of the monomer silicon adatom concentration. In this way the nucleation can be described satisfactorily and approximate values for the size of the critical cluster can be derived. Author

AMORPHOUS-CRYSTALLINE BOUNDARY DYNAMICS IN LASER CRYSTALLIZATION

Herbert J. Zeiger, John Chin C. Fan, Barbara J. Palm, Ralph L. Chapman, and Ronald P. Gale 25 Aug. 1981 76 p refs
(Contract F19628-80-C-0002; AF Proj. 649L)
(AD-A105811; TR-558; ESD-TR-81-85) Avail: NTIS HC A05/MF A01 CSCL 20/5

Two theoretical descriptions have been developed for the phase boundary dynamics during crystallization of amorphous films by scanning with the slit image of a cw laser or of any cw energy beam. The first reduces the problem to the solution of a one-dimensional integral equation, which allows a choice of initial conditions. Depending on the background temperature, numerical solutions yield either periodic or runaway motion of the amorphous-crystalline (a-c) boundary, as observed in experiments on scanned laser crystallization of thin films of a-Ge on fused-silica substrates. The calculations give a semi-quantitative fit to the experimental results for the spatial periodicity observed in the crystallized films as a function of background temperature. Profiles of film temperature as a function of distance from the laser image at successive times have been computed for both the periodic and runaway cases. The model qualitatively explains many of the effects observed during scanned cw laser crystallization, including periodic fluctuations in light emission. The second theoretical description is a more exact two-dimensional treatment, applicable only to cases of steady-state motion of the a-c boundary, which rigorously handles heat flow into the substrate. This treatment has been used to calculate the boundary velocity during steady-state runaway. GRA

POINT DEFECTS IN CRYSTALS (INCLUDING GROUPED DEFECTS)

David N. Seidman Aug. 1981 21 p refs
(Contract DE-AS02-76ER-03158)
(DE82-000395; DOE/ER-03158/97; MSC-4548) Avail: NTIS HC A02/MF A01

The fundamental properties of point defects, vacancies and self-interstitial atoms, in pure fcc and bcc metals is reviewed. Point defects created by both thermally-activated and irradiation processes are considered. The roles played by vacancies and self-interstitial atoms in thermal equilibrium are discussed and the best values of the enthalpy of formation of these point defects, in a number of metals, are given. Methods for obtaining fundamental properties of vacancies, such as activation volumes, mobilities, and binding enthalpies are discussed. Selected best values of mobilities and binding enthalpies of vacancies, as deduced from recovery experiments on a number of different quenched metals are listed. The problem of the production of single self-interstitial atoms and their configuration(s) is discussed. The clustering of single self-interstitials into small clusters is also considered. The physical origin of the extremely high low-temperature mobility of self-interstitials in the so-called Stage 1 recovery regime is also discussed. DOE

N82-14944# Cornell Univ., Ithaca, N. Y.

POINT-DEFECT SOURCES AND SINKS

D. N. Seidman Aug. 1981 9 p refs
(Contract DE-AS02-76ER-03158)
(DE82-000655; DOE/ER-03158/98) Avail: NTIS HC A02/MF A01

The role played by sources and sinks of point defects is of importance in understanding a wide range of physical phenomena. The problem of the efficiency (eta) of a sink (or sources) and its relatonship to the super (or sub) saturation of point defects which drives the process is considered. A qualitative discussion is given of the atomic mechanisms by which the following defects act as sources and sinks: (a) the free surface; (b) voids; (c) dislocation loops; and (d) grain boundaries. Examples of specific values of eta are given for different experimental situations. DOE

DAMAGE STRUCTURE IN NIMONIC PE16 ALLOY ION BOMBARDED TO HIGH DOSES AND GAS LEVELS

K. Farrell and N. H. Packan 1981 4 p refs Presented at the Fusion Reactor Materials Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028562; CONF-810831-25) Avail: NTIS HC A02/MF A01

The Nimonic PE16 alloy in solution-treated-and-aged condition was bombarded simultaneously with nickel ions and alpha and deuteron beams at 625 C to doses of 80 to 313 dpa at He/dpa - 10 and D/dpa = 25. Microstructural changes consisted of the introduction of dislocations and of cavities, and the redistribution of gamma prime precipitates to these defects. Cavitational swelling remained below 1%. Cavities were represented by several distinct size classes, the smaller ones believed to be gas bubbles, and some larger ones associated with preferred growth of precipitate. Formation of bubbles at grain boundaries, and large cavities at incoherent twins intensified the possibility of mechanical separation of interfaces under high-gas irradiation conditions. DOE

RELAXATION EFFECTS IN SHOCK-INDUCED TRANSITIONS IN BISMUTH

T. R. Neal 1981 6 p refs Presented at the 8th AIRAPT Conf. and 19th EHPRG Conf., Uppsala, 17 Aug. 1981
(Contract W-7405-eng-36)
(DE81-028728; LA-UR-81-2338; CONF-810827-6) Avail: NTIS HC A02/MF A01

The baratol experiments indicate that as the shock in the mixed region progresses and decays, the lead state does not change along a stable Hugoniot but appears to change from a sort of metastable Hugoniot, in accordance with Romain's data, to a stable Hugoniot reminiscent of the earlier results. If this is so, then the Bi I-III transition is exhibiting a relaxation effect similar to that seen in the Sb I-III transition. The transition detected by Romain could then be interpreted as the II-III transition seen in the metastable region. The few experiments outlined here merely hint at an explanation. Additional precision work in the stress range 6 to 10 GPa, some with thin samples, is needed to resolve this behavior. DOE

ION-IMPLANTATION EFFECTS IN GLASSES
G. W. Arnold 1981 37 p refs Presented at the Intern. Conf on Radiation Effects in Glasses, Arco, Italy, 30 Jun. 1981
(Contract DE-AC04-76DP-00789)
(DE81-027208; SAND-81-0819C; CONF-8106132-1) Avail: NTIS HC A03/MF A01

Ion implantation can be used to introduce network damage and to alter the chemical composition in glasses. Structural changes can be inferred from IR measurements near 1000 per cm and by optical absorption near 2150 A. Implantation induced damage decreases the implanted volume in fused silica with consequent changes in the refractive index, near-surface hardness, and surface tensile stress. Prior work in these areas is reviewed. Implantation into alkali silicate glasses depletes the alkali content in the implanted region. These changes allow preferential surface crystallization in Li_2O $2SiO_2$ glasses. Crystallization of amorphous SiO_2 can be induced by implantation of Li. Insight into the crystallization process is obtained by observing the associated ion movement using elastic recoil detection and optical techniques. Results are of interest to studies of corrosion in glasses considered for nuclear waste encapsulation and for components in fusion reactors. DOE

RESEARCH AND DEVELOPMENT ON TECHNOLOGIES FOR THE PREPARATION OF III-V SEMICONDUCTOR MATERIALS AND ON METHODS FOR EVALUATION OF THE QUALITY OF THESE MATERIALS: PRODUCTION OF GALLIUM PHOSPHIDE CRYSTALS Final Report
Michael Blaette Bonn Bundesministerium fuer Forschung und Technologie Mar. 1981 28 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technol.
(BMFT-FB-T-81-021; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 5.70

Methods for economic synthesis and crystal growth of gallium phosphide were developed. Polycrystalline ingots up to 800 gr of the dense and homogeneous quality necessary for crystal growth are currently produced with very good yield. The conditions for high pressure crystal growth by the liquid encapsulation technique were thoroughly investigated and optimized in a manner that permits industrial production of substrate quality crystals with a weight of 700 grams and a diameter of 50 mm. Diameter variations, common in the growth of GaP crystals, can be reduced to a few millimeters by a monitoring system based on crystal weighing. Author (ESA)

RESEARCH AND DEVELOPMENT ON TECHNOLOGIES FOR THE PREPARATION OF III-V SEMICONDUCTOR MATERIALS AND ON METHODS FOR EVALUATION OF THE QUALITY OF THESE MATERIALS: GALLIUM ARSENIDE CRYSTALS, CRUCIBLE PULLING OF Ga As CRYSTALS Final Report
Michael Blaette Bonn Bundesministerium fuer Forschung und Technologie Jan. 1981 38 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-022; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7.80

The economic synthesis of the polycrystalline starting material was investigated. For the industrial production of gallium arsenide crystals, which are used as substrates for the epitaxial growth of basic material for light emitting diodes, the Czochralski liquid encapsulation technique was developed. After preliminary experiments in a small puller, the parameters for crystal growth were tested and optimized in pulling equipment which was specially constructed for this purpose. Methods for diameter control were tested as well. By means of production scale pulling of crystals with a diameter of 50 mm and a weight of 1.4 kg with dislocation densities of 50,000/sq. cm the objective was fully achieved. Author (ESA)

RESEARCH AND DEVELOPMENT ON TECHNOLOGIES FOR THE PREPARATION OF III-V SEMICONDUCTOR MATERIALS AND ON METHODS FOR EVALUATION OF THE QUALITY OF THESE MATERIALS: GALLIUM ARSENIDE CRYSTALS, GRADIENT FREEZE CRYSTAL GROWTH AND MEASUREMENT TECHNIQUES Final Report
Franz Kuhn-Kuhnenfeld Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 75 p refs Partly in GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-023; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 15.50

A gradient freeze technique was developed for the growth of GaAs crystals with low dislocation densities in closed quartz containers, using directional solidification. Such GaAs substrates are required for the manufacture of infrared light emitting diodes and other III-V devices. Crystal size (up to 1kg) and quality (crystal densities from 1000 to 10,000 cm E-2) are in accordance with present market requirements. The electrical parameters of III-V materials were determined by the van der Pauw method, and also by an eddy current method. Crystal perfection was evaluated by selective photoetching and chemical etching in H_2SO_4-H_2O_2-HF solution. Photoluminescense and photoelasticity measurements were also conducted on the III-V-materials.

PREPARATION OF GaAs/AlxGa1-XAs MULTILAYER STRUCTURES WITH PREDETERMINED OPTICAL AND ELECTRICAL PROPERTIES BY MOLECULAR BEAM EPITAXY Final Report, Jun. 1980
Klaus Ploog and Albrecht Fischer Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 68 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-042; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 14.30

Semiconductor structures of GaAs-AlAs multilayers were developed for fundamental research microwave technology and optoelectronics applications. Measuring and evaluation procedures for molecular beam epitaxy (MBE) layers and semiconductor diodes were elaborated. Two semiconductor structures were studied: (1) periodic p/n doping multilayer structures ('nipi' structures) in GaAs consisting of a periodic sequence of ultrathin alternating p and n-doped GaAs layers, possibly with intrinsic (i-) layers in between, and (2) one-sided abrupt GaAs/n+-AlXgAl-XAs heterostructures producing two-dimensional carrier confinement and enhanced mobilities at the interface. The method performs better than previous MBE technologies. Author (ESA)

CALCULATIONAL ASPECTS OF QUANTUM GRAVITY Ph.D. Thesis
Walter Mark Wilcox 1981 174 p

Avail: Univ. Microfilms Order No. 8122886

Weak field gravitational effects in the context of Schwinger's Source Theory are investigated. The first type of calculation considered is particle scattering from a weak, immoblie gravitational scattering center. Physical cross sections for scalar, vector (including photon) and graviton scattering from the weak source are developed. Next, gravitational scattering events between identical and nonidentical scalar particles are considered. The last cross section derived is for scalar-graviton scattering. Quantum gravitational corrections to physical processes are begun by calculating the first order correction to the photon propagation function. A series of causal calculations, aimed at isolating the gravitational contribution to the electron (or muon or tau) magnetic moment is then described. The regularization method used to carry out the last calculation is shown to respect the gravitational and electromagnetic gauge invariances. Dissert. Abstr.

THERMODYNAMICS OF ELECTROLYTE SOLUTIONS OVER THE ENTIRE MISCIBILITY RANGE

Kenneth S. Pitzer Mar. 1981 9 p refs Presented at 2nd World Congr. of Chem. Engr., Thermodyn. of Electrolytes Session, Montreal, 4-8 Oct. 1981

(Contract W-7405-eng-48)

(LBL-12377; CONF-811007-1) Avail: NTIS HC A02/MF A01

It is shown that the properties of fully ionized aqueous electrolyte systems can be represented by relatively simple equations over wide ranges of composition. There are only a few systems for which data are available over the full range to fused salt. A simple equation commonly used for nonelectrolytes fits the measured vapor pressure of water reasonably well and further refinements are clearly possible. Over the somewhat more limited composition range up to saturation of typical salts such as NaCl, the equations representing thermodynamic properties with a Debye-Hueckel term plus second and third virial coefficients are very successful and these coefficients are known for nearly 300 electrolytes at room temperature. These same equations effectively predict the properties of mixed electrolytes. DOE

PHENOMENOLOGICAL APPLICATIONS OF PERTURBATIVE QUANTUM CHROMODYNAMICS Ph.D. Thesis

Muhammad Sajjad Z. Zahir 1981 172 p

Avail: Univ. Microfilms Order No. 8123604

Topics in high energy particle physics, each of which is a case of theoretical and phenomenological application of perturbative quantum chromodynamics, are investigated. The first topic is the structure of nucleons as probed in deep inelastic lepton nucleon scattering. The structure functions of the nucleon are analyzed in the framework of the valon model in which a nucleon is assumed to be a bound state of three valence quark clusters (valons). In the second topic, the production of massive dimuons at large transverse momentum in Drell-Yan process where it is believed that the dimuons acquire large transverse momentum through the emission of absorption of hard gluons is studied. The third topic discusses how high energy photons can replace hadrons in a new lepton pair production process. Dissert. Abstr.

ORDERS OF MAGNITUDE: A HISTORY OF NACA AND NASA, 1915 - 1980

Frank W. Anderson, Jr. 1981 113 p refs

(NASA-SP-4403) Avail: NTIS MF A01; HC SOD $4.75 CSCL 05D

The history of NACA and NASA from 1915 to 1980 is narrated. The impact of two world wars on aeronautics is reviewed. Research activity before and during World War II is presented. Postwar exploitation of new technologies is summarized. The creation of NASA and a comprehensive space program is discussed. Long range planning for a lunar mission is described. The Gemini project is reviewed. The Apollo project and side effects includng NASA's university and technology transfer programs are presented. Numerous scientific and application satellite projects are reviewed. The impact of budget reductions is explained. The value of space exploration is emphasized. Development of the Space Shuttle is reported. N.W.

RELIABILITY VS. DIAGNOSTICITY IN HIERARCHICAL INFERENCE

Gregory M. Griffin and Ward Edwards Jun. 1981 32 p refs Sponsored in part by Decisions and Designs, Inc.

(Contract MDA903-80-C-0194)

(AD-A105628; SSRI-81-3) Avail: NTIS HC A03/MF A01 CSCL 05/1

This study examined the performance of subjects in a cascaded inference task where two subjects worked together, one subject having diagnosticity information and the other having reliability information. This was compared to a condition in which a single subject received both types of information. Additionally, the effects of different 'experts' having the power to make the final decision in the two-person conditions was explored. Seventy-two subjects made inferences about the probability of success vs. failure of hypothetical job applicants presented in a personnel manager scenario. Subjects were paid bonuses according to their performance on the task. Contrary to hypotheses, there were no between conditions differences. Single subjects performed just as well as subjects working together. This study replicates previous work using single subjects in the general pattern of responses: subjects were somewhat radical in comparison to the normative model. GRA

MATERIALS RESEARCH AT STANFORD UNIVERSITY Annual Report, 1 Jul. 1980 - 30 Jun. 1981

Jul. 1981 475 p refs

(Grant NSF DMR-77-24222)

(AD-A106108; CMR-81-7; AR-20) Avail: NTIS HC A20/MF A01 CSCL 05/1

This Twentieth Annual Report includes the total research activity related to the science of materials at Stanford University during the period July 1, 1980 through June 30, 1981. It contains brief descriptions of research programs active during this period. The report of the research programs is organized into two groupings: (1) the research programs of CMR Members who have participated in one of the five major Thrust group programs supported by the NSF-MRL block grant including their work on the Thrust program and other related research, and (2) individual research programs; when appropriate, members are included in both the Thrust and individual programs. As indicated in their descriptions, some of the research programs were supported by private sources. GRA

MILLIONS WASTED TRYING TO DEVELOP MAJOR ENERGY INFORMATION SYSTEM Report to the Congress

15 May 1981 81 p refs

(AFMD-81-40) Avail: NTIS HC A05/MF A01

A Federal energy information system created to improve Federal and State energy regulation by providing computerized access to current energy data is reviewed. It is concluded that the system failed because management deficiencies existed in planning, development, and implementation. Moreover, the cost and progress of the system was not monitored. Poor communication among system developers and intended users at the Federal and State levels, lack of continuous involvement and support from top Federal management, and disruptions in both organization and personnel are also cited as reasons for the system's failure. R.J.F.

TECHNICAL COMMUNICATION: PERSPECTIVES FOR THE EIGHTIES, PART 1. PROCEEDINGS OF THE TECHNICAL COMMUNICATIONS SESSIONS AT THE 32ND ANNUAL MEETING OF THE CONFERENCE ON COLLEGE COMPOSITION AND COMMUNICATION

J. C. Mathes, comp. (Michigan Univ., Ann Arbor) and Thomas E. Pinelli, comp. Dec. 1981 307 p refs Conf. held in Dallas, 26-28 Mar. 1981

(NASA-CP-2203-Pt-1; L-14899) Avail: NTIS HC A14/MF A01 CSCL 05B

Proceeding of the technical communication sessions at the 32nd annual meeting of the Conference on College Composition and Communication held in Dallas, Texas, March 26-28, 1981 are summarized. The proceeding suggest that technical communication has become an important subfield and is becoming an intrinsic part of many undergraduate curricula. Technical communication as a separate discipline, however, is relatively new. For that reason, proceedings that can make current research available as quickly as possible are suggested for preparation. The following topics were addressed: (1) a history and definition of technical writing, (2) the case method is technical communication (3) teaching technical writing (4) oral communication and rhetorical theory, and (5) new approaches in and practical applications of technical writing. For individual titles, see N82-14961 through N82-14979.

WHAT IS TECHNICAL WRITING? PROLEGOMENON TO A CONTEXTUAL DEFINITION

Ben F. Barton and Marthalee S. Barton *In* NASA. Langley Research Center Tech. Commun. Pt. 1 Dec. 1981 p 3-14 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

The question, 'What is Technical Writing?', is addressed. Interest about the stance a teacher assumes in a classroom, the orientation of textbooks, and the shape of curricula are considered. Technical writing is considered of age, definitions abound and the time is ripe for a metaperspective on the question. This analyzes pitfalls in representative definitions of technical writing suggest a direction for future inquiry. M.D.K.

N82-14962*# Pittsburg State Univ., Kans.

TECHNICAL WRITING IN AMERICA: A HISTORICAL PERSPECTIVE

Michael E. Connaughton *In* NASA. Langley Research Center Tech. Commun. Pt. 1 Dec. 1981 p 15-24 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

The standard distinction between poetic and referential language, the gulf between science and the humanities, and the distress many teachers of English feel when faced for the first time with the prospect of teaching technical writing are discussed. In the introduction of many technical writing textbooks. Technical communication is divorced from other forms of linguistic experience by making language limiting and reductive rather than creative and expansive. The emphasis on technical/scientific writing as radically different had blinded people to those traits it has in common with all species of composition and has led to a neglect of research, on fundamental rhetorical issues. A complete rhetorical theory of technical discourse should include information about the attitudes and motives of writers, the situations which motivate (or coerce) them to write, definitive features of technical style and form, interrelationship of expression and creativity, and functions of communication in shaping and preserving scientific networds and institutions. The previous areas should be explored with respect to contemporary practice and within an historical perspective. M.D.K.

N82-14963*# Rensselaer Polytechnic Inst., Troy, N. Y. Dept. of Language, Literature and Communication.

TECHNICAL COMMUNICATION: NOTES TOWARD DEFINING DISCIPLINE

Philip M. Rubens *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 25-31 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

In the field of technical communication, definitions posited in virtually any major text violate every major rule of definitions. The most popular method for defining the field is to state that technical writing is any writing that supports technology or technological activities. There is a need for a nice yardstick for measuring what 'technology' is. Some ways in which the field can be defined in a tightly structured empirical way and some implications of technical communication for a humanistic education in a technological age are suggested. M.D.K.

MARKETING INFORMATION: THE TECHNICAL REPORT AS PRODUCT

Freda F. Stoher (Old Dominion Univ.) and Thomas E. Pinelli *In its* Tech. Commun., Pt. 1 Dec 1981 p 33-42 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

Technical reports constitute a product, the primary means for communicating the results of research to the user. The Langley scientific and technical information (STI) review and evaluation project undertook a review of the technical report as an effective product for information communication. Style manuals describing theory and practice in technical report preparation; publication manuals covering such factors as design, layout, and type style; and copies of technical reports were obtained from industrial, academic, governmental, and research organizations. Based on an analysis of this material, criteria will be established for the report components, for the relationship of the components within the report context, and for the overall report organization. The criteria will be used as bench marks and compared with the publication standards currently used to prepare NASA technical reports. M.D.K.

HOW TO DEVELOP AND WRITE A CASE FOR TECHNICAL WRITING

Barbara Couture and Jone Goldstein *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 73-84 refs Submitted for publication (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

Case of different sizes and shapes for teaching technical writing to engineers at Wayne State University have been developed. The case approach was adopted for some assignments because sophomores and juniors lacked technical expertise and professional knowledge of the engineering world. Cases were found to be good exercises, providing realistic practice in specific writing tasks or isolating particular skills in the composing process. A special kind of case which narrates the experiences of one technical person engaged in the problem-solving process in a professional rhetorical situation was developed. This type of long, realistic fiction is called a an 'holistic' case. Rather than asking students to role-play a character, an holistic case realistically encompasses the whole of the technical writing process. It allows students to experience the total communication act in which the technical task and data are fully integrated into the rhetorical situation and gives an opportunity to perform in a realistic context, using skills and knowledge required in communication on the job. It is believed that the holistic case most fully exploits the advantages of the case method for students of professional communication. M.D.K.

EVALUATING THE EFFECTIVENESS OF CASE METHOD INSTRUCTION IN TECHNICAL COMMUNICATION

Susan G. Feinberg *In* NASA. Langley Research Center Techn. Commun., Pt. 1 Dec. 1981 p 85-91 Submitted for publication (For primary document see N82-14960 05-82)
Avail: NTIS HC A14/MF A01 CSCL 05B

The effectiveness of the case method as an instructional technique in improving technical writing was evaluated. The development of a self-report instrument that attempts to measure changes in attitude toward technical communication and the presentation results change are the purpose of this paper. Standards for developing a case set forth by Goldstein and Couture, were used to design an evaluation instrument to measure the effect instruction on student attitude toward technical communication. This self-report instrument is based on model developed and tested by Daly and Miller who studied writer attitude and apprehension toward writing. It was the most important objective of any evaluation is to provide information for improving the program. M.D.K.

TEACHING GRAPHICS IN TECHNICAL COMMUNICATION CLASSES

Kristene C. Spurgeon *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 115-129 refs (For primary document see N82-14960 05-82)
Avail: NTIS HC A14/MF A01 CSCL 05B

Graphic aids convey and clarify information more efficiently and accurately than words alone therefore, most technical writing includes the use of graphics. Ways of accumulating and presenting graphics illustrations on a shoestring budget are suggested. These include collecting graphics from companies, annual reports and laminating them for workshop use or putting them on a flip chart for classroom presentation, creating overhead transparencies to demonstrate different levels of effectiveness of graphic aids, and bringing in grahic artistis for question/answer periods or in class workshops. Also included are an extensive handout as an introduction to graphics, sample assignments, and a selected and annotated bibliography. S.L.

A GRAPHICS PRIMER FOR ENGLISH TEACHERS

L. V. Brillhart (Triton Coll., River Grove, Ill.) and M. B. Debs *In* NASA. Langley Research Center Tech. Commun. Pt. 1 Dec. 1981 p 131-143 (For primary document see N82-14960 05-82)
Avail: NTIS HC A14/MF A01 CSCL 05B

Skills necessary for teaching graphics are addressed. A simple, step by step method of teaching students how to draw different types of graphs is presented. Each step is illustrated by a drawing. Some audience analysis for the determination of appropriateness of the use of different types of graphs is included. S.L.

N82-14971*# Case Western Reserve Univ., Cleveland, Ohio.

APPLIED TAGMEMICS: A HEURISTIC APPROACH TO THE USE OF GRAPHIC AIDS IN TECHNICAL WRITING

Pamela P. Brownlee and Mary K. Kirtz *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 145-151 refs (For primary document see N82-14960 05-82)
Avail: NTIS HC A14/MF A01 CSCL 05B

In technical report writing, two needs which must be met if reports are to be useable by an audience are the language needs and the technical needs of that particular audience. A heuristic analysis helps to decide the most suitable format for information; that is, whether the information should be presented verbally or visually. The report writing process should be seen as an organic whole which can be divided and subdivided according to the writer's purpose, but which always functions as a totality. The tagmemic heuristic, because it itself follows a process of deconstructing and reconstructing information, lends itself to being a useful approach to the teaching of technical writing. By applying the abstract questions this heuristic asks to specific parts of the report. The language and technical needs of the audience are analyzed by examining the viability of the solution within the givens of the corporate structure, and by deciding which graphic or verbal format will best suit the writer's purpose. By following such a method, answers which are both specific and thorough in their range of application are found. S.L.

N82-14972*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.

CLINICAL REPORT WRITING: PROCESS AND PERSPECTIVE

Helen Rothschild Ewald *In its* Tech. Commun. Pt. 1 Dec. 1981 p 163-171 refs (For primary document see N82-14960 05-82)
Avail: NTIS HC A14/MF A01 CSCL 05B

Clinical report writing in psychology and psychiatry is addressed. Audience/use analysis and the basic procedures of information gathering, diagnosis, and prognosis are described. Two interlinking processes are involved: the process of creation and the process of communication. Techniques for good report writing are presented.* S.L.

N82-14973*# Syracuse Univ., N. Y.

PREPARING FOR AN INFLUX OF FOREIGN STUDENTS IN TECHNICAL WRITING COURSES: UNDERSTANDING THEIR BACKGROUND

Carol S. Lipson *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 173-179 refs (For primary document see N82-14960 05-82)
Avail: NTIS HC A14/MF A01 CSCL 05B

The cultural and historical influences that students from foreign countries bring with them to technical and report writing classes, in particular those influences that would affect their receipt of instruction in American principles for written prose are examined. The grouping of sentences into idea units and into paragraphs, and the grouping of the paragraphs into whole structures are considered. The different cultures, different habits and norms for handling prose, and the dictates for style and structure and sufficiency and approach are also considered. S.L.

N82-14974*# Florida Atlantic Univ., Boca Raton. Dept. of Communication.

ENLIGHTENED USE OF PASSIVE VOICE IN TECHNICAL WRITING

M. K. Trammell *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 181-190 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

The passive voice as a normal, acceptable, and established syntactic form in technical writing is defended. Passive/active verb ratios, taken from sources including 'antipassivist' text books, are considered. The suitability of the passive voice in technical writing which involves unknown or irrelevant agents is explored. Three 'myths' that the passive (1) utilizes an abnormal and artificial word order, (2) is lifeless, and (3) is indirect are considered. Awkward and abnormal sounding examples encountered in text books are addressed in terms of original context. Unattractive or incoherent passive sentences are explained in terms of inappropriate conversion from active sentences having (1) short nominal or pronominal subjects or (2) verbs with restrictions on their passive use. N.W.

THE PROBLEMS INHERENT IN TEACHING TECHNICAL WRITING AND REPORT WRITING TO NATIVE AMERICANS

Jean Zukowski/Faust *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 199-209 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01

Teaching technical writing to Native Americans contending with a second language and culture is addressed. Learning difficulties arising from differences between native and acquired language and cultural systems are examined. Compartmentalized teaching, which presents the ideals of technical writing in minimal units, and skills development are considered. Rhetorical problems treated include logic of arrangement, selection of support and scope of detail, and time and space. Specific problems selected include the concept of promptness, the contextualization of purpose, interpersonal relationships, wordiness, mixture of registers, and the problem of abstracting. Four inductive procedures for students having writing and perception problems are included. Four sample exercises and a bibliography of 13 references are also included. N.W.

N82-14976*# Washington Univ., Seattle. Scientific and Technical Communication Program.

WRITING AS DECISION-MAKING

James W. Souther *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 239-243 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

The need to teach informational writing as a decision-making process is discussed. Situational analysis, its relationship to decisions in writing, and the need for relevant assignments are considrered. Teaching students to ask the right questions is covered. The need to teach writing responsiveness is described. Three steps to get started and four teaching techniques are described. The information needs of the 'expert' and the 'manager' are contrasted. N.W.

N82-14977*# Delaware Univ., Newark. Dept. of English.

INTEGRATE ORAL COMMUNICATION WITH TECHNICAL WRITING: TOWARDS A RATIONALE

Terry Skelton *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 255-259 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

Integrating oral communication and technical writing instruction, to give students the opportunity to learn and practice interpersonal skills, is proposed. By linking speech and writing the importance of small-group interaction in developing transferable ideas is acknowledged. Three reasons for integration are examined: workday activities, application of role-taking to writing, and conflict resolution. Four advantages of integration are stated. N.W.

TOWARD DEFINING GOOD WRITING: A RHETORICAL ANALYSIS OF THE WORDS, SENTENCES, AND PARAGRAPHS IN 16 INDUSTRIAL SCRIPTS

Randall R. Freisinger and Bruce T. Petersen *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 291-304 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

The assumption that teachers of technical writing agree on a definition of good writing was found to be without basis. Resolution of disagreements arising from close reading and textual analysis is described. Writing samples from corporate sources including IBM, ALCOA, Exxon, Weyerhaeuser, Bell Labs, Underwriters Laboratories, Dow Chemical, and US Steel were requested. A mixture of informative and persuasive examples, and examples directed at lay and specialist audiences were received. Analyses of 16 writing samples are reported. Analysis of word level, sentence level, and paragraph level, was completed. Syllabism, verb selection, nominalizations, vocabulary choices, t-units, subordination, sentence and clause length, syntactic order, patterns, development, topic sentences, propositional order, and transitions were analyzed. N.W.

RESEARCH IN THE COMPREHENSION OF ENGINEERING LECTURES BY NON-NATIVE SPEAKERS

Leslie A. Olsen and Thomas N. Huckin *In* NASA. Langley Research Center Tech. Commun., Pt. 1 Dec. 1981 p 305-311 refs (For primary document see N82-14960 05-82)

Avail: NTIS HC A14/MF A01 CSCL 05B

Failure by foreign students to perceive the rhetorical structure or overall organization of an engineering lecture, rendering them unable to understand it, is discussed. Equally serious failure by such students to percieve the organizing role of theory in structuring the activities in their field is reported. Failure to identify the role of theory in the problem-solving process that underlies engineering is emphasized. Engineering was not seen as a series of on-going problems where each stage of solution exposed new problems to be solved. Implications for course planners and material designers are discussed. N.W.

DEFENSE TECHNICAL INFORMATION CENTER FREE TEXT EXPERIMENT: MANAGEMENT DATA BASES Information Retrieval Report, Jan. - Jul. 1981

Carlyan J. Thompson Oct. 1981 35 p refs

(AD-A105570) Avail: NTIS HC A03/MF A01 CSCL 05/2

DTIC has conducted an experiment that utilizes the free text inversion technique to retrieve records from the DROLS management data bases. It was felt that free text inversion as a form of retrieval would be beneficial in supporting DTIC's revitalized role in the transfer of technical information. The intent of this project was to determine if the free text inversion technique could be implemented in the management data bases without severely impacting the on-line system. Response time, storage capacity and relevance of reports were the major areas of concern. GRA

Different effects are classified by: technological advantages; commercial gains; organization and methodological advances; and impact on employment. Exports and limiting, or substitution for, imports are considered. Advantages other than space research were estimated for each sector of the economy and by country. Project Meteosat is shown to be of particular value. Results show that innovations due to ESA funding center on two essential activities: processing, storage and dissemination of information; and conditioning, storage and distribution of energy.

SCENARIOS OF ECONOMIC DEVELOPMENT WITHIN THE EUROPEAN COMMUNITY UNTIL THE YEAR 2000
Hermann Keimel and Alfons Schmitt Feb. 1981 174 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-730)
(DFVLR-FB-81-08) Avail: NTIS HC A08/MF A01; DFVLR, Cologne DM 28,70

A tendency scenario is projected in order to assess the influence of the European economy on the need for long-distance transportation, i.e. by air. The tendency scenario is supplemented with two additional scenarios which illustrate possible trends in the European Economic Community either towards a technology based economy or towards a service economy. In the technology scenario it is assumed that after a stagnative period of transition economic growth impetus will result from technological innovations and world trade expansion. The service economy scenario describes a situation of low economic growth paralleled by strong expansion in the service sector. Based on the qualitative characteristics of the scenarios, quantitative forecasts are made on economic structure.

The objective of the FSM is to map the zone-to-zone transit patronage demand onto AGT station pairs and to generate feeder system performance data. The output of this model can be used in conjunction with AGT data in order to provide normalized comparisons between different AGT systems operating in the same demand environment with both conventional feeder service/AGT operation and dual mode feeder/AGT operation. Because of its generic nature, the model is recommended for representative AGT deployments comparison only. GRA

The System Availability Model (SAM) is a system level model which provides measures of vehicle and passenger availability. The SAM operates in conjunction with the AGT discrete Event Simulation Model (DESM). The DESM output is the normal source of the delays information portion of the SAM's input data set. There is no inherent restriction on the systems applicability of the SAM. Therefore, the range of applicability of the DESM defines the ranges of applicability for the SAM. This SAM user's manual describes the program, its input requirements, and its operating procedures. The maintenance and standby fleet size required to support the operational fleet are also determined. GRA

INTERSTELLAR GRAINS c90
F. Hoyle and N. C. Wickramasinghe *In its* Interstellar Grains Investigated and Comets Proposed as a Vehicle for Panspermia

Nov. 1980 26 p refs (For primary document see N82-14995 05-88)
Avail: NTIS HC A03/MF A01

Interstellar extinction of starlight was observed and plotted as a function of inverse wavelength. Agreement with the calculated effects of the particle distribution is shown. The main kinds of grain distinguished are: (1) graphite spheres of radius 0.02 microns, making up 10% of the total grain mass; (2) small dielectric spheres of radius 0.04 microns making up 25%; and (3) hollow dielectric cylinders containing metallic iron, with diameters of 2/3 microns making up 45%. The remaining 20% consists of other metals, metal oxides, and polysiloxanes. Absorption factor evidence suggests that the main dielectric component of the grains is organic material. Author (ESA)

Avail: NTIS HC A03/MF A01

Arguments are given for life being a cosmic phenomenon, which comets carry amplify and disperse throughout the universe. The overall atomic composition of comets agrees well with that of living materials. Since organic matter and water are present in comets, there is potentially an excellent culture medium for some types of microorganism. The melted interiors of comets are well suited to the amplification of autotrophic anaerobic bacteria. The frozen exteriors could preserve almost all forms of microorganism known to exist on Earth today. The Earth receives over 10 to the 18th power viable cells per year as a result of the deposition of cometary particles at the top of the atmosphere. The various environments of the Earth offer ample scope for development to the particles which do not perish. Author (ESA)

OPTICAL PERFORMANCE DATA FOR THE UK INFRARED TELESCOPE: ATMOSPHERIC SEEING EFFECTS IN THE INFRARED
C. M. Humphries and T. E. Purkins 1 Dec. 1980 25 p refs
(UKIRT-16; ISSN-0260-9983) Avail: NTIS HC A02/MF A01

Aperture diffraction modulation transfer functions (MTF) were calculated at wavelengths from 0.5 to 10 microns, for a primary aperture of 3.8m, and a secondary diameter of 0.95m. Measured MTF at 0.5 to 4 microns for UKIRT optics is compared with aperture diffraction MTF, including the effect of average seeing conditions. Wavelength dependent MTF under good atmospheric,seeing conditions, i.e. 0.5, 1, and 2 arcsec seeing, are presented with point spread functions. Performance matches predictions. The theory of MTF is introduced. It measures the modulation or contrast of features in the exit pupil at various spatial frequencies and expresses them in linear or angular seperation distances. Author (ESA)

90 ASTROPHYSICS

UNIVERSITY OF CALIFORNIA ELECTRON AND X-RAY EXPERIMENTS ON ISEE-3, SERIES 22, ISSUE 5 Technical Progress Report, 1 Feb. 1980 - 28 Feb. 1981
Kinsey A. Anderson Mar. 1981 10 p refs
(Contracts NAS5-22307; NAS5-25980)
(NASA-CR-166725) CSCL 03B

Some results of the solar electron and X-ray experiments onboard the International Sun Earth Explorer 3 are briefly discussed. The production of plasma waves and the generation of type 3 solar radio emission were analyzed using measurements of the electron distribution function. Measurements of bow shock particles far upstream from Earth and of low energy electrons and ions during long-lived solar particle events were examined. An analysis of the propagation of low energy electrons indicates that the pitch angle distributions of solar electrons are highly varied, complex and rapidly changing. The use of X-ray data to investigate solar flares is described. M.G.

PLASMA WAVE EXPERIMENT FOR THE ISEE-3 MISSION Semiannual Report, 20 Feb. - 19 Aug. 1981
Frederick L. Scarf 19 Aug. 1981 70 p refs
(Contracts NAS5-20682; NAS5-20093; NAS7-100; Grant NGL-16-001-043)
(NASA-CR-166730; Rept-23499-6024-UT-00; SAR-3) CSCL 03B

Analyses of data from the scientific instrument designed to study solar wind and plasma wave phenomena on the International Sun Earth Explorer 3 are presented. Plasma turbulence upstream and downstream of interplanetary shocks was detected. The microscopic plasma waves associated with interplanetary shocks were studied in the broad context of a discussion of some potential contributions to collisionless shock and cosmic ray acceleration theories. The central issue here was whether heated ions create magnetohydrodynamic turbulence as part of the quasi-parallel shock structure. The analysis suggests that the plasma physics near the Earth's bow shock may apply to interplanetary shocks on a far larger scale. Additional analyses concerning whistler mode wave propagation and Earth's foreshock structure are briefly described. R.J.F.

THE DISCOVERY OF 50 MINUTE PERIODIC ABSORPTION EVENTS FROM 4U1915-05
N. E. White and J. H. Swank Oct. 1981 18 p refs Submitted for publication
(NASA-TM-83839) Avail: NTIS HC A02/MF A01 CSCL 03B

The steady flux from 4U1915-05 which undergoes periodic absorption dips every 50 minutes was demonstrated. This period represents the underlying orbital period of the system. It is suggested that variations in the depth and duration of these events are caused by a bulge in the edge of the accretion disk, at the point where the gas stream impacts the disk. The mass losing star in this system is probably a low mass white dwarf. The spectrum of the dips indicates that the metallicity of the absorbing material is at least a factor 17 below solar values. E.A.K.

N82-15002# University Coll., Cardiff (Wales). Dept. of Applied Mathematics and Astronomy.
THE 3.4 MICRON INTERSTELLAR ABSORPTION FEATURE AND THE ORGANIC COMPOSITION OF INTERSTELLAR GRAINS
D. T. Wickramasinghe, D. A. Allen, F. Hoyle, and N. C. Wickramasinghe Jun. 1980 16 p refs Submitted for publication
(Preprint-61) Avail: NTIS HC A02/MF A01

The nature of interstellar matter is examined by infrared spectroscopy. The 3.4 micron absorption feature is believed to arise in the general interstellar medium. The interstellar grains are organic, existing in polymeric form. For individual titles, see N82-15003 through N82-15004.

N82-15003# University Coll., Cardiff (Wales). Dept. of Applied Mathematics and Astronomy.
THE 3.4 MICROMETER INTERSTELLAR ABSORPTION FEATURE
D. T. Wickramasinghe (Royal Observatory, Edinburgh) and D. A. Allen (Anglo-Australian Observatory, Epping, Australia) *In its*

The 3.4 Micron Interstellar Absorption Feature and the Organic Composition of Interstellar Grains Jun. 1980 9 p refs Submitted for publication (For primary document see N82-15002 05-90)
Avail: NTIS HC A02/MF A01

The presence of the 3.4 micrometer absorption feature in the source IRS 7 is shown. The ratio of the absorption coefficient of grains at 3.4 micrometers to the extinction coefficient at lambda V = 5500A is shown to be in the range 0.003 to 0.006. The wavelength of the peak absorption is 3.39 micrometers, + or - 0.03 micrometers; the equivalent width 330A, and the intrinsic full width at half maximum 0.13 micrometers. The 3.4 micrometer absorption is believed to arise in the general interstellar medium, and not in the dense molecular clouds where absorption due to other CH and CC bonds is known to occur. A circumstellar origin is also discounted. A substantial fraction of carbon in the interstellar medium is deduced to be in the form of organic molecules in grains. Visual extinction coefficient equals 5500A. This is consistent with observational data. The band center varies slightly from one polysaccharide to another but is again consistent with observational data. Author (ESA)

N82-15004# University Coll., Cardiff (Wales). Dept. of Applied Mathematics and Astronomy.
THE ORGANIC COMPOSITION OF INTERSTELLAR GRAINS
D. T. Wickramasinghe (Royal Observatory, Edinburgh), F. Hoyle, and N. C. Wickramasinghe *In its* The 3.4 Micron Interstellar Absorption Feature and the Organic Composition of Interstellar Grains Jun. 1980 6 p refs Submitted for publication (For primary document see N82-15002 05-90)
Avail: NTIS HC A02/MF A01

Polyformaldehyde is examined as a possible organic component of interstellar grains. Absorption coefficients are determined from calibrated infrared spectra. The CH band center is at 3.4 microns and the visual extinction coefficient equals 5500A. This is consistent with observational data. The band center varies slightly from one polysaccharide to another but is always consistent with observational data. Grains are thus thought to exist in polymeric form. Author (ESA)

N82-15005# State Univ. of New York, Albany.
RESEARCH IN NUCLEAR ASTROPHYSICS: STELLAR COLLAPSE AND SUPERNOVAE Progress Report, 1 Dec. 1981 - 30 Nov. 1984
T. J. Mazurek and J. M. Lattimer 1981 40 p refs Prepared in cooperation with State Univ. of New York at Stony Brook
(Contract DE-AC02-80ER-10719)
(DE81-030041; DOE/ER-10719/T1) Avail: NTIS HC A03/MF A01

The implications of nuclear theory for the final collapse of massive stars is examined. The development of an appropriate nuclear equation of state and its implementation in hydrodynamics are studied. The influence of nuclear dissociation and neutrino emission on the formation and propagation of shocks are investigated. The long term evolution of collapsed stellar cores after the initial hydrodynamic bounce, neutrino production and emission in all phases are derived, and potential effects of pion condensation and neutrino instabilities are explored. ROTATIONAL VELOCITIES AND AGES OF SOLAR-TYPE STARS Ph.D. Thesis
David Robert Soderblom 1980 88 p
Avail: Univ. Microfilms Order No. 8123249

Data needed to discuss the rotational history of solar-type stars and the relation of angular momentum loss to other physical phenomena are provided. High resolution spectral lin profiles were obtained for 82 stars and were modeled to yield rotational velocities. The available Li data were reanalyzed to derive an age calibration for field stars. The Li age relation indicates that stars of solar mass one have undergone pre-main-sequence Li depletion by a factor of two to five. The field star and cluster data indicate a relation that was predicted from models of angular momentum loss through stellar wind forced to corotate by a magnetic field. Rapid rotation does not enhance Li depletion, nor is it likely that it enhances the mass loss rate or the Alfven radius. It is possible, but not certain, that slow rotation inhibits Li depletion. Dissert. Abstr.

C. A. Lundquist and Paul D. Craven Oct. 1981 35 p refs
(NASA-TM-82449) Avail: NTIS HC A03/MF A01 CSCL 03B

The final results of the Skylab 4 experiment S233, Kohoutek photometric photography experiment, which undertook a series of visible light photographs suitable for photometry and for a photographic history of Comet Kohoutek are described. The experiment concept, the data reduction method, and the results obtained are discussed. B.W.

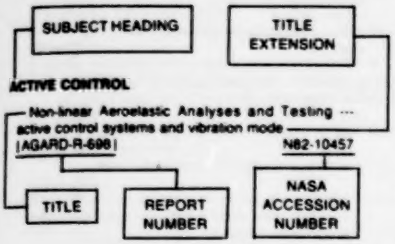
99 GENERAL

N82-15008* National Aeronautics and Space Administration, Washington, D. C.
HIGHLIGHTS OF 1981 ACTIVITIES
23 Dec. 1981 20 p
(NASA-News-Release-81-199; P81-10203) Avail: NTIS Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 22B

The highlights of NASA's 1981 activities are presented, including the results of the two flights of the space shuttle Columbia and the Voyager 2 encounter with Saturn. Accomplishments in the areas of space transportation operations; space science; aeronautical, energy, and space research and development; as well as space tracking, international activities, and 1981 launch activities are discussed. S.L.

SUBJECT INDEX

Typical Subject Index Listing



The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

A

ABERRATION
Third order aberrations of classical mirror lenses with spherical surfaces
[DRIC-T-6359] N82-14913

ABLATION
Laser tool: Pulsed solid state laser for welding and ablation of material
[BMFT-FB-T-81-043] N82-14518

ABLATIVE MATERIALS
A study of test techniques for evaluating ablative plasma engines in vacuum test cells

[PB81-231946] N82-14623

ALGEBRA

The design, specification, and implementation of OBJ-T: A language for writing and testing abstract algebraic program specifications N82-14827

Normal forms, versal deformations and quadratic integrals of linear Hamiltonian systems N82-14848

Research in applied mathematics related to nonlinear system theory
[AD-A106091] N82-14852

ALGORITHMS

The use of ESA starmapper measurements for spacecraft estimation: Estimator design rationale and results N82-14161

Optimal voltage level control and its application to long range extension planning in high voltage transmission network
[ISBN-951-45-5116-2] N82-14446

Synthesis and optimization of programmable logic arrays N82-14814

Application of integration algorithms in a parallel processing environment for the simulation of jet engines
[NASA-TM-82746] N82-14849

Exact and approximation algorithms for a scheduling problem
[AD-A105881] N82-14859

ALKALI HALIDES

Manufacturing methods and technology for production hot forging of alkali halide lenses
[AD-A104643] N82-14396

ALKALI METALS

Interpretation of the nitrogen KVV Auger lineshape from alkali metal nitrates
[AD-A105877] N82-14315

ALL SKY PHOTOGRAPHY

All-sky, video-based luminance mapper for daylighting research
[DE81-029276] N82-14707

ALLOYS

Mechanical relaxation response of 2 1/4 Cr-1 Mo steel
[DE81-027301] N82-14344

Theoretical investigations on the separation of immiscible alloys
[BMFT-FB-W-81-004] N82-14352

Point-defect sources and sinks
[DE82-000655] N82-14944

ALPHA DECAY

Accelerated Alpha-s deterioration in a geostationary orbit N82-14237

ALPHANUMERIC CHARACTERS

A prototype interface unit for microprocessor based Loran-C receiver
[NASA-CR-164887] N82-14078

ALUMINUM

Charging characteristics of silica fabrics
N82-14233

Bending fatigue tests on SiC-Al tapes under alternating stress at room temperature
[NASA-TM-76631] N82-14285

ALUMINUM ALLOYS

Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334

Fatigue corrosion resistance of aluminum alloys --- aircraft construction materials
[SNIAS-812-551-104] N82-14354

ALUMINUM ARSENIDES

Preparation of GaAs/AlxGa1-xAs multilayer structures with predetermined optical and electrical properties by molecular beam epitaxy
[BMFT-FB-T-81-042] N82-14951

ALUMINUM BORON COMPOSITES

Analysis of crack propagation as an energy absorption mechanism in metal matrix composites
[NASA-CR-165051] N82-14288

Fracture mechanics in fiber reinforced composite materials, taking as examples B/Al and CFRP
N82-14290

ALUMINUM OXIDES

Aerosil for the improvement of the flow behavior of powdered substances
[NASA-TM-76643] N82-14283

Fracture toughness of Al2O3-ZrO2 composites
[DE81-026575] N82-14300

AMBIPOLAR DIFFUSION

Field errors in EBT and their effects on the ambipolar potential --- bumpy toruses
[DE82-000828] N82-14930

AMERICAN INDIANS

The problems inherent in teaching technical writing and report writing to native Americans N82-14975

AMINES

Carcinogenic effects of coal-conversion materials
[DE81-028108] N82-14803

AMMONIA

Studies on the behavior of ammonia and ammonium salts in the atmosphere (1) - Fractional collection of ammonia gas and particulate ammonium
[NASA-TM-76582] N82-14693

AMMONIUM COMPOUNDS

Studies on the behavior of ammonia and ammonium salts in the atmosphere (1) - Fractional collection of ammonia gas and particulate ammonium
[NASA-TM-76582] N82-14693

AMORPHOUS MATERIALS

Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

Amorphous-crystalline boundary dynamics in laser crystallization
[AD-A105811] N82-14942

Materials research at Stanford University
[AD-A106108] N82-14957

AMPLIFIER DESIGN

Optimum design of wide-bandwidth, low-noise photodiode amplifiers. Volume 1: Bandwidth --- photodiode circuit
[OUEL-1363/81-VOL-1] N82-14468

AMPLITUDE DISTRIBUTION ANALYSIS

Nonadiabatic corrections and detrapping for variable parameter free electron lasers
[DE81-028425] N82-14515

AMPS (SATELLITE PAYLOAD)

A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492

ANALOG CIRCUITS

Integrated circuits for accurate linear analogue electric signal processing N82-14445

ANALOG TO DIGITAL CONVERTERS

REPEAT facility. Report for May, June, July
[DE81-028156] N82-14665

ANALYSIS (MATHEMATICS)

Generalized algebraic relation for predicting developing curved channel flow with a k-epsilon model of turbulence
[DE81-028131] N82-14486

ANALYSIS OF VARIANCE

Assessing the behavior of robust estimates of location in small samples: Introduction to configural polysampling
[AD-A105956] N82-14869

ANALYTIC GEOMETRY

Global geometry techniques for mission analysis
N82-14159

ANALYZERS

System performance analyzer N82-14832

ANEMIAS

Inborn anemias in mice
[DE81-029128] N82-14795

ANGLES (GEOMETRY)

The dynamic attitude reconstruction method
N82-14160

ANGULAR MOMENTUM

Rotational velocities and ages of solar-type stars
N82-15006

ANISOTROPY

Representation and material charging response of geoplasma environments N82-14249

ANNEALING

Defect chemistry and characterization of (Hg, Cd)Te
[NASA-CR-161928] N82-14308

ANNUAL VARIATIONS

REPEAT facility. Report for May, June, July
[DE81-028156] N82-14665

ANNULAR FLOW

Experimental investigation of the flow in a rotating circular channel
[MPIS-21/1980] N82-14490

ANNULI

The design of phased annular antenna arrays of interacting radiators, excited by a Butler circuit
N82-14417

ANODES

Lithium based anodes for solid state batteries
[AD-A105618] N82-14640

ANODIZING

Investigation of the in-situ oxidation of methanol in fuel cells
[AD-A105947] N82-14642

ANOMALIES

Variability of seasonal precipitation over the conterminous United States, 1948-1976 — circulation anomalies related to precipitation extremes
N82-14788

ANTENNA ARRAYS

Antenna (selected articles)
[FTD-ID(RS)T-0943-81] N82-14416

The design of phased annular antenna arrays of interacting radiators, excited by a Butler circuit
N82-14417

A transmitting solid state linear phased array antenna for C band
[PHL-1980-10] N82-14437

ANTENNA COMPONENTS

Antenna (selected articles)
[FTD-ID(RS)T-0943-81] N82-14416

The design of phased annular antenna arrays of interacting radiators, excited by a Butler circuit
N82-14417

ANTENNA DESIGN

An overview of the design and construction of small Earth stations used with OTS N82-14196

Antenna (selected articles)
[AD-A107428] N82-14413

Synthesis of a plane impedance antenna of finite length N82-14414

Antenna (selected articles)
[FTD-ID(RS)T-0943-81] N82-14416

ANTENNA RADIATION PATTERNS

Results of tests on the satellite spotbeam antenna — OTS N82-14182

Emission of an elementary slot vibrator located in the center of an ideally conducting disk N82-14415

The synthesis of difference direction patterns of spherical antennas N82-14419

A user's manual for: Electromagnetic Surface Patch code (ESP)
[AD-A105954] N82-14428

The eccentrically insulated circular-loop antenna and the horizontal circular-loop antenna near a planar interface N82-14440

APOGEES

Optimization of Apogee Kick Motor (AKM) firing attitude N82-14164

APPALACHIAN MOUNTAINS (NORTH AMERICA)

Evaluation of the eastern gas shales in Pennsylvania
[DE82-001165] N82-14596

Evaluation of Devonian shale potential in New York
[DE82-001163] N82-14597

APPLICATIONS PROGRAMS (COMPUTERS)

airborne data analysis/monitor system
N82-14830

APPROACH CONTROL

Analysis of two air traffic samples in the terminal area of Frankfurt/Main, August 4th 1978
[DFVLR-MITT-81-12] N82-14073

Requirements for instrument approaches to triple parallel runways
[AD-A105622] N82-14079

APPROACH INDICATORS

In-service testing of the Precision Approach Path Indicator (PAPI) at Newark International Airport, New Jersey
[DOT/FAA/RD-81/95] N82-14076

Requirements for independent and dependent parallel instrument approaches at reduced runway spacing
[AD-A105673] N82-14080

APPROXIMATION

Exact and approximation algorithms for a scheduling problem
[AD-A105881] N82-14859

A further investigation of efficient heuristic procedures for integer linear programming with an interior
[AD-A106027] N82-14860

Optimization of unconstrained functions with sparse Hessian matrices: Quasi-Newton methods
[AD-A106028] N82-14861

AQUIFERS

Water problems and research needs for New Mexico
[PB81-231979] N82-14619

Waste heat and chill storage in aquifer systems
[DE81-028016] N82-14652

ARC DISCHARGES

Brushfire arc discharge model N82-14224

Tank testing of a 2500-cm2 solar panel
N82-14228

Design of an arc-free thermal blanket N82-14231

ARC WELDING

Study of problems posed by the emission of fumes during welding
[CETIM-12-Y-213] N82-14524

ARCHITECTURE

Residential site design and energy conservation. Part 1: General report
[DE81-904010] N82-14398

Design of an energy conservation building
[NASA-TM-83175] N82-14632

Scheme of attributes in multilevel design of computer systems N82-14844

ARCHITECTURE (COMPUTERS)

Functionally specialized multi-processor architectures
[AD-A105662] N82-14809

Use of software tools in the development of real time software systems N82-14838

MIKE: A network operating system for the distributed double-loop computer network N82-14843

ARCTIC OCEAN

The Norwegian remote sensing experiment (Norsex) in a marginal ice zone N82-14586

Measurements of radar backscatter from Arctic Sea ice in the summer
[AD-A105586] N82-14592

Measurements of radar backscatter from Arctic Sea ice in the summer, Appendices A and B
[AD-A105736] N82-14593

ARTIFICIAL INTELLIGENCE

C2 relevance of selected artificial intelligence systems. Brief examination of several existing AI systems for use in future command and control applications
[AD-A105876] N82-14846

ARTILLERY

Dust cloud models: Sensitivity of calculated transmittances to variations in input parameters
[AD-A103310] N82-14918

ASHES

Coal conversion solid waste disposal
[DE81-028567] N82-14680

ASSEMBLING

Hand-operated honeycomb core expansion set-up
[AE-TN-810901] N82-14284

ASTRONOMICAL MODELS

Plasma flow and magnetic fields in comets
N82-14109

ASTRONOMICAL PHOTOGRAPHY

A polarizer for vacuum ultraviolet N82-14916

Kohoutek, photometric photography experiment (S233)
[NASA-TM-82449] N82-15007

ASYMMETRY

Modular asymmetric parachute for wind-tunnel testing
[DE81-028416] N82-14068

ATMOSPHERIC ATTENUATION

Depolarization measurements at 11 and 14 GHz with OTS N82-14178

Correlating OTS beacon measurements with radiometer and rainfall data N82-14179

Electro-optical atmospheric transmission effort in the marine environment
[AD-A105665] N82-14700

ATMOSPHERIC BOUNDARY LAYER

Description of an advective boundary layer model using trajectories N82-14753

ATMOSPHERIC CHEMISTRY

Stratospheric aerosols
[NASA-TM-83217] N82-14691

ATMOSPHERIC CIRCULATION

A simulation study of the recession coefficient for antecedent precipitation index — soil moisture and water runoff estimation
[NASA-TM-83860] N82-14549

The use of mesoscale meteorological and climatological information in nowcasting and short range prediction N82-14751

Variability of seasonal precipitation over the conterminous United States, 1948-1976 — circulation anomalies related to precipitation extremes
N82-14788

ATMOSPHERIC DENSITY

Research results from analysis of satellite orbits — Earth atmosphere and gravitational effects
N82-14124

ATMOSPHERIC EFFECTS

Application of a Gaussian multilayer diffusion model to characterize dispersion of vertical HCl column density in rocket exhaust clouds
[NASA-TP-1956] N82-14672

Optical performance data for the UK infrared telescope; atmospheric seeing effects in the infrared — United Kingdom Infrared Telescope (UKIRT)
[UKIRT-16] N82-14998

ATMOSPHERIC MODELS

Sensitivity analysis of a mesoscale moisture model
[AD-A101528] N82-14590

A finite-element sea-breeze model N82-14712

Simple short range models using satellite imagery data N82-14746

Description of an advective boundary layer model using trajectories N82-14753

A statistical model of wind distribution in force and in direction: Application to Uccle (Brussels) data and validity of the model for Belgium
[PUBL-SER-B-107] N82-14784

ATMOSPHERIC MOISTURE

Silicon dew-point sensor for accurate humidity measurement systems N82-14493

Scientific studies using Bhaskara satellite microwave radiometer (SAMIR) data: A short overview — calibration of the instrument and its use in the study of oceanographic parameters N82-14587

Sensitivity analysis of a mesoscale moisture model
[AD-A101528] N82-14590

The role of mesoscale surface motions in the life of a convective storm in a dry continental climate
N82-14740

ATMOSPHERIC OPTICS

Spectral atmospheric observations at Nantucket Island, May 7-14, 1981
[NASA-TM-83196] N82-14550

ATMOSPHERIC REFRACTION

Electro-optical atmospheric transmission effort in the marine environment
[AD-A105665] N82-14700

ATMOSPHERIC SOUNDING

Atmospheric sounding user's guide
[PB81-230476] N82-14208

Ground based remote sensing for meteorological nowcasting N82-14737

ATMOSPHERIC TEMPERATURE

Transfer and distortion of atmospheric information in the satellite temperature retrieval problem
N82-14728

Satellite temperature soundings: Microwave satellite observations N82-14729

ATOMIC BEAMS

Laser cooling and trapping of neutral atoms
[AD-A105750] N82-14512

Field-ion-microscope observations of radiation effects
[DE81-030934] N82-14802

ATOMIC COLLISIONS

Theoretical studies relating to the interaction of radiation with matter: Atomic collision processes occurring in the presence of radiation fields
[AD-A105789] N82-14897

ATOMIC EXCITATIONS

Temperature dependence of O2 (1 Delta) + O2 (1 Delta) and I (2P sub 1/2) + O2 (1 Delta) energy pooling
[AD-A105817] N82-14507

ATOMIC STRUCTURE

Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

The electronic structure of porphyrins and metalloporphyrins N82-14329

ATTENUATION

Some optical properties of blowing snow
[AD-A103268] N82-14697

ATTENUATION COEFFICIENTS
Results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield [PHL-1979-43] N82-14435
Further results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield [PHL-1980-46] N82-14436

ATTITUDE (INCLINATION)
Optimization of Apogee Kick Motor (AKM) firing attitude N82-14164

ATTITUDE CONTROL
Validation and operations experience related to orbit and attitude software of Bhaskara N82-14162

ATTITUDE GYROS
In orbit checkout of the IRAS gyroscopes --- infrared astronomy satellite (IRAS) N82-14170

ATTITUDE INDICATORS
Infrared radiance model variation by sensor flight measurements N82-14171

AUGER EFFECT
Interpretation of the nitrogen KVV Auger lineshape from alkali metal nitrates [AD-A105877] N82-14315

AUGER SPECTROSCOPY
Microanalysis of composite materials --- silicon carbide reinforced titanium alloys N82-14294
Interpretation of the nitrogen KVV Auger lineshape from alkali metal nitrates [AD-A105877] N82-14315
Application of surface analysis to solve problems of wear [NASA-TM-82753] N82-14519

AURORAL IONIZATION
Charging of a large object in low polar Earth orbit --- space shuttle orbiter N82-14275

AURORAL ZONES
Nonlinear evolution of plasma enhancements in the auroral ionosphere 1: Long wavelength irregularities [AD-A105553] N82-14699
Experimental study of instabilities and motion of a streaming ionospheric plasma in the polar zone --- interpretation of Ionospheric Polar Campaign rocket sounding results [CRPE-NT-78] N82-14710

AUSTENITIC STAINLESS STEELS
Alloy development for cladding and duct applications --- breeder reactor materials [DE81-027843] N82-14339
Influence of neutron irradiation at 55 deg C on the properties of austenitic stainless steels [DE81-028065] N82-14342
Effects of pulsed dual-ion irradiation of microstructural development --- in austenitic stainless steels [DE81-028631] N82-14343

AUSTRALIA
The numerical simulation of intense frontal discontinuities over southeastern Australia N82-14758

AUTOMATED EN ROUTE ATC
Data communications support for the ATC computer replacement program (1988-1996) --- requirements for automated en route ATC [DOT/FAA/RD-81/104] N82-14807

AUTOMATED GUIDEWAY TRANSIT VEHICLES
Systems operation studies for automated guideway transit systems. Feeder systems model functional specification [PB81-233496] N82-14990
Systems operation studies for automated guideway transit systems: System Availability model user's manual [PB81-233504] N82-14991
Systems operation studies for automated guideway transit systems. Availability model functional specification [PB81-233512] N82-14992
Systems Operation Studies for Automated Guideway Transit systems. System availability model programmer's manual [PB81-233520] N82-14993
Systems operation studies for automated guideway transit systems. Detailed station model functional specification [PB81-233538] N82-14994

AUTOMATIC CONTROL
Electronic master monitor and advisory display system, operational fuctions report [AD-A105516] N82-14087
Integrated circuits for industrial controller applications [BMFT-FB-T-80-116] N82-14463
Automated transportable mass spectrometer [DE82-000903] N82-14498
Automatic balancing system with laser unit --- for miniature rotors [BMFT-FB-T-81-008] N82-14502
PMP 80 automatic photometer --- for enzyme activity determination [BMFT-FB-T-81-051] N82-14504

AUTOMATIC FLIGHT CONTROL
Advanced crash survivable flight data recorder and Accident Information Retrieval System (AIRS) [AD-A105510] N82-14072

AUTOMATIC GAIN CONTROL
Commutated automatic gain control system [NASA-CR-164798] N82-14077

AUTOMATIC LANDING CONTROL
MLS vertical guidance and navigation for a STOL airplane landing on an elevated STOLport [NASA-TM-81338] N82-14101

AUTOMATIC TEST EQUIPMENT
ROLM computers in the flight testing of the Fokker F29 aircraft N82-14839

AUTOMATIC WEATHER STATIONS
The Modular Automated Weather System (MAWS) concept --- airfield weather support N82-14763
The Swiss network of 2 digital radars and 60 automatic weather stations N82-14766
Automated techniques for satellite imagery analysis N82-14768
The mesoscale observational network in Japan N82-14769

AUTOMOBILE ACCIDENTS
Occupant response and vehicle acceleration in a 30 MPH frontial impact test, 1981 Subaru DL, 4 wheel drive, 4 door wagon, NHTSA 811301 [PB81-226769] N82-14989

AUTOMOBILE FUELS
Alcohol fuels grant program at Lincoln Land Community College, Springfield, Illinois [DE82-000744] N82-14375

AUTOMOBILES
Staged collision and damage data. Volume 1: Report for accident reconstruction of thirty (30) test vehicles [PB81-234072] N82-14407
Staged collision and damage data. Volume 2: Report for accident reconstruction of thirty (30) test vehicles [PB81-234080] N82-14408
Technical change in US industry: A cross-industry analysis [NASA-CR-165047] N82-14986

AVAILABILITY
Systems operation studies for automated guideway transit systems. Availability model functional specification [PB81-233512] N82-14992

AVALANCHE DIODES
A transmitting solid state linear phased array antenna for C band [PHL-1980-10] N82-14437
Design, performance and device/circuit limitations of N-way symmetrical IMPATT diode power combining arrays [AD-A105663] N82-14453

AVIONICS
The use of flight management computers in air carrier operations in the 1980s [AD-A105621] N82-14071
Advanced crash survivable flight data recorder and Accident Information Retrieval System (AIRS) [AD-A105510] N82-14072
Investigation of functional commonality of avionics systems in naval aircraft [AD-A105503] N82-14088
Modular Multi-Function Multi-Band Airborne Radio System (MFBARS). Volume 1: Executive summary [AD-A106057] N82-14423
Modular Multi-Function Multi-Band Airborne Radio System (MFBARS). Volume 2: Detailed report [AD-A106052] N82-14424
A tutorial on the CARE III approach to reliability modeling --- of fault tolerant avionics and control systems [NASA-CR-3488] N82-14806
Description of a dual fail operational redundant strapdown inertial measurement unit for integrated avionics systems research N82-14842

AXES OF ROTATION
Small strain accompanied by moderate rotation [AD-A105592] N82-14535

AXIAL FLOW
Optimization of compressor vane and bleed settings [AD-A106059] N82-14097

AXIAL FLOW TURBINES
The use of optimization techniques to design controlled diffusion compressor blading [NASA-TM-82763] N82-14094

AXIAL LOADS
Inclination control using a pulse mode axial thruster N82-14166
Coupled flexural torsional vibration of an eccentrically stretched strip [AE-TN-8131] N82-14528
Stress distribution around a circular hole in square plates, loaded uniformly in the plane, on two opposite sides of the square. Optimum shapes of central holes in square plates subjected to uniaxial uniform load. Optimization of hole shapes in circular cylindrical shells under axial tension [AD-A105598] N82-14536

AXIAL MODES
Inclination control using a pulse mode axial thruster N82-14166

AXISYMMETRIC FLOW
Experimental and analytical investigation of axisymmetric supersonic cruise nozzle geometry at Mach numbers from 0.60 to 1.30 [NASA-TP-1953] N82-14052

AZIDES (INORGANIC)
Mass spectrometric studies of the thermal decomposition of some Azido polymetric binders [AD-A106090] N82-14361

AZIMUTH
The dynamic attitude reconstruction method N82-14160
Regional phase processors [AD-A105470] N82-14696

B

BACKGROUND RADIATION
A computer model for high-latitude phase scintillation based on wideband satellite data from Poker Flat [AD-A105620] N82-14702

BACKSCATTERING
State-of-the-art in using a spaceborne altimeter and scatterometer for the determination of wind, sea state, and marine and ice dynamics --- Seasat instruments N82-14560
Measurements of radar backscatter from Arctic Sea ice in the summer, Appendices A and B [AD-A105736] N82-14593
Project Noordwijk. Part 1: Measurements of the radar backscatter coefficient gamma (sigma deg) in 1977 and 1978 --- on a sea platform [PHL-1979-49-PT-1] N82-14617
Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977 [PHL-1980-28-PT-2] N82-14618

BALANCING
Automatic balancing system with laser unit --- for miniature rotors [BMFT-FB-T-81-008] N82-14502

BALLASTS (IMPEDANCES)
Electromagnetic interference (EMI) measurements of fluorescent lamps operated with solid-state ballasts [DE81-025218] N82-14432

BALLISTIC TRAJECTORIES
Trajectory predictions for a 75 mm solid fuel ramjet tubular projectile [AD-A105551] N82-14207

BARIUM TITANATES
Synthesis, characterization and optical properties of barium titanate films sputtered under various conditions [AD-A105655] N82-14296

BASALT
Dealing with regional hydrologic data-base limitations. Case example: The Columbia River basalts --- hydrology models and site selection for radioactive waste storage [DE81-030086] N82-14809

BAYES THEOREM
Proper Bayes minimax estimators for a multivariate normal mean with unknown common variance under a convex loss function
[AD-A105746] N82-14865
Bayesian forecasting for switching regression and autoregressive processes N82-14873
BEACHES
A beach comfort index used by the national weather service in the Netherlands N82-14761
BEADS
Effects of suspended particles on the rate of mass transfer to a rotating disk electrode
[DE81-028002] N82-14485
BEAM SPLITTERS
Low cost, wide angle infinity optics visual system
[AD-A105508] N82-14921
BEAMS (RADIATION)
Two-dimensional beam-profile monitor using the Reticon MC510A array camera
[DE81-030853] N82-14496
BENDING FATIGUE
Bending fatigue tests on SiC-Al tapes under alternating stress at room temperature
[NASA-TM-76631] N82-14285
BERYLLIUM
Viscoplastic response of beryllium under shock compression
[DE81-028248] N82-14348
BETA FACTOR
Review or recent EBT coupled ring-core stability theory --- bumpy toruses
[DE82-000880] N82-14931
BIBLIOGRAPHIES
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510
Bibliography of publications dealing with tar sands
[DE81-026146] N82-14594
BINARY CODES
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection
[DE82-000507] N82-14799
BINOMIALS
Estimation and testing procedures for the parameters of the negative binomial distribution
N82-14872
BIOASSAY
Algal assay studies of the Chowan River, North Carolina
[PB81-231821] N82-14621
Inborn anemias in mice
[DE81-029128] N82-14795
Evaluation of short-term bioassays to predict functional impairment. Development of plumonary bioassays in small animals: Directory of institutions; individuals involved in utilization
[AD-A103767] N82-14798
BIOCONVERSION
Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377
BIOLOGICAL EFFECTS
Radiological and environmental research 1980: Ecology
[DE82-000154] N82-14678
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests
[AD-A103766] N82-14797
BIOLOGICAL EVOLUTION
Interstellar grains investigated and comets proposed as a vehicle for Panspermia
[PREPRINT-65] N82-14995
Comets: A vehicle for panspermia --- origins of life
N82-14997
BIOMASS
Progress on catalyzed steam gasification of biomass
[DE81-028198] N82-14663
BIOMASS ENERGY PRODUCTION
The PC/ecuador biogas program: Considerations for future development
[PB81-234783] N82-14372
Technical and economic feasibility study for a 1,500,000 gallon per year anhydrous ethanol manufacturing plant
[DE82-000286] N82-14376
Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377
Biomass energy utilization in the Pacific Northwest: impacts associated with residential use of solid fuels
[DE81-029137] N82-14383
Fuels and chemicals made from solar energy
[DE81-025016] N82-14384
Energy balance and utilization of agricultural waste on a farm
[PB81-229262] N82-14385
Studies on sugarcane as an energy crop for Punjab
[PB81-232306] N82-14386
Development of a biomass energy system for drying corn
[DE81-029027] N82-14660
Education and training implications of biomass energy system use
[DE81-029956] N82-14664
BIPOLAR TRANSISTORS
Integrated Schottky Logic N82-14306
BIREFRINGENCE
FOC F/96 polarizers --- faint object camera for space telescope N82-14915
Anomalous dispersion of birefringence of sapphire and magnesium fluoride in the vacuum ultraviolet
N82-14917
BISMUTH
Relaxation effects in shock-induced transitions in bismuth
[DE81-028728] N82-14946
BLADE TIPS
Analytic investigation of effect of end-wall contouring on stator performance
[NASA-TP-1943] N82-14051
BLOCK DIAGRAMS
On the calculation of the H-plane stepped joint of rectangular waveguides N82-14421
BLOWDOWN WIND TUNNELS
Research on an induction driven cryogenic wind tunnel N82-14394
BOATTAILS
Experimental and analytical investigation of axisymmetric supersonic cruise nozzle geometry at Mach numbers from 0.60 to 1.30
[NASA-TP-1953] N82-14052
Numerical simulation of steady supersonic flow over an ogive cylinder boattail body
[AD-A106060] N82-14065
BODY CENTERED CUBIC LATTICES
Point defects in crystals (including grouped defects)
[DE82-000395] N82-14943
BODY-WING CONFIGURATIONS
Subsonic flow in a corner --- laminar and turbulent flow in a wing-fuselage junction N82-14393
BOILERS
Evaluation of coal gasification/combined cycle power plant feasibility at the Sewells Point Naval Complex, Norfolk, Virginia
[AD-A103674] N82-14639
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 2: Utility boiler NO sub x control by combustion modification
[PB81-236127] N82-14686
BOLTS
Ultrasonic inspection of full-size bolting specimens
[KAPL-4129] N82-14525
BOOSTER ROCKET ENGINES
Thrustor performance modeling and parameters estimation N82-14172
BOREHOLES
Ultrasonic inspection of full-size bolting specimens
[KAPL-4129] N82-14525
Geology and geochemistry of samples from Los Alamos National Laboratory HDR well EE-2, Fenton Hill, New Mexico
[DE81-026068] N82-14706
BORON FIBERS
Durability/life of fiber composites in hygrothermomechanical environments
[NASA-TM-82749] N82-14287
BORON REINFORCED MATERIALS
Durability/life of fiber composites in hygrothermomechanical environments
[NASA-TM-82749] N82-14287
BOROSILICATE GLASS
Secondary electron emission yields N82-14226
Failure prediction in glass
[AD-A105857] N82-14364
BOUNDARY LAYER FLOW
Core compressor exit stage study. Volume 4: Data and performance report for the best stage configuration
[NASA-CR-165357] N82-14092
Core compressor exit stage study. Volume 5: Design and performance report for the Rotor C/Stator B configuration
[NASA-CR-165358] N82-14093
High Reynolds Number Cylinder Flow Workshop
[AD-A105066] N82-14477
BOUNDARY LAYER TRANSITION
Experimental investigation of the flow in a rotating circular channel
[MPIS-21/1980] N82-14490
BOUNDARY LAYERS
Determination of the transition point in a boundary layer by the measurement of pressure fluctuation
[NASA-TM-76639] N82-14475
BOUNDARY VALUE PROBLEMS
Simplified Navier-Stokes equations and their mathematical properties N82-14062
Impact of data and initialization procedures on variations of vertical motion and precipitation in mesoscale models N82-14755
Research in partial differential equations and applications
[AD-A105859] N82-14853
BRAGG ANGLE
Signal processing theory of Bragg cells
[AD-A100451] N82-14451
Acoustooptical spectrum analysis modeling
[AD-A105866] N82-14687
BRASSES
Electrochemical aspects of stress-corrosion cracking in alpha-brass
[DE81-022078] N82-14345
BRAYTON CYCLE
Satellite power system: Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237-VOL-4] N82-14634
BRIDGES (STRUCTURES)
Incremental analysis of structural construction costs
[PB81-234932] N82-14406
BRIGHTNESS
Notes on the P/Halley nucleus N82-14119
Kohoutek, photometric photography experiment (S233)
[NASA-TM-82449] N82-15007
BRIGHTNESS DISCRIMINATION
Multitemporal calibration of LANDSAT images: A method for improving the marine phenomena recognition, with as example the Venice lagoon --- brightness/green/yellow feature space, image enhancement N82-14578
BRIGHTNESS TEMPERATURE
Determination of surface wind speed from remotely measured whitecap coverage, a feasibility assessment N82-14565
BROADBAND
Broadband monolithic Sezawa wave storage correlators and convolvers N82-14442
A computer model for high-latitude phase scintillation based on wideband satellite data from Poker Flat
[AD-A105620] N82-14702
BROADBAND AMPLIFIERS
Optimum design of wide-bandwidth, low-noise photodiode amplifiers. Volume 1: Bandwidth --- photodiode circuit
[OUEL-1363/81-VOL-1] N82-14468
BROADCASTING
OTS: 3rd Year in Orbit --- conference
[ISBN-0-8529-6244-4] N82-14173
Overview of the OTS experimental program
N82-14175
Analogue television tests --- OTS, European Communications Satellite N82-14189
Experimental digital television transmissions through the OTS N82-14190
Direct broadcasting experiments with OTS: Results of sound transmission tests N82-14192
Teletext and data broadcasting experiments with OTS N82-14193
Study on digital television transmission via a television broadcasting satellite (TV-SAT)
[BMFT-FB-W-81-18] N82-14433

BROMINE
Studies in unsegmented continuous-flow analysis. Part 1: Repetitive determinations of Cu(2) catalyst. Part 2: Repetitive determinations of bromine and chlorine in gaseous samples at a gas-solid interface N82-14328

BUBBLES
Computation of subsonic flow around airfoil systems with multiple separation
[DFVLR-FB-81-24] N82-14050

On the design of an acoustically isolating bubble screen for the Carr Inlet acoustic range
[AD-A105830] N82-14883

BUFFER STORAGE
Extended memory management under RTOS N82-14841

BUMPY TORUSES
Field errors in EBT and their effects on the ambipolar potential --- bumpy toruses
[DE82-000828] N82-14930

Review or recent EBT coupled ring-core stability theory --- bumpy toruses
[DE82-000880] N82-14931

BUOYS
GEM: A simple meteorological buoy with satellite telemetry N82-14779

BURNING TIME
Optimization of Apogee Kick Motor (AKM) firing attitude N82-14164

C

C BAND
A transmitting solid state linear phased array antenna for C band
[PHL-1980-10] N82-14437

C-5 AIRCRAFT
C-5A operational utility evaluation soil tests and analysis
[AD-A105555] N82-14083

CABLES (ROPES)
High voltage testing
[AD-A106029] N82-14641

CADMIUM
Potentiometric stripping as a detector for flow injection analysis of metal ions N82-14304

CADMIUM TELLURIDES
Defect chemistry and characterization of (Hg, Cd)Te
[NASA-CR-161928] N82-14308

CALCIUM CARBONATES
Calcium carbonate precipitation as influenced by stream primary production
[PB81-231946] N82-14623

CALIBRATING
The measurement of Earth station performances and its impact on future design --- antenna gain and satellite control N82-14194

CALORIMETERS
Comparison of thin-film resistance heat-transfer gages with thin-skin transient calorimeter gages in conventional hypersonic wind tunnels
[NASA-TM-83197] N82-14474

CAMERAS
A Halley multicolor camera --- for the Giotto mission N82-14120

CANS
Characterization of materials for waste-canister compatibility studies
[DE82-000902] N82-14907

CAP CLOUDS
The influence of mountains on the atmosphere: Recent advances N82-14722

CAPILLARY TUBES
Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography
[AD-A105588] N82-14312

CARBON
Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

Temperature dependence of H saturation and isotope exchange
[DE81-026633] N82-14902

CARBON COMPOUNDS
Laser-induced-fluorescence studies of fragment ions: CH( ) and CD( )
[DE82-001010] N82-14514

CARBON DIOXIDE
Destruction of oxalate by reaction with hydrogen peroxide
[DE81-030624] N82-14320

CARBON DIOXIDE LASERS
A stark cell for frequency control of a waveguide C02 laser
[AD-A104734] N82-14495

A probable breakdown mechanism in the electron beam sustained CO2 laser
[AD-A105809] N82-14506

Investigation of plasma excitation. Volume 3: Advanced optical diagnostics of plasmas
[AD-A105496] N82-14929

CARBON FIBER REINFORCED PLASTICS
Fracture mechanics in fiber reinforced composite materials, taking as examples B/Al and CFRP N82-14290

CARBON MONOXIDE POISONING
Evaluation of short-term bioassays to predict functional impairment. Development of plumonary bioassays in small animals: Directory of Institutions; individuals involved in utilization
[AD-A103767] N82-14798

CARCINOGENS
Repair of radiation damage in mammalian cells
[DE81-030824] N82-14800

Carcinogenic effects of coal-conversion materials
[DE81-028108] N82-14803

CASE HISTORIES
Technical writing in America: A historical perspective N82-14962

How to develop and write a case for technical writing N82-14965

Evaluating the effectiveness of case method instruction in technical communication N82-14966

Using case studies to teach an engineering technology technical writing class N82-14967

Why use case studies rather than simulation-gaming techniques or library research? N82-14968

CASSEGRAIN ANTENNAS
Results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield
[PHL-1979-43] N82-14435

Further results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield
[PHL-1980-46] N82-14436

CAST ALLOYS
Long-term stability of finely cast alloys for gas turbine blades under hot gas corrosion conditions
[DECHEMA-PROJ-4.2/1] N82-14100

CATALYSTS
Development of superior denitrogenation and isomerization catalysts for processing crude oil derived from shale, part 1
[AD-A105667] N82-14317

Catalytic effect of iron in hydrogasification of coal
[DE81-023928] N82-14323

Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

Progress on catalyzed steam gasification of biomass
[DE81-028196] N82-14663

Materials research at Stanford University
[AD-A106108] N82-14957

CATALYTIC ACTIVITY
Determination of a kinetic region in catalytic oxidation of carbon monoxide
[NASA-TM-76651] N82-14309

Catalytic effect of iron in hydrogasification of coal
[DE81-023928] N82-14323

CATHODE RAY TUBES
A prototype interface unit for microprocessor based Loran-C receiver
[NASA-CR-164887] N82-14078

High contrast CRT module
[AD-A106079] N82-14430

Low cost, wide angle infinity optics visual system
[AD-A105508] N82-14921

CATHODES
Dispenser cathode physics
[AD-A105126] N82-14450

CATHODOLUMINESCENCE
Cathodoluminescence characterization of ion implanted GaAs
[AD-A105656] N82-14314

CAVITATION FLOW
A data reduction procedure for cavitation noise from an oscillating hydrofoil
[AD-A105719] N82-14892

CAVITY RESONATORS
The transverse Rf accelerator
[AD-A105896] N82-14457

Electromagnetic effects on the formation of potential wells for ion acceleration
[DE81-026240] N82-14911

CDC CYBER 175 COMPUTER
Design and implementation of a telecommunication interface for the TAATM/TCV real-time experiment
[NASA-TM-83231] N82-14075

CELESTIAL REFERENCE SYSTEMS
Attitude measurement: Principles and sensors
[NASA-TM-76647] N82-14278

CELL ANODES
Electrodes and diaphragms for fuel cells
[BMFT-FB-T-81-047] N82-14666

CELL CATHODES
Stabilizing platinum in phosphoric acid fuel cells
[NASA-CR-165483] N82-14626

Electrodes and diaphragms for fuel cells
[BMFT-FB-T-81-047] N82-14666

CELLS (BIOLOGY)
Progress report to the Department of Energy in support of basic energy and policy research
[DE81-025882] N82-14648

Studies in in vivo electrochemistry N82-14793

Inborn anemias in mice
[DE81-029128] N82-14795

CENTRAL PROCESSING UNITS
Functionally specialized multi-processor architectures
[AD-A105662] N82-14809

CENTRIFUGAL FORCE
Experimental investigation of the influence of the casing geometry upon the flow conditions and the noise of a centrifugal fan
[DFVLR-FB-81-20] N82-14472

CENTRIFUGES
Procedures for the calculation of the separative performance of a countercurrent gas centrifuge
[DE81-025448] N82-14499

CERAMIC COATINGS
Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core
[NASA-TP-1942] N82-14090

Thermal and aerothermal performance of a titanium multiwall thermal protection system
[NASA-TP-1961] N82-14277

CERAMICS
Fracture toughness of Al2O3-ZrO2 composites
[DE81-028575] N82-14300

Mechanical and thermophysical properties of hot-pressed SYNROC B
[DE81-029299] N82-14301

Ultrasonic velocity for estimating density of structural ceramics
[NASA-TM-82765] N82-14359

Mechanisms of elevated-temperature in single phase ceramics
[DE82-000691] N82-14368

CERENKOV RADIATION
Cerenkov radiation produced by 100 Mev electrons
[AD-A105864] N82-14896

CHANNEL CAPACITY
Results and conclusions of the 120 and 180 Mbit/sec digital transmission tests --- OTS N82-14186

TDMA/DSI system tests and telephony channel tests via the Orbital Test Satellite (OTS) --- Digital Speech Interpolation (DSI) N82-14187

Results and conclusions from telephone signaling tests through TDMA/DSI system --- Digital Speech Interpolation (DSI) N82-14188

CHANNEL FLOW
Generalized algebraic relation for predicting developing curved channel flow with a k-epsilon model of turbulence
[DE81-028131] N82-14486

Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026849] N82-14522

Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026962] N82-14523

CHANNELS (DATA TRANSMISSION)
TDMA/DSI system tests and telephony channel tests via the Orbital Test Satellite (OTS) — Digital Speech Interpolation (DSI) N82-14187

CHARACTERIZATION
Characterization and comparison of thermistor thick films
[DE82-000831] N82-14459
The chemical characterization of pollutants in waste water from Volunteer Army Ammunition Plant
[AD-A105705] N82-14676

CHARGE DISTRIBUTION
Electron-beam-charged dielectrics: Internal charge distribution N82-14215

CHARGE EXCHANGE
Investigation of luminescence in the charge exchange process of Ar++ with N2 of N(+) with CO
[MPIS-3/1980] N82-14326

CHARGE TRANSFER
Pyroelectricity and charge transport in a copolymer of vinylidene fluoride and tetrafluroethylene
[AD-A105790] N82-14365
Electron transfer in weakly interacting systems
[DE81-026134] N82-14903

CHARGED PARTICLES
Agreement for NASA/OAST - USAF/AFSC space interdependency on spacecraft environment interaction N82-14271

CHARGING
Three-dimensional analysis of charging events on days 87 and 114, 1979, from SCATHA N82-14252

CHECKOUT
ACS performance verification for IRAS: Software engineering at the Operations Control Centre — Attitude Control System (ACS), infrared astronomical satellite (IRAS) N82-14169

CHEMICAL ANALYSIS
Chemical element concentrations in liquids and solids associated with power plants using FGD systems
[DE81-030422] N82-14322
Oil spill identification by chemical analysis N82-14583

CHEMICAL COMPOSITION
Size distribution, structure, and chemical composition of cometary dust particles N82-14114
Dynamics and chemistry of cometary comes: A pre-Giotto view N82-14117
Applications of the microscan 9 microanalyser — chemical composition
[RAE-TM-MAT-358] N82-14491
Geochemistry of recent Lake Michigan sediments
[PB81-234429] N82-14622
Ion-implantation effects in glasses
[DE81-027208] N82-14947
Interstellar grains investigated and comets proposed as a vehicle for Panspermia
[PREPRINT-65] N82-14995
Interstellar grains — composition and classification N82-14996

CHEMICAL ENGINEERING
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026849] N82-14522
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026962] N82-14523

CHEMICAL LASERS
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510

CHEMICAL PROPERTIES
Liquid crystal block copolyesters. 2: Preparation and properties of block copolyesters containing cyclohexane and benzene rings
[AD-A105556] N82-14362

CHEMICAL REACTIONS
Reactivity of pyrylium salts toward basic reactants
[NASA-TM-76675] N82-14310
Development of a metal hydride process for hydrogen recovery from supplemented natural gas
[DE81-022685] N82-14382
Mathematical modelling of some chemical and physical processes in underground coal gasification
[DE81-027941] N82-14613
Electron transfer in weakly interacting systems
[DE81-026134] N82-14903
Kinetics studies on the nucleation and growth of silicon via chemical vapour deposition N82-14939
Materials research at Stanford University
[AD-A106108] N82-14957

CHEMICAL REACTORS
Fuels and chemicals made from solar energy
[DE81-025018] N82-14384

CHEMISORPTION
Porous polymers as new sorptive materials
[PML-1980-77] N82-14369
Application of a site-binding, electrical, double-layer model to nuclear waste disposal
[DE81-030231] N82-14906

CHLORINATION
Flat-plate solar array project. Task 1: Silicon material: Investigation of the hydrochlorination of SiC1sub4
[NASA-CR-165042] N82-14631

CHLORINE
Studies in unsegmented continuous-flow analysis. Part 1: Repetitive determinations of Cu(2) catalyst. Part 2: Repetitive determinations of bromine and chlorine in gaseous samples at a gas-solid interface N82-14328

CHLOROPHYLLS
The color of the sea and its relation to surface chlorophyll and depth of the euphotic zone N82-14562
Coastal zone research using remote sensing techniques — calibration of coastal zone color scanner N82-14571
Recent work in passive optical imaging of water — space and aircraft derived data N82-14575
Necessity of remote sensing for ocean studies. Part 1: Northwest African missions, Sahara-1 and Atlor-1 — sea truth/remote sensing correlation of offshore upwelling N82-14582

CHLOROSILANES
Flat-plate solar array project. Task 1: Silicon material: Investigation of the hydrochlorination of SiC1sub4
[NASA-CR-165042] N82-14631

CHROMIUM ALLOYS
Mechanisms of elevated temperature fatigue damage in 2 1/4 Cr - 1 Mo steel
[AD-A105786] N82-14335
Microstructure of triple-beam ion irradiated Fe and Fe-Cr alloys
[DE81-028347] N82-14341
Polarization study of hot corrosion phenomena in Ni-Cr alloys
[DE81-029609] N82-14349

CHROMIUM STEELS
Ionic treatment of tools and gears — metallurgical and mechanical properties of nitrided chromium steel surfaces
[CETIM-12-G-129] N82-14353

CHROMOSOMES
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794

CIRCUIT DIAGRAMS
Commutated automatic gain control system
[NASA-CR-164798] N82-14077

CIRCUITS
Preliminary analysis of data from SRI international transient pulse monitor on board P78-2 SCATHA satellite N82-14245
Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246
The design of phased annular antenna arrays of interacting radiators, excited by a Butler circuit N82-14417

CIRCULAR CYLINDERS
Stress distribution around a circular hole in square plates, loaded uniformly in the plane, on two opposite sides of the square. Optimum shapes of central holes in square plates subjected to uniaxial uniform load. Optimization of hole shapes in circular cylindrical shells under axial tension
[AD-A105598] N82-14536

CLADDING
Alloy development for cladding and duct applications — breeder reactor materials
[DE81-027843] N82-14339

CLASSIFICATIONS
The operational oil pollution surveillance system being used in France: Forecasted future developments in consideration of the NATO/CCMS remote sensing pilot study conclusions N82-14573

CLEANING
Evaluation of cleaning procedures and bonding materials for TPX plastic
[DE82-000048] N82-14367

CLIMATOLOGY
POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement
[NASA-TM-76642] N82-14205
The use of climatological and synoptic data for forecasting orographic enhancement of rainfall N82-14749
Variability of seasonal precipitation over the conterminous United States, 1948-1976 — circulation anomalies related to precipitation extremes N82-14788

CLOUD COVER
An operational method for forecasting stratus and fog N82-14774

CLOUD PHYSICS
A layered mesoscale prediction model initialized and verified by satellite data N82-14780

CLOUDS (METEOROLOGY)
Subsynoptic scale cloud system which moves westward and develops off the south coast of Japan N82-14720
Mesoscale structures in midlatitude frontal systems N82-14721
Automated airfield cloud observation and prediction N82-14734
Simple short range models using satellite imagery data N82-14746
Short range prediction of clouds using trajectories N82-14754
The effect of precipitation on microwave soundings in low latitudes
[PB81-225062] N82-14787

CLUTTER
Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977
[PHL-1980-28-PT-2] N82-14618

COAL
Chemical element concentrations in liquids and solids associated with power plants using FGD systems
[DE81-030422] N82-14322
Catalytic effect of iron in hydrogasification of coal
[DE81-023926] N82-14323
Longwall mining of thin seams
[DE81-026042] N82-14612
International energy indicators
[DE81-028117] N82-14653
Value tree analysis of energy supply alternatives
[AD-A105629] N82-14875

COAL DERIVED LIQUIDS
Potential supply of synthetic fuels from Alaskan hydroelectric power and coal
[DE81-025743] N82-14381

COAL GASIFICATION
Catalytic effect of iron in hydrogasification of coal
[DE81-023926] N82-14323
Sixth Underground Coal-Conversion Symposium
[DE81-027669] N82-14374
Fuels and chemicals made from solar energy
[DE81-025018] N82-14384
Mathematical modelling of some chemical and physical processes in underground coal gasification
[DE81-027941] N82-14613
Evaluation of coal gasification/combined cycle power plant feasibility at the Sewells Point Naval Complex, Norfolk, Virginia
[AD-A103674] N82-14639
Coal conversion solid waste disposal
[DE81-026567] N82-14680

COAL LIQUEFACTION
Process development for improved SRC options. Kerr-McGee critical solvent deashing and fractionation studies
[DE81-903785] N82-14380

COAL UTILIZATION
Coal-oil mixtures: An alternative fuel for the commercial markets and large residential markets
[DE81-028335] N82-14379

COASTAL CURRENTS
The Norwegian remote sensing experiment (Norsex) in a marginal ice zone N82-14566
Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites — aerial photography N82-14574

Mapping of surface currents in Greenland fiords by means of LANDSAT images — multispectral photography N82-14579

Necessity of remote sensing for ocean studies. Part 1: Northwest African missions, Sahara-1 and Atlor-1 — sea truth/remote sensing correlation of offshore upwelling N82-14582

Global ocean tides. Part 4: The semidiurnal elliptical lunar tide (N2), atlas of tidal charts and maps [AD-A105949] N82-14791

The NSWC Global Ocean Tide Data Tape (GOTD). Its features and applicaton: Random-Point Tide program [AD-A105974] N82-14792

COASTAL ECOLOGY

Requirements in pollution monitoring and coastal management N82-14558

Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites — aerial photography N82-14574

Billions could be saved through waivers for coastal wastewater treatment plants [CED-81-68] N82-14670

COASTAL WATER

The need for integrated off-shore, real-time information and management systems N82-14555

The color of the sea and its relation to surface chlorophyll and depth of the euphotic zone N82-14562

SPOT data simulations: Littoral applications N82-14568

Coastal zone research using remote sensing techniques — calibration of coastal zone color scanner N82-14571

Marine activities in Sweden for which remote sensing data may be of interest — oceanography, weather forecasting, and analysis N82-14576

Airborne remote sensing of the coastal zone N82-14577

The use of LANDSAT MSS to observe sediment distribution and movement in the Solent coastal area — multispectral scannel (MSS) N82-14580

The feasibility of using remotely sensed color as an index of Irish coastal water properties — statistical correlation of sea truth data N82-14581

Use of Side Looking Airborne Radar (SLAR) for oil pollution monitoring in Norway N82-14588

Billions could be saved through waivers for coastal wastewater treatment plants [CED-81-68] N82-14670

COASTS

Application of remote sensing data on the continental shelf: Proceedings of an EARsL-ESA Symposium [ESA-SP-167] N82-14553

A short review of an oceanographic use of Meteosat data by the ORSTOM remote sensing service N82-14570

COAXIAL CABLES

The design of the critical wave number and wave resistance of a coaxial line with interior conductor of cross-shaped section N82-14418

COBALT

Dissolution kinetics during localized corrosion [DE81-025092] N82-14350

COCKPIT SIMULATORS

A general aviation simulator evaluation of a rate-enhanced instrument landing system display [NASA-TP-1960] N82-14065

Influence of display and control compatibility on pilot-induced oscillations [NASA-TP-1936] N82-14804

COGENERATION

Evaluation of coal gasification/combined cycle power plant feasibility at the Sewells Point Naval Complex, Norfolk, Virginia [AD-A103674] N82-14639

Analysis of potential cogeneration impacts on electricity generation by the Central Maine Power Company [DE81-029991] N82-14650

COHERENT RADIATION

Investigation of the CARS spectrum of water vapor [AD-A105235] N82-14311

Eddy-current phasography [DE81-024242] N82-14462

COLD FLOW TESTS

Combustion behavior of solid fuel ramjets. Volume 1: Correlation of reacting and non-reacting flow characteristics [AD-A106061] N82-14316

COLD FRONTS

The use of direct readout tiros Operational Vertical Sounder (TOVS) data from Tiron N and NOAA 6 spacecraft to study a cut-off low and associated mesoscale cold pools N82-14731

Mesoscale structure of atmospheric fronts in the European part of the U.S.S.R. N82-14777

COLD WORKING

Alloy development for cladding and duct applications — breeder reactor materials [DE81-027843] N82-14339

COLLISIONS

Staged collision and damage data. Volume 1: Report for accident reconstruction of thirty (30) test vehicles [PB81-234072] N82-14407

Staged collision and damage data. Volume 2: Report for accident reconstruction of thirty (30) test vehicles [PB81-234080] N82-14408

Occupant response and vehicle acceleration in a 30 mph frontal impact test, 1981 Ford F150 Custom Explorer Styleside, pickup, NHTSA 810602 [PB81-231045] N82-14409

Occupant response and vehicle acceleration in a 30 MPH frontial impact test, 1981 Subaru DL, 4 wheel drive, 4 door wagon, NHTSA 811301 [PB81-228769] N82-14989

COLOR PHOTOGRAPHY

A Halley multicolor camera — for the Giotto mission N82-14120

COLOR TELEVISION

High contrast CRT module [AD-A106079] N82-14430

COLUMBIA RIVER BASIN (ID-OR-WA)

Dealing with regional hydrologic data-base limitations. Case example: The Columbia River basalts — hydrology models and site selection for radioactive waste storage [DE81-030086] N82-14609

COMBUSTION PRODUCTS

Investigation of the CARS spectrum of water vapor [AD-A105235] N82-14311

Chemical element concentrations in liquids and solids associated with power plants using FGD systems [DE81-030422] N82-14322

Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 5: Fundamental combustion research and advanced processes [PB81-236150] N82-14689

Plan of action and milestones for Navy combustion toxicity [AD-A105623] N82-14796

COMBUSTION STABILITY

Proceeding of the Joint Symposium on Stationary Combustion NOx Control. Volume 1: NOx emission users and invited papers [PB81-236119] N82-14685

Proceedings of the Joint Symposium on Stationary Combustion NOx control. Volume 3: Utility boiler NO sub x control by flue gas treatment [PB81-236135] N82-14687

Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 4: NOx control and environmental assessment of industrial process equipment, engines, and small stationary sources [PB81-236143] N82-14688

COMET NUCLEI

Giotto: A mission to Halley's Comet N82-14108

Notes on the P/Halley nucleus N82-14119

COMETARY ATMOSPHERES

Scientific and experimental aspects of the Giotto mission — proceedings of International Conference held at Noordwijerhout, Netherlands 27-28 Apr. 1981 [ESA-SP-169] N82-14107

Plasma flow and magnetic fields in comets N82-14109

A cometary plasma experiment for the mission to Halley's Comet — cometary plasma velocity measurement N82-14111

Dynamics and chemistry of cometary comas: A pre-Giotto view N82-14117

The Giotto ion mass spectrometer N82-14118

COMETS

Size distribution, structure, and chemical composition of cometary dust particles N82-14114

Interstellar grains investigated and comets proposed as a vehicle for Panspermia [PREPRINT-65] N82-14995

Comets: A vehicle for panspermia — origins of life N82-14997

COMFORT

A beach comfort index used by the national weather service in the Netherlands N82-14761

COMMAND AND CONTROL

Initiation into the utilization of programmable industrial robots: Grafcet — graphic engineering language N82-14805

C2 relevance of selected artificial intelligence systems. Brief examination of several existing AI systems for use in future command and control applications [AD-A105676] N82-14846

COMMERCIAL AIRCRAFT

Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference [NASA-CP-2206] N82-14829

COMMERCIAL ENERGY

Coal-oil mixtures: An alternative fuel for the commercial markets and large residential markets [DE81-028335] N82-14379

COMMONALITY (EQUIPMENT)

Investigation of functional commonality of avionics systems in naval aircraft [AD-A105503] N82-14088

COMMUNICATING

Using case studies to teach an engineering technology technical writing class N82-14967

COMMUNICATION EQUIPMENT

General description of the Orbital Test Satellite (OTS) — satellite links for intra-European telecommunication N82-14176

Earth station measurement techniques and lessons in Earth station design — communication networks satellite N82-14195

COMMUNICATION NETWORKS

Earth station measurement techniques and lessons in Earth station design — communication networks satellite N82-14195

Data communications support for the ATC computer replacement program (1988-1996) — requirements for automated en route ATC [DOT/FAA/RD-81/104] N82-14807

COMMUNICATION SATELLITES

The attitude control system of AMSAT P 3 satellites N82-14132

L-SAT stationkeeping N82-14139

COMMUNICATION THEORY

Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication [NASA-CP-2203-PT-1] N82-14960

What is technical writing? Prolegomenon to a contextual definition N82-14961

Technical writing in America: A historical perspective N82-14962

Technical communication: Notes toward defining discipline N82-14963

Marketing information: The technical report as product N82-14964

How to develop and write a case for technical writing N82-14965

Evaluating the effectiveness of case method instruction in technical communication N82-14966

COMPACTING

Volume reduction of used High-Efficiency Particulate Air (HEPA) filters [DE81-028529] N82-14679

COMPATIBILITY

Characterization of materials for waste-canister compatibility studies [DE82-000902] N82-14907

COMPLEX SYSTEMS

Software modeling studies executive summary [AD-A105810] N82-14822

COMPONENT RELIABILITY

The application of probabilistic design theory to high temperature low cycle fatigue [NASA-CR-165488] N82-14531

COMPOSITE MATERIALS

Charging characteristics of silica fabrics N82-14233

Whole-field experimental stress analysis using laser speckle interferometry [AD-A105805] N82-14298

Fracture toughness of Al2O3-ZrO2 composites [DE81-028575] N82-14300

Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-166612] N82-14533

COMPOSITE STRUCTURES
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159114] N82-14286
Whole-field experimental stress analysis using laser speckle interferometry
[AD-A106805] N82-14296
Composite flywheel durability and life expectancy: Test program
[DE81-028648] N82-14299
Numerical stability of an explicit finite difference scheme for the solution of transient conduction in composite media
[NASA-TM-82453] N82-14476

COMPRESSED AIR
Compressed air energy storage preliminary design and site development program in an aquifer. Volume 5, part 2, appendix F, dynamic system computer model
[DE82-000671] N82-14646

COMPRESSED GAS
Simulation of transient behavior of a compression-evaporation refrigeration system
[WTHD-133] N82-14405

COMPRESSIBILITY EFFECTS
Computation of subsonic flow around airfoil systems with multiple separation
[DFVLR-FB-81-24] N82-14050

COMPRESSIBLE FLOW
A class of monotonic shock-capturing difference schemes
[AD-A105601] N82-14480

COMPRESSIBLE FLUIDS
Compressible fluids investigation
[AD-A105703] N82-14483

COMPRESSION LOADS
Viscoplastic response of beryllium under shock compression
[DE81-028246] N82-14346

COMPRESSION WAVES
Experimental investigation of a transonic potential flow around a symmetric airfoil
[NASA-TM-76676] N82-14057

COMPRESSOR BLADES
Core compressor exit stage study. Volume 4: Data and performance report for the best stage configuration
[NASA-CR-165357] N82-14092
Core compressor exit stage study. Volume 5: Design and performance report for the Rotor C/Stator B configuration
[NASA-CR-165358] N82-14093
The use of optimization techniques to design controlled diffusion compressor blading
[NASA-TM-82763] N82-14094

COMPUTATION
Calculational aspects of quantum gravity
N82-14952

COMPUTATIONAL FLUID DYNAMICS
Experimental investigation of a transonic potential flow around a symmetric airfoil
[NASA-TM-76676] N82-14057
Time linearized calculation of two dimensional unsteady transonic potential flow at small disturbances
[DFVLR-FB-81-01] N82-14070

COMPUTER ASSISTED INSTRUCTION
An investigation into the current attitudes and perceptions held by educators toward computer-assisted-instruction N82-14828

COMPUTER COMPONENTS
A prototype interface unit for microprocessor based Loran-C receiver
[NASA-CR-164887] N82-14078
Fault isolation techniques N82-14840

COMPUTER DESIGN
Synthesis and optimization of programmable logic arrays N82-14814

COMPUTER GRAPHICS
A prototype interface unit for microprocessor based Loran-C receiver
[NASA-CR-164887] N82-14078
Flood plain mapping using computer graphics
[PB81-231670] N82-14625
The design of the FRONTIERS interactive display system --- forecasting rain optimized using new techniques of interactively enhanced rader and satellite (FRONTIERS) N82-14772
Geometric data analysis: An interactive graphics program for shape comparison
[AD-A105856] N82-14823

COMPUTER NETWORKS
Functionally specialized multi-processor architectures
[AD-A105862] N82-14809
MIKE: A network operating system for the distributed double-loop computer network N82-14843
Flow control in store-and-forward computer network N82-14845

COMPUTER PROGRAMMING
Computer program design: Methodology, reliability, and quality control
[CNES-NT-98] N82-14526
Software modeling studies experimental study of a two dimensional language versus FORTRAN for first-course programmers, volume 3
[AD-A106034] N82-14824

COMPUTER PROGRAMS
Evaluation of USSAERO and HABP computer codes for aerodynamic predictions for slender bodies
[AD-A106065] N82-14064
Analysis of two air traffic samples in the terminal area of Frankfurt/Main, August 4th 1978
[DFVLR-MITT-81-12; N82-14073
Quality control for mission-critical flight dynamic operations N82-14158
Validation and operations experience related to orbit and attitude software of Bhaskara N82-14162
ACS performance vertification for IRAS: Software engineering at the Operations Control Centre --- Attitude Control System (ACS), infrared astrononomical satellite (IRAS) N82-14169
NASCAP charging calculations for a synchronous orbit satellite N82-14256
Numerical simulation of plasma insulator ineractions in space. Part 1: The self consistent calculation
N82-14272
Numerical simulation of plasma insulator interactions in space. Part 2: Dielectric effects N82-14273
Three dimensional space charge model for large high voltage satellites --- plasma sheath N82-14274
Parametric analysis of diffuser requirements for high expansion ratio space engine
[NASA-CR-161924] N82-14280
Investigation of the CARS spectrum of water vapor
[AD-A105235] N82-14311
Computer program design: Methodology, reliability, and quality control
[CNES-NT-98] N82-14526
Compressed air energy storage preliminary design and site development program in an aquifer. Volume 5, part 2, appendix F, dynamic system computer model
[DE82-000671] N82-14646
Potential energy savings in the residential sector of the United States
[DE81-028673] N82-14662
The design of the FRONTIERS interactive display system --- forecasting rain optimized using new techniques of interactively enhanced rader and satellite (FRONTIERS) N82-14772
Computer program to support remote manipulator system flight planning analysis N82-14820
Voice recognition as an input modality for the TACCO preflight data insertion task in the P-3C aircraft
[AD-A105568] N82-14821
Investigation of plasma excitation. Volume 3: Advanced optical diagnostics of plasmas
[AD-A105486] N82-14929

COMPUTER STORAGE DEVICES
Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829

COMPUTER SYSTEMS DESIGN
ACS performance vertification for IRAS: Software engineering at the Operations Control Centre --- Attitude Control System (ACS), infrared astronomical satellite (IRAS) N82-14169
Analysis and design of fault-tolerant computer systems
[AD-A105491] N82-14808
Functionally specialized multi-processor architectures
[AD-A105862] N82-14809
Fabrication of a processor adapted to numerical filtering
[TEL/KAR/81] N82-14812
Directions for future research and development in multicomputer systems
[BMFT-FB-DV-81-003] N82-14813
The design, specification, and implementation of OBJ-T: A language for writing and testing abstract algebraic program specifications N82-14827
Use of software tools in the development of real time software systems N82-14838
MIKE: A network operating system for the distributed double-loop computer network N82-14843
Scheme of attributes in multilevel design of computer systems N82-14844

COMPUTER SYSTEMS PERFORMANCE
ARTS BETA testing report N82-14836
Scheme of attributes in multilevel design of computer systems N82-14844

COMPUTER SYSTEMS PROGRAMS
Real time simulation of computer-assisted sequencing of terminal area operations
[NASA-CR-166195] N82-14817
Laboratory data manipulation tools basic data handling programs. Volume 2: Detailed software/hardware documentation
[NASA-CR-167478-VOL-2] N82-14819
airborne data analysis/monitor system
N82-14830
Software error detection N82-14835
ARTS BETA testing report N82-14836
Real time software tools and methodologies
N82-14837
Extended memory management under RTOS
N82-14841
Mirowave energy deposition, breakdown and heating of nitrogen and air
[AD-A105749] N82-14926

COMPUTER SYSTEMS SIMULATION
Software modeling studies executive summary
[AD-A105810] N82-14822
Scheme of attributes in multilevel design of computer systems N82-14844

COMPUTERIZED DESIGN
Computer program applications to tactical missile conceptual design
[AD-A105788] N82-14205
Interactive design and analysis of future large spacecraft concepts
[NASA-TP-1937] N82-14276
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 1: Technical report
[NASA-CR-165538] N82-14447
Computer aided design and reliability of a general LSI logic structure for custom VLSI N82-14815

COMPUTERIZED SIMULATION
Oblique-incidence secondary emission from charged dielectronics N82-14227
Investigation of luminescence in the charge exchange process of Ar++ with N2 of N(+) with CO
[MPIS-3/1980] N82-14326
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165040] N82-14356
Computer modeling of piezoresistive gauges
[DE81-027964] N82-14500
SPOT data simulations: Littoral applications
N82-14568
Real time simulation of computer-assisted sequencing of terminal area operations
[NASA-CR-166195] N82-14817
On-board computer progress in development of A 310 flight testing program N82-14833
Software error detection N82-14835
Electromagnetic effects on the formation of potential wells for ion acceleration
[DE81-028240] N82-14911

COMPUTERS
Data communications support for the ATC computer replacement program (1988-1996) --- requirements for automated en route ATC
[DOT/FAA/RD-81/104] N82-14807

Technical change in US industry: A cross-industry analysis
[NASA-CR-165047] N82-14986
COMSTAR SATELLITES
Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14548
CONCRETES
Testing program for concrete at temperatures to 894 deg K
[DE81-029144] N82-14536
CONDUCTIVE HEAT TRANSFER
Numerical stability of an explicit finite difference scheme for the solution of transient conduction in composite media
[NASA-TM-82453] N82-14476
CONDUCTORS
The design of the critical wave number and wave resistance of a coaxial line with interior conductor of cross-shaped section N82-14416
CONFERENCES
Spacecraft Flight Dynamics — conference
[ESA-SP-160] N82-14123
OTS: 3rd Year in Orbit — conference
[ISBN-0-8529-6244-4] N82-14173
Spacecraft Charging Technology, 1980
[NASA-CP-2182] N82-14213
Colloquium on composite materials — conference, Cologne, 3 Dec. 1980 N82-14289
Sixth Underground Coal-Conversion Symposium
[DE81-027669] N82-14374
Application of remote sensing data on the continental shelf: Proceedings of an EARsL-ESA Symposium
[ESA-SP-167] N82-14553
SOLTECH 80
[DE81-901931] N82-14643
Solar Photovoltaic Residential Project. Project Integration Meeting, Agenda and Abstracts
[DE81-028433] N82-14657
Nowcasting: Mesoscale observations and short-range prediction — conference proceedings, Hamburg, 25-28 Aug. 1981
[ESA-SP-165] N82-14716
Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829
Gordon Research Conference on Molecular Energy Transfer
[AD-A105441] N82-14895
Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication
[NASA-CP-2203-PT-1] N82-14960
CONFIDENCE LIMITS
Kinds of polyconfidence intervals for centers, and some thoughts on identification and selection of confidence procedures using configural polysampling
[AD-A105907] N82-14867
CONFORMAL MAPPING
Oblique-incidence secondary emission from charged dielectronics N82-14227
CONGRESSIONAL REPORTS
Millions wasted trying to develop major energy information system
[AFMD-81-40] N82-14959
CONICAL BODIES
Simplified Navier-Stokes equations and their mathematical properties N82-14062
CONICAL NOZZLES
Parametric analysis of diffuser requirements for high expansion ratio space engine
[NASA-CR-161924] N82-14280
CONICAL SCANNING
Analysis and calculation of special system aspects for the conical scan radiometer (phase A)
[BMFT-FB-W-81-003] N82-14505
CONICS
Pressure distributions and shock shapes for 12.84 deg/7 deg on-axis and bent-nose biconics in air at Mach 6
[NASA-TM-83222] N82-14054
CONSTRUCTION
Scientific and technical research activities report in industrial fabrication N82-14404
Incremental analysis of structural construction costs
[PB81-234932] N82-14406
Study of multi-megawatt technology needs for photovoltaic space power systems. Volume 1: Executive summary
[NASA-CR-165323-VOL-1] N82-14636
CONSTRUCTION INDUSTRY
Technical change in US industry: A cross-industry analysis
[NASA-CR-165047] N82-14986
CONTAINMENT
Flywheel rotor and containment technology development
[DE81-026047] N82-14655
CONTAMINANTS
The chemical characterization of pollutants in waste water from Volunteer Army Ammunition Plant
[AD-A105705] N82-14676
CONTAMINATION
Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247
CONTINENTAL SHELVES
Application of remote sensing data on the continental shelf: Proceedings of an EARsL-ESA Symposium
[ESA-SP-167] N82-14553
Studies of the Indian continental shelf: Application of remote sensing data N82-14569
CONTINUOUS WAVE LASERS
Amorphous-crystalline boundary dynamics in laser crystallization
[AD-A105811] N82-14942
CONTOURS
Analytic investigation of effect of end-wall contouring on stator performance
[NASA-TP-1943] N82-14051
CONTRACTS
Economic effects induced by ESA contracts, phase 2. Volume 1: Summary
[ESA-CR(P)-1462-VOL-1] N82-14981
Economic effects induced by ESA contracts, phase 2. Volume 2: Main report
[ESA-CR(P)-1462-VOL-2] N82-14982
Economic effects induced by ESA contracts. Phase 2. Volume 3: Theory and method
[ESA-CR(P)-1462-VOL-3] N82-14983
CONTROL EQUIPMENT
RICAR: Portable test equipment for the integration of the ISOPROBRE experiment on board the ARCAD 3 satellite
[CRPE-1078] N82-14279
CONTROL SIMULATION
A general aviation simulator evaluation of a rate-enhanced instrument landing system display
[NASA-TP-1960] N82-14085
CONTROL THEORY
Optimal linear estimation and suboptimal numerical solutions of dynamical systems control problems
N82-14145
Linear programming and suboptimal solutions of dynamical systems control problems N82-14146
Numerical methods and approximation and modelling problems in stochastic control theory
[AD-A105490] N82-14847
Research in applied mathematics related to nonlinear system theory
[AD-A106091] N82-14852
Mathematical software for linear control and estimation theory
[AD-A106000] N82-14854
CONTROLLABILITY
Test and evaluation of the Bell-Halter 110-foot surface effect ship demonstration craft
[AD-A099000] N82-14399
CONVECTION
Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core
[NASA-TP-1942] N82-14090
CONVECTION CLOUDS
The role of mesoscale surface motions in the life of a convective storm in a dry continental climate
N82-14740
Life cycle of mesoscale convective systems
N82-14776
CONVECTION CURRENTS
Mesoscale aspects of convective storms
N82-14717
The role of near surface outflow in maintaining convective activity — in storms N82-14741
Forecast of severe hail processes N82-14742
CONVECTIVE FLOW
Life cycle of mesoscale convective systems
N82-14776
CONVECTIVE HEAT TRANSFER
An experimental investigation into the feasibility of a thermoelectric heat flux gage
[NASA-TM-82755] N82-14494
CONVERGENT-DIVERGENT NOZZLES
Experimental and analytical investigation of axisymmetric supersonic cruise nozzle geometry at Mach numbers from 0.60 to 1.30
[NASA-TP-1953] N82-14052
COOLING SYSTEMS
Cycle design for a cryogenic refrigeration system for FED with forced-flow superfluid helium through internally cooled conductors
[DE82-000446] N82-14400
Helium 2 cooling systems for long term missions in space: phase separation and hybrid cooling systems
N82-14403
Simulation of transient behavior of a compression-evaporation refrigeration system
[WTHD-133] N82-14405
A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492
COORDINATE TRANSFORMATIONS
Hypersonic slip-flow around slender elliptical cones at a slight angle of attack
[ESA-TT-644] N82-14069
Grid systems for Earth radiation budget experiment applications
[NASA-TM-83233] N82-14818
COORDINATES
Equations of flight mechanics considering atmospheric turbulence N82-14063
COPOLYMERS
Pyroelectricity and charge transport in a copolymer of vinylidene fluoride and tetrafluroethylene
[AD-A105790] N82-14365
COPPER
Potentiometric stripping as a detector for flow injection analysis of metal ions N82-14304
Studies in unsegmented continuous-flow analysis. Part 1: Repetitive determinations of Cu(2) catalyst. Part 2: Repetitive determinations of bromine and chlorine in gaseous samples at a gas-solid interface
N82-14326
Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion
[DE81-025919] N82-14337
Electrochemical aspects of stress-corrosion cracking in alpha-brass
[DE81-022078] N82-14345
COPPER OXIDES
Determination of a kinetic region in catalytic oxidation of carbon monoxide
[NASA-TM-76651] N82-14309
CORE FLOW
Review or recent EBT coupled ring-core stability theory — bumpy toruses
[DE82-000880] N82-14931
CORES
Core compressor exit stage study. Volume 4: Data and performance report for the best stage configuration
[NASA-CR-165357] N82-14092
Core compressor exit stage study. Volume 5: Design and performance report for the Rotor C/Stator B configuration
[NASA-CR-165358] N82-14093
CORN
Development of a biomass energy system for drying corn
[DE81-029027] N82-14660
Solar-supplemented, natural air drying of shelled corn: The economic limitations
[PB81-235681] N82-14668
CORNER FLOW
Subsonic flow in a corner — laminar and turbulent flow in a wing-fuselage junction N82-14393
CORRELATORS
Broadband monolithic Sezawa wave storage correlators and convolvers N82-14442
CORROSION
Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334

CORROSION PREVENTION
Corrosion inhibiting engine oils
[AD-A106127] N82-14099
Securing containerized hazardous wastes with welded polyethylene encapsulates
[PB81-231282] N82-14370
Lithium-aluminum alloy electrodes in lithium chlorate
[AD-A105902] N82-14452

CORROSION RESISTANCE
Development of improved high temperature coatings for IN-792 + HF
[NASA-CR-165395] N82-14333
Corrosion and high temperature resistant coatings for molybdenum, made out of iron and nickel alloys and applied by explosive welding --- Inconel 601 coatings
[T-15/80] N82-14351
Fatigue corrosion resistance of aluminum alloys --- aircraft construction materials
[SNIAS-812-551-104] N82-14354

CORROSION TESTS
Corrosion inhibiting engine oils
[AD-A106127] N82-14099
Long-term stability of finely cast alloys for gas turbine blades under hot gas corrosion conditions
[DECHEMA-PROJ-4.2/1] N82-14100
Characterization of materials for waste-canister compatibility studies
[DE82-000902] N82-14907

COSMIC DUST
Size distribution, structure, and chemical composition of cometary dust particles N82-14114
The particulate impact analyzer, an instrument to analyze small particles released by Halley's Comet --- Giotto mission N82-14115
A dust impact detection system for the Giotto Halley mission N82-14116

COSMOLOGY
Comets: A vehicle for panspermia --- origins of life N82-14997

COST ANALYSIS
Incremental analysis of structural construction costs
[PB81-234932] N82-14406
Study of a combined satellite system for remote sensing and earth-oriented research (LOCSS) --- ESA satellite
[BMFT-FB-W-81-002] N82-14615
Potential energy savings in the residential sector of the United States
[DE81-028673] N82-14662

COST EFFECTIVENESS
Comparative analyses of space-to-space central power stations
[NASA-TP-1955] N82-14202

COST ESTIMATES
Technical and economic feasibility study for a 1,500,000 gallon per year anhydrous ethanol manufacturing plant
[DE82-000286] N82-14376
Biomass energy utilization in the Pacific Northwest: Impacts associated with residential use of solid fuels
[DE81-029137] N82-14383

COST REDUCTION
Manufacturing technology study on radio frequency power modules packaging techniques
[AD-A105892] N82-14426
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670

COUNTER-ROTATING WHEELS
Flywheel rotor and containment technology development
[DE81-028047] N82-14655

COUNTERS
Lightning flash counter measurements in Finland during 1978 and 1979
[REPT-86] N82-14713

COUPLING
Review or recent EBT coupled ring-core stability theory --- bumpy toruses
[DE82-000880] N82-14931

COUPLINGS
Elevated-temperature (800 deg F), manual contact ultrasonic examination
[CONF-811003-2] N82-14540

COVARIANCE
Compact covariance operators
[AD-A105858] N82-14851
Proper Bayes minimax estimators for a multivariate normal mean with unknown common variance under a convex loss function
[AD-A105746] N82-14865

COVERINGS
Experimental investigation of the influence of the casing geometry upon the flow conditions and the noise of a centrifugal fan
[DFVLR-FB-81-20] N82-14472

CRACK GEOMETRY
Fatigue test program on notched implanted specimens, cracked and uncracked --- welded punch implant tests
[CETIM-12-Y-261] N82-14542

CRACK INITIATION
Analysis of crack propagation as an energy absorption mechanism in metal matrix composites
[NASA-CR-165051] N82-14288
Ultrasonic inspection of full-size bolting specimens
[KAPL-4129] N82-14525

CRACK PROPAGATION
Analysis of crack propagation as an energy absorption mechanism in metal matrix composites
[NASA-CR-165051] N82-14288
Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334
Electrochemical aspects of stress-corrosion cracking in alpha-brass
[DE81-022078] N82-14345
The crack growth resistance curve as a one-parameter representation of stable crack propagation in thin-walled structures
[DFVLR-FB-80-35] N82-14544

CRACKS
Influence of a free surface on the elastodynamic field of a finite crack N82-14547

CRASH INJURIES
Occupant response and vehicle acceleration in a 30 mph frontal impact test, 1981 Ford F150 Custom Explorer Styleside, pickup, NHTSA 810602
[PB81-231045] N82-14409

CRASHES
Occupant response and vehicle acceleration in a 30 MPH frontal impact test, 1981 Subaru DL, 4 wheel drive, 4 door wagon, NHTSA 811301
[PB81-226769] N82-14989

CROP GROWTH
Radiological and environmental research 1980: Ecology
[DE82-000154] N82-14678

CROSS CORRELATION
Design and performance of time-frequency-coded signals for spread-spectrum systems N82-14904

CROSS POLARIZATION
Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14548

CRUDE OIL
Development of superior denitrogenation and isomerization catalysts for processing crude oil derived from shale, part 1
[AD-A105667] N82-14317
High performance liquid chromatography/video fluorometry. Part 3: Applications
[AD-A105945] N82-14318
Oil spill identification by chemical analysis N82-14583
International energy indicators
[DE81-028117] N82-14653

CRYOGENIC COOLING
Cycle design for a cryogenic refrigeration system for FED with forced-flow superfluid helium through internally cooled conductors
[DE82-000446] N82-14400
Performance of an internally cooled superconducting solenoid
[DE81-028058] N82-14460
Cryogenic tests of glass-epoxy based electrical insulation
[DE81-028144] N82-14461
Cool-down flow-rate limits imposed by thermal stresses in LNG pipelines
[DE81-028731] N82-14484
A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492

CRYOGENIC EQUIPMENT
Test of a cryogenic helium pump --- for a superconducting magnet system
[DE81-028629] N82-14401
Helium 2 cooling systems for long term missions in space: phase seperation and hybrid cooling systems N82-14403
Performance of an internally cooled superconducting solenoid
[DE81-028058] N82-14460
A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492

CRYOGENIC MAGNETS
Test of a cryogenic helium pump --- for a superconducting magnet system
[DE81-028629] N82-14401

CRYOGENIC WIND TUNNELS
Research on an induction driven cryogenic wind tunnel N82-14394

CRYOGENICS
A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492

CRYSTAL DEFECTS
Defect chemistry and characterization of (Hg, Cd)Te
[NASA-CR-161928] N82-14308
Sub-gap and band edge optical absorption in a-Si:H by photothermal deflection spectroscopy
[DE81-026040] N82-14923

CRYSTAL DISLOCATIONS
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, gradient freeze crystal growth and measurement techniques
[BMFT-FB-T-81-023] N82-14950

CRYSTAL GROWTH
Critical analysis of gradient and isothermal furnace concepts for use in Spacelab with special regard for heat pipe technology and connected basic requirements --- on crystal growth experiments
[BMFT-FB-W-81-019] N82-14200
Mechanism of ice crystal growth habit and shape instability development below water saturation
[AD-A105520] N82-14783
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Production of gallium phosphide crystals
[BMFT-FB-T-81-021] N82-14948
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, gradient freeze crystal growth and measurement techniques
[BMFT-FB-T-81-023] N82-14950

CRYSTAL LATTICES
Dispenser cathode physics
[AD-A105126] N82-14450

CRYSTAL OSCILLATORS
Evaluation of the performance characteristics of BVA resonators under static and dynamic conditions
[AD-A105064] N82-14448
Modeling the influence of static acceleration on surface wave (quartz) oscillators
[ONERA-NT-1981-3] N82-14470

CRYSTAL STRUCTURE
Laboratory experience with directional solidification of eutectic high temperature alloys N82-14293
Crystal and molecular structure of Mo6010(OPr(i))12: A serpentine chain of molybdenum atoms and observation of semibridging alkoxy ligands
[AD-A105769] N82-14941
Point defects in crystals (including grouped defects)
[DE82-000395] N82-14943
Point-defect sources and sinks
[DE82-000655] N82-14944

CRYSTALLIZATION
Amorphous-crystalline boundary dynamics in laser crystallization
[AD-A105811] N82-14942
Ion-implantation effects in glasses
[DE81-027206] N82-14947

CUBIC EQUATIONS

Linear and geometric nonlinear analysis of shells by an isoparametric three dimensional degenerated element [REPT-140] N82-14862

CURING

Acceleration of the epoxy resin-dicyandiamide cure cycle by trisubstituted ureas [AD-A105870] N82-14363

CURRENT DENSITY

Effects of suspended particles on the rate of mass transfer to a rotating disk electrode [DE81-028002] N82-14485

CURRENT DISTRIBUTION

Results from a two dimensional spacecraft charging simulation and comparison with a surface photocurrent model N82-14257

Calculation of surface current response to surface flashover of a large sample under grounded and floating conditions N82-14259

CURVE FITTING

Geometric data analysis: An interactive graphics program for shape comparison [AD-A105858] N82-14823

CURVED PANELS

Fabrication of titanium multiwall Thermal Protection System (TPS) curved panel [NASA-CR-165754] N82-14530

CYANAMIDES

Acceleration of the epoxy resin-dicyandiamide cure cycle by trisubstituted ureas [AD-A105870] N82-14363

CYCLIC LOADS

Influence of cyclic load and environmental effects on stress corrosion cracking of sensitized steel [DE81-904216] N82-14338

CYCLONES

Mesoscale structures in midlatitude frontal systems N82-14721

The use of a single Doppler radar in short range forecasting and real time analysis of extratropical cyclones N82-14744

Mesoscale structure of atmospheric fronts in the European part of the U.S.S.R. N82-14777

CYLINDRICAL BODIES

Numerical simulation of steady supersonic flow over an ogive cylinder boattail body [AD-A106060] N82-14065

High Reynolds Number Cylinder Flow Workshop [AD-A105088] N82-14477

CYLINDRICAL SHELLS

Stress distribution around a circular hole in square plates, loaded uniformly in the plane, on two opposite sides of the square. Optimum shapes of central holes in square plates subjected to uniaxial uniform load. Optimization of hole shapes in circular cylindrical shells under axial tension [AD-A105598] N82-14536

D

DAMAGE

Damage structure in Nimonic PE16 alloy ion bombarded to high doses and gas levels [DE81-028562] N82-14945

DAMAGE ASSESSMENT

Foreign object damage in naval aircraft engines [AD-A105787] N82-14098

Examination of a damaged gun shield of Ota Melara [KRI-204/80] N82-14303

DATA BASES

Dealing with regional hydrologic data-base limitations. Case example: The Columbia River basalts — hydrology models and site selection for radioactive waste storage [DE81-030086] N82-14609

airborne data analysis/monitor system N82-14830

ADAMS executive and operating system N82-14831

Defense Technical Information Center free text experiment: Management data bases [AD-A105570] N82-14980

DATA COMPRESSION

Advanced crash survivable flight data recorder and Accident Information Retrieval System (AIRS) [AD-A105510] N82-14072

DATA LINKS

Feasibility study for an advanced lighted aid to navigation [AD-A105944] N82-14081

OTS: 3rd Year in Orbit — conference [ISBN-0-8529-6244-4] N82-14173

General description of the Orbital Test Satellite (OTS) — satellite links for intra-European telecommunication N82-14176

Impact of OTS propagation results on the ECS system — European Communications Satellite (ECS) N82-14180

STELLA and SPINE data transmission experiments: Preliminary results and conclusions — Satellite Transmission Experiment Linking Laboratories (STELLA); Space Information Network Experiment (SPINE) N82-14197

DATA MANAGEMENT

Functionally specialized multi-processor architectures [AD-A105662] N82-14809

DATA PROCESSING

Analysis of date from line-source thermal-conductivity measurements taken in situ in dome salt at the Ivery Island mine [DE82-000517] N82-14703

Millions wasted trying to develop major energy information system [AFMD-81-40] N82-14959

Plasma wave experiment for the ISEE-3 Mission [NASA-CR-166730] N82-15000

DATA PROCESSING EQUIPMENT

Regional phase processors [AD-A105470] N82-14696

Laboratory data manipulation tools basic data handling programs. Volume 2: Detailed software/hardware documentation [NASA-CR-167478-VOL-2] N82-14819

Fault isolation techniques N82-14840

DATA PROCESSING TERMINALS

Data communications support for the ATC computer replacement program (1988-1996) — requirements for automated en route ATC [DOT/FAA/RD-81/104] N82-14807

DATA REDUCTION

ADAMS executive and operating system N82-14831

Some advance thoughts on the data analysis involved in configural polysampling directed toward high performance estimates [AD-A105906] N82-14866

A data reduction procedure for cavitation noise from an oscillating hydrofoil [AD-A105719] N82-14892

DATA STORAGE

Extended memory management under RTOS N82-14841

DATA SYSTEMS

Laboratory data manipulation tools basic data handling programs. Volume 2: Detailed software/hardware documentation [NASA-CR-167478-VOL-2] N82-14819

Flow control in store-and-forward computer network N82-14845

DATA TRANSMISSION

Overview of the OTS experimental program N82-14175

Teletext and data broadcasting experiments with OTS N82-14193

STELLA and SPINE data transmission experiments: Preliminary results and conclusions — Satellite Transmission Experiment Linking Laboratories (STELLA); Space Information Network Experiment (SPINE) N82-14197

A lower bound for the time to assure interactive consistency [AD-A105946] N82-14810

DECELERATION

Comparison of experimental and theoretical turbulence reduction characteristics for screens, honeycomb, and honeycomb-screen combinations [NASA-TP-1958] N82-14055

DECISION MAKING

The nuclear controversy: Unequal competition in public policy-making [ERG-035] N82-14626

Need for power and the choice of technologies: State decisions on electric power facilities [DE81-025960] N82-14644

Writing as decision-making N82-14976

DECISION THEORY

Reliability vs. diagnosticity in hierarchical inference [AD-A105626] N82-14956

DEEP SPACE NETWORK

Deep space navigation systems and operations N82-14136

DEFECTS

Damage structure in Nimonic PE16 alloy ion bombarded to high doses and gas levels [DE81-028562] N82-14945

DEFINITION

What is technical writing? Prolegomenon to a contextual definition N82-14961

Technical communication: Notes toward defining discipline N82-14963

DEFORMATION

Staged collision and damage data. Volume 2: Report for accident reconstruction of thirty (30) test vehicles [PB81-234080] N82-14408

DEIONIZATION

Mirowave energy deposition, breakdown and heating of nitrogen and air [AD-A105749] N82-14926

DELAMINATING

Examination of a damaged gun shield of Ota Melara [KRI-204/80] N82-14303

DENDRITIC CRYSTALS

Lithium-aluminum alloy electrodes in lithium chlorate [AD-A105902] N82-14452

DENITROGENATION

Development of superior denitrogenation and isomerization catalysts for processing crude oil derived from shale, part 1 [AD-A105667] N82-14317

DENSITY (MASS/VOLUME)

Ultrasonic velocity for estimating density of structural ceramics [NASA-TM-82765] N82-14359

DEOXIDIZING

Stabilizing platinum in phosphoric acid fuel cells [NASA-CR-165483] N82-14628

DEOXYRIBONUCLEIC ACID

Repair of radiation damage in mammalian cells [DE81-030624] N82-14800

DEPOLARIZATION

Depolarization measurements at 11 and 14 GHz with OTS N82-14178

Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics [NASA-CR-166717] N82-14548

DEPOSITION

Stratigraphy and depositional history of the Iola Limestone Upper Pennsylvanian (Missourian), Northern Midcontinent U.S. N82-14711

Mirowave energy deposition, breakdown and heating of nitrogen and air [AD-A105749] N82-14926

DESIGN ANALYSIS

AFCC technical report. Use of Short Range Modems (SRM) [AD-A105597] N82-14422

Conceptual design of superconducting magnet system for Magnetohydrodynamic (MHD) Engineering Test Facility (ETF) 200 MWe power plant [NASA-CR-165053] N82-14520

Design of an energy conservation building [NASA-TM-83175] N82-14632

Design study of hydroacoustic impulse source for deep towing, phase 2 [AD-A106066] N82-14884

ATA injector-gun calculations [DE82-001149] N82-14906

Design study for superconducting main field coils for the Oak Ridge Isochronous Cyclotron [DE81-028066] N82-14912

DESULFURIZING

Chemical element concentrations in liquids and solids associated with power plants using FGD systems [DE81-030422] N82-14322

DETERIORATION

Relating pavement distress to serviceability and performance [PB81-227852] N82-14410

DETONATION

Energy and technology review [DE82-000304] N82-14647

DETONATION WAVES
Relaxation effects in shock-induced transitions in bismuth
[DE81-028728] N82-14946
DEUTERIUM
Temperature dependence of H saturation and isotope exchange
[DE81-028633] N82-14902
Tandem-mirror technology demonstration facility
[DE81-030878] N82-14933
DEW POINT
Silicon dew-point sensor for accurate humidity measurement systems N82-14493
DIAGNOSIS
Reliability vs. diagnosticity in hierarchical inference
[AD-A105628] N82-14956
DIAPHRAGMS (MECHANICS)
Electrodes and diaphragms for fuel cells
[BMFT-FB-T-81-047] N82-14666
DIELECTRIC PROPERTIES
Spacecraft Charging Technology, 1980
[NASA-CP-2182] N82-14213
Dielectric discharge characteristics in a two-electron simulation environment N82-14214
Electron-beam-charged dielectrics: Internal charge distribution N82-14215
Bulk charging and breakdown in electron-irradiated polymers N82-14216
Charging and discharging Teflon N82-14217
Role of energetic particles in charging/discharging of spacecraft dielectrics N82-14219
Dielectric surface discharges: Effects of combined low-energy and high-energy incident electrons N82-14222
Oblique-incidence secondary emission from charged dielectronics N82-14227
DIELECTRICS
Design of an arc-free thermal blanket N82-14231
Charging control techniques N82-14232
Charging characteristics of silica fabrics N82-14233
Evaluation of charge control techniques on spacecraft thermal surfaces (electrostatic discharge study) N82-14235
Conduction through punctures in metal-backed dielectrics N82-14236
Numerical simulation of plasma insulator ineractions in space. Part 1: The self consistent calculation N82-14272
Numerical simulation of plasma insulator interactions in space. Part 2: Dielectric effects N82-14273
Synthesis, characterization and optical properties of barium titanate films sputtered under various conditions
[AD-A105655] N82-14296
The calculation of the input resistance of a vibrator with dielectric cover by the method of induced EMF N82-14420
Radiation loss from a curved dielectric channel waveguide in a dense substrate
[AD-A105928] N82-14425
Cerenkov radiation produced by 100 Mev electrons
[AD-A105664] N82-14896
DIFFERENTIAL EQUATIONS
Three-dimensional analysis of charging events on days 87 and 114, 1979, from SCATHA N82-14252
Normal forms, versal deformations and quadratic integrals of linear Hamiltonian systems N82-14848
DIFFRACTION PATTERNS
The synthesis of difference direction patterns of spherical antennas N82-14419
Acoustooptical spectrum analysis modeling
[AD-A105666] N82-14887
DIFFUSION
Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion
[DE81-025919] N82-14337
DIGITAL FILTERS
Single channel seismic event detection
[AD-A105469] N82-14695
DIGITAL SIMULATION
Simulation of transient behavior of a compression-evaporation refrigeration system
[WTHD-133] N82-14405
Study of an autoadaptive equalizer: Computerized simulation based on Kalman filter or gradient methods
[TEL/ARB/81] N82-14471
Application of integration algorithms in a parallel processing environment for the simulation of jet engines
[NASA-TM-82746] N82-14849
DIGITAL SPACECRAFT TELEVISION
Experimental digital television transmissions through the OTS N82-14190
DIGITAL SYSTEMS
TDMA/DSI system tests and telephony channel tests via the Orbital Test Satellite (OTS) --- Digital Speech Interpolation (DSI) N82-14187
Results and conclusions from telephone signaling tests through TDMA/DSI system --- Digital Speech Interpolation (DSI) N82-14188
Seasat SAR processing at the Norwegian Defence Research Establishment --- design and operation of a digital process N82-14584
The Swiss network of 2 digital radars and 60 automatic weather stations N82-14766
DIGITAL TELEVISION
Study on digital television transmission via a television broadcasting satellite (TV-SAT)
[BMFT-FB-W-81-18] N82-14433
DILUENTS
Determination of a kinetic region in catalytic oxidation of carbon monoxide
[NASA-TM-76551] N82-14309
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Critical analysis of gradient and isothermal furnace concepts for use in Spacelab with special regard for heat pipe technology and connected basic requirements --- on crystal growth experiments
[BMFT-FB-W-81-019] N82-14200
Laboratory experience with directional solidification of eutectic high temperature alloys N82-14293
Oxidation behavior of directionally solidified eutectic composites as prototypes for the development of protective layers N82-14295
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, gradient freeze crystal growth and measurement techniques
[BMFT-FB-T-81-023] N82-14950
DIRECTIVITY
The eccentrically insulated circular-loop antenna and the horizontal circular-loop antenna near a planar interface N82-14440
DISARMAMENT
Energy and technology review
[DE82-000304] N82-14647
DISCRETE FUNCTIONS
Computer program for solving an inverse problem with one variable: Part 1: Methodology
[CRPE-NT-80-VOL-1] N82-14825
Computer program for solving an inverse problem with one variable. Part 2: User manual
[CRPE-NT-81-VOL-2] N82-14826
DISKS
Emission of an elementary slot vibrator located in the center of an ideally conducting disk N82-14415
DISLOCATIONS (MATERIALS)
Influence of neutron irradiation at 55 deg C on the properties of austenitic stainless steels
[DE81-026065] N82-14342
DISPENSERS
Dispenser cathode physics
[AD-A105126] N82-14450
DISPERSING
Atmospheric dust and aerosol study
[AD-A100658] N82-14698
DISPLACEMENT
Influence of a free surface on the elastodynamic field of a finite crack N82-14547
DISPLAY DEVICES
A prototype interface unit for microprocessor based Loran-C receiver
[NASA-CR-164887] N82-14078
A general aviation simulator evaluation of a rate-enhanced instrument landing system display
[NASA-TP-1960] N82-14085
Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829
DISSOLVED GASES
Influence of cyclic load and environmental effects on stress corrosion cracking of sensitized steel
[DE81-904216] N82-14338
DISSOLVING
Dissolution kinetics during localized corrosion
[DE81-025092] N82-14350
Salt release from suspended sediments: A simulated model
[PB81-231839] N82-14824
DISTANCE
On the relationship between the Hausdorff distance and matric distances of ellipsoids
[AD-A105660] N82-14858
DISTILLATION EQUIPMENT
Alcohol fuels grant program at Lincoln Land Community College, Springfield, Illinois
[DE82-000744] N82-14375
DISTRIBUTED PARAMETER SYSTEMS
MIKE: A network operating system for the distributed double-loop computer network N82-14843
DISTRIBUTION FUNCTIONS
The second representing function for compound situations
[AD-A105660] N82-14870
DIURNAL VARIATIONS
Solar radiation as a sole source of energy for photovoltaics in Las Vegas, Nevada, for July and December
[PB81-224503] N82-14669
Global ocean tides. Part 4: The semidiurnal elliptical lunar tide (N2), atlas of tidal charts and maps
[AD-A105949] N82-14791
DOCUMENTS
Marketing information: The technical report as product N82-14964
DOMES (GEOLOGY)
Analysis of data from line-source thermal-conductivity measurements taken in situ in dome salt at the Ivery Island mine
[DE82-000517] N82-14703
DOPPLER RADAR
Nowcasting applications of Doppler radar N82-14736
The use of a single Doppler radar in short range forecasting and real time analysis of extratropical cyclones N82-14744
Design of a short range forecasting system --- Prototype Regional Observing and Forecasting Service (PROFS) N82-14770
DOSIMETERS
Repair of radiation damage in mammalian cells
[DE81-030624] N82-14800
DOWNLINKING
Results and conclusions of RF performance tests made by ESA --- OTS N82-14184
Study on digital television transmission via a television broadcasting satellite (TV-SAT)
[BMFT-FB-W-81-18] N82-14433
DRAFT (GAS FLOW)
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 2: Utility boiler NO sub x control by combustion modification
[PB81-236127] N82-14686
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 5: Fundamental combustion research and advanced processes
[PB81-236150] N82-14689
DRAG REDUCTION
Comparison of experimental and theoretical turbulence reduction characteristics for screens, honeycomb, and honeycomb-screen combinations
[NASA-TP-1958] N82-14055
Numerical studies of laminar and turbulent drag reduction
[NASA-CR-3496] N82-14473
DRILLING
Accessing the geothermal resources
[DE81-025396] N82-14614
DRUMS (CONTAINERS)
Securing containerized hazardous wastes with welded polyethylene encapsulates
[PB81-231292] N82-14370
DRYING
Solar-supplemented, natural air drying of shelled corn: The economic limitations
[PB81-235681] N82-14688
DRYING APPARATUS
Development of a biomass energy system for drying corn
[DE81-029027] N82-14660

DUAL WING CONFIGURATIONS
Optimization and performance calculation of dual-rotation propellers
[NASA-TP-1948] N82-14049

DUCT GEOMETRY
Mode propagation in nonuniform circular ducts with potential flow
[NASA-TM-82776] N82-14881

DUCTED FLOW
Mode propagation in nonuniform circular ducts with potential flow
[NASA-TM-82776] N82-14881

DUCTS
Alloy development for cladding and duct applications — breeder reactor materials
[DE81-027843] N82-14339
Mode propagation in nonuniform circular ducts with potential flow
[NASA-TM-82776] N82-14881

DURABILITY
Durability/life of fiber composites in hygrothermomechanical environments
[NASA-TM-82749] N82-14287
Composite flywheel durability and life expectancy: Test program
[DE81-028849] N82-14299

DUST
Study of problems posed by the emission of fumes during welding
[CETIM-12-Y-213] N82-14524
Atmospheric dust and aerosol study
[AD-A100658] N82-14698
Dust cloud models: Sensitivity of calculated transmittances to variations in input parameters
[AD-A103310] N82-14918

DUST STORMS
SOLTECH 80
[DE81-901931] N82-14643

DYE LASERS
Laser-induced fluorescence technique to monitor H2S (PR 16023)
[DE81-028784] N82-14516

DYNAMIC CHARACTERISTICS
Dynamics and chemistry of cometary comas: A pre-Giotto view N82-14117

DYNAMIC CONTROL
Optimal linear estimation and suboptimal numerical solutions of dynamical systems control problems N82-14145
Linear programming and suboptimal solutions of dynamical systems control problems N82-14146

DYNAMIC LOADS
Modular asymmetric parachute for wind-tunnel testing
[DE81-028416] N82-14068
Rail roughness study of the Holloman high speed rocket sled test track
[AD-A105778] N82-14105
Plastic deformation and fracture of steel under dynamic loading
[AD-A105997] N82-14336

DYNAMIC MODELS
The dynamic attitude reconstruction method N82-14160
Spacecraft tracking campaigns and the assessment of orbit determination accuracy N82-14163

DYNAMIC RESPONSE
Three-dimensional analysis of charging events on days 87 and 114, 1979, from SCATHA N82-14252
Dynamic safety analysis — first-passage probabilities for linear elastic structures subjected to random base accelerators N82-14546

DYNAMIC STRUCTURAL ANALYSIS
Dynamic safety analysis — first-passage probabilities for linear elastic structures subjected to random base accelerators N82-14546
Modal analysis of structures with prestress effects: Application to flexible solar generators
[CNES-81/CT/PRT/SST/SM/178] N82-14667

DYNAMIC TESTS
System for acquisition and analysis of dynamic tests on air intakes
[NASA-TM-76646] N82-14056

E

EARTH ORBITS
An analytical singularity-free orbit predictor for near-Earth satellites N82-14154
Comparative analyses of space-to-space central power stations
[NASA-TP-1955] N82-14202
Charging of a large object in low polar Earth orbit — space shuttle orbiter N82-14275

EARTH RADIATION BUDGET EXPERIMENT
POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement
[NASA-TM-76842] N82-14205
Grid systems for Earth radiation budget experiment applications
[NASA-TM-83233] N82-14818

EARTH SATELLITES
Present status and future trends in near-Earth satellite orbit determination N82-14152

ECCENTRICITY
The eccentrically insulated circular-loop antenna and the horizontal circular-loop antenna near a planar interface N82-14440
Coupled flexural torsional vibration of an eccentrically stretched strip
[AE-TN-8131] N82-14528

ECLIPSES
Three-dimensional analysis of charging events on days 87 and 114, 1979, from SCATHA N82-14252

ECOLOGY
Radiological and environmental research 1980: Ecology
[DE82-000154] N82-14678

ECONOMETRICS
Research in applied mathematics related to nonlinear system theory
[AD-A106091] N82-14852

ECONOMIC ANALYSIS
Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377
Solar-supplemented, natural air drying of shelled corn: The economic limitations
[PB81-235681] N82-14668
Short-range weather forecasts and current weather information: User requirements and economic values N82-14759
The changing tide: Federal support of civilian-sector R and D
[NASA-CR-165048] N82-14985
Technical change in US industry: A cross-industry analysis
[NASA-CR-165047] N82-14986

ECONOMIC DEVELOPMENT
Scenarios of economic development within the European community until the Year 2000
[DFVLR-FB-81-06] N82-14984

ECONOMIC FACTORS
Environmental assessment and industrial cogeneration demonstration plant at the Hoffmann-La Roche Plant Site, Belvidere, New Jersey
[DE81-030180] N82-14681

ECONOMIC IMPACT
Analysis of potential cogeneration impacts on electricity generation by the Central Maine Power Company
[DE81-029991] N82-14650
Economic effects induced by ESA contracts, phase 2. Volume 1: Summary
[ESA-CR(P)-1462-VOL-1] N82-14981
Economic effects induced by ESA contracts, phase 2. Volume 2: Main report
[ESA-CR(P)-1462-VOL-2] N82-14982
Economic effects induced by ESA contracts. Phase 2. Volume 3: Theory and method
[ESA-CR(P)-1462-VOL-3] N82-14983
The changing tide: Federal support of civilian-sector R and D
[NASA-CR-165048] N82-14985
Technical change in US industry: A cross-industry analysis
[NASA-CR-165047] N82-14986

EDDY CURRENTS
Eddy-current phasography
[DE81-024242] N82-14462

EDUCATION
Education and training implications of biomass energy system use
[DE81-029956] N82-14664
An investigation into the current attitudes and perceptions held by educators toward computer-assisted-instruction N82-14828
Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication
[NASA-CP-2203-PT-1] N82-14960
Using case studies to teach an engineering technology technical writing class N82-14967
Why use case studies rather than simulation-gaming techniques or library research? N82-14968
Teaching graphics in technical communication classes N82-14969
A graphics primer for English Teachers N82-14970
Applied tagmemics: A heuristic approach to the use of graphic aids in technical writing N82-14971
Clinical report writing: Process and perspective N82-14972
Preparing for an influx of foreign students in technical writing courses: Understanding their background N82-14973

EFFECTIVENESS
Evaluating the effectiveness of case method instruction in technical communication N82-14966

EFFICIENCY
Point-defect sources and sinks
[DE82-000655] N82-14944

EIGENVALUES
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

EIGENVECTORS
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

EJECTA
Satellite observations of the Mt. St. Helens' eruption of 18 May 1980
[AD-A105784] N82-14591

EJECTORS
Parametric analysis of diffuser requirements for high expansion ratio space engine
[NASA-CR-161924] N82-14280

ELASTIC BODIES
A flow-visualization study of turbulent spots on solid and compliant surfaces
[AD-A106073] N82-14478
Dynamic safety analysis — first-passage probabilities for linear elastic structures subjected to random base accelerators N82-14546

ELASTIC DEFORMATION
Polymeric microelectronics
[AD-A105707] N82-14366

ELASTIC SHELLS
A geometrically nonlinear finite element shell theory N82-14532

ELASTODYNAMICS
Influence of a free surface on the elastodynamic field of a finite crack N82-14547

ELECTRIC ARCS
P78-2 satellite and payload responses to electron beam operations on March 30, 1979 N82-14248
Electron irradiation tests on European meteorological satellite N82-14266

ELECTRIC AUTOMOBILES
Future of electricity for automobiles: Advanced electric vehicle concepts
[DE81-028235] N82-14987

ELECTRIC BATTERIES
Lithium based anodes for solid state batteries
[AD-A105518] N82-14640
Thermal behavior of an experimental 2.5-kWh lithium/iron sulfide battery
[DE81-029661] N82-14654
Future of electricity for automobiles: Advanced electric vehicle concepts
[DE81-028235] N82-14987

ELECTRIC CONDUCTORS
SCATHA SSPM charging response: NASCAP predictions compared with data N82-14251
The calculation of the input resistance of a vibrator with dielectric cover by the method of induced EMF N82-14420

ELECTRIC CONNECTORS
A user's manual for: Electromagnetic Surface Patch code (ESP)
[AD-A105954] N82-14428

ELECTRIC CONTACTS
Development of an all-metal thick film cost effective metallization system for solar cells
[NASA-CR-165043] N82-14630

ELECTRIC DISCHARGES
Helicopter model studies for on-board electrostatic sensors
[AD-A105511] N82-14089
Charging and discharging Teflon N82-14217
Role of energetic particles in charging/discharging of spacecraft dielectrics N82-14219
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221
Dielectric surface discharges: Effects of combined low-energy and high-energy incident electrons N82-14222
Preliminary analysis of data from SRI international transient pulse monitor on board P78-2 SCATHA satellite N82-14245
Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246
Analytical modeling of satellites in geosynchronous environment N82-14258
Model of coupling discharges into spacecraft structures N82-14260
Military standards and SCATHA program update of MIL-STD-1541 N82-14262
Importance of differential charging for controlling both natural and induced vehicle potentials on ATS-5 and ATS-6 N82-14269
Electromagnetic fields produced by simulated spacecraft discharges N82-14270
Investigation of plasma excitation. Volume 3: Advanced optical diagnostics of plasmas
[AD-A105496] N82-14929

ELECTRIC FIELD STRENGTH
Bulk charging and breakdown in electron-irradiated polymers N82-14216

ELECTRIC FIELDS
The transverse Rf accelerator
[AD-A105896] N82-14457

ELECTRIC GENERATORS
High voltage testing
[AD-A106029] N82-14641

ELECTRIC HYBRID VEHICLES
Future of electricity for automobiles: Advanced electric vehicle concepts
[DE81-026235] N82-14987

ELECTRIC POTENTIAL
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221
satellite surface potential survey --- Kapton voltage measurement N82-14244
Numerical simulation of plasma insulator ineractions in space. Part 1: The self consistent calculation N82-14272
Field errors in EBT and their effects on the ambipolar potential --- bumpy toruses
[DE82-000626] N82-14930

ELECTRIC POWER PLANTS
Chemical element concentrations in liquids and solids associated with power plants using FGD systems
[DE81-030422] N82-14322
Evaluation of coal gasification/combined cycle power plant feasibility at the Sewells Point Naval Complex, Norfolk, Virginia
[AD-A103674] N82-14639
Need for power and the choice of technologies: State decisions on electric power facilities
[DE81-025960] N82-14644

ELECTRIC POWER SUPPLIES
Pulsed Power Research colloquium
[AD-A105770] N82-14638

ELECTRIC POWER TRANSMISSION
Optimal voltage level control and its application to long range extension planning in high voltage transmission network
[ISBN-951-45-5116-2] N82-14446

ELECTRIC TERMINALS
Integrated circuits for accurate linear analogue electric signal processing N82-14445

ELECTRIC WIRE
A user's manual for: Electromagnetic Surface Patch code (ESP)
[AD-A105954] N82-14428

ELECTRICAL FAULTS
Solar cell modules for plasma interaction evaluation
[NASA-CR-161922] N82-14281

ELECTRICAL GROUNDING
Integrated circuits for accurate linear analogue electric signal processing N82-14445

ELECTRICAL IMPEDANCE
Meaning of the negative impedance
[DE81-030630] N82-14458

ELECTRICAL INSULATION
Cryogenic tests of glass-epoxy based electrical insulation
[DE81-028144] N82-14461

ELECTRICAL PROPERTIES
Preparation of GaAs/AlxGa1-xAs multilayer structures with predetermined optical and electrical properties by molecular beam epitaxy
[BMFT-FB-T-81-042] N82-14951

ELECTRICAL RESISTIVITY
Electron penetration of spacecraft thermal insulation N82-14220
Ideal transport in transition metals: The rigid-muffin-tin approximation and beyond
[DE81-029073] N82-14346

ELECTRO-OPTICS
Electro-optical atmospheric transmission effort in the marine environment
[AD-A105665] N82-14700

ELECTROACOUSTIC TRANSDUCERS
Broadband monolithic Sezawa wave storage correlators and convolvers N82-14442

ELECTROCATALYSTS
Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325
Stabilizing platinum in phosphoric acid fuel cells
[NASA-CR-165483] N82-14628

ELECTROCHEMICAL OXIDATION
Polarization study of hot corrosion phenomena in Ni-Cr alloys
[DE81-029609] N82-14349

ELECTROCHEMISTRY
Electrochemical aspects of stress-corrosion cracking in alpha-brass
[DE81-022078] N82-14345
Studies in in vivo electrochemistry N82-14793

ELECTRODEPOSITION
Photoelectrochemical depositions of microscopic metal film patterns on Si and GaAs
[AD-A099456] N82-14940

ELECTRODES
Lithium-aluminum alloy electrodes in lithium chlorate
[AD-A105902] N82-14452
Effects of suspended particles on the rate of mass transfer to a rotating disk electrode
[DE81-028002] N82-14485

ELECTRODIALYSIS
Nickel recovery from electroplating rinsewaters by electrodialysis
[PB81-227209] N82-14355

ELECTRODYNAMICS
Representation and material charging response of geoplasma environments N82-14249

ELECTROLYTES
Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325
Dissolution kinetics during localized corrosion
[DE81-025092] N82-14350
Thermodynamics of electrolyte solutions over the entire miscibility range
[LBL-12377] N82-14953

ELECTROLYTIC CELLS
Electrodes and diaphragms for fuel cells
[BMFT-FB-T-81-047] N82-14666
Studies in in vivo electrochemistry N82-14793
Thermodynamics of electrolyte solutions over the entire miscibility range
[LBL-12377] N82-14953

ELECTROLYTIC POLARIZATION
Polarization study of hot corrosion phenomena in Ni-Cr alloys
[DE81-029609] N82-14349

ELECTROMAGNETIC ABSORPTION
Laser-induced-fluorescence studies of fragment ions: CH( ) and CD( )
[DE82-001010] N82-14514
Sub-gap and band edge optical absorption in a-Si:H by photothermal deflection spectroscopy
[DE81-026040] N82-14923

ELECTROMAGNETIC COMPATIBILITY
Military standards and SCATHA program update of MIL-STD-1541 N82-14262

ELECTROMAGNETIC FIELDS
Electromagnetic fields produced by simulated spacecraft discharges N82-14270

ELECTROMAGNETIC INTERACTIONS
Theoretical studies relating to the interaction of radiation with matter: Atomic collision processes occurring in the presence of radiation fields
[AD-A105789] N82-14897

ELECTROMAGNETIC INTERFERENCE
Brushfire arc discharge model N82-14224
Electromagnetic interference (EMI) measurements of fluorescent lamps operated with solid-state ballasts
[DE81-025218] N82-14432

ELECTROMAGNETIC PULSES
Model of coupling discharges into spacecraft structures N82-14260
Spacecraft charging technology in the satellite X-ray test facility N82-14267

ELECTROMAGNETIC RADIATION
Investigation of transform techniques for solving electromagnetic radiation and scattering problems
[AD-A105664] N82-14431

ELECTROMAGNETIC SCATTERING
Investigation of transform techniques for solving electromagnetic radiation and scattering problems
[AD-A105664] N82-14431

ELECTROMAGNETIC SURFACE WAVES
A user's manual for: Electromagnetic Surface Patch code (ESP)
[AD-A105954] N82-14428

ELECTROMAGNETIC WAVE TRANSMISSION
SHF-EHF propagation through vegetation on Colorado east slope
[AD-A105672] N82-14429
A computer model for high-latitude phase scintillation based on wideband satellite data from Poker Flat
[AD-A105620] N82-14702

ELECTROMAGNETISM
Conceptual design of superconducting magnet system for Magnetohydrodynamic (MHD) Engineering Test Facility (ETF) 200 MWe power plant
[NASA-CR-165053] N82-14520

ELECTRON ACCELERATORS
The transverse Rf accelerator
[AD-A105896] N82-14457

ELECTRON ATTACHMENT
A probable breakdown mechanism in the electron beam sustained CO2 laser
[AD-A105809] N82-14508

ELECTRON AVALANCHE
A probable breakdown mechanism in the electron beam sustained CO2 laser
[AD-A105809] N82-14508

ELECTRON BEAMS
Electron-beam-charged dielectrics: Internal charge distribution N82-14215
Experimental validation of a numerical model predicting the charging characteristics of Teflon and Kapton under electron beam irradiation N82-14218
Preliminary comparison of material charging properties using single-energy and multienergy electron beams N82-14223
Secondary electron emission yields N82-14226
P78-2 satellite and payload responses to electron beam operations on March 30, 1979 N82-14248
Computer simulation of spacecraft charging on SCATHA N82-14253
Analysis of ambient and beam particle characteristics during the ejection of an electron beam from a satellite in near-geosynchronous orbit on March 30, 1979 N82-14254
KrF laser pumping by electron beam discharge N82-14389
A probable breakdown mechanism in the electron beam sustained CO2 laser
[AD-A105809] N82-14508
Simple model of beam transport in low-pressure ion-focused regimes
[DE82-000242] N82-14698

ELECTRON BOMBARDMENT
Tank testing of a 2500-cm2 solar panel N82-14228

Electrostatic charging characteristics of thermal control paints as function of temperature
N82-14234

ELECTRON DENSITY (CONCENTRATION)
The effect of multiburst NO production on electron densities and HF attenuation at 60 KM altitude
[AD-A105676] N82-14701

ELECTRON DENSITY PROFILES
Microwave energy deposition, breakdown and heating of nitrogen and air
[AD-A105749] N82-14926
Dark-ground illumination: A quantitative diagnostic for plasma density
[DE82-000442] N82-14932

ELECTRON DISTRIBUTION
Effects of secondary electron emission on charging N82-14225
Electron angular distributions during charging events N82-14239
Disappearance and reappearance of particles of energies 50 keV as seen by P78-2 (SCATHA) near geosynchronous orbit N82-14261

ELECTRON EMISSION
Spacecraft Charging Technology, 1980
[NASA-CP-2182] N82-14213
Secondary electron emission yields N82-14226
Oblique-incidence secondary emission from charged dielecronics N82-14227
Computer simulation of spacecraft charging on SCATHA N82-14253
Analysis of ambient and beam particle characteristics during the ejection of an electron beam from a satellite in near-geosynchronous orbit on March 30, 1979 N82-14254
Importance of differential charging for controlling both natural and induced vehicle potentials on ATS-5 and ATS-6 N82-14269
Dispenser cathode physics
[AD-A105126] N82-14450

ELECTRON ENERGY
The Copernic experiment to measure three dimensional electron distribution and the composition of thermal positive ions including water clusters near Halley's Comet N82-14112
Dielectric discharge characteristics in a two-electron simulation environment N82-14214
Electron penetration of spacecraft thermal insulation N82-14220
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221
Dielectric surface discharges: Effects of combined low-energy and high-energy incident electrons
N82-14222
Temperature dependence of O2 (1 Delta) + O2 (1 Delta) and I (2P sub 1/2) + O2 (1 Delta) energy pooling
[AD-A105617] N82-14507
Gordon Research Conference on Molecular Energy Transfer
[AD-A105441] N82-14695
University of California Electron and X-Ray Experiments on ISEE-3, series 22, issue 5
[NASA-CR-166725] N82-14999

ELECTRON GUNS
P78-2 satellite and payload responses to electron beam operations on March 30, 1979 N82-14248
The UCSB free electron laser experimental program
[AD-A106084] N82-14506
ATA injector-gun calculations
[DE82-001149] N82-14906

ELECTRON IMPACT
Investigation of plasma excitation. Volume 1: Electron impact studies of selected ground state and excited state rare gas atoms
[AD-A105494] N82-14927

ELECTRON IRRADIATION
Spacecraft Charging Technology, 1980
[NASA-CP-2182] N82-14213
Bulk charging and breakdown in electron-irradiated polymers N82-14216
Experimental validation of a numerical model predicting the charging characteristics of Teflon and Kapton under electron beam irradiation N82-14218
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221
Effects of secondary electron emission on charging N82-14225
Charging and discharging characteristics of a rigid solar array N82-14229
Charging control techniques N82-14232
Electron irradiation tests on European meteorological satellite N82-14266

ELECTRON ORBITALS
Results from a two dimensional spacecraft charging simulation and comparison with a surface photocurrent model N82-14257
Calculation of surface current response to surface flashover of a large sample under grounded and floating conditions N82-14259
Nonadiabatic corrections and detrapping for variable parameter free electron lasers
[DE81-028425] N82-14515

ELECTRON PROBES
Applications of the microscan 9 microanalyser — chemical composition
[RAE-TM-MAT-358] N82-14491

ELECTRON TRAJECTORIES
Conduction through punctures in metal-backed dielectrics N82-14236

ELECTRON TRANSFER
Electron transfer in weakly interacting systems
[DE81-026134] N82-14903

ELECTRON TRANSITIONS
Relaxation effects in shock-induced transitions in bismuth
[DE81-026728] N82-14946

ELECTRON-ION RECOMBINATION
A probable breakdown mechanism in the electron beam sustained CO2 laser
[AD-A105609] N82-14508

ELECTRONIC MODULES
Electronic image analysis — system development
[BMFT-FB-T-80-126] N82-14464
Extended memory management under RTOS
N82-14841

ELECTRONIC TRANSDUCERS
Thin film transducers for temperature and heat flux measurements — turbomachine blades N82-14390

ELECTROPHYSIOLOGY
Studier in in vivo electrochemistry N82-14793

ELECTROPLATING
Nickel recovery from electroplating rinsewaters by electrodialysis
[PB81-227209] N82-14355

ELECTROSTATIC CHARGE
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221
Materials characterization study of conductive flexible second surface mirrors N82-14230
Electrostatic charging characteristics of thermal control paints as function of temperature
N82-14234
Evaluation of charge control techniques on spacecraft thermal surfaces (electrostatic discharge study) N82-14235
P78-2 engineering overview N82-14243
Preliminary analysis of data from SRI international transient pulse monitor on board P78-2 SCATHA satellite N82-14245
Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246
Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247
Simulation of charging response of SCATHA (P78-2) satellite N82-14250
SCATHA SSPM charging response: NASCAP predictions compared with data N82-14251
Three-dimensional analysis of charging events on days 87 and 114, 1979, from SCATHA N82-14252
Computer simulation of spacecraft charging on SCATHA N82-14253
Analysis of ambient and beam particle characteristics during the ejection of an electron beam from a satellite in near-geosynchronous orbit on March 30, 1979 N82-14254
Comparison of NASCAP modelling results with lumped circuit analysis N82-14255
Meteosat spacecraft charging investigation
N82-14265
Generation of electrostatic charge in fuel handling systems: A literature survey
[AD-A106056] N82-14454
The UCSB free electron laser experimental program
[AD-A106084] N82-14506

ELECTROSTATIC PROBES
Helicopter model studies for on-board electrostatic sensors
[AD-A105611] N82-14069
The Giotto neutral mass spectrometer
N82-14122

ELECTROSTATICS
Numerical simulation of plasma insulator ineractions in space. Part 1: The self consistent calculation
N82-14272
Numerical simulation of plasma insulator interactions in space. Part 2: Dielectric effects N82-14273

ELLIPSOIDS
On the relationship between the Hausdorff distance and metric distances of ellipsoids
[AD-A105880] N82-14858

ELLIPSOMETERS
Preparatory tasks on the definition and optimization of the Out of Ecliptic Zodiacal Light experiment --- International Solar Polar Mission
[BMFT-FB-W-81-009] N82-14199

ELLIPTIC DIFFERENTIAL EQUATIONS
Block iterative methods for elliptic and parabolic difference equations
[AD-A105698] N82-14850

ELLIPTICITY
Hypersonic slip-flow around slender elliptical cones at a slight angle of attack
[ESA-TT-644] N82-14069

EMISSION SPECTRA
Cathodoluminescence characterization of ion implanted GaAs
[AD-A105656] N82-14314
Investigation of plasma excitation. Volume 1: Electron impact studies of selected ground state and excited state rare gas atoms
[AD-A105494] N82-14927
Investigation of plasma excitation. Volume 2: Microwave plasmas
[AD-A105495] N82-14928

EMITTERS
Computer simulation of spacecraft charging on SCATHA N82-14253
Importance of differential charging for controlling both natural and induced vehicle potentials on ATS-5 and ATS-6 N82-14269

EMPLOYMENT
Education and training implications of biomass energy system use
[DE81-029956] N82-14664

ENCAPSULATING
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, crucible pulling of Ga As crystals
[BMFT-FB-T-81-022] N82-14949

ENERGETIC PARTICLES
An energetic particle detector for Giotto and its scientific objectives N82-14113
Role of energetic particles in charging/discharging of spacecraft dielectrics N82-14219

ENERGY ABSORPTION
Analysis of crack propagation as an energy absorption mechanism in metal matrix composites
[NASA-CR-165051] N82-14288

ENERGY ABSORPTION FILMS
Photovoltaic systems performance experience
[DE81-025725] N82-14656

ENERGY CONSERVATION
The use of flight management computers in air carrier operations in the 1980s
[AD-A105621] N82-14071
Residential site design and energy conservation. Part 1: General report
[DE81-904010] N82-14398
Reliable aerial thermography for energy conservation
[NASA-TM-81766] N82-14552
Design of an energy conservation building
[NASA-TM-83175] N82-14632
Projecting regional potentials for cost-effective energy conservation and renewable resource applications: A feasibility study
[DOE/CS-10045/T3] N82-14645
Analysis of the energy impacts of the DOE Appropriate Energy Technology Small Grants Program: Method and results
[DE81-029644] N82-14651

Seminars for private college administrators on solar applications for college buildings
[DE81-027981] N82-14661
Potential energy savings in the residential sector of the United States
[DE81-026873] N82-14662

ENERGY CONSUMPTION
Need for power and the choice of technologies: State decisions on electric power facilities
[DE81-025960] N82-14644
Projecting regional potentials for cost-effective energy conservation and renewable resource applications: A feasibility study
[DOE/CS-10045/T3] N82-14645
Potential energy savings in the residential sector of the United States
[DE81-026873] N82-14662

ENERGY CONVERSION EFFICIENCY
Biomass energy utilization in the Pacific Northwest: Impacts associated with residential use of solid fuels
[DE81-029137] N82-14383
Study of multi-megawatt technology needs for photovoltaic space power systems, volume 2
[NASA-CR-165323-VOL-2] N82-14637

ENERGY DISSIPATION
A study of the viscous dissipation and surface loading on a vibrating surface
[NASA-CR-3499] N82-14678

ENERGY DISTRIBUTION
The directional energy distribution of wind generated waves as inferred from stereophotographic observations of the sea surface N82-14715

ENERGY GAPS (SOLID STATE)
Synthesis, characterization and optical properties of barium titanate films sputtered under various conditions
[AD-A105655] N82-14296

ENERGY LEVELS
Investigation of luminescence in the charge exchange process of Ar++ with N2 of N(+) with CO
[MPIS-3/1980] N82-14326

ENERGY METHODS
Coal-oil mixtures: An alternative fuel for the commercial markets and large residential markets
[DE81-028335] N82-14379

ENERGY POLICY
Sixth Underground Coal-Conversion Symposium
[DE81-027669] N82-14374
The nuclear controversy: Unequal competition in public policy-making
[ERG-035] N82-14626
Need for power and the choice of technologies: State decisions on electric power facilities
[DE81-025960] N82-14644
Projecting regional potentials for cost-effective energy conservation and renewable resource applications: A feasibility study
[DOE/CS-10045/T3] N82-14645
Analysis of potential cogeneration impacts on electricity generation by the Central Maine Power Company
[DE81-029991] N82-14650
Analysis of the energy impacts of the DOE Appropriate Energy Technology Small Grants Program: Method and results
[DE81-029644] N82-14651
International energy indicators
[DE81-028117] N82-14653
Seminars for private college administrators on solar applications for college buildings
[DE81-027981] N82-14661
Potential energy savings in the residential sector of the United States
[DE81-026873] N82-14662
Millions wasted trying to develop major energy information system
[AFMD-81-40] N82-14959

ENERGY REQUIREMENTS
Need for power and the choice of technologies: State decisions on electric power facilities
[DE81-025960] N82-14644

ENERGY STORAGE
Design of an energy conservation building
[NASA-TM-83175] N82-14632
Compressed air energy storage preliminary design and site development program in an aquifer. Volume 5, part 2, appendix F, dynamic system computer model
[DE82-000671] N82-14646
Flywheel rotor and containment technology development
[DE81-028047] N82-14655

ENERGY TECHNOLOGY
Pulsed Power Research colloquium
[AD-A105770] N82-14636
Need for power and the choice of technologies: State decisions on electric power facilities
[DE81-025960] N82-14644
Fire-protection research for energy technology: Fy 80 year end report
[DE82-000970] N82-14649
Analysis of the energy impacts of the DOE Appropriate Energy Technology Small Grants Program: Method and results
[DE81-029644] N82-14651
Flywheel rotor and containment technology development
[DE81-028047] N82-14655
Energy recovery from municipal waste development program for Idaho Falls, Idaho
[DE81-029999] N82-14659
Seminars for private college administrators on solar applications for college buildings
[DE81-027981] N82-14661
Value tree analysis of energy supply alternatives
[AD-A105829] N82-14875
Millions wasted trying to develop major energy information system
[AFMD-81-40] N82-14959

ENERGY TRANSFER
Comparison of viscous and pressure energy exchange in fluid flow induction
[AD-A105806] N82-14481
Temperature dependence of O2 (1 Delta) + O2 (1 Delta) and I (2P sub 1/2) + O2 (1 Delta) energy pooling
[AD-A105817] N82-14507
Gordon Research Conference on Molecular Energy Transfer
[AD-A105441] N82-14895

ENGINE INLETS
System for acquisition and analysis of dynamic tests on air intakes
[NASA-TM-76646] N82-14056

ENGINE TESTS
Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165386] N82-14095
ERBS fuel addendum: Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165387] N82-14096

ENGINEERING MANAGEMENT
New starts in research and development, 1962 N82-14834

ENGLAND
The use of LANDSAT MSS to observe sediment distribution and movement in the Solent coastal area — multispectral scannel (MSS) N82-14580

ENGLISH LANGUAGE
Research in the comprehension of engineering lectures by non-native speakers N82-14979

ENTROPY
A thermodynamic approach to metal-plasma interaction in one-dimensional stationary evolution — probe-plasma interaction
[REPT-81-1] N82-14936

ENTROPY (STATISTICS)
Software modeling studies executive summary
[AD-A105810] N82-14822

ENVIRONMENT EFFECTS
Hydrogeology of spoil at three abandoned surface mines in Illinois: Preliminary results
[PB81-231664] N82-14620
Coal conversion solid waste disposal
[DE81-028567] N82-14680
Environmental assessment and industrial cogeneration demonstration plant at the Hoffmann-La Roche Plant Site, Belvidere, New Jersey
[DE81-030180] N82-14681
Patterns of behavior in lodgings subject to traffic noise
[IRT-47] N82-14682
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 2: Utility boiler NO sub x control by combustion modification
[PB81-236127] N82-14686

ENVIRONMENT MANAGEMENT
Requirements in pollution monitoring and coastal management N82-14558

ENVIRONMENT POLLUTION
Hazardous waste sites pose investigation, evaluation, scientific, and legal problems
[CED-81-57] N82-14671

ENVIRONMENT PROTECTION
Hazardous waste sites pose investigation, evaluation, scientific, and legal problems
[CED-81-57] N82-14671
Environmental readiness document. Advanced Isotope Separation Program
[DE81-029952] N82-14900

ENVIRONMENT SIMULATION
Electromagnetic fields produced by simulated spacecraft discharges N82-14270
Agreement for NASA/OAST - USAF/AFSC space interdependency on spacecraft environment interaction N82-14271

ENVIRONMENT SIMULATORS
Hemispherical sky simulator for daylighting model studies
[DE81-026130] N82-14706

ENVIRONMENTAL MONITORING
ERS-1: Mission objectives and system concept N82-14554
The need for integrated off-shore, real-time information and management systems N82-14555
Offshore petroleum industry environmental data requirements: Emphasis on remote sensing N82-14557
Fisheries investigations and management benefits from remote sensing — fish tracking N82-14559
A look at nonsatellite remote sensing systems for marine use — together with satellite systems, overall view of the technology N82-14586
Evaluation of fiber optics for in-line photometry in hostile environments
[DE81-026139] N82-14922

ENZYME ACTIVITY
PMP 80 automatic photometer — for enzyme activity determination
[BMFT-FB-T-81-051] N82-14504

EPITAXY
Development of fabrication technology for the permeable base transistor
[AD-A105532] N82-14456

EPOXY MATRIX COMPOSITE MATERIALS
Durability/life of fiber composites in hygrothermomechanical environments
[NASA-TM-82749] N82-14287
Cryogenic tests of glass-epoxy based electrical insulation
[DE81-026144] N82-14461

EPOXY RESINS
New epoxy resins: Synthesis and stability N82-14356
Acceleration of the epoxy resin-dicyandiamide cure cycle by trisubstituted ureas
[AD-A105870] N82-14363

EQUALIZERS (CIRCUITS)
Study of an autoadaptive equalizer: Computerized simulation based on Kalman filter or gradient methods
[TEL/ARB/81] N82-14471

EQUATIONS OF MOTION
ACTA Mechanica Sinica (selected articles)
[AD-A107322] N82-14060
Equations of flight mechanics considering atmospheric turbulence N82-14063

EQUIVALENT CIRCUITS
Comparison of NASCAP modelling results with lumped circuit analysis N82-14255
Optimum design of wide-bandwidth, low-noise photodiode amplifiers. Volume 1: Bandwidth — photodiode circuit
[OUEL-1363/81-VOL-1] N82-14468

EROSIVE BURNING
Erosivity of LOVA propellants
[AD-A106081] N82-14373

ERROR ANALYSIS
On the accuracy of radio location in media with indirect wave propagation
[DFVLR-FB-81-02] N82-14436
A geometrically nonlinear finite element shell theory N82-14532
On the complex control method — error analysis of meteorological data N82-14733

Hierarchical finite element approaches error estimates and adaptive refinement
[AD-A105899] N82-14855
Floating-point on-line arithmetic for highly concurrent digit-serial computation: Application to mesh problems N82-14863

ERROR CORRECTING DEVICES
The usefulness of auxiliary transfer orbit maneuvers for a near nominal geostationary mission — salvaging N82-14140

ERROR DETECTION CODES
Optimization of Apogee Kick Motor (AKM) firing attitude N82-14164
On the complex control method — error analysis of meteorological data N82-14733
Development of a methodology for the detection of system failures and for the design of fault-tolerant control systems
[AD-A105900] N82-14811
Software error detection N82-14835

ERS-1 (ESA SATELLITE)
ERS-1: Mission objectives and system concept N82-14554

ESA SATELLITES
Midcourse navigation for the European Comet Halley mission N82-14141
Study of a combined satellite system for remote sensing and earth-oriented research (LOCSS) --- ESA satellite
[BMFT-FB-W-81-002] N82-14615

ESTIMATING
SIRIO 2 LASSO mission: Geosynchronous satellite laser station ranging data orbit determination simulations — laser synchronization from stationary orbit (LASSO) mission N82-14156
Mathematical software for linear control and estimation theory
[AD-A106000] N82-14854
New estimation methods for log-linear models
[AD-A105745] N82-14864
Proper Bayes minimax estimators for a multivariate normal mean with unknown common variance under a convex loss function
[AD-A105746] N82-14865
Assessing the behavior of robust estimates of location in small samples: Introduction to configural polysampling
[AD-A105956] N82-14869
A simplified approach to spectrum estimation of stochastic processes N82-14871

ESTUARIES
SPOT data simulations: Littoral applications N82-14568
The use of LANDSAT MSS to observe sediment distribution and movement in the Solent coastal area --- multispectral scannel (MSS) N82-14580

ETHYL ALCOHOL
Alcohol fuels grant program at Lincoln Land Community College, Springfield, Illinois
[DE82-000744] N82-14375
Technical and economic feasibility study for a 1,500,000 gallon per year anhydrous ethanol manufacturing plant
[DE82-000266] N82-14376
Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377

EULER BUCKLING
Homogenization method for reinforced plate buckling prediction N82-14392

EUROPEAN COMMUNICATIONS SATELLITE
Impact of OTS propagation results on the ECS system — European Communications Satellite (ECS) N82-14180
Analogue television tests — OTS, European Communications Satellite N82-14189

EUROPEAN SPACE AGENCY
Spacecraft flight dynamics at ESOC N82-14129
Economic effects induced by ESA contracts, phase 2. Volume 1: Summary
[ESA-CR(P)-1462-VOL-1] N82-14981
Economic effects induced by ESA contracts, phase 2. Volume 2: Main report
[ESA-CR(P)-1462-VOL-2] N82-14982
Economic effects induced by ESA contracts. Phase 2. Volume 3: Theory and method
[ESA-CR(P)-1462-VOL-3] N82-14983

EUROPEAN SPACE PROGRAMS
Scientific and experimental aspects of the Giotto mission — proceedings of International Conference held at Noordwijerhout, Netherlands 27-28 Apr. 1981
[ESA-SP-169] N82-14107
Midcourse navigation for the European Comet Halley mission N82-14141

EUTECTIC ALLOYS
Laboratory experience with directional solidification of eutectic high temperature alloys N82-14293

EUTECTIC COMPOSITES
Colloquium on composite materials — conference, Cologne, 3 Dec. 1980 N82-14289
Effects of a large temperature gradient on the structure of directionally solidified eutectic composites and superalloys N82-14291
Oxidation behavior of directionally solidified eutectic composites as prototypes for the development of protective layers N82-14295

EVALUATION
Study of the performance parameters of a FLIR system
[AD-A105865] N82-14920

EVAPORATIVE COOLING
Simulation of transient behavior of a compression-evaporation refrigeration system
[WTHD-133] N82-14405

EVAPOTRANSPIRATION
A simulation study of the recession coefficient for antecedent precipitation index — soil moisture and water runoff estimation
[NASA-TM-83860] N82-14549
Pasco basin hydrometeorological study --- site selection for underground radioactive waste disposal
[DE82-000283] N82-14596

EVEN-EVEN NUCLEI
Nuclear structure from radioactive decay
[DE82-000423] N82-14899

EXCAVATION
Longwall mining of thin seams
[DE81-028042] N82-14612

EXCIMER LASERS
La Recherche Aerospatiale, Bi-monthly Bulletin No. 1981-2, March - April 1981 --- aerodynamic research
[ESA-TT-713] N82-14388
KrF laser pumping by electron beam discharge N82-14389
High power gas laser for material processing of organic and inorganic material
[BMFT-FB-T-81-025] N82-14517

EXCITATION
The electronic structure of porphyrins and metalloporphyrins N82-14329

EXHAUST GASES
ERBS fuel addendum: Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165387] N82-14096
Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247
A study of test techniques for evaluating ablative plasma engines in vacuum test cells
[AD-A105875] N82-14282

EXHAUST SYSTEMS
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 2: Utility boiler NO sub x control by combustion modification
[PB81-236127] N82-14686
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 5: Fundamental combustion research and advanced processes
[PB81-236150] N82-14689

EXPANSION
Hand-operated honeycomb core expansion set-up
[AE-TN-810901] N82-14284

EXPERIMENTAL DESIGN
The Giotto magnetometer experiment N82-14110
The Copernic experiment to measure three dimensional electron distribution and the composition of thermal positive ions including water clusters near Halley's Comet N82-14112
The particulate impact analyzer, an instrument to analyze small particles released by Halley's Comet --- Giotto mission N82-14115
A dust impact detection system for the Giotto Halley mission N82-14116
An assessment of mesoscale forecast experiments — at airfields N82-14773

EXPLOSIVE WELDING
Corrosion and high temperature resistant coatings for molybdenum, made out of iron and nickel alloys and applied by explosive welding --- Inconel 601 coatings
[T-15/80] N82-14351

EXTERNAL COMBUSTION ENGINES
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 2: Utility boiler NO sub x control by combustion modification
[PB81-236127] N82-14686
Proceedings of the Joint Symposium on Stationary Combustion NOx control. Volume 3: Utility boiler NO sub x control by flue gas treatment
[PB81-236135] N82-14687
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 4: NOx control and environmental assessment of industrial process equipment, engines, and small stationary sources
[PB81-236143] N82-14688
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 5: Fundamental combustion research and advanced processes
[PB81-236150] N82-14689

EXTERNAL SURFACE CURRENTS
Conduction through punctures in metal-backed dielectrics N82-14236

EXTINCTION
Statistical measurement of the 1978 lidar measurements --- aerosols and meteorology
[PHL-1980-41] N82-14924

EXTINGUISHING
A study of the mechanism of lean limit flammability
[AD-A105952] N82-14319

EXTRATERRESTRIAL LIFE
Comets: A vehicle for panspermia --- origins of life N82-14997

EXTREMELY HIGH FREQUENCIES
Depolarization measurements at 11 and 14 GHz with OTS N82-14178
Results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield
[PHL-1979-43] N82-14435
Further results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield
[PHL-1980-46] N82-14436

F

F REGION
Nonlinear evolution of plasma enhancements in the auroral ionosphere 1: Long wavelength irregularities
[AD-A105553] N82-14699

FABRICATION
Hand-operated honeycomb core expansion set-up
[AE-TN-810901] N82-14284
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159114] N82-14286
Development of fabrication technology for the permeable base transistor
[AD-A105532] N82-14456
MOS field effect transistors for UHF applications
[BMFT-FB-T-81-030] N82-14465
Fabrication of titanium multiwall Thermal Protection System (TPS) curved panel
[NASA-CR-165754] N82-14530

FACE CENTERED CUBIC LATTICES
Point defects in crystals (including grouped defects)
[DE82-000395] N82-14943

FACSIMILE COMMUNICATION
Teletext and data broadcasting experiments with OTS N82-14193
STELLA and SPINE data transmission experiments: Preliminary results and conclusions --- Satellite Transmission Experiment Linking Laboratories (STELLA); Space Information Network Experiment (SPINE) N82-14197

FACTOR ANALYSIS
Influences on factorial accuracy: A Monte Carlo investigation N82-14874

FAILURE
Millions wasted trying to develop major energy information system
[AFMD-81-40] N82-14959

FAILURE ANALYSIS

Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water
[DE81-028090] N82-14340

Failure prediction in glass
[AD-A105857] N82-14364

Evaluation of French hybrid microelectronics
[CNES-NT-87] N82-14409

Fault isolation techniques N82-14840

FAINT OBJECT CAMERA

FOC F/96 polarizers --- faint object camera for space telescope N82-14915

A polarizer for vacuum ultraviolet N82-14916

Anomalous dispersion of birefringence of sapphire and magnesium fluoride in the vacuum ultraviolet N82-14917

FAN BLADES

Experimental investigation of the influence of the casing geometry upon the flow conditions and the noise of a centrifugal fan
[DFVLR-FB-81-20] N82-14472

FAR FIELDS

Near and far field techniques in the analysis of noise generation mechanisms. Part 1: Localization levels and methods of representing source fields, intuitive introduction to near field antennas
[DRIC-T-6336] N82-14877

FAR ULTRAVIOLET RADIATION

FOC F/96 polarizers --- faint object camera for space telescope N82-14915

A polarizer for vacuum ultraviolet N82-14916

Anomalous dispersion of birefringence of sapphire and magnesium fluoride in the vacuum ultraviolet N82-14917

FARM CROPS

Energy balance and utilization of agricultural waste on a farm
[PB81-229262] N82-14385

FASTENERS

Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533

FATIGUE (MATERIALS)

Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334

Failure prediction in glass
[AD-A105857] N82-14364

Study of the fatigue behavior of welded joints, cross stressed --- influence of inclusions
[CETIM-12-Y-200] N82-14541

FATIGUE LIFE

Multiaxial fatigue of metals N82-14330

The application of probabilistic design theory to high temperature low cycle fatigue
[NASA-CR-165488] N82-14531

FATIGUE TESTING MACHINES

Effects of a large temperature gradient on the structure of directionally solidified eutectic composites and superalloys N82-14291

Description and numerical simulation of thermal fatigue tests on smooth specimens --- heat resistant alloys N82-14391

FATIGUE TESTS

Bending fatigue tests on SiC-Al tapes under alternating stress at room temperature
[NASA-TM-76631] N82-14285

Mechanisms of elevated temperature fatigue damage in 2 1/4 Cr - 1 Mo steel
[AD-A105786] N82-14335

High-temperature fatigue behavior of unirradiated V-15Cr-5Ti tested in vacuum
[DE81-028557] N82-14539

Fatigue test program on notched implanted specimens, cracked and uncracked --- welded punch implant tests
[CETIM-12-Y-261] N82-14542

FAULT TOLERANCE

Analysis and design of fault-tolerant computer systems
[AD-A105491] N82-14808

A lower bound for the time to assure interactive consistency
[AD-A105946] N82-14810

Development of a methodology for the detection of system failures and for the design of fault-tolerant control systems
[AD-A105900] N82-14811

FEASIBILITY ANALYSIS

Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377

An experimental investigation into the feasibility of a thermoelectric heat flux gage
[NASA-TM-82755] N82-14494

Evaluation of coal gasification/combined cycle power plant feasibility at the Sewells Point Naval Complex, Norfolk, Virginia
[AD-A103674] N82-14639

FERTILIZERS

The PC/ecuador biogas program: Considerations for future development
[PB81-234783] N82-14372

FIBER COMPOSITES

Durability/life of fiber composites in hygrothermomechanical environments
[NASA-TM-82749] N82-14287

FIBER OPTICS

Study of fiber optics to enhance an environmental lighting laboratory
[AD-A106117] N82-14104

Energy and technology review
[DE82-000304] N82-14647

Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A105717] N82-14919

Evaluation of fiber optics for in-line photometry in hostile environments
[DE81-028139] N82-14922

FIBER REINFORCED COMPOSITES

Colloquium on composite materials --- conference, Cologne, 3 Dec. 1980 N82-14289

Fracture mechanics in fiber reinforced composite materials, taking as examples B/Al and CFRP N82-14290

Microanalysis of composite materials --- silicon carbide reinforced titanium alloys N82-14294

FIELD EFFECT TRANSISTORS

MOS field effect transistors for UHF applications
[BMFT-FB-T-81-030] N82-14465

FIELD EMISSION

Field-ion-microscope observations of radiation effects
[DE81-030934] N82-14802

FIELD OF VIEW

Analysis and calculation of special system aspects for the conical scan radiometer (phase A)
[BMFT-FB-W-81-003] N82-14505

FIELD THEORY (PHYSICS)

Neutrino, Maxwell and scalar fields in cylindrical and spherical relativistic spaces N82-14694

FINITE DIFFERENCE THEORY

Numerical stability of an explicit finite difference scheme for the solution of transient conduction in composite media
[NASA-TM-82453] N82-14476

A class of monotonic shock-capturing difference schemes
[AD-A105601] N82-14480

Block iterative methods for elliptic and parabolic difference equations
[AD-A105898] N82-14850

FINITE ELEMENT METHOD

A geometrically nonlinear finite element shell theory N82-14532

A finite-element sea-breeze model N82-14712

Hierarchical finite element approaches error estimates and adaptive refinement
[AD-A105899] N82-14855

Linear and geometric nonlinear analysis of shells by an isoparametric three dimensional degenerated element
[REPT-140] N82-14862

FINLAND

Optimal voltage level control and its application to long range extension planning in high voltage transmission network
[ISBN-951-45-5116-2] N82-14446

Operative warnings; routine services and ongoing experimental work in Finland N82-14781

FIORDS

Mapping of surface currents in Greenland fiords by means of LANDSAT images --- multispectral photography N82-14579

FIR FILTERS

Fabrication of a processor adapted to numerical filtering
[TEL/KAR/81] N82-14812

FIRE CONTROL

Terrain masking analysis for White Sands Missile Range East Center 50 and West Center 50
[AD-A105806] N82-14201

FIRE PREVENTION

Fire-protection research for energy technology: Fy 80 year end report
[DE82-000970] N82-14640

FISHERIES

Application of remote sensing data on the continental shelf: Proceedings of an EAReL-ESA Symposium
[ESA-SP-167] N82-14553

Fisheries investigations and management benefits from remote sensing --- fish tracking N82-14559

The Seasat commercial demonstration program N82-14561

A short review of an oceanographic use of Meteosat data by the ORSTOM remote sensing service N82-14570

FISSIONABLE MATERIALS

Representation of the neutron cross sections of several fertile and fissile nuclei in the response regions
[DE82-000504] N82-14905

FLAME PROPAGATION

A study of the mechanism of lean limit flammability
[AD-A105952] N82-14319

FLAME STABILITY

New epoxy resins: Synthesis and stability N82-14356

FLASHING (VAPORIZING)

External fuel vaporization study
[NASA-CR-165513] N82-14371

FLAT PLATES

A theory of laminated composite plates and rods
[AD-A105591] N82-14297

Flat-plate solar array project. Task 1: Silicon material: Investigation of the hydrochlorination of SiC1sub4
[NASA-CR-165042] N82-14631

FLEXIBILITY

Low-cost forming influence on reinforced thermoplastic mechanical properties
[AD-A106004] N82-14360

FLEXING

Coupled flexural torsional vibration of an eccentrically stretched strip
[AE-TN-8131] N82-14528

FLIGHT CHARACTERISTICS

Equations of flight mechanics considering atmospheric turbulence N82-14063

FLIGHT CONTROL

Computer program to support remote manipulator system flight planning analysis N82-14820

Voice recognition as an input modality for the TACCO preflight data insertion task in the P-3C aircraft
[AD-A105568] N82-14821

FLIGHT CREWS

Electronic master monitor and advisory display system. operational fuctions report
[AD-A105516] N82-14087

FLIGHT HAZARDS

Mesoscale studies of weather hazards to aviation N82-14723

FLIGHT MECHANICS

ACTA Mechanica Sinica (selected articles)
[AD-A107322] N82-14060

Equations of flight mechanics considering atmospheric turbulence N82-14063

FLIGHT PLANS

The use of flight management computers in air carrier operations in the 1980s
[AD-A105621] N82-14071

Introduction to orbital flight planning (1)
[NASA-CR-165052] N82-14106

FLIGHT RECORDERS

Advanced crash survivable flight data recorder and Accident Information Retrieval System (AIRS)
[AD-A105510] N82-14072

ROLM computers in the flight testing of the Fokker F29 aircraft N82-14839

FLIGHT SAFETY

Measurement of characteristics of lightning at high altitudes
[NASA-TM-76669] N82-14714

FLIGHT SIMULATORS

A general aviation simulator evaluation of a rate-enhanced instrument landing system display
[NASA-TP-1960] N82-14085

Study of fiber optics to enhance an environmental lighting laboratory
[AD-A106117] N82-14104
Low cost, wide angle infinity optics visual system
[AD-A105506] N82-14921

FLIGHT TESTS
A flight investigation of blade-section aerodynamics for a helicopter main rotor having 10-64C airfoil sections
[NASA-TM-83226] N82-14058
Commutated automatic gain control system
[NASA-CR-164798] N82-14077
Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829
airborne data analysis/monitor system
N82-14830
ADAMS executive and operating system
N82-14831
System performance analyzer N82-14832
On-board computer progress in development of A 310 flight testing program N82-14833
ROLM computers in the flight testing of the Fokker F29 aircraft N82-14839

FLIR DETECTORS
Study of the performance parameters of a FLIR system
[AD-A105865] N82-14920

FLOATING POINT ARITHMETIC
Floating-point on-line arithmetic for highly concurrent digit-serial computation: Application to mesh problems N82-14863

FLOOD PLAINS
Flood plain mapping using computer graphics
[PB81-231870] N82-14625

FLOOD PREDICTIONS
Analysis of rainfall from flash flood producing thunderstorms, using GOES data N82-14724

FLORIDA
Application of a Gaussian multilayer diffusion model to characterize dispersion of vertical HCl column density in rocket exhaust clouds
[NASA-TP-1956] N82-14672
Terminal forecast reference notebook, detachment 9, 12th weather squadron (MAC), Tyndall AFB, Florida
[AD-A105065] N82-14782

FLOW CHARACTERISTICS
Aerosil for the improvement of the flow behavior of powdered substances
[NASA-TM-76643] N82-14283
Experimental investigation of the influence of the casing geometry upon the flow conditions and the noise of a centrifugal fan
[DFVLR-FB-81-20] N82-14472
A flow-visualization study of turbulent spots on solid and compliant surfaces
[AD-A106073] N82-14478
Experimental investigation of instability phases of a laminar vortex ring, in light of comparable instability events in turbulent shear layer, boundary layer, and channel flows
[MPIS-17/1980] N82-14489
Mode propagation in nonuniform circular ducts with potential flow
[NASA-TM-82776] N82-14881

FLOW DIRECTION INDICATORS
The design of a jet catcher --- for wind tunnels
[RAE-TM-AERO-1891] N82-14102

FLOW DISTRIBUTION
Experimental investigation of a transonic potential flow around a symmetric airfoil
[NASA-TM-76676] N82-14057
Lifting surface theory for wings in low frequency small amplitude yawing and side slipping oscillating motions at low speeds N82-14061
Numerical simulation of steady supersonic flow over an ogive cylinder boattail body
[AD-A106060] N82-14065
Core compressor exit stage study. Volume 4: Data and performance report for the best stage configuration
[NASA-CR-165357] N82-14092
Core compressor exit stage study. Volume 5: Design and performance report for the Rotor C/Stator B configuration
[NASA-CR-165358] N82-14093
Ultrasound characterization of disturbed flow patterns N82-14893

FLOW GEOMETRY
The use of optimization techniques to design controlled diffusion compressor blading
[NASA-TM-82763] N82-14094

FLOW MEASUREMENT
System for acquisition and analysis of dynamic tests on air intakes
[NASA-TM-76646] N82-14056

FLOW STABILITY
Transformation and reflection of vortex rings impinging on a plate inclined with respect to their translation direction
[MPIS-12/1980] N82-14488
Experimental investigation of instability phases of a laminar vortex ring, in light of comparable instability events in turbulent shear layer, boundary layer, and channel flows
[MPIS-17/1980] N82-14489

FLOW VELOCITY
Combustion behavior of solid fuel ramjets. Volume 1: Correlation of reacting and non-reacting flow characteristics
[AD-A106061] N82-14316
Cool-down flow-rate limits imposed by thermal stresses in LNG pipelines
[DE81-028731] N82-14484

FLUID FLOW
Determination of the transition point in a boundary layer by the measurement of pressure fluctuation
[NASA-TM-76639] N82-14475

FLUID ROTOR GYROSCOPES
Automatic balancing system with laser unit --- for miniature rotors
[BMFT-FB-T-81-008] N82-14502

FLUIDIZED BED PROCESSORS
Energy recovery from municipal waste development program for Idaho Falls, Idaho
[DE81-029999] N82-14659

FLUORESCENCE
High performance liquid chromatography/video fluorometry. Part 3: Applications
[AD-A105945] N82-14318
Electromagnetic interference (EMI) measurements of fluorescent lamps operated with solid-state ballasts
[DE81-025218] N82-14432
Laser-induced-fluorescence studies of fragment ions: CH( ) and CD( )
[DE82-001010] N82-14514
Laser-induced fluorescence technique to monitor H2S (PR 16023)
[DE81-028784] N82-14516
A recommended sensor package for the detection and tracking of oil spills N82-14563

FLUORIDES
Development of an all-metal thick film cost affective metallization system for solar cells
[NASA-CR-165044] N82-14629

FLUORINE
Quantitative determination of fluorine in steel-making slags by the ion selective electrode
[DRIC-T-6446] N82-14331

FLUX (RATE)
Kohoutek, photometric photography experiment (S233)
[NASA-TM-82449] N82-15007

FLUX DENSITY
The discovery of 50 minute periodic absorption events from 4U1915-05
[NASA-TM-83839] N82-15001

FLYBY MISSIONS
Scientific and experimental aspects of the Giotto mission --- proceedings of International Conference held at Noordwijerhout, Netherlands 27-28 Apr. 1981
[ESA-SP-169] N82-14107
Giotto: A mission to Halley's Comet N82-14108
The Giotto magnetometer experiment N82-14110
The Copernic experiment to measure three dimensional electron distribution and the composition of thermal positive ions including water clusters near Halley's Comet N82-14112
The particulate impact analyzer, an instrument to analyze small particles released by Halley's Comet --- Giotto mission N82-14115
A dust impact detection system for the Giotto Halley mission N82-14116
Midcourse navigation for the European Comet Halley mission N82-14141
Operational compensation for effect of close Titan flyby on remainder of Voyager 1 Saturn near encounter --- photography N82-14166

FLYWHEELS
Composite flywheel durability and life expectancy: Test program
[DE81-026849] N82-14299
Flywheel rotor and containment technology development
[DE81-026047] N82-14655

FOAMING
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026849] N82-14522
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026962] N82-14523

FOILS (MATERIALS)
Electromagnetic effects on the formation of potential wells for ion acceleration
[DE81-028240] N82-14911

FORCE DISTRIBUTION
Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533

FORECASTING
Bayesian forecasting for switching regression and autoregressive processes N82-14873

FORGING
Manufacturing methods and technology for production hot forging of alkali halide lenses
[AD-A104843] N82-14396

FORTRAN
The NSWC Global Ocean Tide Data Tape (GOTD). Its features and applicaton: Random-Point Tide program
[AD-A105974] N82-14792
Grid systems for Earth radiation budget experiment applications
[NASA-TM-83233] N82-14818
Extended memory management under RTOS
N82-14841

FOSSIL FUELS
Fuels and chemicals made from solar energy
[DE81-025016] N82-14384

FOURIER SERIES
A simplified approach to spectrum estimation of stochastic processes N82-14871

FOURIER TRANSFORMATION
Possibility of a new approach to processing space pulse radio signals
[NASA-TM-76748] N82-14412

FRACTIONATION
Process development for improved SRC options. Kerr-McGee critical solvent deashing and fractionation studies
[DE81-903785] N82-14380

FRACTURE MECHANICS
Fracture mechanics in fiber reinforced composite materials, taking as examples B/Al and CFRP
N82-14290
Mechanisms of elevated temperature fatigue damage in 2 1/4 Cr - 1 Mo steel
[AD-A105786] N82-14335
Plastic deformation and fracture of steel under dynamic loading
[AD-A105997] N82-14336
Failure prediction in glass
[AD-A105857] N82-14364
Fatigue test program on notched implanted specimens, cracked and uncracked --- welded punch implant tests
[CETIM-12-Y-261] N82-14542

FRACTURE STRENGTH
Fracture toughness of Al2O3-ZrO2 composites
[DE81-028575] N82-14300

FREE ELECTRON LASERS
The UCSB free electron laser experimental program
[AD-A106084] N82-14506

FREE ELECTRONS
The UCSB free electron laser experimental program
[AD-A106084] N82-14506
Nonadiabatic corrections and detrapping for variable parameter free electron lasers
[DE81-028425] N82-14515

FREEZING
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, gradient freeze crystal growth and measurement techniques
[BMFT-FB-T-81-023] N82-14950

FRENCH SPACE PROGRAMS
Aerospace research activities N82-14958

FREQUENCY ASSIGNMENT
Variability of acoustic transmissions in a shallow water area
[AD-A103278] N82-14882

FREQUENCY CONTROL
A stark cell for frequency control of a waveguide C02 laser
[AD-A104734] N82-14495

FREQUENCY HOPPING
Anti-jam analysis of frequency hopping M-ary frequency shift keying communication systems in high frequency Rayleigh fading channels N82-14441

FREQUENCY MEASUREMENT
On the accuracy of radio location in media with indirect wave propagation
[DFVLR-FB-81-02] N82-14438
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

FREQUENCY MODULATION
* Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246

FREQUENCY SHIFT
Modeling the influence of static acceleration on surface wave (quartz) oscillators
[ONERA-NT-1981-3] N82-14470

FREQUENCY SHIFT KEYING
Anti-jam analysis of frequency hopping M-ary frequency shift keying communication systems in high frequency Rayleigh fading channels N82-14441

FREQUENCY STABILITY
Evaluation of the performance characteristics of BVA resonators under static and dynamic conditions
[AD-A105064] N82-14448

FRESH WATER
Recent work in passive optical imaging of water — space and aircraft derived data N82-14575

FRICTION
Application of surface analysis to solve problems of wear
[NASA-TM-82753] N82-14519

FRONTS (METEOROLOGY)
The numerical simulation of intense frontal discontinuities over southeastern Australia N82-14758

FROST
Topoclimatological measurements at Bielefeld and its surroundings as an example of mesoscale observations N82-14732

FUEL CELLS
Investigation of the in-situ oxidation of methanol in fuel cells
[AD-A105947] N82-14642
Future of electricity for automobiles: Advanced electric vehicle concepts
[DE81-028235] N82-14987

FUEL COMBUSTION
Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography
[AD-A105588] N82-14312
Determination of pyridine in modified JP-4 via High Performance Liquid Chromatography (HPLC)
[AD-A105589] N82-14313
Combustion behavior of solid fuel ramjets. Volume 1: Correlation of reacting and non-reacting flow characteristics
[AD-A106061] N82-14316

FUEL CONSUMPTION
The use of flight management computers in air carrier operations in the 1980s
[AD-A105621] N82-14071

FUEL CONTAMINATION
Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography
[AD-A105588] N82-14312

FUEL INJECTION
Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165386] N82-14095
External fuel vaporization study
[NASA-CR-165513] N82-14371

FUEL OILS
Coal-oil mixtures: An alternative fuel for the commercial markets and large residential markets
[DE81-028335] N82-14379

FUEL PRODUCTION
Alcohol fuels grant program at Lincoln Land Community College, Springfield, Illinois
[DE82-000744] N82-14375
Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377
Fuels and chemicals made from solar energy
[DE81-025018] N82-14384
Energy balance and utilization of agricultural waste on a farm
[PB81-229262] N82-14385
Education and training implications of biomass energy system use
[DE81-029956] N82-14664

FUEL SYSTEMS
Generation of electrostatic charge in fuel handling systems: A literature survey
[AD-A106058] N82-14454

FUELS
Biomass energy utilization in the Pacific Northwest: Impacts associated with residential use of solid fuels
[DE81-029137] N82-14383

FULL SCALE TESTS
Advanced technology lightweight gondola system experimental fabrication program
[AD-A104157] N82-14082

FUMES
Study of problems posed by the emission of fumes during welding
[CETIM-12-Y-213] N82-14524

FUNCTIONAL INTEGRATION
Computer program for solving an inverse problem with one variable: Part 1: Methodology
[CRPE-NT-80-VOL-1] N82-14825

FUNCTIONS (MATHEMATICS)
Optimization of unconstrained functions with sparse Hessian matrices: Quasi-Newton methods
[AD-A106028] N82-14861

FURNACES
Critical analysis of gradient and isothermal furnace concepts for use in Spacelab with special regard for heat pipe technology and connected basic requirements — on crystal growth experiments
[BMFT-FB-W-81-019] N82-14200

FUSELAGES
Experimental study of noise reduction for an unstiffened cylindrical model of an airplane fuselage
[NASA-TP-1964] N82-14879

FUSION REACTORS
High-temperature fatigue behavior of unirradiated V-15Cr-5Ti tested in vacuum
[DE81-028557] N82-14539
Progress report to the Department of Energy in support of basic energy and policy research
[DE81-025682] N82-14648

G

GALLIUM
Direct analysis of plutonium metal for gallium, iron and nickel by energy dispersive X-ray spectrometry
[DE81-028046] N82-14324

GALLIUM ARSENIDES
Cathodoluminescence characterization of ion implanted GaAs
[AD-A105656] N82-14314
Photoelectrochemical depositions of microscopic metal film patterns on Si and GaAs
[AD-A099456] N82-14940
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, crucible pulling of Ga As crystals
[BMFT-FB-T-81-022] N82-14949
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, gradient freeze crystal growth and measurement techniques
[BMFT-FB-T-81-023] N82-14950
Preparation of GaAs/AlxGal-xAs multilayer structures with predetermined optical and electrical properties by molecular beam epitaxy
[BMFT-FB-T-81-042] N82-14951

GALLIUM PHOSPHIDES
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Production of gallium phosphide crystals
[BMFT-FB-T-81-021] N82-14948

GAMMA RAY SPECTRA
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York. Volume 1: Data acquisition, reduction and interpretation
[DE82-000650] N82-14599
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000401] N82-14601
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000780] N82-14602
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000872] N82-14603
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000772] N82-14604
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000785] N82-14605
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000869] N82-14606
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000794] N82-14607
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000784] N82-14608

GAMMA RAYS
Beneficial uses of nuclear waste program sewage-sludge irradiation project
[DE82-000440] N82-14677

GAS ANALYSIS
Molecular wake shield gas analyzer
[NASA-CR-161926] N82-14212
Studies in unsegmented continuous-flow analysis. Part 1: Repetitive determinations of Cu(2) catalyst. Part 2: Repetitive determinations of bromine and chlorine in gaseous samples at a gas-solid interface N82-14328

GAS CHROMATOGRAPHY
Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography
[AD-A105588] N82-14312
A microwave induced helium plasma emission detector for gas chromatography
[PML-1979-75] N82-14327
Oil spill identification by chemical analysis N82-14583

GAS COOLING
Studies of resonance-light pressure
[ISBN-951-45-2131-5] N82-14914

GAS DISCHARGE TUBES
Investigation of plasma excitation. Volume 2: Microwave plasmas
[AD-A105495] N82-14926

GAS DISCHARGES
Study of metastable states of atomic nitrogen in luminescent discharges
[LP-185] N82-14935

GAS DYNAMICS
A class of monotonic shock-capturing difference schemes
[AD-A105801] N82-14480

GAS LASERS
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510

GAS RECOVERY
Development of a metal hydride process for hydrogen recovery from supplemented natural gas
[DE81-022685] N82-14382

GAS TURBINE ENGINES
The use of optimization techniques to design controlled diffusion compressor blading
[NASA-TM-82763] N82-14094
ERBS fuel addendum: Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165387] N82-14096
External fuel vaporization study
[NASA-CR-165513] N82-14371

GAS TURBINES
Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core
[NASA-TP-1942] N82-14090
Long-term stability of finely cast alloys for gas turbine blades under hot gas corrosion conditions
[DECHEMA-PROJ-4.2/1] N82-14100
High voltage testing
[AD-A106029] N82-14641

GAS-ION INTERACTIONS
Investigation of luminescence in the charge exchange process of Ar++ with N2 of N(+) with CO
[MPIS-3/1980] N82-14326

GAS-METAL INTERACTIONS
A thermodynamic approach to metal-plasma interaction in one-dimensional stationary evolution --- probe-plasma interaction
[REPT-81-1] N82-14936

GASIFICATION
Progress on catalyzed steam gasification of biomass
[DE81-028198] N82-14663

GEOCHEMISTRY
Evaluation of Devonian shale potential in eastern Kentucky/Tennessee
[DE82-001164] N82-14595
Evaluation of the eastern gas shales in Pennsylvania
[DE82-001165] N82-14596
Evaluation of Devonian shale potential in New York
[DE82-001163] N82-14597
Hydrogeochemical and stream sediment reconnaissance basic data for Broken Bow NTMS Quadrangle, Nebraska
[DE81-030295] N82-14610
Geochemistry of recent Lake Michigan sediments
[PB81-234429] N82-14622

GEOCHRONOLOGY
Stratigraphy and depositional history of the Iola Limestone Upper Pennsylvanian (Missourian), Northern Midcontinent U.S. N82-14711

GEODYNAMICS
The seismotectonics of plate boundaries
[NASA-CR-165050] N82-14690

GEOLOGICAL FAULTS
Geology and geochemistry of samples from Los Alamos National Laboratory HDR well EE-2, Fenton Hill, New Mexico
[DE81-026068] N82-14708

GEOLOGICAL SURVEYS
Bibliography of publications dealing with tar sands
[DE81-026146] N82-14594
Stratigraphy and depositional history of the Iola Limestone Upper Pennsylvanian (Missourian), Northern Midcontinent U.S. N82-14711

GEOLOGY
Assessment of effectiveness of geologic isolation systems: The AEGIS geologic simulation model
[DE81-028007] N82-14704

GEOMAGNETISM
Electron angular distributions during charging events N82-14239
Review of hot plasma composition near geosynchronous altitude N82-14241

GEOMETRY
Geometric data analysis: An interactive graphics program for shape comparison
[AD-A105858] N82-14823

GEOPOTENTIAL
Representation and material charging response of geoplasma environments N82-14249
SCATHA SSPM charging response: NASCAP predictions compared with data N82-14251

GEOS SATELLITES (ESA)
Partitioning methods for identification and control of flexible spacecraft N82-14147

GEOS 1 SATELLITE
A European flight dynamics experiment --- GEOS 1 rotation N82-14144

GEOSYNCHRONOUS ORBITS
A SIRIO 2 laser ranging experiment --- in orbit determination N82-14125

GEOTHERMAL ENERGY EXTRACTION
Accessing the geothermal resources
[DE81-025396] N82-14614
Geology and geochemistry of samples from Los Alamos National Laboratory HDR well EE-2, Fenton Hill, New Mexico
[DE81-026068] N82-14708

GEOTHERMAL RESOURCES
Accessing the geothermal resources
[DE81-025396] N82-14614

GEOTHERMAL TECHNOLOGY
Value tree analysis of energy supply alternatives
[AD-A105629] N82-14875

GLASS
Effects of suspended particles on the rate of mass transfer to a rotating disk electrode
[DE81-028002] N82-14485
Ion-implantation effects in glasses
[DE81-027208] N82-14947

GLASS FIBER REINFORCED PLASTICS
Examination of a damaged gun shield of Ota Melara
[KRI-204/80] N82-14303
Cryogenic tests of glass-epoxy based electrical insulation
[DE81-028144] N82-14461

GLIDE PATHS
In-service testing of the Precision Approach Path Indicator (PAPI) at Newark International Airport, New Jersey
[DOT/FAA/RD-81/95] N82-14076

GLOBAL POSITIONING SYSTEM
Design studies for a technology assessment receiver for global positioning system
[NASA-CR-165046] N82-14074
Navstar Global Positioning System (GPS): Future enhanced capabilities N82-14130
Global geometry techniques for mission analysis N82-14159

GLOBAL TRACKING NETWORK
Global ocean tides. Part 4: The semidiurnal elliptical lunar tide (N2), atlas of tidal charts and maps
[AD-A105949] N82-14791

GONDOLAS
Advanced technology lightweight gondola system experimental fabrication program
[AD-A104157] N82-14082

GOVERNMENT/INDUSTRY RELATIONS
The Seasat commercial demonstration program N82-14561
The changing tide: Federal support of civilian-sector R and D
[NASA-CR-165048] N82-14985
Technical change in US industry: A cross-industry analysis
[NASA-CR-165047] N82-14986

GRADIENTS
Procedures for the calculation of the separative performance of a countercurrent gas centrifuge
[DE81-025448] N82-14499

GRAIN BOUNDARIES
Dissolution kinetics during localized corrosion
[DE81-025092] N82-14350
Point-defect sources and sinks
[DE82-000655] N82-14944

GRANULAR MATERIALS
Interstellar grains --- composition and classification N82-14996
The organic composition of interstellar grains N82-15004

GRAPHIC ARTS
Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication
[NASA-CP-2203-PT-1] N82-14960
Teaching graphics in technical communication classes N82-14969
A graphics primer for English Teachers N82-14970
Applied tagmemics: A heuristic approach to the use of graphic aids in technical writing N82-14971

GRAPHITE
Mechanical and thermophysical properties of hot-pressed SYNROC B
[DE81-029299] N82-14301

GRAPHITE-POLYIMIDE COMPOSITES
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159114] N82-14286

GRATINGS (SPECTRA)
Development of a linear measuring system --- precision length measurement, using holographic gratings
[BMFT-FB-T-81-031] N82-14503

GRAVIMETERS
The seismotectonics of plate boundaries
[NASA-CR-165050] N82-14690

GRAVIMETRY
A SIRIO 2 laser ranging experiment --- in orbit determination N82-14125

GRAVITATIONAL COLLAPSE
Research in nuclear astrophysics: Stellar collapse and supernovae
[DE81-030041] N82-15005

GRAVITATIONAL EFFECTS
Calculational aspects of quantum gravity N82-14952

GRAVITATIONAL FIELDS
Research results from analysis of satellite orbits --- Earth atmosphere and gravitational effects N82-14124
Accurate orbit determinations from laser range observations by LAGEOS, Starlette and GEOS 3 N82-14126
Lunar gravitational field determination --- POLO experiment N82-14127
Calculational aspects of quantum gravity N82-14952

GRAVITY WAVES
Gravity waves on water with non-uniform depth and current N82-14692
On the identification of planetary-scale waves during disturbed conditions
[ISSN-0340-9821] N82-14694

GREENLAND
Mapping of surface currents in Greenland fiords by means of LANDSAT images --- multispectral photography N82-14579

GRINDING (MATERIAL REMOVAL)
Ultra-high surface speed for metal removal, artillery shell
[AD-A103970] N82-14395

GRINDING MACHINES
Development of new production technologies for optical components with spherical surfaces --- precision optics
[BMFT-FB-T-81-032] N82-14402

GROUND BASED CONTROL
Operational loads induced by orbital control of a geostationary satellite --- organizing control networks N82-14131

GROUND EFFECT
An empirical method for estimating the effect of ground proximity on the jet-induced lift of V/STOL aircraft employing rectangular jets
[AD-A105668] N82-14067

GROUND STATE
The electronic structure of porphyrins and metalloporphyrins N82-14329
Nuclear structure from radioactive decay
[DE82-000423] N82-14899

GROUND STATIONS
Accurate orbit determinations from laser range observations by LAGEOS, Starlette and GEOS 3 N82-14126
Future in ground base attitude support activities N82-14148

An overview of the design and construction of small Earth stations used with OTS N82-14196

GROUND SUPPORT EQUIPMENT
A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492

GROUND WATER
Hydrogeology of spoil at three abandoned surface mines in Illinois: Preliminary results
[PB81-231664] N82-14620

GROUND WIND
The role of mesoscale surface motions in the life of a convective storm in a dry continental climate N82-14740
The role of near surface outflow in maintaining convective activity — in storms N82-14741
Combined use of radar with mesoscale surface network for very short range prediction of precipitation N82-14747

GROUP DYNAMICS
Reliability vs. diagnosticity in hierarchical inference
[AD-A105628] N82-14956
Integrate oral communication with technical writing: Towards a rationale N82-14977

GUIDANCE SENSORS
High precision attitude determination for Magsat N82-14134

GUIDE VANES
Optimization of compressor vane and bleed settings
[AD-A106059] N82-14097

GUN PROPELLANTS
Erosivity of LOVA propellants
[AD-A106081] N82-14373

GUN TURRETS
Examination of a damaged gun shield of Ota Melara
[KRI-204/80] N82-14303

GUSTS
On the meteorological meaning of the terms gust, storm, and hurricane
[PUBL-SER-B-109] N82-14785

H

HAIL
Forecast of severe hail processes N82-14742

HALL EFFECT
Defect chemistry and characterization of (Hg, Cd)Te
[NASA-CR-161926] N82-14306

HALLEY'S COMET
Scientific and experimental aspects of the Giotto mission — proceedings of International Conference held at Noordwijerhout, Netherlands 27-28 Apr. 1981
[ESA-SP-169] N82-14107
Giotto: A mission to Halley's Comet N82-14108
The Giotto magnetometer experiment N82-14110
A cometary plasma experiment for the mission to Halley's Comet — cometary plasma velocity measurement N82-14111
The Copernic experiment to measure three dimensional electron distribution and the composition of thermal positive ions including water clusters near Halley's Comet N82-14112
An energetic particle detector for Giotto and its scientific objectives N82-14113
The particulate impact analyzer, an instrument to analyze small particles released by Halley's Comet — Giotto mission N82-14115
A dust impact detection system for the Giotto Halley mission N82-14116
The Giotto ion mass spectrometer N82-14118
Notes on the P/Halley nucleus N82-14119
A Halley multicolor camera — for the Giotto mission N82-14120
The Halley optical probe experiment — for the Giotto mission N82-14121
The Giotto neutral mass spectrometer N82-14122

HAMILTONIAN FUNCTIONS
Normal forms, versal deformations and quadratic integrals of linear Hamiltonian systems N82-14848

HAWAII
The effect of precipitation on microwave soundings in low latitudes
[PB81-225062] N82-14787

HAZE
Multitemporal calibration of LANDSAT images: A method for improving the marine phenomena recognition, with as example the Venice lagoon — brightness/green/yellow feature space, image enhancement N82-14578

HEAT EXCHANGERS
External fuel vaporization study
[NASA-CR-165513] N82-14371

HEAT FLUX
Thin film transducers for temperature and heat flux measurements — turbomachine blades N82-14390
An experimental investigation into the feasibility of a thermoelectric heat flux gage
[NASA-TM-82755] N82-14494

HEAT PUMPS
An experimental investigation into the feasibility of a thermoelectric heat flux gage
[NASA-TM-82755] N82-14494

HEAT RESISTANT ALLOYS
Colloquium on composite materials — conference, Cologne, 3 Dec. 1980 N82-14289
Effects of a large temperature gradient on the structure of directionally solidified eutectic composites and superalloys N82-14291
Vapor deposition tests with NiCoCrAlY alloys: First results for the mechanical high temperature characteristics of the coated superalloy IN 738 LC N82-14292
Laboratory experience with directional solidification of eutectic high temperature alloys N82-14293
Description and numerical simulation of thermal fatigue tests on smooth specimens — heat resistant alloys N82-14391

HEAT STORAGE
Waste heat and chill storage in aquifer systems
[DE81-028016] N82-14652
Systems analysis of thermal storage
[DE81-030288] N82-14658

HEAT TRANSFER
Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core
[NASA-TP-1942] N82-14090
External fuel vaporization study
[NASA-CR-165513] N82-14371
Comparison of thin-film resistance heat-transfer gages with thin-skin transient calorimeter gages in conventional hypersonic wind tunnels
[NASA-TM-83197] N82-14474
Heat-transfer and pressure tests on an oblate elliptic nosetip in the NSWC/WO hypersonic tunnel at Mach Number 5 (STR-1346)
[AD-A106058] N82-14482
Progress report to the Department of Energy in support of basic energy and policy research
[DE81-025882] N82-14648

HEATING EQUIPMENT
Coal-oil mixtures: An alternative fuel for the commercial markets and large residential markets
[DE81-028335] N82-14379

HEAVY LIFT LAUNCH VEHICLES
Satellite power system: Concept development and evaluation program. Volume 7: Space transportation
[NASA-TM-58238-VOL-7] N82-14635

HELICOPTER CONTROL
Electronic master monitor and advisory display system, operational fuctions report
[AD-A105516] N82-14087

HELICOPTER PERFORMANCE
A flight investigation of blade-section aerodynamics for a helicopter main rotor having 10-64C airfoil sections
[NASA-TM-83226] N82-14058

HELICOPTERS
Advanced technology lightweight gondola system experimental fabrication program
[AD-A104157] N82-14082
Helicopter model studies for on-board electrostatic sensors
[AD-A105511] N82-14089

HELIUM PLASMA
A microwave induced helium plasma emission detector for gas chromatography
[PML-1979-75] N82-14327

HEMATITE
Catalytic effect of iron in hydrogasification of coal
[DE81-023926] N82-14323

HEREDITY
Inborn anemias in mice
[DE81-029128] N82-14795

HESSIAN MATRICES
Optimization of unconstrained functions with sparse Hessian matrices: Quasi-Newton methods
[AD-A106028] N82-14861

HETEROJUNCTION DEVICES
Hot electron effects of importance for micron and submicron devices
[AD-A105616] N82-14513

HEURISTIC METHODS
Synthesis and optimization of programmable logic arrays N82-14814
Exact and approximation algorithms for a scheduling problem
[AD-A105681] N82-14859
A further investigation of efficient heuristic procedures for integer linear programming with an interior
[AD-A106027] N82-14860
Applied tagmemics: A heuristic approach to the use of graphic aids in technical writing N82-14971

HIERARCHIES
Hierarchical finite element approaches error estimates and adaptive refinement
[AD-A105699] N82-14855

HIGH ENERGY ELECTRONS
Dielectric surface discharges: Effects of combined low-energy and high-energy incident electrons N82-14222

HIGH FREQUENCIES
Anti-jam analysis of frequency hopping M-ary frequency shift keying communication systems in high frequency Rayleigh fading channels N82-14441
Optimum design of wide-bandwidth, low-noise photodiode amplifiers. Volume 1: Bandwidth — photodiode circuit
[OUEL-1363/81-VOL-1] N82-14468
The effect of multiburst NO production on electron densities and HF attenuation at 60 KM altitude
[AD-A105676] N82-14701

HIGH POWER LASERS
Investigation of methods for fabricating, characterizing and transporting cryogenic inertial-confinement-fusion targets
[DE81-029737] N82-14934

HIGH RESOLUTION
A Halley multicolor camera — for the Giotto mission N82-14120
Eddy-current phasography
[DE81-024242] N82-14462

HIGH STRENGTH STEELS
Mechanical relaxation response of 2 1/4 Cr-1 Mo steel
[DE81-027301] N82-14344

HIGH TEMPERATURE
Testing program for concrete at temperatures to 894 deg K
[DE81-029144] N82-14538
Elevated-temperature (600 deg F), manual contact ultrasonic examination
[CONF-811003-2] N82-14540

HIGH TEMPERATURE PLASMAS
Review of hot plasma composition near geosynchronous altitude N82-14241
SCATHA observations of space plasma composition during a spacecraft charging event N82-14242

HIGH TEMPERATURE RESEARCH
Mechanisms of elevated temperature fatigue damage in 2 1/4 Cr - 1 Mo steel
[AD-A105786] N82-14335

HIGH TEMPERATURE TESTS
Effects of a large temperature gradient on the structure of directionally solidified eutectic composites and superalloys N82-14291
Vapor deposition tests with NiCoCrAlY alloys: First results for the mechanical high temperature characteristics of the coated superalloy IN 738 LC N82-14292
Mechanisms of elevated-temperature in single phase ceramics
[DE82-000691] N82-14368
High-temperature fatigue behavior of unirradiated V-15Cr-5Ti tested in vacuum
[DE81-028557] N82-14539

HIGH VOLTAGES
Three dimensional space charge model for large high voltage satellites — plasma sheath N82-14274

Optimal voltage level control and its application to long range extension planning in high voltage transmission network
[ISBN-951-45-5116-2] N82-14446

HISTOCHEMICAL ANALYSIS
Inborn anemias in mice
[DE81-029128] N82-14795

HISTORIES
Orders of magnitude: A history of NACA and NASA, 1915 - 1980
[NASA-SP-4403] N82-14955

HOLE DISTRIBUTION (MECHANICS)
Stress distribution around a circular hole in square plates, loaded uniformly in the plane, on two opposite sides of the square. Optimum shapes of central holes in square plates subjected to uniaxial uniform load. Optimization of hole shapes in circular cylindrical shells under axial tension
[AD-A105598] N82-14536
Mathematical modelling of some chemical and physical processes in underground coal gasification
[DE81-027941] N82-14613

HOLOGRAPHIC INTERFEROMETRY
Manufacture and testing of a prototype holographic series tire tester
[BMFT-FB-T-80-192] N82-14501
Development of a linear measuring system — precision length measurement, using holographic gratings
[BMFT-FB-T-81-031] N82-14503

HOLOGRAPHY
Low cost, wide angle infinity optics visual system
[AD-A105508] N82-14921

HOMOGENEITY
Homogenization method for reinforced plate buckling prediction N82-14392

HONEYCOMB CORES
Hand-operated honeycomb core expansion set-up
[AE-TN-810901] N82-14264

HONEYCOMB STRUCTURES
Comparison of experimental and theoretical turbulence reduction characteristics for screens, honeycomb, and honeycomb-screen combinations
[NASA-TP-1958] N82-14055

HORN ANTENNAS
Near and far field techniques in the analysis of noise generation mechanisms. Part 1: Localization levels and methods of representing source fields, intuitive introduction to near field antennas
[DRIC-T-6338] N82-14877

HOSPITALS
Electromagnetic interference (EMI) measurements of fluorescent lamps operated with solid-state ballasts
[DE81-025218] N82-14432

HOT CORROSION
Long-term stability of finely cast alloys for gas turbine blades under hot gas corrosion conditions
[DECHEMA-PROJ-4.2/1] N82-14100
Polarization study of hot corrosion phenomena in Ni-Cr alloys
[DE81-029609] N82-14349

HOT ELECTRONS
Hot electron effects of importance for micron and submicron devices
[AD-A105616] N82-14513

HOT PRESSING
Mechanical and thermophysical properties of hot-pressed SYNROC B
[DE81-029299] N82-14301

HUMAN BEHAVIOR
Patterns of behavior in lodgings subject to traffic noise
[IRT-47] N82-14682

HUMAN FACTORS ENGINEERING
Taking into account nighttime annoyance in the calculation of the psophic index
[NASA-TM-76580] N82-14674

HUMAN REACTIONS
Taking into account nighttime annoyance in the calculation of the psophic index
[NASA-TM-76580] N82-14674
Patterns of behavior in lodgings subject to traffic noise
[IRT-47] N82-14682

HUMAN TOLERANCES
Attitudes of the people of France towards the supersonic bang
[NASA-TM-76581] N82-14675
Repair of radiation damage in mammalian cells
[DE81-030624] N82-14800
Occupant response and vehicle acceleration in a 30 MPH frontial impact test, 1981 Subaru DL, 4 wheel drive, 4 door wagon, NHTSA 811301
[PB81-228760] N82-14989

HUMIDITY MEASUREMENT
Silicon dew-point sensor for accurate humidity measurement systems N82-14493
Improvement of humidity analyses by direct use of Meteosat water vapour channel radiances N82-14726

HURRICANES
On the meteorological meaning of the terms gust, storm, and hurricane
[PUBL-SER-B-109] N82-14785

HYBRID CIRCUITS
Low power hybrid circuits for satellite-borne time of flight spectrometers
[BMFT-FB-W-81-013] N82-14467
Evaluation of French hybrid microelectronics
[CNES-NT-97] N82-14469

HYDROCHLORIDES
Flat-plate solar array project. Task 1: Silicon material: Investigation of the hydrochlorination of SiC1sub4
[NASA-CR-165042] N82-14631

HYDROCLIMATOLOGY
The effect of spatial variability in precipitation on streamflow
[AD-A105955] N82-14589

HYDRODYNAMICS
Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites --- aerial photography N82-14574

HYDROELECTRICITY
Potential supply of synthetic fuels from Alaskan hydroelectric power and coal
[DE81-025743] N82-14381

HYDROFOIL OSCILLATIONS
A data reduction procedure for cavitation noise from an oscillating hydrofoil
[AD-A105719] N82-14892

HYDROGEN
Catalytic effect of iron in hydrogasification of coal
[DE81-023928] N82-14323

HYDROGEN CHLORIDES
Application of a Gaussian multilayer diffusion model to characterize dispersion of vertical HCl column density in rocket exhaust clouds
[NASA-TP-1956] N82-14672

HYDROGEN IONS
Temperature dependence of H saturation and isotope exchange
[DE81-026633] N82-14902

HYDROGEN ISOTOPES
Fundamental studies in isotope chemistry
[DE82-000651] N82-14321

HYDROGEN OXYGEN FUEL CELLS
Electrodes and diaphragms for fuel cells
[BMFT-FB-T-81-047] N82-14666

HYDROGEN PEROXIDE
Destruction of oxalate by reaction with hydrogen peroxide
[DE81-030624] N82-14320

HYDROGEN PRODUCTION
Potential supply of synthetic fuels from Alaskan hydroelectric power and coal
[DE81-025743] N82-14381
Development of a metal hydride process for hydrogen recovery from supplemented natural gas
[DE81-022685] N82-14382

HYDROGEN SULFIDE
H2S adsorption of plasticity strained iron
[DE81-027996] N82-14347

HYDROGENATION
Process development for improved SRC options. Kerr-McGee critical solvent deashing and fractionation studies
[DE81-903785] N82-14380

HYDROGEOLOGY
Hydrogeochemical and stream sediment reconnaissance basic data for Broken Bow NTMS Quadrangle, Nebraska
[DE81-030295] N82-14610
Hydrogeochemical and stream sediment reconnaissance basic data for Milbank NTMS Quadrangle, Minnesota; North Dakota; South Dakota
[DE81-029657] N82-14611
Hydrogeology of spoil at three abandoned surface mines in Illinois: Preliminary results
[PB81-231664] N82-14620

HYDROLOGY
Dealing with regional hydrologic data-base limitations. Case example: The Columbia River basalts — hydrology models and site selection for radioactive waste storage
[DE81-030086] N82-14609
Water problems and research needs for New Mexico
[PB81-231979] N82-14619

HYDROMETEOROLOGY
Pasco basin hydrometeorological study --- site selection for underground radioactive waste disposal
[DE82-000283] N82-14598

HYDROSTATICS
Compressible fluids investigation
[AD-A105703] N82-14483

HYGROMETERS
Silicon dew-point sensor for accurate humidity measurement systems N82-14493

HYPERBOLIC FUNCTIONS
Shock front rise time in water
[AD-A105704] N82-14479

HYPERSONIC FLOW
Hypersonic slip-flow around slender elliptical cones at a slight angle of attack
[ESA-TT-644] N82-14069
Heat-transfer and pressure tests on an oblate elliptic nosetip in the NSWC/WO hypersonic tunnel at Mach Number 5 (STR-1346)
[AD-A106058] N82-14482

HYPERSONIC FORCES
Pressure distributions and shock shapes for 12.84 deg/7 deg on-axis and bent-nose biconics in air at Mach 6
[NASA-TM-83222] N82-14054

HYPERSONIC WIND TUNNELS
Comparison of thin-film resistance heat-transfer gages with thin-skin transient calorimeter gages in conventional hypersonic wind tunnels
[NASA-TM-83197] N82-14474

HYPOKINESIA
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794

HYSTERESIS
Mechanical relaxation response of 2 1/4 Cr-1 Mo steel
[DE81-027301] N82-14344

I

ICE
Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14548

ICE FORMATION
Mechanism of ice crystal growth habit and shape instability development below water saturation
[AD-A105520] N82-14783

ICE MAPPING
The Norwegian remote sensing experiment (Norsex) in a marginal ice zone N82-14566

IDENTIFYING
Oil spill identification by chemical analysis N82-14583

IGNEOUS ROCKS
Geology and geochemistry of samples from Los Alamos National Laboratory HDR well EE-2, Fenton Hill, New Mexico
[DE81-026066] N82-14706

ILLINOIS
Hydrogeology of spoil at three abandoned surface mines in Illinois: Preliminary results
[PB81-231664] N82-14620

ILLUMINANCE
Studies of resonance-light pressure
[ISBN-951-45-2131-5] N82-14914

ILLUMINATORS
Daylighting calculations for nonrectangular interior spaces with shading devices
[DE81-027962] N82-14705

IMAGE CONTRAST
High contrast CRT module
[AD-A106079] N82-14430

IMAGE CORRELATORS
All-sky, video-based luminance mapper for daylighting research
[DE81-029276] N82-14707

IMAGE ENHANCEMENT
A simple approach to solve the Meteosat image deformation problem based on horizon extraction from image data and orbit information N82-14153
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment
[DE81-030166] N82-14801

IMAGE PROCESSING
A simple approach to solve the Meteosat image deformation problem based on horizon extraction from image data and orbit information N82-14153
Electronic image analysis — system development
[BMFT-FB-T-80-126] N82-14464
Reliable aerial thermography for energy conservation
[NASA-TM-81766] N82-14552
Seasat SAR processing at the Norwegian Defence Research Establishment — design and operation of a digital process N82-14584
Maritime applications of image processing at DFVLR, Oberpfaffenhofen, West Germany --- LANDSAT multispectral scanner images, digital interactive image analysis N82-14585

IMAGE RECONSTRUCTION
Eddy-current phasography
[DE81-024242] N82-14462

IMAGE RESOLUTION
Maritime applications of image processing at DFVLR, Oberpfaffenhofen, West Germany --- LANDSAT multispectral scanner images, digital interactive image analysis N82-14585

IMAGING TECHNIQUES
Eddy-current phasography
[DE81-024242] N82-14462
A recommended sensor package for the detection and tracking of oil spills N82-14563

IMPACT ACCELERATION
Staged collision and damage data. Volume 1: Report for accident reconstruction of thirty (30) test vehicles
[PB81-234072] N82-14407
Staged collision and damage data. Volume 2: Report for accident reconstruction of thirty (30) test vehicles
[PB81-234080] N82-14408
Occupant response and vehicle acceleration in a 30 mph frontal impact test, 1981 Ford F150 Custom Explorer Styleside, pickup, NHTSA 810602
[PB81-231045] N82-14409

IMPACT DAMAGE
Occupant response and vehicle acceleration in a 30 MPH frontial impact test, 1981 Subaru DL, 4 wheel drive, 4 door wagon, NHTSA 811301
[PB81-228769] N82-14989

IMPACT RESISTANCE
Measurement problems in high velocity impact experiments
[AD-A105550] N82-14521

IMPACT TESTS
Staged collision and damage data. Volume 1: Report for accident reconstruction of thirty (30) test vehicles
[PB81-234072] N82-14407
Staged collision and damage data. Volume 2: Report for accident reconstruction of thirty (30) test vehicles
[PB81-234080] N82-14408
Occupant response and vehicle acceleration in a 30 mph frontal impact test, 1981 Ford F150 Custom Explorer Styleside, pickup, NHTSA 810602
[PB81-231045] N82-14409
Measurement problems in high velocity impact experiments
[AD-A105550] N82-14521
Occupant response and vehicle acceleration in a 30 MPH frontial impact test, 1981 Subaru DL, 4 wheel drive, 4 door wagon, NHTSA 811301
[PB81-228769] N82-14989

IMPAIRMENT
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests
[AD-A103766] N82-14797

IMPEDANCE
Synthesis of a plane impedance antenna of finite length N82-14414

IMPELLERS
Experimental investigation of the influence of the casing geometry upon the flow conditions and the noise of a centrifugal fan
[DFVLR-FB-81-20] N82-14472

IN-FLIGHT MONITORING
A method for measuring takeoff and landing performance of aircraft, using an inertial sensing system
[NLR-MP-80036-U] N82-14084
In orbit checkout of the IRAS gyroscopes — infrared astronomy satellite (IRAS) N82-14170
Infrared radiance model variation by sensor flight measurements N82-14171
Measurement of characteristics of lightning at high altitudes
[NASA-TM-78669] N82-14714
ROLM computers in the flight testing of the Fokker F29 aircraft N82-14839

INCLUSIONS
Study of the fatigue behavior of welded joints, cross stressed — influence of inclusions
[CETIM-12-Y-200] N82-14541

INCOMPRESSIBLE FLOW
High Reynolds Number Cylinder Flow Workshop
[AD-A105088] N82-14477

INCONEL (TRADEMARK)
Corrosion and high temperature resistant coatings for molybdenum, made out of iron and nickel alloys and applied by explosive welding — Inconel 601 coatings
[T-15/80] N82-14351

INDEPENDENT VARIABLES
Nonadiabatic corrections and detrapping for variable parameter free electron lasers
[DE81-028425] N82-14515

INDEXES (DOCUMENTATION)
Evaluation of short-term bioassays to predict functional impairment. Development of plumonary bioassays in small animals: Directory of Institutions; individuals involved in utilization
[AD-A103767] N82-14798

INDIA
Studies of the Indian continental shelf: Application of remote sensing data N82-14569

INDIAN SPACE PROGRAM
Orbit and attitude determination for Bhaskara N82-14157
Validation and operations experience related to orbit and attitude software of Bhaskara N82-14162

INDIUM
Secondary electron emission yields N82-14226

INDUSTRIAL AREAS
Environmental assessment and industrial cogeneration demonstration plant at the Hoffmann-La Roche Plant Site, Belvidere, New Jersey
[DE81-030180] N82-14681

INDUSTRIAL PLANTS
Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377
Environmental assessment and industrial cogeneration demonstration plant at the Hoffmann-La Roche Plant Site, Belvidere, New Jersey
[DE81-030180] N82-14681

INDUSTRIAL WASTES
Waste heat and chill storage in aquifer systems
[DE81-028016] N82-14652
The chemical characterization of pollutants in waste water from Volunteer Army Ammunition Plant
[AD-A105705] N82-14676
Laboratory studies of priority pollutant treatability
[PB81-231235] N82-14684

INDUSTRIES
Scientific and technical research activities report in industrial fabrication N82-14404
The changing tide: Federal support of civilian-sector R and D
[NASA-CR-165048] N82-14985

INERTIA PRINCIPLE
Equations of flight mechanics considering atmospheric turbulence N82-14063

INERTIAL CONFINEMENT FUSION
Investigation of methods for fabricating, characterizing and transporting cryogenic inertial-confinement-fusion targets
[DE81-029737] N82-14934

INERTIAL COORDINATES
Grid systems for Earth radiation budget experiment applications
[NASA-TM-83233] N82-14818

INERTIAL REFERENCE SYSTEMS
Attitude measurement: Principles and sensors
[NASA-TM-76647] N82-14276

INFERENCE
Reliability vs. diagnosticity in hierarchical inference
[AD-A105626] N82-14956

INFLATING
Modular asymmetric parachute for wind-tunnel testing
[DE81-028416] N82-14068

INFORMATION
Staged collision and damage data. Volume 1: Report for accident reconstruction of thirty (30) test vehicles
[PB81-234072] N82-14407

INFORMATION DISSEMINATION
The need for integrated off-shore, real-time information and management systems N82-14555
Short-range weather forecasts and current weather information: User requirements and economic values N82-14759
A beach comfort index used by the national weather service in the Netherlands N82-14761
Millions wasted trying to develop major energy information system
[AFMD-81-40] N82-14959

INFORMATION FLOW
Flow control in store-and-forward computer network N82-14845

INFORMATION MANAGEMENT
Extended memory management under RTOS N82-14841

INFORMATION RETRIEVAL
Advanced crash survivable flight data recorder and Accident Information Retrieval System (AIRS)
[AD-A105510] N82-14072
MIKE: A network operating system for the distributed double-loop computer network N82-14843
Defense Technical Information Center free text experiment: Management data bases
[AD-A105570] N82-14980

INFRARED ASTRONOMY SATELLITE
The observation planning facility for the infrared astronomical satellite (IFAS) N82-14150
ACS performance vertification for IRAS: Software engineering at the Operations Control Centre — Attitude Control System (ACS), infrared astronomical satellite (IRAS) N82-14169
In orbit checkout of the IRAS gyroscopes — infrared astronomy satellite (IRAS) N82-14170

INFRARED IMAGERY
Infrared parameters for nowcasting severe rainstorms N82-14725
The enhanced V, a satellite observable severe storm signature
[PB81-230328] N82-14786

INFRARED RADIATION
Improvement of humidity analyses by direct use of Meteosat water vapour channel radiances N82-14726
Dust cloud models: Sensitivity of calculated transmittances to variations in input parameters
[AD-A103310] N82-14918

INFRARED RADIOMETERS
Structure function analysis of Nimbus 5 SCR data at the mesoscale N82-14730

INFRARED SPECTRA
Infrared radiance model variation by sensor flight measurements N82-14171
Satellite observations of the Mt. St. Helens' eruption of 18 May 1980
[AD-A105784] N82-14591
The 3.4 micrometer interstellar absorption feature --- IR source 7 N82-15003

INFRARED SPECTROSCOPY
Investigation of plasma excitation. Volume 3: Advanced optical diagnostics of plasmas
[AD-A105496] N82-14929

INFRARED TELESCOPES
Optical performance data for the UK infrared telescope; atmospheric seeing effects in the infrared --- United Kingdom Infrared Telescope (UKIRT)
[UKIRT-16] N82-14998

INFRARED TRACKING
Satellite observations of the Mt. St. Helens' eruption of 18 May 1980
[AD-A105784] N82-14591

INGESTION (ENGINES)
Foreign object damage in naval aircraft engines [AD-A105787] N82-14098
INJECTORS
Field demonstration of the conventional steam drive process with ancillary materials [DE81-026849] N82-14522
Field demonstration of the conventional steam drive process with ancillary materials [DE81-026962] N82-14523
INKS
Characterization and comparison of thermistor thick films [DE82-000831] N82-14459
INLET AIRFRAME CONFIGURATIONS
Wind tunnel tests of engine-equipped models: Comparison of two jet wash simulation methods [NASA-TM-76764] N82-14091
INORGANIC COMPOUNDS
Salt release from suspended sediments: A simulated model [PB81-231839] N82-14624
INSTRUCTORS
An investigation into the current attitudes and perceptions held by educators toward computer-assisted-instruction N82-14826
INSTRUMENT APPROACH
In-service testing of the Precision Approach Path Indicator (PAPI) at Newark International Airport, New Jersey [DOT/FAA/RD-81/95] N82-14076
INSTRUMENT ERRORS
P78-2 satellite and payload responses to electron beam operations on March 30, 1979 N82-14248
INSTRUMENT LANDING SYSTEMS
Requirements for instrument approaches to triple parallel runways [AD-A105622] N82-14079
Requirements for independent and dependent parallel instrument approaches at reduced runway spacing [AD-A105673] N82-14080
A general aviation simulator evaluation of a rate-enhanced instrument landing system display [NASA-TP-1960] N82-14085
INSULATORS
SCATHA SSPM charging response: NASCAP predictions compared with data N82-14251
Numerical simulation of plasma insulator ineractions in space. Part 1: The self consistent calculation N82-14272
Numerical simulation of plasma insulator interactions in space. Part 2: Dielectric effects N82-14273
The calculation of the input resistance of a vibrator with dielectric cover by the method of induced EMF N82-14420
INTEGERS
A further investigation of efficient heuristic procedures for integer linear programming with an interior [AD-A106027] N82-14860
INTEGRAL CALCULUS
Normal forms, versal deformations and quadratic integrals of linear Hamiltonian systems N82-14848
INTEGRAL TRANSFORMATIONS
Investigation of transform techniques for solving electromagnetic radiation and scattering problems [AD-A105864] N82-14431
INTEGRATED CIRCUITS
Integrated Schottky Logic N82-14306
Activities of the Department of Systems and Communications [ENST-D-81003] N82-14434
Broadband monolithic Sezawa wave storage correlators and convolvers N82-14442
Proceedings of the molecular electronic devices workshop [AD-A105816] N82-14455
Electronic image analysis --- system development [BMFT-FB-T-80-126] N82-14464
Computer aided design and reliability of a general LSI logic structure for custom VLSI N82-14815
INTERACTIVE CONTROL
Interactive design and analysis of future large spacecraft concepts [NASA-TP-1937] N82-14276
A lower bound for the time to assure interactive consistency [AD-A105946] N82-14810
INTERFACES
Design and implementation of a telecommunication interface for the TAATM/TCV real-time experiment [NASA-TM-83231] N82-14075
The eccentrically insulated circular-loop antenna and the horizontal circular-loop antenna near a planar interface N82-14440
INTERFACIAL ENERGY
Solar Photovoltaic Residential Project. Project Integration Meeting, Agenda and Abstracts [DE81-028433] N82-14657
INTERFEROMETERS
A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3 [NASA-CR-166722] N82-14492
INTERFEROMETRY
Whole-field experimental stress analysis using laser speckle interferometry [AD-A105805] N82-14298
INTERGRANULAR CORROSION
Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water [DE81-028090] N82-14340
INTERNAL COMBUSTION ENGINES
ERBS fuel addendum: Pollution reduction technology program small jet aircraft engines, phase 3 [NASA-CR-165387] N82-14096
INTERNATIONAL COOPERATION
The use of OTS in the COST 211 project --- European cooperation in the field of scientific and technical research (COST) N82-14198
INTERNATIONAL MAGNETOSPHERIC STUDY
Sounding rocket program Magnetosphere: The search coil magnetometer experiment in the substorm phenomena payload [BMFT-FB-W-81-010] N82-14709
INTERNATIONAL SUN EARTH EXPLORER 2
An investigation of the anomalous attitude motion of the ISEE B spacecraft N82-14143
INTERNATIONAL SUN EARTH EXPLORER 3
University of California Electron and X-Ray Experiments on ISEE-3, series 22, issue 5 [NASA-CR-166725] N82-14999
Plasma wave experiment for the ISEE-3 Mission [NASA-CR-166730] N82-15000
INTERPLANETARY DUST
Preparatory tasks on the definition and optimization of the Out of Ecliptic Zodiacal Light experiment --- International Solar Polar Mission [BMFT-FB-W-81-009] N82-14199
INTERPLANETARY MAGNETIC FIELDS
Plasma wave experiment for the ISEE-3 Mission [NASA-CR-166730] N82-15000
INTERPLANETARY MEDIUM
Mission operation report: Voyager mission success assessment [NASA-TM-84062] N82-14204
INTERPLANETARY NAVIGATION
Deep space navigation systems and operations N82-14136
INTERPROCESSOR COMMUNICATION
Functionally specialized multi-processor architectures [AD-A105662] N82-14809
Use of software tools in the development of real time software systems N82-14838
INTERSTELLAR COMMUNICATION
Possibility of a new approach to processing space pulse radio signals [NASA-TM-76748] N82-14412
INTERSTELLAR MATTER
Interstellar grains investigated and comets proposed as a vehicle for Panspermia [PREPRINT-65] N82-14995
Interstellar grains --- composition and classification N82-14996
The 3.4 micron interstellar absorption feature and the organic composition of interstellar grains [PREPRINT-61] N82-15002
The organic composition of interstellar grains N82-15004
INTERSTELLAR RADIATION
The 3.4 micron interstellar absorption feature and the organic composition of interstellar grains [PREPRINT-61] N82-15002
The 3.4 micrometer interstellar absorption feature --- IR source 7 N82-15003
INTERSTITIALS
Point defects in crystals (including grouped defects) [DE82-000395] N82-14943
INVARIANCE
Small strain accompanied by moderate rotation [AD-A105592] N82-14535
Some computational details of configural sampling methods [AD-A105932] N82-14868
INVESTIGATION
Hazardous waste sites pose investigation, evaluation, scientific, and legal problems [CED-81-57] N82-14671
INVISCID FLOW
A class of monotonic shock-capturing difference schemes [AD-A105801] N82-14480
IODINE 131
Behavior of radioactive iodine and technetium in the spray calcination of high-level waste [DE81-028405] N82-14909
ION ACCELERATORS
Electromagnetic effects on the formation of potential wells for ion acceleration [DE81-028240] N82-14911
ION CONCENTRATION
Molecular wake shield gas analyzer [NASA-CR-161926] N82-14212
Dissolution kinetics during localized corrosion [DE81-025092] N82-14350
ION DISTRIBUTION
Electron angular distributions during charging events N82-14239
ION EXCHANGING
Application of a site-binding, electrical, double-layer model to nuclear waste disposal [DE81-030231] N82-14908
ION IMPLANTATION
Cathodoluminescence characterization of ion implanted GaAs [AD-A105656] N82-14314
Temperature dependence of H saturation and isotope exchange [DE81-026633] N82-14902
Ion-implantation effects in glasses [DE81-027208] N82-14947
ION IRRADIATION
Effects of pulsed dual-ion irradiation of microstructural development --- in austenitic stainless steels [DE81-028631] N82-14343
Damage structure in Nimonic PE16 alloy ion bombarded to high doses and gas levels [DE81-028562] N82-14945
ION MICROSCOPES
Application of surface analysis to solve problems of wear [NASA-TM-82753] N82-14519
Field-ion-microscope observations of radiation effects [DE81-030934] N82-14802
ION PROBES
A cometary plasma experiment for the mission to Halley's Comet --- cometary plasma velocity measurement N82-14111
The Copernic experiment to measure three dimensional electron distribution and the composition of thermal positive ions including water clusters near Halley's Comet N82-14112
ION SELECTIVE ELECTRODES
Quantitative determination of fluorine in steel-making slags by the ion selective electrode [DRIC-T-6448] N82-14331
ION TRAPS (INSTRUMENTATION)
The Giotto ion mass spectrometer N82-14118
IONIC DIFFUSION
Ionic treatment of tools and gears --- metallurgical and mechanical properties of nitrided chromium steel surfaces [CETIM-12-G-129] N82-14353
IONIZATION
Mirowave energy deposition, breakdown and heating of nitrogen and air [AD-A105749] N82-14926
IONOSPHERIC DISTURBANCES
Nonlinear evolution of plasma enhancements in the auroral ionosphere 1: Long wavelength irregularities [AD-A105553] N82-14699

IONOSPHERIC NOISE
A computer model for high-latitude phase scintillation based on wideband satellite data from Poker Flat
[AD-A105620] N82-14702
IRELAND
The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581
IRON
Catalytic effect of iron in hydrogasification of coal
[DE81-023928] N82-14323
Direct analysis of plutonium metal for gallium, iron and nickel by energy dispersive X-ray spectrometry
[DE81-028046] N82-14324
Microstructure of triple-beam ion irradiated Fe and Fe-Cr alloys
[DE81-028347] N82-14341
H2S adsorption of plasticity strained iron
[DE81-027996] N82-14347
Dissolution kinetics during localized corrosion
[DE81-025092] N82-14350
IRON ALLOYS
Microstructure of triple-beam ion irradiated Fe and Fe-Cr alloys
[DE81-028347] N82-14341
IRON CYANIDES
Effects of suspended particles on the rate of mass transfer to a rotating disk electrode
[DE81-026002] N82-14485
IRRADIANCE
Angle of arrival and irradiance statistics of laser beams in turbulence
[AD-A105639] N82-14509
The color of the sea and its relation to surface chlorophyll and depth of the euphotic zone
N82-14562
Acoustooptical spectrum analysis modeling
[AD-A105666] N82-14887
IRRADIATION
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Beneficial uses of nuclear waste program sewage-sludge irradiation project
[DE82-000440] N82-14677
IRRIGATION
Water problems and research needs for New Mexico
[PB81-231979] N82-14619
ISOMERIZATION
Development of superior denitrogenation and isomerization catalysts for processing crude oil derived from shale, part 1
[AD-A105667] N82-14317
ISOTOPE EFFECT
Fundamental studies in isotope chemistry
[DE82-000651] N82-14321
Temperature dependence of H saturation and isotope exchange
[DE81-026633] N82-14902
ISOTOPE SEPARATION
Environmental readiness document. Advanced Isotope Separation Program
[DE81-029952] N82-14900
Studies of resonance-light pressure
[ISBN-951-45-2131-5] N82-14914
ISOTOPIC ENRICHMENT
Environmental readiness document. Advanced Isotope Separation Program
[DE81-029952] N82-14900
ISOTROPY
Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533
ITERATIVE SOLUTION
A simple approach to solve the Meteosat image deformation problem based on horizon extraction from image data and orbit information N82-14153
Block iterative methods for elliptic and parabolic difference equations
[AD-A105698] N82-14850

J

JACOBI MATRIX METHOD
Optimal voltage level control and its application to long range extension planning in high voltage transmission network
[ISBN-951-45-5116-2] N82-14446
JAMMING
Anti-jam analysis of frequency hopping M-ary frequency shift keying communication systems in high frequency Rayleigh fading channels N82-14441
JAPANESE SPACE PROGRAM
Geostationary satellites launched by NASA. Part 1: NASDA tracking and control system --- Nippon Aerospace Development Agency (NASDA)
N82-14137
Geostationary satellites launched by NASDA. Part 2: Mission analysis for maneuver N82-14138
JET AIRCRAFT NOISE
Prediction of flyover jet noise spectra from static tests
[NASA-TM-83219] N82-14880
JET ENGINE FUELS
Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165386] N82-14095
JET ENGINES
System for acquisition and analysis of dynamic tests on air intakes
[NASA-TM-76646] N82-14056
Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165386] N82-14095
ERBS fuel addendum: Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165387] N82-14096
Application of integration algorithms in a parallel processing environment for the simulation of jet engines
[NASA-TM-82746] N82-14849
JET FLOW
Wind tunnel tests of engine-equipped models: Comparison of two jet wash simulation methods
[NASA-TM-76764] N82-14091
JET LIFT
An empirical method for estimating the effect of ground proximity on the jet-induced lift of V/STOL aircraft employing rectangular jets
[AD-A105668] N82-14067
JET PUMPS
Comparison of viscous and pressure energy exchange in fluid flow induction
[AD-A105808] N82-14481
JET STREAMS (METEOROLOGY)
Mesoscale aspects of jet streak coupling and implications for the short term forecasting of severe convective storms --- severe environmental storms and mesoscale experiment (SESAME) N82-14775
JOINTS (JUNCTIONS)
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159114] N82-14286
Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533
JP-4 JET FUEL
Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography
[AD-A105588] N82-14312
Determination of pyridine in modified JP-4 via High Performance Liquid Chromatography (HPLC)
[AD-A105589] N82-14313
JP-8 JET FUEL
Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography
[AD-A105588] N82-14312
JUPITER (PLANET)
Electron penetration of spacecraft thermal insulation N82-14220
JUPITER RINGS
Mission operation report: Voyager mission success assessment
[NASA-TM-84062] N82-14204

K

KALMAN FILTERS
Estimates of spacecraft attitude and sensor parameters using adaptive filtering: Meteosat 1 transfer orbit application N82-14135
Validation and operations experience related to orbit and attitude software of Bhaskara N82-14162
Study of an autoadaptive equalizer: Computerized simulation based on Kalman filter or gradient methods
[TEL/ARB/81] N82-14471
KAPTON (TRADEMARK)
Experimental validation of a numerical model predicting the charging characteristics of Teflon and Kapton under electron beam irradiation N82-14218
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221
Effects of secondary electron emission on charging N82-14225
Secondary electron emission yields N82-14226
Design of an arc-free thermal blanket N82-14231
satellite surface potential survey --- Kapton voltage measurement N82-14244
KENTUCKY
Evaluation of Devonian shale potential in eastern Kentucky/Tennessee
[DE82-001184] N82-14595
KOHOUTEK COMET
Kohoutek, photometric photography experiment (S233)
[NASA-TM-82449] N82-15007
KOVAR (TRADEMARK)
Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion
[DE81-025919] N82-14337
KRYPTON FLUORIDE LASERS
KrF laser pumping by electron beam discharge
N82-14389
High power gas laser for material processing of organic and inorganic material
[BMFT-FB-T-81-025] N82-14517

L

LAGOONS
Multitemporal calibration of LANDSAT images: A method for improving the marine phenomena recognition, with as example the Venice lagoon --- brightness/green/yellow feature space, image enhancement N82-14578
LAKE MICHIGAN
Geochemistry of recent Lake Michigan sediments
[PB81-234429] N82-14622
LAKE ONTARIO
Recent work in passive optical imaging of water --- space and aircraft derived data N82-14575
LAMINAR FLOW
Subsonic flow in a corner --- laminar and turbulent flow in a wing-fuselage junction N82-14393
Numerical studies of laminar and turbulent drag reduction
[NASA-CR-3496] N82-14473
Determination of the transition point in a boundary layer by the measurement of pressure fluctuation
[NASA-TM-76639] N82-14475
A flow-visualization study of turbulent spots on solid and compliant surfaces
[AD-A106073] N82-14478
LAMINATES
A theory of laminated composite plates and rods
[AD-A105591] N82-14297
Fabrication of titanium multiwall Thermal Protection System (TPS) curved panel
[NASA-CR-165754] N82-14530
LANDING AIDS
In-service testing of the Precision Approach Path Indicator (PAPI) at Newark International Airport, New Jersey
[DOT/FAA/RD-81/95] N82-14076
Real time simulation of computer-assisted sequencing of terminal area operations
[NASA-CR-166195] N82-14817
LANDING SIMULATION
MLS vertical guidance and navigation for a STOL airplane landing on an elevated STOLport
[NASA-TM-81336] N82-14101
LAP JOINTS
Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533
Stress in single lap joints of dissimilar materials
[AD-A105519] N82-14537
LARGE SCALE INTEGRATION
Computer aided design and reliability of a general LSI logic structure for custom VLSI N82-14815

LARGE SPACE STRUCTURES
Interactive design and analysis of future large spacecraft concepts
[NASA-TP-1937] N82-14276

LARGE SPACE TELESCOPE
System analysis approach to deriving design criteria (loads) for Space Shuttle and its payloads. Volume 1: General statement of approach
[NASA-TP-1949] N82-14203
FOC F/96 polarizers --- faint object camera for space telescope N82-14915

LASER ALTIMETERS
Remote sensing of sea state by laser altimeters
[NASA-CR-165049] N82-14789

LASER APPLICATIONS
Comparative analyses of space-to-space central power stations
[NASA-TP-1955] N82-14202
Whole-field experimental stress analysis using laser speckle interferometry
[AD-A105805] N82-14298
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510
Bibliography of Soviet laser developments, no. 48, July - August 1980
[AD-A105578] N82-14511
Laser-induced fluorescence technique to monitor H2S (PR 16023)
[DE81-028784] N82-14516
Lidar monitoring of the tropospheric water vapor mixing ratio N82-14739

LASER DOPPLER VELOCIMETERS
Laser speckle doppler velocimeter technique applied to measure torsional vibrations of rotating surfaces N82-14545

LASER HEATING
Investigation of methods for fabricating, characterizing and transporting cryogenic inertial-confinement-fusion targets
[DE81-029737] N82-14934

LASER OUTPUTS
Angle of arrival and irradiance statistics of laser beams in turbulence
[AD-A105639] N82-14509
Laser cooling and trapping of neutral atoms
[AD-A105750] N82-14512

LASER PLASMAS
Bibliography of Soviet laser developments, no. 48, July - August 1980
[AD-A105578] N82-14511

LASER PUMPING
KrF laser pumping by electron beam discharge N82-14389
Temperature dependence of O2 (1 Delta) + O2 (1 Delta) and I (2P sub 1/2) + O2 (1 Delta) energy pooling
[AD-A105817] N82-14507
Plasma conditions required for attainment of maximum gain in resonantly photo-pumped Al 12 and Ne 9
[AD-A105779] N82-14925

LASER SPECTROSCOPY
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510

LASER TARGETS
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510

LASER WELDING
Laser tool: Pulsed solid state laser for welding and ablation of material
[BMFT-FB-T-81-043] N82-14518

LASERS
Nonadiabatic corrections and detrapping for variable parameter free electron lasers
[DE81-026425] N82-14515

LATTICES (MATHEMATICS)
Lifting surface theory for wings in low frequency small amplitude yawing and side slipping oscillating motions at low speeds N82-14061

LEAD (METAL)
Potentiometric stripping as a detector for flow injection analysis of metal ions N82-14304
Ideal transport in transition metals: The rigid-muffin-tin approximation and beyond
[DE81-026073] N82-14346

LEADING EDGES
Development of an efficient procedure for calculating the aerodynamic effects of planform variation
[NASA-CR-3489] N82-14529

LEARNING THEORY
Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication
[NASA-CP-2203-PT-1] N82-14960

LEAST SQUARES METHOD
A simplified approach to spectrum estimation of stochastic processes N82-14871

LECTURES
Research in the comprehension of engineering lectures by non-native speakers N82-14979

LEGAL LIABILITY
Hazardous waste sites pose investigation, evaluation, scientific, and legal problems
[CED-81-57] N82-14671

LENGTH
Development of a linear measuring system --- precision length measurement, using holographic gratings
[BMFT-FB-T-81-031] N82-14503

LENS DESIGN
Manufacturing methods and technology for production hot forging of alkali halide lenses
[AD-A104643] N82-14396

LENSES
Development of new production technologies for optical components with spherical surfaces --- precision optics
[BMFT-FB-T-81-032] N82-14402
Third order aberrations of classical mirror lenses with spherical surfaces
[DRIC-T-6359] N82-14913

LIES
Normal forms, versal deformations and quadratic integrals of linear Hamiltonian systems N82-14848

LIFE (DURABILITY)
Durability/life of fiber composites in hygrothermomechanical environments
[NASA-TM-82749] N82-14287

LIFT
ACTA Mechanica Sinica (selected articles)
[AD-A107322] N82-14060

LIGANDS
Crystal and molecular structure of Mo6010(OPr(i))12: A serpentine chain of molybdenum atoms and observation of semibridging alkoxy ligands
[AD-A105769] N82-14941

LIGHT (VISIBLE RADIATION)
Light fields in the ocean
[NASA-TM-76731] N82-14790
Dust cloud models: Sensitivity of calculated transmittances to variations in input parameters
[AD-A103310] N82-14918

LIGHT EMITTING DIODES
Reliability study of opto-coupled semiconductor devices and Light Emitting Diodes (LED)
[NASA-CR-161923] N82-14444

LIGHT SOURCES
Daylighting calculations for nonrectangular interior spaces with shading devices
[DE81-027962] N82-14705

LIGHT TRANSMISSION
Electro-optical atmospheric transmission effort in the marine environment
[AD-A105665] N82-14700

LIGHTING EQUIPMENT
Study of fiber optics to enhance an environmental lighting laboratory
[AD-A106117] N82-14104

LIGHTNING
Lightning flash counter measurements in Finland during 1978 and 1979
[REPT-86] N82-14713
Measurement of characteristics of lightning at high altitudes
[NASA-TM-76669] N82-14714

LIMESTONE
Testing program for concrete at temperatures to 894 deg K
[DE81-029144] N82-14538
Stratigraphy and depositional history of the Iola Limestone Upper Pennsylvanian (Missourian), Northern Midcontinent U.S. N82-14711

LIMITS (MATHEMATICS)
On the accuracy of radio location in media with indirect wave propagation
[DFVLR-FB-81-02] N82-14438

LINE SHAPE
Interpretation of the nitrogen KVV Auger lineshape from alkali metal nitrates
[AD-A105877] N82-14315

LINE SPECTRA
Interpretation of the nitrogen KVV Auger lineshape from alkali metal nitrates
[AD-A105877] N82-14315

LINEAR ACCELERATORS
Simple model of beam transport in low-pressure ion-focused regimes
[DE82-000242] N82-14898
ATA injector-gun calculations
[DE82-001149] N82-14906

LINEAR EQUATIONS
Research in partial differential equations and applications
[AD-A105859] N82-14853

LINEAR INTEGRATED CIRCUITS
Integrated circuits for accurate linear analogue electric signal processing N82-14445

LINEAR PREDICTION
Mathematical software for linear control and estimation theory
[AD-A106000] N82-14854

LINEAR PROGRAMMING
Linear programming and suboptimal solutions of dynamical systems control problems N82-14146
A further investigation of efficient heuristic procedures for integer linear programming with an interior
[AD-A106027] N82-14860

LINEAR SYSTEMS
Optimal linear estimation and suboptimal numerical solutions of dynamical systems control problems N82-14145
New estimation methods for log-linear models
[AD-A105745] N82-14864

LINEAR TRANSFORMATIONS
Linear and geometric nonlinear analysis of shells by an isoparametric three dimensional degenerated element
[REPT-140] N82-14862

LINEARITY
New estimation methods for log-linear models
[AD-A105745] N82-14864

LIQUID CHROMATOGRAPHY
Application of resonance Raman spectrometry in high performance liquid chromatography
[DRIC-T-6367] N82-14305
Determination of pyridine in modified JP-4 via High Performance Liquid Chromatography (HPLC)
[AD-A105589] N82-14313
High performance liquid chromatography/video fluorometry. Part 3: Applications
[AD-A105945] N82-14318

LIQUID CRYSTALS
Liquid crystal block copolyesters. 2: Preparation and properties of block copolyesters containing cyclohexane and benzene rings
[AD-A105556] N82-14362

LIQUID HELIUM
Cycle design for a cryogenic refrigeration system for FED with forced-flow superfluid helium through internally cooled conductors
[DE82-000446] N82-14400
Test of a cryogenic helium pump --- for a superconducting magnet system
[DE81-026629] N82-14401
Performance of an internally cooled superconducting solenoid
[DE81-026058] N82-14460

LIQUID HELIUM 2
Helium 2 cooling systems for long term missions in space: phase separation and hybrid cooling systems N82-14403

LIQUID LASERS
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510

LIQUID PHASE EPITAXY
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, crucible pulling of Ga As crystals
[BMFT-FB-T-81-022] N82-14949

LIQUID WASTES
Chemical element concentrations in liquids and solids associated with power plants using FGD systems
[DE81-030422] N82-14322

LIQUID-SOLID INTERFACES
Theoretical investigations on the separation of immiscible alloys
[BMFT-FB-W-81-004] N82-14352

LITHIUM ALLOYS
Lithium based anodes for solid state batteries
[AD-A105518] N82-14640

LITHIUM SULFUR BATTERIES
Thermal behavior of an experimental 2.5-kWh lithium/iron sulfide battery
[DE81-029661] N82-14654

LITHOGRAPHY
Development of fabrication technology for the permeable base transistor
[AD-A105532] N82-14456

LITHOLOGY
Stratigraphy and depositional history of the Iola Limestone Upper Pennsylvanian (Missourian), Northern Midcontinent U.S. N82-14711

LIVER
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515] N82-14794

LOAD DISTRIBUTION (FORCES)
A study of the viscous dissipation and surface loading on a vibrating surface
[NASA-CR-3499] N82-14878

LOAD TESTS
Composite flywheel durability and life expectancy: Test program
[DE81-028849] N82-14299
Mechanical relaxation response of 2 1/4 Cr-1 Mo steel
[DE81-027301] N82-14344

LOADS (FORCES)
Multiaxial fatigue of metals N82-14330

LOGARITHMS
New estimation methods for log-linear models
[AD-A105745] N82-14864

LOGIC CIRCUITS
Integrated Schottky Logic N82-14306
Synthesis and optimization of programmable logic arrays N82-14814
Computer aided design and reliability of a general LSI logic structure for custom VLSI N82-14815

LOGIC DESIGN
Computer program design: Methodology, reliability, and quality control
[CNES-NT-98] N82-14526
Synthesis and optimization of programmable logic arrays N82-14814

LOGISTICS
Systems operation studies for automated guideway transit systems: System Availability model user's manual
[PB81-233504] N82-14991

LONG RANGE WEATHER FORECASTING
Promis-90: Future Swedish weather service system N82-14771

LONG TERM EFFECTS
Long-term stability of finely cast alloys for gas turbine blades under hot gas corrosion conditions
[DECHEMA-PROJ-4.2/1] N82-14100

LOOP ANTENNAS
The eccentrically insulated circular-loop antenna and the horizontal circular-loop antenna near a planar interface N82-14440

LORAN C
Commutated automatic gain control system
[NASA-CR-164798] N82-14077
A prototype interface unit for microprocessor based Loran-C receiver
[NASA-CR-164887] N82-14078

LOSSLESS EQUIPMENT
Design, performance and device/circuit limitations of N-way symmetrical IMPATT diode power combining arrays
[AD-A105663] N82-14453

LOW NOISE
Monolithic microwave preamplifier
[AD-A104857] N82-14449

LOW TEMPERATURE TESTS
Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water
[DE81-028090] N82-14340

LOW VISIBILITY
Use of Side Looking Airborne Radar (SLAR) for oil pollution monitoring in Norway N82-14588

LUBRICATING OILS
Corrosion inhibiting engine oils
[AD-A106127] N82-14099

LUBRICATION
Application of surface analysis to solve problems of wear
[NASA-TM-82753] N82-14519

LUMINAIRES
Electromagnetic interference (EMI) measurements of fluorescent lamps operated with solid-state ballasts
[DE81-025218] N82-14432

LUMINANCE
Hemispherical sky simulator for daylighting model studies
[DE81-028130] N82-14706

LUMINESCENCE
Investigation of luminescence in the charge exchange process of Ar++ with N2 of N(+) with CO
[MPIS-3/1980] N82-14326
Preparation, thermal properties, solid solution formation and some luminescence properties of rare Earth oxysulfides
[ISBN-951-751-949-4] N82-14443

LUMPED PARAMETER SYSTEMS
Comparison of NASCAP modelling results with lumped circuit analysis N82-14255

LUNAR FAR SIDE
Lunar gravitational field determination --- POLO experiment N82-14127

LUNAR GRAVITATION
Lunar gravitational field determination — POLO experiment N82-14127

LUNAR OBSERVATORIES
Lunar gravitational field determination --- POLO experiment N82-14127

LUNGS
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection
[DE82-000507] N82-14799

M

MACH NUMBER
Experimental and analytical investigation of axisymmetric supersonic cruise nozzle geometry at Mach numbers from 0.60 to 1.30
[NASA-TP-1953] N82-14052
Stability and control characteristics of a monoplanar missile configuration with triform-tail-fin arrangements at Mach numbers from 1.70 to 2.86
[NASA-TM-83223] N82-14053
Pressure distributions and shock shapes for 12.84 deg/7 deg on-axis and bent-nose biconics in air at Mach 6
[NASA-TM-83222] N82-14054

MACHINE TOOLS
Ultra-high surface speed for metal removal, artillery shell
[AD-A103970] N82-14395

MACHINING
Ultra-high surface speed for metal removal, artillery shell
[AD-A103970] N82-14395
Automatic balancing system with laser unit — for miniature rotors
[BMFT-FB-T-81-006] N82-14502
High power gas laser for material processing of organic and inorganic material
[BMFT-FB-T-81-025] N82-14517

MAGNESIUM FLUORIDES
Anomalous dispersion of birefringence of sapphire and magnesium fluoride in the vacuum ultraviolet N82-14917

MAGNET COILS
Design study for superconducting main field coils for the Oak Ridge Isochronous Cyclotron
[DE81-028066] N82-14912

MAGNETIC CHARGE DENSITY
satellite surface potential survey — Kapton, voltage measurement N82-14244
Representation and material charging response of geoplasma environments N82-14249

MAGNETIC DISTURBANCES
Review of hot plasma composition near geosynchronous altitude N82-14241

MAGNETIC FIELD CONFIGURATIONS
Field errors in EBT and their effects on the ambipolar potential — bumpy toruses
[DE82-000828] N82-14930

MAGNETIC FIELDS
Plasma flow and magnetic fields in comets N82-14109

MAGNETIC FLUX
Review or recent EBT coupled ring-core stability theory — bumpy toruses
[DE82-000880] N82-14931

MAGNETIC MIRRORS
Tandem-mirror technology demonstration facility
[DE81-030878] N82-14933

MAGNETIC PROBES
The Giotto neutral mass spectrometer N82-14122

MAGNETIC STORMS
Preliminary comparison of material charging properties using single-energy and multienergy electron beams N82-14223
On the identification of planetary-scale waves during disturbed conditions
[ISSN-0340-9821] N82-14694

MAGNETIC SURVEYS
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York. Volume 1: Data acquisition, reduction and interpretation
[DE82-000650] N82-14599
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000781] N82-14600
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000401] N82-14601
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000780] N82-14602
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000872] N82-14603
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000772] N82-14604
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000785] N82-14605
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000869] N82-14606
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000794] N82-14607
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000784] N82-14608

MAGNETOHYDRODYNAMIC FLOW
Plasma flow and magnetic fields in comets N82-14109
A cometary plasma experiment for the mission to Halley's Comet — cometary plasma velocity measurement N82-14111

MAGNETOHYDRODYNAMIC GENERATORS
Conceptual design of superconducting magnet system for Magnetohydrodynamic (MHD) Engineering Test Facility (ETF) 200 MWe power plant
[NASA-CR-165053] N82-14520

MAGNETOHYDRODYNAMIC STABILITY
Experimental study of instabilities and motion of a streaming ionospheric plasma in the polar zone --- interpretation of Ionospheric Polar Campaign rocket sounding results
[CRPE-NT-78] N82-14710
Review or recent EBT coupled ring-core stability theory --- bumpy toruses
[DE82-000880] N82-14931
A thermodynamic approach to metal-plasma interaction in one-dimensional stationary evolution --- probe-plasma interaction
[REPT-81-1] N82-14936

MAGNETOMETERS
The Giotto magnetometer experiment N82-14110
Sounding rocket program Magnetosphere: The search coil magnetometer experiment in the substorm phenomena payload
[BMFT-FB-W-81-010] N82-14709

MAGNETOSPHERE
Plasma wave experiment for the ISEE-3 Mission
[NASA-CR-166730] N82-15000

MAGNUS EFFECT
Computational parametric study of the aerodynamics of spinning slender bodies at supersonic speeds
[AD-A106074] N82-14066

MAGSAT 1 SATELLITE
High precision attitude determination for Magsat N82-14134

MAINE
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York. Volume 1: Data acquisition, reduction and interpretation
[DE82-000650] N82-14599
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000781] N82-14600
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000401] N82-14601
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000780] N82-14602
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000872] N82-14603
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000772] N82-14604
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000785] N82-14605
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000869] N82-14606
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000794] N82-14607
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000784] N82-14608
Remote sensing of non-point source sediment in Northern Maine
[PB81-233603] N82-14683

MAINTENANCE
Fault isolation techniques N82-14840

MAN MACHINE SYSTEMS
Voice recognition as an input modality for the TACCO preflight data insertion task in the P-3C aircraft
[AD-A105568] N82-14821

MANAGEMENT
Satellite power system: Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237-VOL-4] N82-14634
Seminars for private college administrators on solar applications for college buildings
[DE81-027981] N82-14661

MANAGEMENT INFORMATION SYSTEMS
The need for integrated off-shore, real-time information and management systems N82-14555
Millions wasted trying to develop major energy information system
[AFMD-81-40] N82-14959
Defense Technical Information Center free text experiment: Management data bases
[AD-A105570] N82-14980

MANAGEMENT PLANNING
Need for power and the choice of technologies: State decisions on electric power facilities
[DE81-025960] N82-14644

MANNED SPACE FLIGHT
Orders of magnitude: A history of NACA and NASA, 1915 - 1980
[NASA-SP-4403] N82-14955

MANUALS
Marketing information: The technical report as product N82-14964

MANUFACTURING
Manufacturing technology study on radio frequency power modules packaging techniques
[AD-A105892] N82-14426
Manufacture and testing of a prototype holographic series tire tester
[BMFT-FB-T-80-192] N82-14501
Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A105717] N82-14919

MAPPING
The operational oil pollution surveillance system being used in France: Forecasted future developments in consideration of the NATO/CCMS remote sensing pilot study conclusions N82-14573
Flood plain mapping using computer graphics
[PB81-231870] N82-14625

MAPS
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000785] N82-14605

MARINE BIOLOGY
Fisheries investigations and management benefits from remote sensing --- fish tracking N82-14559

MARINE ENVIRONMENTS
The Seasat commercial demonstration program N82-14561
A look at nonsatellite remote sensing systems for marine use --- together with satellite systems, overall view of the technology N82-14586
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670

MARINE METEOROLOGY
The potential and requirements for space oceanography --- National Oceanic Satellite system and U.S. Navy requirements N82-14556
Offshore petroleum industry environmental data requirements: Emphasis on remote sensing N82-14557

MARINE RESOURCES
Studies of the Indian continental shelf: Application of remote sensing data N82-14569

MARINE TECHNOLOGY
Feasibility study for an advanced lighted aid to navigation
[AD-A105944] N82-14081

MARINE TRANSPORTATION
An evaluation of Seasat-A data in relation to optimum track ship weather routing and site specific forecasting for the offshore oil industry N82-14564

MARKET RESEARCH
Market assessment of photovoltaic power systems for agricultural applications in Morocco
[NASA-CR-165477] N82-14627
International energy indicators
[DE81-028117] N82-14653

MARKOV PROCESSES
An assessment of mesoscale forecast experiments --- at airfields N82-14773

MASS SPECTRA
Interstellar grains --- composition and classification N82-14996

MASS SPECTROMETERS
The Giotto ion mass spectrometer N82-14118
The Giotto neutral mass spectrometer N82-14122
Molecular wake shield gas analyzer
[NASA-CR-161926] N82-14212
Mechanisms of elevated-temperature in single phase ceramics
[DE82-000691] N82-14368
Automated transportable mass spectrometer
[DE82-000903] N82-14498

MASS TRANSFER
Effects of suspended particles on the rate of mass transfer to a rotating disk electrode
[DE81-028002] N82-14485

MASSACHUSETTS
Spectral atmospheric observations at Nantucket Island, May 7-14, 1981
[NASA-TM-83196] N82-14550

MATCHED FILTERS
Wave structure detection through two-dimensional filtering
[AD-A105554] N82-14665

MATERIALS HANDLING
Generation of electrostatic charge in fuel handling systems: A literature survey
[AD-A106056] N82-14454

MATERIALS RECOVERY
Nickel recovery from electroplating rinsewaters by electrodialysis
[PB81-227209] N82-14355

MATHEMATICAL LOGIC
A lower bound for the time to assure interactive consistency
[AD-A105946] N82-14810

MATHEMATICAL MODELS
An empirical method for estimating the effect of ground proximity on the jet-induced lift of V/STOL aircraft employing rectangular jets
[AD-A105668] N82-14067
Simulation of spacecraft charging environments by monoenergetic beams N82-14268
Electromagnetic fields produced by simulated spacecraft discharges N82-14270
Theoretical investigations on the separation of immiscible alloys
[BMFT-FB-W-81-004] N82-14352
Description and numerical simulation of thermal fatigue tests on smooth specimens --- heat resistant alloys N82-14391
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 1: Technical report
[NASA-CR-165538] N82-14447
Generalized algebraic relation for predicting developing curved channel flow with a k-epsilon model of turbulence
[DE81-028131] N82-14486
Laser speckle doppler velocimeter technique applied to measure torsional vibrations of rotating surfaces N82-14545
Salt release from suspended sediments: A simulated model
[PB81-231839] N82-14624
Gravity waves on water with non-uniform depth and current N82-14692
The directional energy distribution of wind generated waves as inferred from stereophotographic observations of the sea surface N82-14715
A tutorial on the CARE III approach to reliability modeling --- of fault tolerant avionics and control systems
[NASA-CR-3488] N82-14806
Specification of parallel processing using production systems N82-14816
Numerical methods and approximation and modelling problems in stochastic control theory
[AD-A105490] N82-14847
Design study of hydroacoustic impulse source for deep towing, phase 2
[AD-A106066] N82-14884
Simple model of beam transport in low-pressure ion-focused regimes
[DE82-000242] N82-14898
Electron transfer in weakly interacting systems
[DE81-026134] N82-14903
Thermodynamics of electrolyte solutions over the entire miscibility range
[LBL-12377] N82-14953

MATHEMATICAL PROGRAMMING
Computer program for solving an inverse problem with one variable: Part 1: Methodology
[CRPE-NT-80-VOL-1] N82-14825
Mathematical software for linear control and estimation theory
[AD-A106000] N82-14854

MATRIX THEORY

Fast parallel exact computation of the generalized inverse and rank of a matrix
[AD-A105586] N82-14856

On the relationship between the Hausdorff distance and metric distances of ellipsoids
[AD-A105880] N82-14858

MATTER (PHYSICS)

Theoretical studies relating to the interaction of radiation with matter: Atomic collision processes occurring in the presence of radiation fields
[AD-A105789] N82-14897

MAXIMUM LIKELIHOOD ESTIMATES

Estimation and testing procedures for the parameters of the negative binomial distribution N82-14872

MAXWELL BODIES

Neutrino, Maxwell and scalar fields in cylindrical and spherical relativistic spaces N82-14894

MAXWELL EQUATION

Simulation of charging response of SCATHA (P78-2) satellite N82-14250

MEASURING INSTRUMENTS

Attitude measurement: Principles and sensors
[NASA-TM-76647] N82-14278

An experimental investigation into the feasibility of a thermoelectric heat flux gage
[NASA-TM-82755] N82-14494

MECHANICAL ENGINEERING

Research activities report in advanced technology — engineering sciences N82-14988

MECHANICAL PROPERTIES

Vapor deposition tests with NiCoCrAlY alloys: First results for the mechanical high temperature characteristics of the coated superalloy IN 738 LC N82-14292

Mechanical and thermophysical properties of hot-pressed SYNROC B
[DE81-029299] N82-14301

Ionic treatment of tools and gears — metallurgical and mechanical properties of nitrided chromium steel surfaces
[CETIM-12-G-129] N82-14353

MEDICAL EQUIPMENT

Performance of a large hyperpure germanium detector array for in-vivo detection of low-energy photon and X-ray emitters: Analytical procedure and current capabilities
[DE82-000443] N82-14497

MEDITERRANEAN SEA

Oil spills: Large scale monitoring by LANDSAT N82-14572

Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites — aerial photography N82-14574

MENISCI

Third order aberrations of classical mirror lenses with spherical surfaces
[DRIC-T-6359] N82-14913

MERCURY TELLURIDES

Defect chemistry and characterization of (Hg, Cd)Te
[NASA-CR-161928] N82-14308

MESOMETEOROLOGY

Nowcasting: Mesoscale observations and short-range prediction — conference proceedings, Hamburg, 25-28 Aug. 1981
[ESA-SP-165] N82-14716

Mesoscale aspects of convective storms N82-14717

Mesoscale weather patterns during April 10-11, 1979: Severe weather outbreak in the southwestern United States N82-14718

Mesoscale disturbances causing a heavy snowfall over the coastal area of the Sea of Japan N82-14719

Mesoscale structures in midlatitude frontal systems N82-14721

Nowcasting applications of Doppler radar N82-14736

An assessment of mesoscale forecast experiments — at airfields N82-14773

GEM: A simple meteorological buoy with satellite telemetry N82-14779

MESOSCALE PHENOMENA

Sensitivity analysis of a mesoscale moisture model
[AD-A101526] N82-14590

Nowcasting: Mesoscale observations and short-range prediction — conference proceedings, Hamburg, 25-28 Aug. 1981
[ESA-SP-165] N82-14716

Mesoscale aspects of convective storms N82-14717

Mesoscale weather patterns during April 10-11, 1979: Severe weather outbreak in the southwestern United States N82-14718

Mesoscale disturbances causing a heavy snowfall over the coastal area of the Sea of Japan N82-14719

Subsynoptic scale cloud system which moves westward and develops off the south coast of Japan N82-14720

Mesoscale structures in midlatitude frontal systems N82-14721

The influence of mountains on the atmosphere: Recent advances N82-14722

Mesoscale studies of weather hazards to aviation N82-14723

A study of summer thunderstorms developing over Europe using Meteosat N82-14727

Satellite temperature soundings: Microwave satellitd observations N82-14729

Topoclimatological measurements at Bielefeld and its surroundings as an example of mesoscale observations N82-14732

Automated airfield cloud observation and prediction N82-14734

The role of mesoscale surface motions in the life of a convective storm in a dry continental climate N82-14740

Short range prediction of orecipitation N82-14743

Combined use of radar with mesoscale surface network for very short range prediction of precipitation N82-14747

The use of mesoscale meteorological and climatological information in nowcasting and short range prediction N82-14751

A mesoscale forecast for 25 August 1975: The Hampstead storm N82-14752

Impact of data and initialization procedures on variations of vertical motion and precipitation in mesoscale models N82-14755

Utilizing satellite wind data in a mesoscale numerical model N82-14757

The numerical simulation of intense frontal discontinuities over southeastern Australia N82-14758

The Swiss network of 2 digital radars and 60 automatic weather stations N82-14766

The mesoscale observational network in Japan N82-14769

Design of a short range forecasting system — Prototype Regional Observing and Forecasting Service (PROFS) N82-14770

Mesoscale aspects of jet streak coupling and implications for the short term forecasting of severe convective storms — severe environmental storms and mesoscale experiment (SESAME) N82-14775

Life cycle of mesoscale convective systems N82-14776

Mesoscale structure of atmospheric fronts in the European part of the U.S.S.R. N82-14777

Combining satellite and conventional data for very short range forecasting purposes N82-14778

A layered mesoscale prediction model initialized and verified by satellite data N82-14780

MESSAGE PROCESSING

Flow control in store-and-forward computer network N82-14845

METAL COATINGS

Vapor deposition tests with NiCoCrAlY alloys: First results for the mechanical high temperature characteristics of the coated superalloy IN 738 LC N82-14292

METAL CRYSTALS

Studies of vacancy: Type defects in metals — positron annihilation technique N82-14938

METAL FATIGUE

Multiaxial fatigue of metals N82-14330

Fatigue corrosion resistance of aluminum alloys — aircraft construction materials
[SNIAS-812-551-104] N82-14354

Description and numerical simulation of thermal fatigue tests on smooth specimens — heat resistant alloys N82-14391

Study of the fatigue behavior of welded joints, cross stressed — influence of inclusions
[CETIM-12-Y-200] N82-14541

METAL FILMS

Synthesis, characterization and optical properties of barium titanate films sputtered under various conditions
[AD-A105655] N82-14296

Polymeric microelectronics
[AD-A105707] N82-14366

Development of an all-metal thick film cost effective metallization system for solar cells
[NASA-CR-165043] N82-14630

Photoelectrochemical depositions of microscopic metal film patterns on Si and GaAs
[AD-A099456] N82-14940

METAL IONS

Potentiometric stripping as a detector for flow injection analysis of metal ions N82-14304

METAL MATRIX COMPOSITES

Analysis of crack propagation as an energy absorption mechanism in metal matrix composites
[NASA-CR-165051] N82-14288

METAL OXIDE SEMICONDUCTORS

MOS field effect transistors for UHF applications
[BMFT-FB-T-81-030] N82-14465

METAL PLATES

Stress in single lap joints of dissimilar materials
[AD-A105519] N82-14537

METAL SURFACES

Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core
[NASA-TP-1942] N82-14090

METAL WORKING

Fabrication of titanium multiwall Thermal Protection System (TPS) curved panel
[NASA-CR-165754] N82-14530

METAL-METAL BONDING

Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion
[DE81-025919] N82-14337

METALLIZING

Development of an all-metal thick film cost affective metallization system for solar cells
[NASA-CR-165044] N82-14629

Development of an all-metal thick film cost effective metallization system for solar cells
[NASA-CR-165043] N82-14630

METALLOGRAPHY

Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion
[DE81-025919] N82-14337

METALS

Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

Electron transfer in weakly interacting systems
[DE81-026134] N82-14903

Point defects in crystals (including grouped defects)
[DE82-000395] N82-14943

METASTABLE ATOMS

Study of metastable states of atomic nitrogen in luminescent discharges
[LP-185] N82-14935

METASTABLE STATE

Investigation of plasma excitation. Volume 1: Electron impact studies of selected ground state and excited state rare gas atoms
[AD-A105494] N82-14927

Materials research at Stanford University
[AD-A106108] N82-14957

METEOROLOGICAL INSTRUMENTS

Lightning flash counter measurements in Finland during 1978 and 1979
[REPT-86] N82-14713

Terminal forecast reference notebook, detachment 9, 12th weather squadron (MAC), Tyndall AFB, Florida
[AD-A105085] N82-14782

METEOROLOGICAL PARAMETERS

Mesoscale studies of weather hazards to aviation N82-14723

On the complex control method — error analysis of meteorological data N82-14733

Statistical measurement of the 1978 lidar measurements — aerosols and meteorology
[PHL-1980-41] N82-14824

METEOROLOGICAL RADAR
A total system approach to a weather radar network N82-14735
Nowcasting applications of Doppler radar N82-14736
Ground based remote sensing for meteorological nowcasting N82-14737
The capabilities of VHF radar for meteorological observations N82-14738
Lidar monitoring of the tropospheric water vapor mixing ratio N82-14739
The role of mesoscale surface motions in the life of a convective storm in a dry continental climate N82-14740
The use of a single Doppler radar in short range forecasting and real time analysis of extratropical cyclones N82-14744
Combining satellite and radar data for the short range forecasting of precipitation N82-14745
Combined use of radar with mesoscale surface network for very short range prediction of precipitation N82-14747
Objective rainfall forecasting using data from the United Kingdom weather radar network N82-14748
Use of precipitation measurements by radar in short range forecasting of precipitation N82-14750
The initialization of a mesoscale weather prediction model using satellite and precipitation data N82-14756
Cost 72: European weather radar project N82-14765
The Swiss network of 2 digital radars and 60 automatic weather stations N82-14766
A system for the combined use of data from multiple radars and satellites in the United Kingdom N82-14767

METEOROLOGICAL SATELLITES
Transfer and distortion of atmospheric information in the satellite temperature retrieval problem N82-14728
A system for the combined use of data from multiple radars and satellites in the United Kingdom N82-14767
Automated techniques for satellite imagery analysis N82-14768
The mesoscale observational network in Japan N82-14769
Combining satellite and conventional data for very short range forecasting purposes N82-14778
A layered mesoscale prediction model initialized and verified by satellite data N82-14780

METEOROLOGICAL SERVICES
A beach comfort index used by the national weather service in the Netherlands N82-14761
Weather 80 --- weather data dissemination for military usage N82-14764
Operative warnings; routine services and ongoing experimental work in Finland N82-14781

METEOSAT SATELLITE
Estimates of spacecraft attitude and sensor parameters using adaptive filtering: Meteosat 1 transfer orbit application N82-14135
A simple approach to solve the Meteosat image deformation problem based on horizon extraction from image data and orbit information N82-14153
Meteosat spacecraft charging investigation N82-14265
Electron irradiation tests on European meteorological satellite N82-14266

METHANE
A study of the mechanism of lean limit flammability
[AD-A105952] N82-14319
The PC/ecuador biogas program: Considerations for future development
[PB81-234783] N82-14372
Progress on catalyzed steam gasification of biomass
[DE81-028198] N82-14663

METHODOLOGY
What is technical writing? Prolegomenon to a contextual definition N82-14961
How to develop and write a case for technical writing N82-14965
Evaluating the effectiveness of case method instruction in technical communication N82-14966

METHYL ALCOHOLS
Investigation of the in-situ oxidation of methanol in fuel cells
[AD-A105947] N82-14642
Progress on catalyzed steam gasification of biomass
[DE81-028198] N82-14663

METRIC SPACE
On the relationship between the Hausdorff distance and matric distances of ellipsoids
[AD-A105880] N82-14858

MICROANALYSIS
Microanalysis of composite materials --- silicon carbide reinforced titanium alloys N82-14294
Applications of the microscan 9 microanalyser --- chemical composition
[RAE-TM-MAT-358] N82-14491

MICROBALANCES
Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247

MICROELECTRONICS
Polymeric microelectronics
[AD-A105707] N82-14366
Evaluation of French hybrid microelectronics
[CNES-NT-97] N82-14469

MICROPROCESSORS
Fabrication of a processor adapted to numerical filtering
[TEL/KAR/81] N82-14812
Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829
System performance analyzer N82-14832
On-board computer progress in development of A 310 flight testing program N82-14833

MICROSCOPY
Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

MICROSTRUCTURE
Effect of the powder characteristics of Sisub3Nsub4 on the microstructure of sintered bodies
[NASA-TM-76619] N82-14332
Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion
[DE81-025919] N82-14337
Microstructure of triple-beam ion irradiated Fe and Fe-Cr alloys
[DE81-028347] N82-14341
Effects of pulsed dual-ion irradiation of microstructural development --- in austenitic stainless steels
[DE81-028631] N82-14343
Ultrasonic velocity for estimating density of structural ceramics
[NASA-TM-82765] N82-14359
Polymeric microelectronics
[AD-A105707] N82-14366
Characterization and comparison of thermistor thick films
[DE82-000831] N82-14459
Damage structure in Nimonic PE16 alloy ion bombarded to high doses and gas levels
[DE81-028562] N82-14945

MICROWAVE AMPLIFIERS
Monolithic microwave preamplifier
[AD-A104857] N82-14449

MICROWAVE ATTENUATION
Attenuation statistics obtained with OTS N82-14177

MICROWAVE EQUIPMENT
Design, performance and device/circuit limitations of N-way symmetrical IMPATT diode power combining arrays
[AD-A105663] N82-14453
Mirowave energy deposition, breakdown and heating of nitrogen and air
[AD-A105749] N82-14926

MICROWAVE IMAGERY
A preliminary evaluation of Seasat performance over the area of JASIN and its relevance to ERS-1 N82-14567

MICROWAVE LANDING SYSTEMS
MLS vertical guidance and navigation for a STOL airplane landing on an elevated STOLport
[NASA-TM-81338] N82-14101

MICROWAVE PLASMA PROBES
A microwave induced helium plasma emission detector for gas chromatography
[PML-1979-75] N82-14327

MICROWAVE RADIOMETERS
Correlating OTS beacon measurements with radiometer and rainfall data N82-14179
Scientific studies using Bhaskara satellite microwave radiometer (SAMIR) data: A short overview --- calibration of the instrument and its use in the study of oceanographic parameters N82-14587

MICROWAVE RESONANCE
Study of a discharge caused by a surface wave --- microwave discharge plasmas
[LP-190] N82-14937

MICROWAVE SCATTERING
State-of-the-art in using a spaceborne altimeter and scatterometer for the determination of wind, sea state, and marine and ice dynamics --- Seasat instruments N82-14560

MICROWAVE SENSORS
Remote Sensing Information Bulletin, Issue number 6 N82-14616
Satellite temperature soundings: Microwave satellite observations N82-14729

MICROWAVE SPECTROMETERS
The effect of precipitation on microwave soundings in low latitudes
[PB81-225062] N82-14787

MICROWAVE TRANSMISSION
Results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield
[PHL-1979-43] N82-14435
Further results of the propagation measurements at 94 GHz over a 935 m link on the Ypenburg airfield
[PHL-1980-46] N82-14436

MICROWAVES
Investigation of plasma excitation. Volume 2: Microwave plasmas
[AD-A105495] N82-14928

MIDCOURSE GUIDANCE
Midcourse navigation for the European Comet Halley mission N82-14141

MILITARY AIR FACILITIES
Weather 80 --- weather data dissemination for military usage N82-14764

MILITARY AIRCRAFT
Investigation of functional commonality of avionics systems in naval aircraft
[AD-A105503] N82-14088

MINERAL DEPOSITS
Analysis of date from line-source thermal-conductivity measurements taken in situ in dome salt at the Ivery Island mine
[DE82-000517] N82-14703

MINERAL EXPLORATION
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000781] N82-14600
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000401] N82-14601
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000780] N82-14602
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000872] N82-14603
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000772] N82-14604
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000785] N82-14605
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000869] N82-14606
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000794] N82-14607
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000784] N82-14608

Hydrogeochemical and stream sediment reconnaissance basic data for Broken Bow NTMS Quadrangle, Nebraska
[DE81-030295]
N82-14610

Hydrogeochemical and stream sediment reconnaissance basic data for Milbank NTMS Quadrangle, Minnesota; North Dakota; South Dakota
[DE81-029657]
N82-14611

MINES (EXCAVATIONS)

Hydrogeology of spoil at three abandoned surface mines in Illinois: Preliminary results
[PB81-231664]
N82-14620

MINIATURE ELECTRONIC EQUIPMENT

Proceedings of the molecular electronic devices workshop
[AD-A105816]
N82-14455

MINICOMPUTERS

New starts in research and development, 1982
N82-14834

MINIMAX TECHNIQUE

Proper Bayes minimax estimators for a multivariate normal mean with unknown common variance under a convex loss function
[AD-A105746]
N82-14865

MINING

Longwall mining of thin seams
[DE81-028042]
N82-14612

MINNESOTA

Hydrogeochemical and stream sediment reconnaissance basic data for Milbank NTMS Quadrangle, Minnesota; North Dakota; South Dakota
[DE81-029657]
N82-14611

MIRROR FUSION

Tandem-mirror technology demonstration facility
[DE81-030878]
N82-14933

MIRRORS

Materials characterization study of conductive flexible second surface mirrors
N82-14230

Polymeric microelectronics
[AD-A105707]
N82-14366

Third order aberrations of classical mirror lenses with spherical surfaces
[DRIC-T-6359]
N82-14913

Low cost, wide angle infinity optics visual system
[AD-A105508]
N82-14921

MISSILE CONFIGURATIONS

Stability and control characteristics of a monoplanar missile configuration with triform-tail-fin arrangements at Mach numbers from 1.70 to 2.86
[NASA-TM-83223]
N82-14053

MISSILE CONTROL

Stability and control characteristics of a monoplanar missile configuration with triform-tail-fin arrangements at Mach numbers from 1.70 to 2.86
[NASA-TM-83223]
N82-14053

MISSILE DESIGN

Computer program applications to tactical missile conceptual design
[AD-A105788]
N82-14206

MISSILE SIGNATURES

Terrain masking analysis for White Sands Missile Range East Center 50 and West Center 50
[AD-A105606]
N82-14201

MISSION PLANNING

Introduction to orbital flight planning (1)
[NASA-CR-165052]
N82-14106

Scientific and experimental aspects of the Giotto mission --- proceedings of International Conference held at Noordwijerhout, Netherlands 27-28 Apr. 1981
[ESA-SP-169]
N82-14107

Giotto: A mission to Halley's Comet
N82-14108

Spacecraft flight dynamics at ESOC
N82-14129

Future in ground base attitude support activities
N82-14148

The observation planning facility for the infrared astronomical satellite (IFAS)
N82-14150

Software for the rescue of nonnominal missions
N82-14151

Quality control for mission-critical flight dynamic operations
N82-14158

Global geometry techniques for mission analysis
N82-14159

POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement
[NASA-TM-76642]
N82-14205

Space Tug systems study (storable). Volume 1: Overview presentation
[NASA-CR-161919]
N82-14209

Space Tug systems study. Volume 2: Compendium
[NASA-CR-161920]
N82-14210

Space Tug systems study (storable). Volume 3: Executive summary
[NASA-CR-161918]
N82-14211

MITOSIS

Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515]
N82-14794

MODAL RESPONSE

Modal analysis of structures with prestress effects: Application to flexible solar generators
[CNES-81/CT/PRT/SST/SM/178]
N82-14867

MODEMS

AFCC technical report. Use of Short Range Modems (SRM)
[AD-A105597]
N82-14422

Laboratory data manipulation tools basic data handling programs. Volume 2: Detailed software/hardware documentation
[NASA-CR-167478-VOL-2]
N82-14819

MODULAR RATIOS

Modular asymmetric parachute for wind-tunnel testing
[DE81-026416]
N82-14068

MODULATION TRANSFER FUNCTION

The Modular Automated Weather System (MAWS) concept --- airfield weather support
N82-14763

MODULES

Manufacturing technology study on radio frequency power modules packaging techniques
[AD-A105692]
N82-14426

MODULUS OF ELASTICITY

Low-cost forming influence on reinforced thermoplastic mechanical properties
[AD-A106004]
N82-14360

MOLECULAR BEAM EPITAXY

Preparation of GaAs/AlxGa1-xAs multilayer structures with predetermined optical and electrical properties by molecular beam epitaxy
[BMFT-FB-T-81-042]
N82-14951

MOLECULAR CHAINS

Crystal and molecular structure of Mo6010(OPr(i))12: A serpentine chain of molybdenum atoms and observation of semibridging alkoxy ligands
[AD-A105769]
N82-14941

MOLECULAR COLLISIONS

Gordon Research Conference on Molecular Energy Transfer
[AD-A105441]
N82-14895

MOLECULAR ELECTRONICS

Proceedings of the molecular electronic devices workshop
[AD-A105816]
N82-14455

MOLECULAR IONS

Laser-induced-fluorescence studies of fragment ions: CH( ) and CD( )
[DE82-001010]
N82-14514

MOLECULAR STRUCTURE

Fundamental studies in isotope chemistry
[DE82-000651]
N82-14321

Gordon Research Conference on Molecular Energy Transfer
[AD-A105441]
N82-14895

Crystal and molecular structure of Mo6010(OPr(i))12: A serpentine chain of molybdenum atoms and observation of semibridging alkoxy ligands
[AD-A105769]
N82-14941

MOLYBDENUM

Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion
[DE81-025919]
N82-14337

Corrosion and high temperature resistant coatings for molybdenum, made out of iron and nickel alloys and applied by explosive welding --- Inconel 601 coatings
[T-15/80]
N82-14351

MOLYBDENUM ALLOYS

Mechanisms of elevated temperature fatigue damage in 2 1/4 Cr - 1 Mo steel
[AD-A105786]
N82-14335

MOLYBDENUM COMPOUNDS

Crystal and molecular structure of Mo6010(OPr(i))12: A serpentine chain of molybdenum atoms and observation of semibridging alkoxy ligands
[AD-A105769]
N82-14941

MOMENTS OF INERTIA

A method for measuring takeoff and landing performance of aircraft, using an inertial sensing system
[NLR-MP-80036-U]
N82-14084

MOMENTUM TRANSFER

Laser cooling and trapping of neutral atoms
[AD-A105750]
N82-14512

MONITORS

Study of problems posed by the emission of fumes during welding
[CETIM-12-Y-213]
N82-14524

MONOMERS

Mass spectrometric studies of the thermal decomposition of some Azido polymetric binders
[AD-A106090]
N82-14361

MONOPLANES

Stability and control characteristics of a monoplanar missile configuration with triform-tail-fin arrangements at Mach numbers from 1.70 to 2.86
[NASA-TM-83223]
N82-14053

MONTE CARLO METHOD

Influences on factorial accuracy: A Monte Carlo investigation
N82-14874

MOROCCO

Market assessment of photovoltaic power systems for agricultural applications in Morocco
[NASA-CR-165477]
N82-14627

MORPHOLOGY

Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia
[NASA-TM-76515]
N82-14794

MOUNTAINS

The influence of mountains on the atmosphere: Recent advances
N82-14722

The use of climatological and synoptic data for forecasting orographic enhancement of rainfall
N82-14749

MULTIPLE ACCESS

Design and performance of time-frequency-coded signals for spread-spectrum systems
N82-14904

MULTIPROCESSING (COMPUTERS)

Analysis and design of fault-tolerant computer systems
[AD-A105491]
N82-14808

Functionally specialized multi-processor architectures
[AD-A105662]
N82-14809

Directions for future research and development in multicomputer systems
[BMFT-FB-DV-81-003]
N82-14813

ARTS BETA testing report
N82-14836

MIKE: A network operating system for the distributed double-loop computer network
N82-14843

MULTIPROGRAMMING

Real time software tools and methodologies
N82-14837

Use of software tools in the development of real time software systems
N82-14838

MULTISPECTRAL PHOTOGRAPHY

Recent work in passive optical imaging of water --- space and aircraft derived data
N82-14575

Multitemporal calibration of LANDSAT images: A method for improving the marine phenomena recognition, with as example the Venice lagoon --- brightness/green/yellow feature space, image enhancement
N82-14578

Mapping of surface currents in Greenland fiords by means of LANDSAT images --- multispectral photography
N82-14579

The use of LANDSAT MSS to observe sediment distribution and movement in the Solent coastal area --- multispectral scannel (MSS)
N82-14580

Maritime applications of image processing at DFVLR, Oberpfaffenhofen, West Germany --- LANDSAT multispectral scanner images, digital interactive image analysis
N82-14585

Automated techniques for satellite imagery analysis
N82-14766

MULTIVARIATE STATISTICAL ANALYSIS

Proper Bayes minimax estimators for a multivariate normal mean with unknown common variance under a convex loss function
[AD-A105746]
N82-14865

N

NASA PROGRAMS
Orders of magnitude: A history of NACA and NASA, 1915 - 1980
[NASA-SP-4403] N82-14955

NATIONAL OCEANIC SATELLITE SYSTEM
The potential and requirements for space oceanography --- National Oceanic Satellite system and U.S. Navy requirements N82-14556

NATURAL GAS
Development of a metal hydride process for hydrogen recovery from supplemented natural gas
[DE81-022685] N82-14382
International energy indicators
[DE81-028117] N82-14653

NATURAL GAS EXPLORATION
Evaluation of Devonian shale potential in eastern Kentucky/Tennessee
[DE82-001164] N82-14595
Evaluation of the eastern gas shales in Pennsylvania
[DE82-001165] N82-14596
Evaluation of Devonian shale potential in New York
[DE82-001163] N82-14597

NAVIER-STOKES EQUATION
ACTA Mechanica Sinica (selected articles)
[AD-A107322] N82-14060
Simplified Navier-Stokes equations and their mathematical properties N82-14062
Numerical studies of laminar and turbulent drag reduction
[NASA-CR-3498] N82-14473

NAVIGATION AIDS
Feasibility study for an advanced lighted aid to navigation
[AD-A105944] N82-14081

NAVSTAR SATELLITES
Navstar Global Positioning System (GPS): Future enhanced capabilities N82-14130

NAVY
Investigation of functional commonality of avionics systems in naval aircraft
[AD-A105503] N82-14088

NEAR FIELDS
Near and far field techniques in the analysis of noise generation mechanisms. Part 1: Localization levels and methods of representing source fields, intuitive introduction to near field antennae
[DRIC-T-6338] N82-14877

NEBRASKA
Hydrogeochemical and stream sediment reconnaissance basic data for Broken Bow NTMS Quadrangle, Nebraska
[DE81-030295] N82-14610

NEGATIVE RESISTANCE CIRCUITS
Meaning of the negative impedance
[DE81-030830] N82-14458

NERVOUS SYSTEM
Studies in in vivo electrochemistry N82-14793

NETWORK ANALYSIS
Integrated circuits for accurate linear analogue electric signal processing N82-14445

NEUROLOGY
Studies in in vivo electrochemistry N82-14793

NEUTRAL GASES
Molecular wake shield gas analyzer
[NASA-CR-161926] N82-14212

NEUTRINO BEAMS
Research in nuclear astrophysics: Stellar collapse and supernovae
[DE81-030041] N82-15005

NEUTRINOS
Neutrino, Maxwell and scalar fields in cylindrical and spherical relativistic spaces N82-14894

NEUTRON CROSS SECTIONS
Neutron production by protons (190 to 268 MeV) in a water-cooled tantalum target
[DE81-030628] N82-14378
Representation of the neutron cross sections of several fertile and fissile nuclei in the response regions
[DE82-000504] N82-14905

NEUTRON EMISSION
Tandem-mirror technology demonstration facility
[DE81-030878] N82-14933

NEUTRON IRRADIATION
Influence of neutron irradiation at 55 deg C on the properties of austenitic stainless steels
[DE81-028065] N82-14342

NEUTRON SPECTRA
Neutron production by protons (190 to 268 MeV) in a water-cooled tantalum target
[DE81-030628] N82-14378

NEVADA
Solar radiation as a sole source of energy for photovoltaics in Las Vegas, Nevada, for July and December
[PB81-224503] N82-14669

NEW MEXICO
Water problems and research needs for New Mexico
[PB81-231979] N82-14619
Geology and geochemistry of samples from Los Alamos National Laboratory HDR well EE-2, Fenton Hill, New Mexico
[DE81-026068] N82-14708

NEW YORK
Evaluation of Devonian shale potential in New York
[DE82-001163] N82-14597
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York. Volume 1: Data acquisition, reduction and interpretation
[DE82-000650] N82-14599
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000781] N82-14600
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000401] N82-14601
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000780] N82-14602
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000872] N82-14603
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2

NITRAMINE PROPELLANTS
Erosivity of LOVA propellants
[AD-A106081] N82-14373

NITRIC OXIDE
Stabilizing platinum in phosphoric acid fuel cells
[NASA-CR-165483] N82-14626

NITRIDING
Ionic treatment of tools and gears --- metallurgical and mechanical properties of nitrided chromium steel surfaces
[CETIM-12-G-129] N82-14353

NITROGEN ATOMS
Reactivity of pyrylium salts toward basic reactants
[NASA-TM-76675] N82-14310
Study of metastable states of atomic nitrogen in luminescent discharges
[LP-165] N82-14935

NITROGEN OXIDES
Proceeding of the Joint Symposium on Stationary Combustion NOx Control. Volume 1: NOx emission users and invited papers
[PB81-236119] N82-14685
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 2: Utility boiler NO sub x control by combustion modification
[PB81-236127] N82-14686
Proceedings of the Joint Symposium on Stationary Combustion NOx control. Volume 3: Utility boiler NO sub x control by flue gas treatment
[PB81-236135] N82-14687
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 4: NOx control and environmental assessment of industrial process equipment, engines, and small stationary sources
[PB81-236143] N82-14688
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 5: Fundamental combustion research and advanced processes
[PB81-236150] N82-14689
The effect of multiburst NO production on electron densities and HF attenuation at 60 KM altitude
[AD-A105676] N82-14701

NITROGEN PLASMA
Mirowave energy deposition, breakdown and heating of nitrogen and air
[AD-A105749] N82-14926

NOISE (SOUND)
Measurements of the low-frequency wind-generated ambient noise in the deep ocean
[AD-A105748] N82-14891
A data reduction procedure for cavitation noise from an oscillating hydrofoil
[AD-A105719] N82-14892

NOISE GENERATORS
Near and far field techniques in the analysis of noise generation mechanisms. Part 1: Localization levels and methods of representing source fields, intuitive introduction to near field antennae
[DRIC-T-6338] N82-14877
Design study of hydroacoustic impulse source for deep towing, phase 2
[AD-A106066] N82-14884

NOISE MEASUREMENT
Near and far field techniques in the analysis of noise generation mechanisms. Part 1: Localization levels and methods of representing source fields, intuitive introduction to near field antennae
[DRIC-T-6338] N82-14877
Experimental study of noise reduction for an unstiffened cylindrical model of an airplane fuselage
[NASA-TP-1964] N82-14879

NOISE POLLUTION
Effects of aircraft noise on the equilibrium of airport residents: Supplementary analyses to the study carried out around Orly
[NASA-TM-76627] N82-14673
Taking into account nighttime annoyance in the calculation of the psophic index
[NASA-TM-76580] N82-14674
Attitudes of the people of France towards the supersonic bang
[NASA-TM-76581] N82-14675

Patterns of behavior in lodgings subject to traffic noise
[IRT-47] N82-14662

NOISE REDUCTION
Experimental study of noise reduction for an unstiffened cylindrical model of an airplane fuselage
[NASA-TP-1964] N82-14879

NOISE SPECTRA
Prediction of flyover jet noise spectra from static tests
[NASA-TM-83219] N82-14880

NOISE TEMPERATURE
Integrated Schottky Logic N82-14306

NONDESTRUCTIVE TESTS
Eddy-current phasography
[DE81-024242] N82-14462
Control methodology: Nondestructive testing in the aeronautics industry
[SNIAS-812-551-110] N82-14527

NONLINEAR EQUATIONS
Research in partial differential equations and applications
[AD-A105859] N82-14853

NONLINEAR OPTICS
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510
Bibliography of Soviet laser developments, no. 48, July - August 1980
[AD-A105578] N82-14511

NONLINEAR SYSTEMS
Research in applied mathematics related to nonlinear system theory
[AD-A106091] N82-14852

NONPARAMETRIC STATISTICS
Estimation and testing procedures for the parameters of the negative binomial distribution
N82-14872

NORMAL DENSITY FUNCTIONS
The second representing function for compound situations
[AD-A105860] N82-14870
Bayesian forecasting for switching regression and autoregressive processes N82-14873

NORTH CAROLINA
Algal assay studies of the Chowan River, North Carolina
[PB81-231821] N82-14621

NORTH DAKOTA
Hydrogeochemical and stream sediment reconnaissance basic data for Milbank NTMS Quadrangle, Minnesota; North Dakota; South Dakota
[DE81-029657] N82-14611

NORTH SEA
Coastal zone research using remote sensing techniques — calibration of coastal zone color scanner
N82-14571
Project Noordwijk. Part 1: Measurements of the radar backscatter coefficient gamma (sigma deg) in 1977 and 1978 — on a sea platform
[PHL-1979-49-PT-1] N82-14617
Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977
[PHL-1980-28-PT-2] N82-14618

NORTHERN HEMISPHERE
Hemispherical sky simulator for daylighting model studies
[DE81-028130] N82-14706

NORWAY
The Norwegian remote sensing experiment (Norsex) in a marginal ice zone N82-14566

NOSE TIPS
Heat-transfer and pressure tests on an oblate elliptic nosetip in the NSWC/WO hypersonic tunnel at Mach Number 5 (STR-1346)
[AD-A106058] N82-14482

NOTCH SENSITIVITY
Fatigue test program on notched implanted specimens, cracked and uncracked — welded punch implant tests
[CETIM-12-Y-261] N82-14542

NOZZLE DESIGN
Experimental and analytical investigation of axisymmetric supersonic cruise nozzle geometry at Mach numbers from 0.60 to 1.30
[NASA-TP-1953] N82-14052

NOZZLE GEOMETRY
Experimental and analytical investigation of axisymmetric supersonic cruise nozzle geometry at Mach numbers from 0.60 to 1.30
[NASA-TP-1953] N82-14052
An empirical method for estimating the effect of ground proximity on the jet-induced lift of V/STOL aircraft employing rectangular jets
[AD-A105668] N82-14067

NOZZLE WALLS
Core compressor exit stage study. Volume 4: Data and performance report for the best stage configuration
[NASA-CR-165357] N82-14092
Core compressor exit stage study. Volume 5: Design and performance report for the Rotor C/Stator B configuration
[NASA-CR-165358] N82-14093

NOZZLES
Development of improved high temperature coatings for IN-792 + HF
[NASA-CR-165395] N82-14833

NUCLEAR ELECTRIC POWER GENERATION
International energy indicators
[DE81-028117] N82-14653

NUCLEAR FUELS
Value tree analysis of energy supply alternatives
[AD-A105629] N82-14875

NUCLEAR INTERACTIONS
Research in nuclear astrophysics: Stellar collapse and supernovae
[DE81-030041] N82-15005

NUCLEAR PHYSICS
Research in nuclear astrophysics: Stellar collapse and supernovae
[DE81-030041] N82-15005

NUCLEAR POWER PLANTS
The nuclear controversy: Unequal competition in public policy-making
[ERG-035] N82-14626

NUCLEAR SCATTERING
Phenomenological applications of perturbative quantum chromodynamics N82-14954

NUCLEAR STRUCTURE
Nuclear structure from radioactive decay
[DE82-000423] N82-14899

NUCLEATION
Kinetics studies on the nucleation and growth of silicon via chemical vapour deposition N82-14939

NUCLEONS
Representation of the neutron cross sections of several fertile and fissile nuclei in the response regions
[DE82-000504] N82-14905
Phenomenological applications of perturbative quantum chromodynamics N82-14954

NUMERICAL ANALYSIS
Lifting surface theory for wings in low frequency small amplitude yawing and side slipping oscillating motions at low speeds N82-14061
Procedures for the calculation of the separative performance of a countercurrent gas centrifuge
[DE81-025448] N82-14499
Optimization of reinforcement for a class of openings in plate structures
[AD-A105718] N82-14857
Amorphous-crystalline boundary dynamics in laser crystallization
[AD-A105811] N82-14942

NUMERICAL CONTROL
Development of new production technologies for optical components with spherical surfaces — precision optics
[BMFT-FB-T-81-032] N82-14402
Integrated circuits for industrial controller applications
[BMFT-FB-T-80-116] N82-14463
The Modular Automated Weather System (MAWS) concept — airfield weather support N82-14763
Initiation into the utilization of programmable industrial robots: Grafcet — graphic engineering language N82-14805
Use of software tools in the development of real time software systems N82-14836

NUMERICAL FLOW VISUALIZATION
Subsonic flow in a corner — laminar and turbulent flow in a wing-fuselage junction N82-14393

NUMERICAL INTEGRATION
Computer program for solving an inverse problem with one variable: Part 1: Methodology
[CRPE-NT-80-VOL-1] N82-14825
Computer program for solving an inverse problem with one variable. Part 2: User manual
[CRPE-NT-81-VOL-2] N82-14826
Application of integration algorithms in a parallel processing environment for the simulation of jet engines
[NASA-TM-82746] N82-14849

NUMERICAL WEATHER FORECASTING
Combining satellite and radar data for the short range forecasting of precipitation N82-14745
Simple short range models using satellite imagery data N82-14746
The use of mesoscale meteorological and climatological information in nowcasting and short range prediction N82-14751
A mesoscale forecast for 25 August 1975: The Hampstead storm N82-14752
Description of an advective boundary layer model using trajectories N82-14753
Short range prediction of clouds using trajectories N82-14754
Impact of data and initialization procedures on variations of vertical motion and precipitation in mesoscale models N82-14755
The initialization of a mesoscale weather prediction model using satellite and precipitation data N82-14756
The numerical simulation of intense frontal discontinuities over southeastern Australia N82-14758
A layered mesoscale prediction model initialized and verified by satellite data N82-14760

NUTRIENTS
Necessity of remote sensing for ocean studies. Part 1: Northwest African missions, Sahara-1 and Atlor-1 — sea truth/remote sensing correlation of offshore upwelling N82-14582

O

OAK RIDGE ISOCHRONOUS CYCLOTRON
Design study for superconducting main field coils for the Oak Ridge Isochronous Cyclotron
[DE81-028066] N82-14912

OCCUPATION
Education and training implications of biomass energy system use
[DE81-029956] N82-14664

OCEAN BOTTOM
Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites — aerial photography N82-14574
The effect of the Mid-Atlantic Ridge on long range sound propagation
[AD-A105747] N82-14890

OCEAN CURRENTS
A short review of an oceanographic use of Meteosat data by the ORSTOM remote sensing service N82-14570
Marine activities in Sweden for which remote sensing data may be of interest — oceanography, weather forecasting, and analysis N82-14576

OCEAN DATA ACQUISITIONS SYSTEMS
The need for integrated off-shore, real-time information and management systems N82-14555
The potential and requirements for space oceanography — National Oceanic Satellite system and U.S. Navy requirements N82-14556
Requirements in pollution monitoring and coastal management N82-14558
GEM: A simple meteorological buoy with satellite telemetry N82-14779

OCEAN DYNAMICS
State-of-the-art in using a spaceborne altimeter and scatterometer for the determination of wind, sea state, and marine and ice dynamics — Seasat instruments N82-14560
The Seasat commercial demonstration program N82-14561

OCEAN MODELS
A finite-element sea-breeze model N82-14712
Global ocean tides. Part 4: The semidiurnal elliptical lunar tide (N2), atlas of tidal charts and maps
[AD-A105949] N82-14791

The NSWC Global Ocean Tide Data Tape (GOTD). Its features and applicaton: Random-Point Tide program
[AD-A105974] N82-14792

OCEAN SURFACE

Determination of surface wind speed from remotely measured whitecap coverage, a feasibility assessment N82-14565

A preliminary evaluation of Seasat performance over the area of JASIN and its relevance to ERS-1 N82-14567

Oil spills: Large scale monitoring by LANDSAT N82-14572

Airborne remote sensing of the coastal zone N82-14577

Multitemporal calibration of LANDSAT images: A method for improving the marine phenomena recognition, with as example the Venice lagoon --- brightness/green/yellow feature space, image enhancement N82-14578

The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581

Project Noordwijk. Part 1: Measurements of the radar backscatter coefficient gamma (sigma deg) in 1977 and 1978 --- on a sea platform
[PHL-1979-49-PT-1] N82-14617

Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977
[PHL-1980-28-PT-2] N82-14618

Remote sensing of sea state by laser altimeters
[NASA-CR-165049] N82-14789

The NSWC Global Ocean Tide Data Tape (GOTD). Its features and applicaton: Random-Point Tide program
[AD-A105974] N82-14792

OCEANOGRAPHIC PARAMETERS

Fisheries investigations and management benefits from remote sensing --- fish tracking N82-14559

Marine activities in Sweden for which remote sensing data may be of interest --- oceanography, weather forecasting, and analysis N82-14576

A look at nonsatellite remote sensing systems for marine use --- together with satellite systems, overall view of the technology N82-14586

OCEANOGRAPHY

Application of remote sensing data on the continental shelf: Proceedings of an EAReL-ESA Symposium
[ESA-SP-167] N82-14553

ERS-1: Mission objectives and system concept N82-14554

Offshore petroleum industry environmental data requirements: Emphasis on remote sensing N82-14557

An evaluation of Seasat-A data in relation to optimum track ship weather routing and site specific forecasting for the offshore oil industry N82-14564

Studies of the Indian continental shelf: Application of remote sensing data N82-14569

OCEANS

Light fields in the ocean
[NASA-TM-76731] N82-14790

Measurements of the low-frequency wind-generated ambient noise in the deep ocean
[AD-A105748] N82-14891

ODD-EVEN NUCLEI

Nuclear structure from radioactive decay
[DE82-000423] N82-14899

OFF-ON CONTROL

Design of a control system for the optimum heating of batch reactors
[MS-1296] N82-14387

OFFSHORE ENERGY SOURCES

Offshore petroleum industry environmental data requirements: Emphasis on remote sensing N82-14557

The Seasat commercial demonstration program N82-14561

OFFSHORE PLATFORMS

Project Noordwijk. Part 1: Measurements of the radar backscatter coefficient gamma (sigma deg) in 1977 and 1978 --- on a sea platform
[PHL-1979-49-PT-1] N82-14617

Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977
[PHL-1980-28-PT-2] N82-14618

OGIVES

Numerical simulation of steady supersonic flow over an ogive cylinder boattail body
[AD-A106060] N82-14065

OIL ADDITIVES

Corrosion inhibiting engine oils
[AD-A106127] N82-14099

OIL EXPLORATION

Offshore petroleum industry environmental data requirements: Emphasis on remote sensing N82-14557

Bibliography of publications dealing with tar sands
[DE81-026146] N82-14594

OIL POLLUTION

Oil spills: Large scale monitoring by LANDSAT N82-14572

The operational oil pollution surveillance system being used in France: Forecasted future developments in consideration of the NATO/CCMS remote sensing pilot study conclusions N82-14573

Use of Side Looking Airborne Radar (SLAR) for oil pollution monitoring in Norway N82-14588

OIL RECOVERY

Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026849] N82-14522

Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026962] N82-14523

Bibliography of publications dealing with tar sands
[DE81-026146] N82-14594

Progress report to the Department of Energy in support of basic energy and policy research
[DE81-025882] N82-14648

OIL SLICKS

A recommended sensor package for the detection and tracking of oil spills N82-14563

Oil spills: Large scale monitoring by LANDSAT N82-14572

The operational oil pollution surveillance system being used in France: Forecasted future developments in consideration of the NATO/CCMS remote sensing pilot study conclusions N82-14573

Oil spill identification by chemical analysis N82-14583

Use of Side Looking Airborne Radar (SLAR) for oil pollution monitoring in Norway N82-14588

ON-LINE SYSTEMS

Floating-point on-line arithmetic for highly concurrent digit-serial computation: Application to mesh problems N82-14863

ONBOARD DATA PROCESSING

Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829

airborne data analysis/monitor system N82-14830

ADAMS executive and operating system N82-14831

System performance analyzer N82-14832

On-board computer progress in development of A 310 flight testing program N82-14833

ONBOARD EQUIPMENT

Helicopter model studies for on-board electrostatic sensors
[AD-A105511] N82-14089

ONE DIMENSIONAL FLOW

Parametric analysis of diffuser requirements for high expansion ratio space engine
[NASA-CR-161924] N82-14280

OPERATING SYSTEMS (COMPUTERS)

RICAR: Portable test equipment for the integration of the ISOPROBRE experiment on board the ARCAD 3 satellite
[CRPE-1078] N82-14279

Use of software tools in the development of real time software systems N82-14838

MIKE: A network operating system for the distributed double-loop computer network N82-14843

OPERATIONAL PROBLEMS

Operational loads induced by orbital control of a geostationary satellite --- organizing control networks N82-14131

OPERATIONS RESEARCH

Exact and approximation algorithms for a scheduling problem
[AD-A105881] N82-14859

A functional technique for decomposing the complexity of requirements analysis
[AD-A105517] N82-14876

OPERATORS (MATHEMATICS)

Compact covariance operators
[AD-A105658] N82-14851

OPTICAL COMMUNICATION

Bibliography of Soviet laser developments, no. 48, July - August 1980
[AD-A105578] N82-14511

OPTICAL COUPLING

Reliability study of opto-coupled semiconductor devices and Light Emitting Diodes (LED)
[NASA-CR-161923] N82-14444

OPTICAL MEASURING INSTRUMENTS

Integrated circuits for industrial controller applications
[BMFT-FB-T-80-116] N82-14483

Development of a linear measuring system --- precision length measurement, using holographic gratings
[BMFT-FB-T-81-031] N82-14503

OPTICAL PROPERTIES

The Halley optical probe experiment --- for the Giotto mission N82-14121

Synthesis, characterization and optical properties of barium titanate films sputtered under various conditions
[AD-A105655] N82-14296

Some optical properties of blowing snow
[AD-A103268] N82-14697

Preparation of GaAs/AlxGa1-xAs multilayer structures with predetermined optical and electrical properties by molecular beam epitaxy
[BMFT-FB-T-81-042] N82-14951

Optical performance data for the UK infrared telescope; atmospheric seeing effects in the infrared --- United Kingdom Infrared Telescope (UKIRT)
[UKIRT-16] N82-14998

OPTICAL PUMPING

Laser-induced fluorescence technique to monitor H2S (PR 16023)
[DE81-026784] N82-14516

OPTICAL RADAR

Results of a slant range visibility field experiment with the modified DFVLR-minilidar
[DFVLR-MITT-81-01] N82-14439

Laser-induced-fluorescence studies of fragment ions: CH( ) and CD( )
[DE82-001010] N82-14514

Lidar monitoring of the tropospheric water vapor mixing ratio N82-14739

Statistical measurement of the 1978 lidar measurements --- aerosols and meteorology
[PHL-1980-41] N82-14924

OPTICAL RESONANCE

Studies of resonance-light pressure
[ISBN-951-45-2131-5] N82-14914

Study of metastable states of atomic nitrogen in luminescent discharges
[LP-185] N82-14935

OPTICAL SCANNERS

Reliable aerial thermography for energy conservation
[NASA-TM-81766] N82-14552

OPTICAL SLANT RANGE

Results of a slant range visibility field experiment with the modified DFVLR-minilidar
[DFVLR-MITT-81-01] N82-14439

OPTIMIZATION

The use of optimization techniques to design controlled diffusion compressor blading
[NASA-TM-82763] N82-14094

Optimization of compressor vane and bleed settings
[AD-A106059] N82-14097

Design of a control system for the optimum heating of batch reactors
[MS-1296] N82-14387

Optimal voltage level control and its application to long range extension planning in high voltage transmission network
[ISBN-951-45-5116-2] N82-14448

Stress distribution around a circular hole in square plates, loaded uniformly in the plane, on two opposite sides of the square. Optimum shapes of central holes in square plates subjected to uniaxial uniform load. Optimization of hole shapes in circular cylindrical shells under axial tension
[AD-A105598] N82-14536

Synthesis and optimization of programmable logic arrays N82-14814
Optimization of reinforcement for a class of openings in plate structures
[AD-A105718] N82-14857
A further investigation of efficient heuristic procedures for integer linear programming with an interior
[AD-A106027] N82-14860
Optimization of unconstrained functions with sparse Hessian matrices: Quasi-Newton methods
[AD-A106028] N82-14861
Study of the performance parameters of a FLIR system
[AD-A105865] N82-14920

ORBIT CALCULATION
Spacecraft Flight Dynamics --- conference
[ESA-SP-160] N82-14123
A SIRIO 2 laser ranging experiment --- in orbit determination N82-14125
Modeling of orbital perturbations due to radiation pressure for high Earth satellites N82-14126
Present status and future trends in near-Earth satellite orbit determination N82-14152
An analytical singularity-free orbit predictor for near-Earth satellites N82-14154
Aspects in measuring and correcting of satellite orbit N82-14155
SIRIO 2 LASSO mission: Geosynchronous satellite laser station ranging data orbit determination simulations --- laser synchronization from stationary orbit (LASSO) mission N82-14156
Orbit and attitude determination for Bhaskara N82-14157
Spacecraft tracking campaigns and the assessment of orbit determination accuracy N82-14163

ORBIT DECAY
Aspects in measuring and correcting of satellite orbit N82-14155
Skylab decay follow-up N82-14167

ORBIT PERTURBATION
Spacecraft Flight Dynamics --- conference
[ESA-SP-160] N82-14123
Research results from analysis of satellite orbits --- Earth atmosphere and gravitational effects N82-14124
Modeling of orbital perturbations due to radiation pressure for high Earth satellites N82-14126

ORBITAL MANEUVERS
Aspects in measuring and correcting of satellite orbit N82-14155

ORBITAL MECHANICS
ACS performance verification for IRAS: Software engineering at the Operations Control Centre --- Attitude Control System (ACS), infrared astronomical satellite (IRAS) N82-14169

ORBITAL POSITION ESTIMATION
Accurate orbit determinations from laser range observations by LAGEOS, Starlette and GEOS 3 N82-14128
Geostationary satellites launched by NASDA. Part 2: Mission analysis for maneuver N82-14138
The dynamic attitude reconstruction method N82-14160
The use of ESA starmapper measurements for spacecraft estimation: Estimator design rationale and results N82-14161

ORBITAL SPACE STATIONS
Interactive design and analysis of future large spacecraft concepts
[NASA-TP-1937] N82-14276

ORGANIC COMPOUNDS
Deposition of thin insulation layers from the gas phase
[NASA-TM-76607] N82-14307
Reactivity of pyrylium salts toward basic reactants
[NASA-TM-76675] N82-14310
Salt release from suspended sediments: A simulated model
[PB81-231839] N82-14624
Effect of organic complexants on the mobility of low-level waste radionuclides in soils: Status report
[DE81-030409] N82-14901
The organic composition of interstellar grains N82-15004

ORGANOMETALLIC COMPOUNDS
The electronic structure of porphyrins and metalloporphyrins N82-14329

OROGRAPHY
The use of climatological and synoptic data for forecasting orographic enhancement of rainfall N82-14749

OSCILLATIONS
Influence of display and control compatibility on pilot-induced oscillations
[NASA-TP-1936] N82-14804

OTS (ESA)
OTS: 3rd Year in Orbit --- conference
[ISBN-0-8529-6244-4] N82-14173
Performance of the Orbital Test Satellite (OTS) during its third year of operation in orbit N82-14174
General description of the Orbital Test Satellite (OTS) --- satellite links for intra-European telecommunication N82-14176
Attenuation statistics obtained with OTS N82-14177
Depolarization measurements at 11 and 14 GHz with OTS N82-14178
Correlating OTS beacon measurements with radiometer and rainfall data N82-14179
Impact of OTS propagation results on the ECS system --- European Communications Satellite (ECS) N82-14180
Platform performance factors affecting link budgets of geosynchronous communication satellites N82-14181
Results of tests on the satellite spotbeam antenna --- OTS N82-14182
Results and conclusions of RF performance tests made by ESA --- OTS N82-14184
Results and conclusions of the 60 Mbit/sec digital transmission tests --- OTS N82-14185
Results and conclusions of the 120 and 180 Mbit/sec digital transmission tests --- OTS N82-14186
TDMA/DSI system tests and telephony channel tests via the Orbital Test Satellite (OTS) --- Digital Speech Interpolation (DSI) N82-14187
Results and conclusions from telephone signaling tests through TDMA/DSI system --- Digital Speech Interpolation (DSI) N82-14188
Analogue television tests --- OTS, European Communications Satellite N82-14189
Experimental digital television transmissions through the OTS N82-14190
Direct broadcasting experiments with OTS: Results of picture transmission tests --- at 27 MHz N82-14191
Direct broadcasting experiments with OTS: Results of sound transmission tests N82-14192
Teletext and data broadcasting experiments with OTS N82-14193
An overview of the design and construction of small Earth stations used with OTS N82-14196
The use of OTS in the COST 211 project --- European cooperation in the field of scientific and technical research (COST) N82-14198

OVER-THE-HORIZON RADAR
Results of a slant range visibility field experiment with the modified DFVLR-minilidar
[DFVLR-MITT-81-01] N82-14439

OXALATES
Destruction of oxalate by reaction with hydrogen peroxide
[DE81-030624] N82-14320

OXIDATION
Oxidation behavior of directionally solidified eutectic composites as prototypes for the development of protective layers N82-14295
Destruction of oxalate by reaction with hydrogen peroxide
[DE81-030624] N82-14320
Investigation of the in-situ oxidation of methanol in fuel cells
[AD-A105947] N82-14642

OXIDATION RESISTANCE
Development of improved high temperature coatings for IN-792 + HF
[NASA-CR-165395] N82-14333

OXIDES
Lithium based anodes for solid state batteries
[AD-A105518] N82-14640

OXYGEN
Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

OXYGENATION
Influence of cyclic load and environmental effects on stress corrosion cracking of sensitized steel
[DE81-904216] N82-14338

P

P-3 AIRCRAFT
Voice recognition as an input modality for the TACCO preflight data insertion task in the P-3C aircraft
[AD-A105568] N82-14821

PACKET SWITCHING
Data communications support for the ATC computer replacement program (1986-1996) --- requirements for automated en route ATC
[DOT/FAA/RD-81/104] N82-14807

PAINTS
Electrostatic charging characteristics of thermal control paints as function of temperature N82-14234

PANEL METHOD (FLUID DYNAMICS)
Time linearized calculation of two dimensional unsteady transonic potential flow at small disturbances
[DFVLR-FB-81-01] N82-14070
Development of an efficient procedure for calculating the aerodynamic effects of planform variation
[NASA-CR-3489] N82-14529

PARABOLIC DIFFERENTIAL EQUATIONS
Block iterative methods for elliptic and parabolic difference equations
[AD-A105898] N82-14850

PARACHUTES
Modular asymmetric parachute for wind-tunnel testing
[DE81-028416] N82-14068

PARALLEL PROCESSING (COMPUTERS)
Specification of parallel processing using production systems N82-14816
Real time software tools and methodologies N82-14837
Application of integration algorithms in a parallel processing environment for the simulation of jet engines
[NASA-TM-82746] N82-14849
Fast parallel exact computation of the generalized inverse and rank of a matrix
[AD-A105586] N82-14856

PARAMETER IDENTIFICATION
Partitioning methods for identification and control of flexible spacecraft N82-14147
Global geometry techniques for mission analysis N82-14159
Thrustor performance modeling and parameters estimation N82-14172
Estimation and testing procedures for the parameters of the negative binomial distribution N82-14872
Dust cloud models: Sensitivity of calculated transmittances to variations in input parameters
[AD-A103310] N82-14918

PARTIAL DIFFERENTIAL EQUATIONS
Research in partial differential equations and applications
[AD-A105859] N82-14853

PARTICLE BEAMS
Simulation of spacecraft charging environments by monoenergetic beams N82-14268

PARTICLE FLUX DENSITY
An energetic particle detector for Giotto and its scientific objectives N82-14113

PARTICLE INTERACTIONS
Signal processing theory of Bragg cells
[AD-A100451] N82-14451

PARTICLE PRODUCTION
Neutron production by protons (190 to 268 MeV) in a water-cooled tantalum target
[DE81-030628] N82-14378

PARTICLE SIZE DISTRIBUTION
Size distribution, structure, and chemical composition of cometary dust particles N82-14114
The particulate impact analyzer, an instrument to analyze small particles released by Halley's Comet --- Giotto mission N82-14115
A dust impact detection system for the Giotto Halley mission N82-14116
Catalytic effect of iron in hydrogasification of coal
[DE81-023928] N82-14323

Preparation, thermal properties, solid solution formation and some luminescence properties of rare Earth oxysulfides
[ISBN-951-751-949-4] N82-14443

PARTICLE THEORY
Phenomenological applications of perturbative quantum chromodynamics N82-14954

PARTICULATE SAMPLING
The particulate impact analyzer, an instrument to analyze small particles released by Halley's Comet --- Giotto mission N82-14115
A dust impact detection system for the Giotto Halley mission N82-14116
Studies on the behavior of ammonia and ammonium salts in the atmosphere (1) - Fractional collection of ammonia gas and particulate ammonium
[NASA-TM-76582] N82-14693
Carcinogenic effects of coal-conversion materials
[DE81-028106] N82-14803

PASTES
Development of an all-metal thick film cost affective metallization system for solar cells
[NASA-CR-165044] N82-14629

PAVEMENTS
Relating pavement distress to serviceability and performance
[PB81-227852] N82-14410

PAYLOAD CONTROL
Operational status of the space test program P78-2 spacecraft and payloads N82-14238

PENNSYLVANIA
Evaluation of the eastern gas shales in Pennsylvania
[DE82-001165] N82-14596

PERFORMANCE PREDICTION
ATA injector-gun calculations
[DE82-001149] N82-14906

PERFORMANCE TESTS
Thrustor performance modeling and parameters estimation N82-14172
OTS: 3rd Year in Orbit --- conference
[ISBN-0-8529-6244-4] N82-14173
Direct broadcasting experiments with OTS: Results of picture transmission tests --- at 27 MHz N82-14191
Test and evaluation of the Bell-Halter 110-foot surface effect ship demonstration craft
[AD-A099000] N82-14399
Results of a slant range visibility field experiment with the modified DFVLR-minilidar
[DFVLR-MITT-81-01] N82-14439
The Modular Automated Weather System (MAWS) concept --- airfield weather support N82-14763
Optical performance data for the UK infrared telescope, atmospheric seeing effects in the infrared --- United Kingdom Infrared Telescope (UKIRT)
[UKIRT-16] N82-14998

PERSONNEL DEVELOPMENT
Introduction to orbital flight planning (1)
[NASA-CR-165052] N82-14106

PERTURBATION THEORY
Phenomenological applications of perturbative quantum chromodynamics N82-14954

PHASED ARRAYS
A transmitting solid state linear phased array antenna for C band
[PHL-1980-10] N82-14437

PHILOSOPHY
The nuclear controversy: Unequal competition in public policy-making
[ERG-035] N82-14626

PHOSPHATES
Reactivity of pyrylium salts toward basic reactants
[NASA-TM-76675] N82-14310

PHOSPHORIC ACID FUEL CELLS
Stabilizing platinum in phosphoric acid fuel cells
[NASA-CR-165483] N82-14628

PHOSPHORUS
Defect chemistry and characterization of (Hg, Cd)Te
[NASA-CR-161928] N82-14308

PHOTODECOMPOSITION
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165040] N82-14358

PHOTODIODES
Optimum design of wide-bandwidth, low-noise photodiode amplifiers. Volume 1: Bandwidth --- photodiode circuit
[OUEL-1363/81-VOL-1] N82-14468

PHOTOELASTIC ANALYSIS
Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533

PHOTOELECTRON SPECTROSCOPY
Application of surface analysis to solve problems of wear
[NASA-TM-82753] N82-14519

PHOTOLITHOGRAPHY
Photoelectrochemical depositions of microscopic metal film patterns on Si and GaAs
[AD-A099456] N82-14940

PHOTOLYSIS
Investigation of plasma excitation. Volume 2: Microwave plasmas
[AD-A105495] N82-14928

PHOTOMAPPING
Mapping of surface currents in Greenland fiords by means of LANDSAT images — multispectral photography N82-14579
All-sky, video-based luminance mapper for daylighting research
[DE81-029276] N82-14707

PHOTOMETERS
PMP 80 automatic photometer --- for enzyme activity determination
[BMFT-FB-T-81-051] N82-14504
Evaluation of fiber optics for in-line photometry in hostile environments
[DE81-028139] N82-14922

PHOTOMETRY
Kohoutek, photometric photography experiment (S233)
[NASA-TM-82449] N82-15007

PHOTONS
Phenomenological applications of perturbative quantum chromodynamics N82-14954

PHOTOOXIDATION
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165040] N82 14358

PHOTOSYNTHESIS
Calcium carbonate precipitation as influenced by stream primary production
[PB81-231946] N82-14623
Progress report to the Department of Energy in support of basic energy and policy research
[DE81-025682] N82-14648

PHOTOTRANSISTORS
Reliability study of opto-coupled semiconductor devices and Light Emitting Diodes (LED)
[NASA-CR-161923] N82-14444

PHOTOVOLTAIC CELLS
Photovoltaic systems performance experience
[DE81-025725] N82-14656
Solar Photovoltaic Residential Project. Project Integration Meeting, Agenda and Abstracts
[DE81-028433] N82-14657
Solar radiation as a sole source of energy for photovoltaics in Las Vegas, Nevada, for July and December
[PB81-224503] N82-14669

PHOTOVOLTAIC CONVERSION
Market assessment of photovoltaic power systems for agricultural applications in Morocco
[NASA-CR-165477] N82-14627
Study of multi-megawatt technology needs for photovoltaic space power systems. Volume 1: Executive summary
[NASA-CR-165323-VOL-1] N82-14636
Study of multi-megawatt technology needs for photovoltaic space power systems, volume 2
[NASA-CR-165323-VOL-2] N82-14637
Photovoltaic systems performance experience
[DE81-025725] N82-14656

PHOTOVOLTAIC EFFECT
Solar Photovoltaic Residential Project. Project Integration Meeting, Agenda and Abstracts
[DE81-028433] N82-14657

PHYSIOLOGICAL EFFECTS
Effects of aircraft noise on the equilibrium of airport residents: Supplementary analyses to the study carried out around Orly
[NASA-TM-76627] N82-14673
Attitudes of the people of France towards the supersonic bang
[NASA-TM-76581] N82-14675

PIEZOELECTRIC CRYSTALS
Evaluation of the performance characteristics of BVA resonators under static and dynamic conditions
[AD-A105064] N82-14448

PIEZOELECTRIC GAGES
Computer modeling of piezoresistive gauges
[DE81-027964] N82-14500

PIEZOELECTRICITY
Pyroelectricity and charge transport in a copolymer of vinylidene fluoride and tetrafluroethylene
[AD-A105790] N82-14365

PINHOLES
Conduction through punctures in metal-backed dielectrics N82-14236

PIPE FLOW
Cool-down flow-rate limits imposed by thermal stresses in LNG pipelines
[DE81-028731] N82-14484

PIPELINES
Cool-down flow-rate limits imposed by thermal stresses in LNG pipelines
[DE81-028731] N82-14484

PIPELINING (COMPUTERS)
Real time software tools and methodologies N82-14837

PIPES (TUBES)
Influence of cyclic load and environmental effects on stress corrosion cracking of sensitized steel
[DE81-904216] N82-14338
Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water
[DE81-028090] N82-14340

PITCH (INCLINATION)
Role of energetic particles in charging/discharging of spacecraft dielectrics N82-14219

PITCHING MOMENTS
Modular asymmetric parachute for wind-tunnel testing
[DE81-028416] N82-14068

PLANE STRAIN
Stress in single lap joints of dissimilar materials
[AD-A105519] N82-14537

PLANE WAVES
Studies of resonance-light pressure
[ISBN-951-45-2131-5] N82-14814

PLANETARY MAPPING
The use of ESA starmapper measurements for spacecraft estimation: Estimator design rationale and results N82-14161

PLANETARY WAVES
On the identification of planetary-scale waves during disturbed conditions
[ISSN-0340-9821] N82-14694

PLANKTON
Spectral atmospheric observations at Nantucket Island, May 7-14, 1981
[NASA-TM-83196] N82-14550
The color of the sea and its relation to surface chlorophyll and depth of the euphotic zone N82-14562
The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581

PLANT DESIGN
Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377
Compressed air energy storage preliminary design and site development program in an aquifer. Volume 5, part 2, appendix F, dynamic system computer model
[DE82-000671] N82-14646

PLASMA ACCELERATION
Plasma wave experiment for the ISEE-3 Mission
[NASA-CR-166730] N82-15000

PLASMA COMPOSITION
SCATHA observations of space plasma composition during a spacecraft charging event N82-14242

PLASMA CONTROL
Field errors in EBT and their effects on the ambipolar potential --- bumpy toruses
[DE82-000828] N82-14930

Investigation of methods for fabricating, characterizing and transporting cryogenic inertial-confinement-fusion targets
[DE81-029737] N82-14934

PLASMA CURRENTS
Brushfire arc discharge model N82-14224
Solar cell modules for plasma interaction evaluation
[NASA-CR-161922] N82-14281

PLASMA DENSITY
SCATHA observations of space plasma composition during a spacecraft charging event N82-14242

PLASMA DIAGNOSTICS
Experimental study of instabilities and motion of a streaming ionospheric plasma in the polar zone --- interpretation of Ionospheric Polar Campaign rocket sounding results
[CRPE-NT-78] N82-14710
Plasma conditions required for attainment of maximum gain in resonantly photo-pumped Al 12 and Ne 9
[AD-A105779] N82-14925
Investigation of plasma excitation. Volume 1: Electron impact studies of selected ground state and excited state rare gas atoms
[AD-A105494] N82-14927
Investigation of plasma excitation. Volume 2: Microwave plasmas
[AD-A105495] N82-14928
Investigation of plasma excitation. Volume 3: Advanced optical diagnostics of plasmas
[AD-A105496] N82-14929

PLASMA DIFFUSION
A microwave induced helium plasma emission detector for gas chromatography
[PML-1979-75] N82-14327

PLASMA ENGINES
A study of test techniques for evaluating ablative plasma engines in vacuum test cells
[AD-A105875] N82-14282

PLASMA GENERATORS
Simulation of spacecraft charging environments by monoenergetic beams N82-14268
Bibliography of Soviet laser developments, no. 48, July - August 1980
[AD-A105578] N82-14511
Study of a discharge caused by a surface wave --- microwave discharge plasmas
[LP-190] N82-14937

PLASMA INTERACTIONS
Spacecraft Charging Technology, 1980
[NASA-CP-2182] N82-14213
Charging control techniques N82-14232
Agreement for NASA/OAST - USAF/AFSC space interdependency on spacecraft environment interaction N82-14271
Numerical simulation of plasma insulator ineractions in space. Part 1: The self consistent calculation N82-14272
Numerical simulation of plasma insulator interactions in space. Part 2: Dielectric effects N82-14273
Solar cell modules for plasma interaction evaluation
[NASA-CR-161922] N82-14281
Mirowave energy deposition, breakdown and heating of nitrogen and air
[AD-A105749] N82-14926

PLASMA PHYSICS
A thermodynamic approach to metal-plasma interaction in one-dimensional stationary evolution --- probe-plasma interaction
[REPT-81-1] N82-14936

PLASMA PINCH
Dark-ground illumination: A quantitative diagnostic for plasma density
[DE82-000442] N82-14932

PLASMA PUMPING
Plasma conditions required for attainment of maximum gain in resonantly photo-pumped Al 12 and Ne 9
[AD-A105779] N82-14925

PLASMA SHEATHS
Three dimensional space charge model for large high voltage satellites --- plasma sheath N82-14274
Solar cell modules for plasma interaction evaluation
[NASA-CR-161922] N82-14281

PLASMA TURBULENCE
Plasma wave experiment for the ISEE-3 Mission
[NASA-CR-166730] N82-15000

PLASMA WAVES
Sounding rocket program Magnetosphere: The search coil magnetometer experiment in the substorm phenomena payload
[BMFT-FB-W-81-010] N82-14709
Plasma wave experiment for the ISEE-3 Mission
[NASA-CR-166730] N82-15000

PLASMAS (PHYSICS)
Representation and material charging response of geoplasma environments N82-14249
Nonlinear evolution of plasma enhancements in the auroral ionosphere 1: Long wavelength irregularities
[AD-A105553] N82-14699
Review or recent EBT coupled ring-core stability theory --- bumpy toruses
[DE82-000880] N82-14931

PLASMASPHERE
Representation and material charging response of geoplasma environments N82-14249
Simulation of charging response of SCATHA (P78-2) satellite N82-14250
SCATHA SSPM charging response: NASCAP predictions compared with data N82-14251
Three-dimensional analysis of charging events on, days 87 and 114, 1979, from SCATHA N82-14252

PLASTIC COATINGS
Securing containerized hazardous wastes with welded polyethylene encapsulates
[PB81-231292] N82-14370

PLASTIC DEFORMATION
A theory of laminated composite plates and rods
[AD-A105591] N82-14297
Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334
Plastic deformation and fracture of steel under dynamic loading
[AD-A105997] N82-14336

PLASTIC PROPERTIES
Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334

PLASTICS
Plan of action and milestones for Navy combustion toxicity
[AD-A105623] N82-14796

PLATES (STRUCTURAL MEMBERS)
Stress distribution around a circular hole in square plates, loaded uniformly in the plane, on two opposite sides of the square. Optimum shapes of central holes in square plates subjected to uniaxial uniform load. Optimization of hole shapes in circular cylindrical shells under axial tension
[AD-A105598] N82-14536

PLATINUM
Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325
Stabilizing platinum in phosphoric acid fuel cells
[NASA-CR-165483] N82-14628

PLATINUM BLACK
Oxygen reduction with carbon supported metallic cluster catalysts in alkaline electrolyte
[DE81-027400] N82-14325

PLUNGERS
Water aeration with plunging jets
[ISBN-90-6231-066-5] N82-14551

PLUTONIUM ALLOYS
Direct analysis of plutonium metal for gallium, iron and nickel by energy dispersive X-ray spectrometry
[DE81-028046] N82-14324

POINT DEFECTS
Studies of vacancy: Type defects in metals --- positron annihilation technique N82-14938
Point defects in crystals (including grouped defects)
[DE82-000395] N82-14943
Point-defect sources and sinks
[DE82-000655] N82-14944

POINTING CONTROL SYSTEMS
Platform performance factors affecting link budgets of geosynchronous communication satellites N82-14181

POLAR ORBITS
POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement
[NASA-TM-76642] N82-14205
Charging of a large object in low polar Earth orbit --- space shuttle orbiter N82-14275

POLAR REGIONS
ERS-1: Mission objectives and system concept N82-14554

POLAR WANDERING (GEOLOGY)
A SIRIO 2 laser ranging experiment — in orbit determination N82-14125

POLARIMETERS
The Halley optical probe experiment --- for the Giotto mission N82-14121
Preparatory tasks on the definition and optimization of the Out of Ecliptic Zodiacal Light experiment --- International Solar Polar Mission
[BMFT-FB-W-81-009] N82-14199

POLARIZATION CHARACTERISTICS
Analysis and calculation of special system aspects for the conical scan radiometer (phase A)
[BMFT-FB-W-81-003] N82-14505

POLARIZERS
FOC F/96 polarizers --- faint object camera for space telescope N82-14915
A polarizer for vacuum ultraviolet N82-14916

POLLUTION CONTROL
Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165386] N82-14095
ERBS fuel addendum: Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165387] N82-14096
Porous polymers as new sorptive materials
[PML-1980-77] N82-14369
Laboratory studies of priority pollutant treatability
[PB81-231235] N82-14684
Proceeding of the Joint Symposium on Stationary Combustion NOx Control. Volume 1: NOx emission users and invited papers
[PB81-236119] N82-14685
Proceedings of the Joint Symposium on Stationary Combustion NOx control. Volume 3: Utility boiler NO sub x control by flue gas treatment
[PB81-236135] N82-14687
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 4: NOx control and environmental assessment of industrial process equipment, engines, and small stationary sources
[PB81-236143] N82-14688

POLLUTION MONITORING
High performance liquid chromatography/video fluorometry. Part 3: Applications
[AD-A105945] N82-14318
Application of remote sensing data on the continental shelf: Proceedings of an EAReL-ESA Symposium
[ESA-SP-167] N82-14553
Requirements in pollution monitoring and coastal management N82-14558
A recommended sensor package for the detection and tracking of oil spills N82-14563
Oil spills: Large scale monitoring by LANDSAT N82-14572
The operational oil pollution surveillance system being used in France: Forecasted future developments in consideration of the NATO/CCMS remote sensing pilot study conclusions N82-14573
Airborne remote sensing of the coastal zone N82-14577
Multitemporal calibration of LANDSAT images: A method for improving the marine phenomena recognition, with as example the Venice lagoon --- brightness/green/yellow feature space, image enhancement N82-14578
Use of Side Looking Airborne Radar (SLAR) for oil pollution monitoring in Norway N82-14588
The chemical characterization of pollutants in waste water from Volunteer Army Ammunition Plant
[AD-A105705] N82-14676

POLYESTERS
Liquid crystal block copolyesters. 2: Preparation and properties of block copolyesters containing cyclohexane and benzene rings
[AD-A105556] N82-14362

POLYETHYLENES
Lithium based anodes for solid state batteries
[AD-A105518] N82-14640

POLYMER CHEMISTRY
Mass spectrometric studies of the thermal decomposition of some Azido polymetric binders
[AD-A106090] N82-14361

POLYMER PHYSICS
Bulk charging and breakdown in electron-irradiated polymers N82-14216

Materials research at Stanford University N82-14957
[AD-A106108]

POLYMERIC FILMS
Polymeric microelectronics N82-14366
[AD-A105707]

POLYMERS
Modelling of polymer photodegradation for solar cell modules N82-14357
[NASA-CR-165041]
Modelling of polymer photodegradation for solar cell modules N82-14358
[NASA-CR-165040]
Field demonstration of the conventional steam drive process with ancillary materials N82-14522
[DE81-026849]
Field demonstration of the conventional steam drive process with ancillary materials N82-14523
[DE81-026962]

POLYNOMIALS
Software modeling studies executive summary N82-14822
[AD-A105810]

POLYURETHANE RESINS
Evaluation of cleaning procedures and bonding materials for TPX plastic N82-14367
[DE82-000048]

POPULATION THEORY
Influences on factorial accuracy: A Monte Carlo investigation N82-14874

POROUS MATERIALS
Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core N82-14090
[NASA-TP-1942]
Porous polymers as new sorptive materials N82-14369
[PML-1980-77]

PORPHYRINS
The electronic structure of porphyrins and metalloporphyrins N82-14329

PORTABLE EQUIPMENT
RICAR: Portable test equipment for the integration of the ISOPROBRE experiment on board the ARCAD 3 satellite N82-14279
[CRPE-1078]
Automated transportable mass spectrometer N82-14496
[DE82-000903]

POSITION (LOCATION)
On the accuracy of radio location in media with indirect wave propagation N82-14436
[DFVLR-FB-81-02]
Regional phase processors N82-14696
[AD-A105470]
Variability of acoustic transmissions in a shallow water area N82-14882
[AD-A103276]

POSITIONING
Station acquisition and stationkeeping with low thrust systems N82-14142

POSITIVE IONS
The Copernic experiment to measure three dimensional electron distribution and the composition of thermal positive ions including water clusters near Halley's Comet N82-14112

POSITRON ANNIHILATION
Studies of vacancy: Type defects in metals --- positron annihilation technique N82-14936

POSITRONS
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment N82-14801
[DE81-030168]

POSTFLIGHT ANALYSIS
Performance of the Orbital Test Satellite (OTS) during its third year of operation in orbit N82-14174
ROLM computers in the flight testing of the Fokker F29 aircraft N82-14839

POSTLAUNCH REPORTS
Mission operation report: Voyager mission success assessment N82-14204
[NASA-TM-84062]

POTENTIAL FLOW
Experimental investigation of a transonic potential flow around a symmetric airfoil N82-14057
[NASA-TM-76676]
Time linearized calculation of two dimensional unsteady transonic potential flow at small disturbances N82-14070
[DFVLR-FB-81-01]
Mode propagation in nonuniform circular ducts with potential flow N82-14881
[NASA-TM-82776]

POTENTIOMETRIC ANALYSIS
Potentiometric stripping as a detector for flow injection analysis of metal ions N82-14304
Quantitative determination of fluorine in steel-making slags by the ion selective electrode N82-14331
[DRIC-T-6448]

POTTING COMPOUNDS
Modelling of polymer photodegradation for solar cell modules N82-14357
[NASA-CR-165041]

POWDER (PARTICLES)
Aerosil for the improvement of the flow behavior of powdered substances N82-14283
[NASA-TM-76643]
Effect of the powder characteristics of Sisub3Nsub4 on the microstructure of sintered bodies N82-14332
[NASA-TM-76619]

POWER AMPLIFIERS
Manufacturing technology study on radio frequency power modules packaging techniques N82-14426
[AD-A105692]

POWER CONDITIONING
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 1: Technical report N82-14447
[NASA-CR-165538]
Satellite power system: Concept development and evaluation program. Volume 4: Energy conversion and power management N82-14634
[NASA-TM-58237-VOL-4]

POWER EFFICIENCY
Comparative analyses of space-to-space central power stations N82-14202
[NASA-TP-1955]

POWER GAIN
Plasma conditions required for attainment of maximum gain in resonantly photo-pumped Al 12 and Ne 9 N82-14925
[AD-A105779]

POWER LINES
High voltage testing N82-14641
[AD-A106029]

POWERED MODELS
Wind tunnel tests of engine-equipped models: Comparison of two jet wash simulation methods N82-14091
[NASA-TM-76764]

PREAMPLIFIERS
Monolithic microwave preamplifier N82-14449
[AD-A104657]

PRECIPITATION (CHEMISTRY)
Calcium carbonate precipitation as influenced by stream primary production N82-14623
[PB81-231946]

PRECIPITATION (METEOROLOGY)
A simulation study of the recession coefficient for antecedent precipitation index --- soil moisture and water runoff estimation N82-14549
[NASA-TM-83860]
The effect of spatial variability in precipitation on streamflow N82-14589
[AD-A105955]
Pasco basin hydrometeorological study --- site selection for underground radioactive waste disposal N82-14598
[DE82-000283]
Short range prediction of precipitation N82-14743
Combining satellite and radar data for the short range forecasting of precipitation N82-14745
Combined use of radar with mesoscale surface network for very short range prediction of precipitation N82-14747
Use of precipitation measurements by radar in short range forecasting of precipitation N82-14750
Impact of data and initialization procedures on variations of vertical motion and precipitation in mesoscale models N82-14755
The initialization of a mesoscale weather prediction model using satellite and precipitation data N82-14756
The effect of precipitation on microwave soundings in low latitudes N82-14787
[PB81-225062]
Variability of seasonal precipitation over the conterminous United States, 1948-1976 --- circulation anomalies related to precipitation extremes N82-14788

PRECIPITATION HARDENING
Alloy development for cladding and duct applications --- breeder reactor materials N82-14339
[DE81-027843]

PRECIPITATION PARTICLE MEASUREMENT
Cost 72: European weather radar project N82-14765

PREDICTION ANALYSIS TECHNIQUES
Evaluation of USSAERO and HABP computer codes for aerodynamic predictions for slender bodies N82-14064
[AD-A106065]
An analytical singularity-free orbit predictor for near-Earth satellites N82-14154
Failure prediction in glass N82-14364
[AD-A105857]
Homogenization method for reinforced plate buckling prediction N82-14392
Generalized algebraic relation for predicting developing curved channel flow with a k-epsilon model of turbulence N82-14486
[DE81-028131]
Projecting regional potentials for cost-effective energy conservation and renewable resource applications: A feasibility study N82-14645
[DOE/CS-10045/T3]
Gravity waves on water with non-uniform depth and current N82-14692
A tutorial on the CARE III approach to reliability modeling --- of fault tolerant avionics and control systems N82-14806
[NASA-CR-3488]
Prediction of flyover jet noise spectra from static tests N82-14880
[NASA-TM-83219]

PREFLIGHT ANALYSIS
ROLM computers in the flight testing of the Fokker F29 aircraft N82-14839

PREMIXED FLAMES
A study of the mechanism of lean limit flammability N82-14319
[AD-A105952]

PRESSURE DISTRIBUTION
Pressure distributions and shock shapes for 12.84 deg/7 deg on-axis and bent-nose biconics in air at Mach 6 N82-14054
[NASA-TM-83222]
Heat-transfer and pressure tests on an oblate elliptic nosetip in the NSWC/WO hypersonic tunnel at Mach Number 5 (STR-1346) N82-14482
[AD-A106058]

PRESSURE EFFECTS
Comparison of viscous and pressure energy exchange in fluid flow induction N82-14481
[AD-A105808]

PRESSURE MEASUREMENTS
Determination of the transition point in a boundary layer by the measurement of pressure fluctuation N82-14475
[NASA-TM-76639]

PRESSURE REDUCTION
Optimization of compressor vane and bleed settings N82-14097
[AD-A106059]

PRESSURE VESSELS
Mechanisms of elevated-temperature in single phase ceramics N82-14368
[DE82-000691]

PRESTRESSING
Modal analysis of structures with prestress effects: Application to flexible solar generators N82-14067
[CNES-81/CT/PRT/SST/SM/176]

PRETREATMENT
Preparation of sinter active silicon carbide powders N82-14302
[BMFT-FB-T-81-038]

PRINTED CIRCUITS
Characterization and comparison of thermistor thick films N82-14459
[DE82-000631]
Electronic image analysis --- system development N82-14464
[BMFT-FB-T-80-126]

PRISMS
A polarizer for vacuum ultraviolet N82-14916

PROBABILITY THEORY
The application of probabilistic design theory to high temperature low cycle fatigue N82-14531
[NASA-CR-165488]
Dynamic safety analysis --- first-passage probabilities for linear elastic structures subjected to random base accelerators N82-14546
Compact covariance operators N82-14851
[AD-A105658]
Reliability vs. diagnosticity in hierarchical inference N82-14956
[AD-A105628]

PROBLEM SOLVING
Linear programming and suboptimal solutions of dynamical systems control problems N82-14146
Quality control for mission-critical flight dynamic operations N82-14158
Global geometry techniques for mission analysis N82-14159
Computer program for solving an inverse problem with one variable. Part 2: User manual
[CRPE-NT-81-VOL-2] N82-14826
Research in partial differential equations and applications
[AD-A105859] N82-14853
Research in the comprehension of engineering lectures by non-native speakers N82-14979

PROCESS CONTROL (INDUSTRY)
Design of a control system for the optimum heating of batch reactors
[MS-1296] N82-14387
Proceedings of the Joint Symposium on Stationary Combustion NOx Control. Volume 4: NOx control and environmental assessment of industrial process equipment, engines, and small stationary sources
[PB81-236143] N82-14686

PROCESS HEAT
Fuels and chemicals made from solar energy
[DE81-025018] N82-14384

PRODUCT DEVELOPMENT
Advanced technology lightweight gondola system experimental fabrication program
[AD-A104157] N82-14082
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, crucible pulling of Ga As crystals
[BMFT-FB-T-81-022] N82-14949

PRODUCTION ENGINEERING
Development of new production technologies for optical components with spherical surfaces --- precision optics
[BMFT-FB-T-81-032] N82-14402
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026849] N82-14522
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026962] N82-14523
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Production of gallium phosphide crystals
[BMFT-FB-T-81-021] N82-14948

PROGRAM VERIFICATION (COMPUTERS)
Experimental validation of a numerical model predicting the charging characteristics of Teflon and Kapton under electron beam irradiation N82-14218

PROGRAMMING LANGUAGES
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection
[DE82-000507] N82-14799
Software modeling studies experimental study of a two dimensional language versus FORTRAN for first-course programmers, volume 3
[AD-A106034] N82-14824
The design, specification, and implementation of OBJ-T: A language for writing and testing abstract algebraic program specifications N82-14827

PROJECT PLANNING
Analysis of the energy impacts of the DOE Appropriate Energy Technology Small Grants Program: Method and results
[DE81-029844] N82-14651

PROJECTILES
Trajectory predictions for a 75 mm solid fuel ramjet tubular projectile
[AD-A105551] N82-14207
Measurement problems in high velocity impact experiments
[AD-A105550] N82-14521

PROPAGATION MODES
Mode propagation in nonuniform circular ducts with potential flow
[NASA-TM-82776] N82-14881

PROPAGATION VELOCITY
Shock front rise time in water
[AD-A105704] N82-14479

PROPANE
A study of the mechanism of lean limit flammability
[AD-A105952] N82-14319

PROPELLER BLADES
Optimization and performance calculation of dual-rotation propellers
[NASA-TP-1948] N82-14049

PROTECTIVE COATINGS
Thermal and aerothermal performance of a titanium multiwall thermal protection system
[NASA-TP-1961] N82-14277
Vapor deposition tests with NiCoCrAlY alloys: First results for the mechanical high temperature characteristics of the coated superalloy IN 738 LC N82-14292
Oxidation behavior of directionally solidified eutectic composites as prototypes for the development of protective layers N82-14295
Corrosion and high temperature resistant coatings for molybdenum, made out of iron and nickel alloys and applied by explosive welding --- Inconel 601 coatings
[T-15/80] N82-14351

PROTECTORS
On the design of an acoustically isolating bubble screen for the Carr Inlet acoustic range
[AD-A105830] N82-14683

PROTON DENSITY (CONCENTRATION)
Disappearance and reappearance of particles of energies 50 keV as seen by P78-2 (SCATHA) near geosynchronous orbit N82-14261

PROTON ENERGY
Neutron production by protons (190 to 268 MeV) in a water-cooled tantalum target
[DE81-030628] N82-14378

PSYCHIATRY
Clinical report writing: Process and perspective N82-14972

PSYCHOLOGICAL EFFECTS
Effects of aircraft noise on the equilibrium of airport residents: Supplementary analyses to the study carried out around Orly
[NASA-TM-76627] N82-14673

PSYCHOLOGY
Clinical report writing: Process and perspective N82-14972

PUBLIC HEALTH
Environmental assessment and industrial cogeneration demonstration plant at the Hoffmann-La Roche Plant Site, Belvidere, New Jersey
[DE81-030180] N82-14681

PUBLIC LAW
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670

PULMONARY FUNCTIONS
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests
[AD-A103766] N82-14797
Evaluation of short-term bioassays to predict functional impairment. Development of plumonary bioassays in small animals: Directory of Institutions; individuals involved in utilization
[AD-A103767] N82-14798
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection
[DE82-000507] N82-14799

PULSE COMMUNICATION
Results and conclusions of the 60 Mbit/sec digital transmission tests --- OTS N82-14185
Results and conclusions of the 120 and 180 Mbit/sec digital transmission tests --- OTS N82-14186
Possibility of a new approach to processing space pulse radio signals
[NASA-TM-76748] N82-14412

PULSE GENERATORS
Pulsed Power Research colloquium
[AD-A105770] N82-14638

PULSE MODULATION
Inclination control using a pulse mode axial thruster N82-14166

PULSED JET ENGINES
A study of test techniques for evaluating ablative plasma engines in vacuum test cells
[AD-A105875] N82-14282

PULSED LASERS
Laser tool: Pulsed solid state laser for welding and ablation of material
[BMFT-FB-T-81-043] N82-14516

PUMPS
Test of a cryogenic helium pump --- for a superconducting magnet system
[DE81-026629] N82-14401

PYRIDINES
Determination of pyridine in modified JP-4 via High Performance Liquid Chromatography (HPLC)
[AD-A105589] N82-14313

PYROELECTRICITY
Pyroelectricity and charge transport in a copolymer of vinylidene fluoride and tetrafluroethylene
[AD-A105790] N82-14365

PYROLYSIS
Preparation of sinter active silicon carbide powders
[BMFT-FB-T-81-038] N82-14302
Kinetics studies on the nucleation and growth of silicon via chemical vapour deposition N82-14939

Q

QUADRATIC EQUATIONS
Linear and geometric nonlinear analysis of shells by an isoparametric three dimensional degenerated element
[REPT-140] N82-14862

QUALITY CONTROL
Quality control for mission-critical flight dynamic operations N82-14158
Computer program design: Methodology, reliability, and quality control
[CNES-NT-98] N82-14526

QUANTITATIVE ANALYSIS
Simplified Navier-Stokes equations and their mathematical properties N82-14062
Determination of pyridine in modified JP-4 via High Performance Liquid Chromatography (HPLC)
[AD-A105589] N82-14313

QUANTUM CHROMODYNAMICS
Phenomenological applications of perturbative quantum chromodynamics N82-14954

QUANTUM MECHANICS
Neutrino, Maxwell and scalar fields in cylindrical and spherical relativistic spaces N82-14894

QUANTUM THEORY
Calculational aspects of quantum gravity N82-14952

QUARKS
Phenomenological applications of perturbative quantum chromodynamics N82-14954

QUARTZ CRYSTALS
Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247
Modeling the influence of static acceleration on surface wave (quartz) oscillators
[ONERA-NT-1981-3] N82-14470

QUARTZ TRANSDUCERS
Evaluation of the performance characteristics of BVA resonators under static and dynamic conditions
[AD-A105064] N82-14448

QUENCHING (COOLING)
A study of the mechanism of lean limit flammability
[AD-A105952] N82-14319
Performance of an internally cooled superconducting solenoid
[DE81-028058] N82-14460

QUEUEING THEORY
Exact and approximation algorithms for a scheduling problem
[AD-A105881] N82-14859

R

RADAR ATTENUATION
Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14546
The effect of multiburst: NO production on electron densities and HF attenuation at 60 KM altitude
[AD-A105876] N82-14701

RADAR BEACONS
Radar correlation with ice depolarization measurements of the 28.56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14548

RADAR BEAMS
Results of tests on the satellite spotbeam antenna --- OTS N82-14182

RADAR CROSS SECTIONS
Measurements of radar backscatter from Arctic Sea ice in the summer
[AD-A105586] N82-14592

RADAR DETECTION
Terrain masking analysis for White Sands Missile Range East Center 50 and West Center 50
[AD-A105806] N82-14201

RADAR ECHOES
Measurements of radar backscatter from Arctic Sea ice in the summer
[AD-A105586] N82-14592

RADAR EQUIPMENT
Manufacturing technology study on radio frequency power modules packaging techniques
[AD-A105892] N82-14426

RADAR IMAGERY
A preliminary evaluation of Seasat performance over the area of JASIN and its relevance to ERS-
N82- 4567

RADAR NETWORKS
A total system approach to a weather radar network N82-14735
Objective rainfall forecasting using data from the United Kingdom weather radar network N82-14748
Cost 72: European weather radar project
N82-14765
The Swiss network of 2 digital radars and 60 automatic weather stations N82-14766
A system for the combined use of data from multiple radars and satellites in the United Kingdom
N82-14767
The mesoscale observational network in Japan
N82-14769

RADAR REFLECTORS
Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977
[PHL-1980-28-PT-2] N82-14616

RADAR SCATTERING
Project Noordwijk. Part 1: Measurements of the radar backscatter coefficient gamma (sigma deg) in 1977 and 1978 --- on a sea platform
[PHL-1979-49-PT-1] N82-14617

RADAR SIGNATURES
Measurements of radar backscatter from Arctic Sea ice in the summer. Appendices A and B
[AD-A105736] N82-14593

RADAR TRACKING
The operational oil pollution surveillance system being used in France: Forecasted future developments in consideration of the NATO/CCMS remote sensing pilot study conclusions N82-14573

RADAR TRANSMITTERS
A transmitting solid state linear phased array antenna for C band
[PHL-1980-10] N82-14437

RADIANCE
Infrared radiance model variation by sensor flight measurements N82-14171

RADIATION ABSORPTION
Radiation loss from a curved dielectric channel waveguide in a dense substrate
[AD-A105928] N82-14425

RADIATION COUNTERS
An energetic particle detector for Giotto and its scientific objectives N82-14113
Performance of a large hyperpure germanium detector array for in-vivo detection of low-energy photon and X-ray emitters: Analytical procedure and current capabilities
[DE82-000443] N82-14497

RADIATION DETECTORS
Performance of a large hyperpure germanium detector array for in-vivo detection of low-energy photon and X-ray emitters: Analytical procedure and current capabilities
[DE82-000443] N82-14497

RADIATION DISTRIBUTION
The discovery of 50 minute periodic absorption events from 4U1915-05
[NASA-TM-83839] N82-15001

RADIATION DOSAGE
Electron penetration of spacecraft thermal insulation N82-14220
INTDOS: A computer code for estimating internal radiation dose using recommendations of the International Commission on Radiological Protection
[DE82-000507] N82-14799

RADIATION EFFECTS
Influence of neutron irradiation at 55 deg C on the properties of austenitic stainless steels
[DE81-028065] N82-14342
Effects of pulsed dual-ion irradiation of microstructural development --- in austenitic stainless steels
[DE81-028631] N82-14343
Repair of radiation damage in mammalian cells
[DE81-030824] N82-14800
Field-ion-microscope observations of radiation effects
[DE81-030934] N82-14802
Evaluation of fiber optics for in-line photometry in hostile environments
[DE81-028139] N82-14922
Ion-implantation effects in glasses
[DE81-027208] N82-14947

RADIATION HAZARDS
Comparison of potential radiological consequences from a spent-fuel repository versus natural-uranium deposits
[DE81-028232] N82-14910

RADIATION PRESSURE
Modeling of orbital perturbations due to radiation pressure for high Earth satellites N82-14128

RADIO ALTIMETERS
State-of-the-art in using a spaceborne altimeter and scatterometer for the determination of wind, sea state, and marine and ice dynamics --- Seasat instruments
N82-14560

RADIO ANTENNAS
The measurement of Earth station performances and its impact on future design --- antenna gain and satellite control N82-14194

RADIO ATTENUATION
Attenuation statistics obtained with OTS
N82-14177

RADIO BEACONS
Correlating OTS beacon measurements with radiometer and rainfall data N82-14179
Results and conclusions of RF performance tests made by ESA --- OTS N82-14184

RADIO EQUIPMENT
Modular Multi-Function Multi-Band Airborne Radio System (MFBARS). Volume 1: Executive summary
[AD-A106057] N82-14423
Modular Multi-Function Multi-Band Airborne Radio System (MFBARS). Volume 2: Detailed report
[AD-A106052] N82-14424

RADIO FREQUENCIES
Manufacturing technology study on radio frequency power modules packaging techniques
[AD-A105892] N82-14426

RADIO FREQUENCY DISCHARGE
Study of a discharge caused by a surface wave --- microwave discharge plasmas
[LP-190] N82-14937

RADIO FREQUENCY HEATING
The transverse Rf accelerator
[AD-A105896] N82-14457

RADIO FREQUENCY IMPEDANCE PROBES
Experimental study of instabilities and motion of a streaming ionospheric plasma in the polar zone --- interpretation of Ionospheric Polar Campaign rocket sounding results
[CRPE-NT-78] N82-14710

RADIO NAVIGATION
Design studies for a technology assessment receiver for global positioning system
[NASA-CR-165046] N82-14074

RADIO RECEIVERS
Design studies for a technology assessment receiver for global positioning system
[NASA-CR-165046] N82-14074
A prototype interface unit for microprocessor based Loran-C receiver
[NASA-CR-164887] N82-14078
Fish RAGU (Fish, Radio-Receiving and Generally Useful)
[AD-A105505] N82-14411

RADIO SIGNALS
Possibility of a new approach to processing space pulse radio signals
[NASA-TM-76748] N82-14412

RADIO TRANSMISSION
On the accuracy of radio location in media with indirect wave propagation
[DFVLR-FB-81-02] N82-14438
Anti-jam analysis of frequency hopping M-ary frequency shift keying communication systems in high frequency Rayleigh fading channels N82-14441

RADIOACTIVE CONTAMINANTS
Radiological and environmental research 1980: Ecology
[DE82-000154] N82-14678

RADIOACTIVE DECAY
Nuclear structure from radioactive decay
[DE82-000423] N82-14899

RADIOACTIVE ISOTOPES
Nuclear structure from radioactive decay
[DE82-000423] N82-14899
Effect of organic complexants on the mobility of low-level waste radionuclides in soils: Status report
[DE81-030409] N82-14901
Application of a site-binding, electrical, double-layer model to nuclear waste disposal
[DE81-030231] N82-14908

RADIOACTIVE WASTES
Dealing with regional hydrologic data-base limitations. Case example: The Columbia River basalts --- hydrology models and site selection for radioactive waste storage
[DE81-030086] N82-14609
Beneficial uses of nuclear waste program sewage-sludge irradiation project
[DE82-000440] N82-14677
Assessment of effectiveness of geologic isolation systems: The AEGIS geologic simulation model
[DE81-028007] N82-14704
Effect of organic complexants on the mobility of low-level waste radionuclides in soils: Status report
[DE81-030409] N82-14901
Characterization of materials for waste-canister compatibility studies
[DE82-000902] N82-14907
Application of a site-binding, electrical, double-layer model to nuclear waste disposal
[DE81-030231] N82-14908
Behavior of radioactive iodine and technetium in the spray calcination of high-level waste
[DE81-028405] N82-14909
Comparison of potential radiological consequences from a spent-fuel repository versus natural-uranium deposits
[DE81-028232] N82-14910

RADIOACTIVITY
Evaluation of fiber optics for in-line photometry in hostile environments
[DE81-028139] N82-14922

RADIOLOGY
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment
[DE81-030168] N82-14801

RADIOMETERS
A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492
Analysis and calculation of special system aspects for the conical scan radiometer (phase A)
[BMFT-FB-W-81-003] N82-14505

RADOMES
Determination of airloads on certain airport towers due to addition of radomes
[AD-A105854] N82-14397

RAILS
Rail roughness study of the Holloman high speed rocket sled test track
[AD-A105778] N82-14105

RAIN
Correlating OTS beacon measurements with radiometer and rainfall data N82-14179
Radar correlation with ice depolarization measurements of the 28.56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14548
Scientific studies using Bhaskara satellite microwave radiometer (SAMIR) data: A short overview --- calibration of the instrument and its use in the study of oceanographic parameters N82-14587

Analysis of rainfall from flash flood producing thunderstorms, using GOES data N82-14724

A total system approach to a weather radar network N82-14735

Objective rainfall forecasting using data from the United Kingdom weather radar network N82-14748

The use of climatological and synoptic data for forecasting orographic enhancement of rainfall N82-14749

A mesoscale forecast for 25 August 1975: The Hampstead storm N82-14752

RAINSTORMS

Infrared parameters for nowcasting severe rainstorms N82-14725

RAMAN SPECTRA

Investigation of the CARS spectrum of water vapor [AD-A105235] N82-14311

RAMAN SPECTROSCOPY

Application of resonance Raman spectrometry in high performance liquid chromatography [DRIC-T-6367] N82-14305

Investigation of the CARS spectrum of water vapor [AD-A105235] N82-14311

RAMJET ENGINES

Combustion behavior of solid fuel ramjets. Volume 1: Correlation of reacting and non-reacting flow characteristics [AD-A106081] N82-14316

RANDOM NOISE

Wave structure detection through two-dimensional filtering [AD-A105554] N82-14885

RANDOM SAMPLING

A simplified approach to spectrum estimation of stochastic processes N82-14871

RANDOM VARIABLES

The second representing function for compound situations [AD-A105860] N82-14870

RAPID TRANSIT SYSTEMS

Systems operation studies for automated guideway transit systems. Feeder systems model functional specification [PB81-233496] N82-14990

Systems operation studies for automated guideway transit systems: System Availability model user's manual [PB81-233504] N82-14991

Systems operation studies for automated guideway transit systems. Availability model functional specification [PB81-233512] N82-14992

Systems Operation Studies for Automated Guideway Transit systems. System availability model programmer's manual [PB81-233520] N82-14993

Systems operation studies for automated guideway transit systems. Detailed station model functional specification [PB81-233538] N82-14994

RARE EARTH COMPOUNDS

Preparation, thermal properties, solid solution formation and some luminescence properties of rare Earth oxysulfides [ISBN-951-751-949-4] N82-14443

RARE EARTH ELEMENTS

Effect of organic complexants on the mobility of low-level waste radionuclides in soils: Status report [DE81-030409] N82-14901

RARE GASES

Investigation of plasma excitation. Volume 1: Electron impact studies of selected ground state and excited state rare gas atoms [AD-A105494] N82-14927

REACTION KINETICS

Electrochemical aspects of stress-corrosion cracking in alpha-brass [DE81-022078] N82-14345

PMP 80 automatic photometer --- for enzyme activity determination [BMFT-FB-T-81-051] N82-14504

Temperature dependence of O2 (1 Delta) + O2 (1 Delta) and I (2P sub 1/2) + O2 (1 Delta) energy pooling [AD-A105817] N82-14507

Salt release from suspended sediments: A simulated model [PB81-231839] N82-14624

REACTIVITY

Reactivity of pyrylium salts toward basic reactants [NASA-TM-76675] N82-14310

REACTOR MATERIALS

Alloy development for cladding and duct applications --- breeder reactor materials [DE81-027643] N82-14339

Effects of pulsed dual-ion irradiation of microstructural development --- in austenitic stainless steels [DE81-028631] N82-14343

REAL TIME OPERATION

Design and implementation of a telecommunication interface for the TAATM/TCV real-time experiment [NASA-TM-83231] N82-14075

Promis-90: Future Swedish weather service system N82-14771

System performance analyzer N82-14832

Software error detection N82-14835

ARTS BETA testing report N82-14836

Real time software tools and methodologies N82-14837

Use of software tools in the development of real time software systems N82-14838

ROLM computers in the flight testing of the Fokker F29 aircraft N82-14839

RECTANGULAR GUIDES

On the calculation of the H-plane stepped joint of rectangular waveguides N82-14421

RECTANGULAR PANELS

Coupled flexural torsional vibration of an eccentrically stretched strip [AE-TN-8131] N82-14528

RECTANGULAR PLANFORMS

An empirical method for estimating the effect of ground proximity on the jet-induced lift of V/STOL aircraft employing rectangular jets [AD-A105668] N82-14067

RECTANGULAR PLATES

A user's manual for: Electromagnetic Surface Patch code (ESP) [AD-A105954] N82-14428

RECURSIVE FUNCTIONS

Software modeling studies executive summary [AD-A105810] N82-14822

REDUNDANCY ENCODING

The use of OTS in the COST 211 project --- European cooperation in the field of scientific and technical research (COST) N82-14198

Floating-point on-line arithmetic for highly concurrent digit-serial computation: Application to mesh problems N82-14863

REDUNDANT COMPONENTS

Description of a dual fail operational redundant strapdown inertial measurement unit for integrated avionics systems research N82-14842

REENTRY TRAJECTORIES

Skylab decay follow-up N82-14167

REFLECTANCE

Oil spills: Large scale monitoring by LANDSAT N82-14572

On the design of an acoustically isolating bubble screen for the Carr Inlet acoustic range [AD-A105830] N82-14883

REFLECTION

Transformation and reflection of vortex rings impinging on a plate inclined with respect to their translation direction [MPIS-12/1980] N82-14488

REFRACTORY METAL ALLOYS

Corrosion and high temperature resistant coatings for molybdenum, made out of iron and nickel alloys and applied by explosive welding --- Inconel 601 coatings [T-15/80] N82-14351

REFRIGERANTS

Helium 2 cooling systems for long term missions in space: phase separation and hybrid cooling systems N82-14403

REFRIGERATING

Cycle design for a cryogenic refrigeration system for FED with forced-flow superfluid helium through internally cooled conductors [DE82-000446] N82-14400

REGIONAL PLANNING

Projecting regional potentials for cost-effective energy conservation and renewable resource applications: A feasibility study [DOE/CS-10045/T3] N82-14645

Environmental assessment and industrial cogeneration demonstration plant at the Hoffmann-La Roche Plant Site, Belvidere, New Jersey [DE81-030180] N82-14681

REGRESSION ANALYSIS

Bayesian forecasting for switching regression and autoregressive processes N82-14873

REGULATIONS

Hazardous waste sites pose investigation, evaluation, scientific, and legal problems [CED-81-57] N82-14671

Millions wasted trying to develop major energy information system [AFMD-81-40] N82-14959

REINFORCED PLASTICS

Low-cost forming influence on reinforced thermoplastic mechanical properties [AD-A106004] N82-14360

REINFORCED PLATES

Homogenization method for reinforced plate buckling prediction N82-14392

REINFORCEMENT (STRUCTURES)

Optimization of reinforcement for a class of openings in plate structures [AD-A105718] N82-14857

REINFORCING FIBERS

Oxidation behavior of directionally solidified eutectic composites as prototypes for the development of protective layers N82-14295

RELATIVISTIC ELECTRON BEAMS

Cerenkov radiation produced by 100 Mev electrons [AD-A105884] N82-14896

Electromagnetic effects on the formation of potential wells for ion acceleration [DE81-028240] N82-14911

RELAXATION (MECHANICS)

Mechanical relaxation response of 2 1/4 Cr-1 Mo steel [DE81-027301] N82-14344

Relaxation effects in shock-induced transitions in bismuth [DE81-028728] N82-14946

RELIABILITY

Reliability vs. diagnosticity in hierarchical inference [AD-A105628] N82-14956

RELIABILITY ANALYSIS

Reliability study of opto-coupled semiconductor devices and Light Emitting Diodes (LED) [NASA-CR-161923] N82-14444

Evaluation of French hybrid microelectronics [CNES-NT-97] N82-14469

Photovoltaic systems performance experience [DE81-025725] N82-14656

A tutorial on the CARE III approach to reliability modeling --- of fault tolerant avionics and control systems [NASA-CR-3488] N82-14806

Computer aided design and reliability of a general LSI logic structure for custom VLSI N82-14815

REMOTE MANIPULATOR SYSTEM

Computer program to support remote manipulator system flight planning analysis N82-14820

REMOTE SENSING

Orbit and attitude determination for Bhaskara N82-14157

Study of a combined satellite system for remote sensipg and earth-oriented research (LOCSS) --- ESA satellite [BMFT-FB-W-81-002] N82-14615

Remote Sensing Information Bulletin; Issue number 6 N82-14616

Remote sensing of non-point source sediment in Northern Maine [PB81-233603] N82-14683

The capabilities of VHF radar for meteorological observations N82-14736

Remote sensing of sea state by laser altimeters [NASA-CR-165049] N82-14789

REMOTE SENSORS

Attitude measurement: Principles and sensors [NASA-TM-76647] N82-14278

Ground based remote sensing for meteorological nowcasting N82-14737

REMOTELY PILOTED VEHICLES

A true air speed sensor for miniature unmanned aircraft [RAE-TM-SPACE-287] N82-14086

REPORTS
Marketing information: The technical report as product N82-14964
Clinical report writing: Process and perspective N82-14972

REQUIREMENTS
A functional technique for decomposing the complexity of requirements analysis
[AD-A105517] N82-14876

RESCUE OPERATIONS
Software for the rescue of nonnominal missions N82-14151

RESEARCH
Scientific and technical research activities report in industrial fabrication N82-14404
Aerospace research activities N82-14958
Research activities report in advanced technology — engineering sciences N82-14988

RESEARCH AND DEVELOPMENT
Directions for future research and development in multicomputer systems
[BMFT-FB-DV-81-003] N82-14813
The changing tide: Federal support of civilian-sector R and D
[NASA-CR-165048] N82-14985
Technical change in US industry: A cross-industry analysis
[NASA-CR-165047] N82-14986

RESEARCH MANAGEMENT
Pulsed Power Research colloquium
[AD-A105770] N82-14638
New starts in research and development, 1982 N82-14834

RESIDENTIAL ENERGY
Coal-oil mixtures: An alternative fuel for the commercial markets and large residential markets
[DE81-028335] N82-14379
Biomass energy utilization in the Pacific Northwest: Impacts associated with residential use of solid fuels
[DE81-029137] N82-14383
Residential site design and energy conservation. Part 1: General report
[DE81-904010] N82-14398
Design of an energy conservation building
[NASA-TM-83175] N82-14632
Solar Photovoltaic Residential Project. Project Integration Meeting, Agenda and Abstracts
[DE81-028433] N82-14657
Potential energy savings in the residential sector of the United States
[DE81-028873] N82-14662
Solar radiation as a sole source of energy for photovoltaics in Las Vegas, Nevada, for July and December
[PB81-224503] N82-14669
Daylighting calculations for nonrectangular interior spaces with shading devices
[DE81-027962] N82-14705

RESIDUES
High performance liquid chromatography/video fluorometry. Part 3: Applications
[AD-A105945] N82-14318

RESISTANCE THERMOMETERS
Comparison of thin-film resistance heat-transfer gages with thin-skin transient calorimeter gages in conventional hypersonic wind tunnels
[NASA-TM-83197] N82-14474

RESONANCE
Representation of the neutron cross sections of several fertile and fissile nuclei in the response regions
[DE82-000504] N82-14905

RESONANT FREQUENCIES
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534
Interior and exterior resonances in acoustic scattering. 1: Spherical targets. 2: Targets of arbitrary shape (T-matrix approach)
[AD-A105534] N82-14686

RESONANT VIBRATION
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

RESONATORS
Evaluation of the performance characteristics of BVA resonators under static and dynamic conditions
[AD-A105064] N82-14448
Cerenkov radiation produced by 100 Mev electrons
[AD-A105864] N82-14896

RESOURCES MANAGEMENT
Application of remote sensing data on the continental shelf: Proceedings of an EARseL-ESA Symposium
[ESA-SP-167] N82-14553
Fisheries investigations and management benefits from remote sensing — fish tracking N82-14559

RESPIRATION
Carcinogenic effects of coal-conversion materials
[DE81-028108] N82-14803

RESPIRATORY SYSTEM
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests
[AD-A103766] N82-14797

REVERBERATION
A scattering function approach to underwater acoustic detection and signal design
[AD-A105593] N82-14889

REYNOLDS NUMBER
Low Reynolds number airfoil survey, volume 1
[NASA-CR-165803-VOL-1] N82-14059
High Reynolds Number Cylinder Flow Workshop
[AD-A105088] N82-14477

REYNOLDS STRESS
Generalized algebraic relation for predicting developing curved channel flow with a k-epsilon model of turbulence
[DE81-028131] N82-14486

RIDGES
The effect of the Mid-Atlantic Ridge on long range sound propagation
[AD-A105747] N82-14890

RIVERS
Algal assay studies of the Chowan River, North Carolina
[PB81-231821] N82-14621
Calcium carbonate precipitation as influenced by stream primary production
[PB81-231946] N82-14623

ROADS
Relating pavement distress to serviceability and performance
[PB81-227852] N82-14410

ROADWAY POWERED VEHICLES
Future of electricity for automobiles: Advanced electric vehicle concepts
[DE81-028235] N82-14987

ROASTING
Behavior of radioactive iodine and technetium in the spray calcination of high-level waste
[DE81-028405] N82-14909

ROBOTS
Initiation into the utilization of programmable industrial robots: Grafcet — graphic engineering language N82-14805

ROBUSTNESS (MATHEMATICS)
Assessing the behavior of robust estimates of location in small samples: Introduction to configural polysampling
[AD-A105956] N82-14869

ROCKET EXHAUST
Application of a Gaussian multilayer diffusion model to characterize dispersion of vertical HCl column density in rocket exhaust clouds
[NASA-TP-1956] N82-14672

ROCKET FIRING
Optimization of Apogee Kick Motor (AKM) firing attitude N82-14164

ROCKET NOSE CONES
Pressure distributions and shock shapes for 12.84 deg/7 deg on-axis and bent-nose biconics in air at Mach 6
[NASA-TM-83222] N82-14054

ROCKET PROPELLED SLEDS
Rail roughness study of the Holloman high speed rocket sled test track
[AD-A105778] N82-14105

ROCKET THRUST
Thrustor performance modeling and parameters estimation N82-14172

RODS
A theory of laminated composite plates and rods
[AD-A105591] N82-14297

ROOFS
Determination of airloads on certain airport towers due to addition of radomes
[AD-A105854] N82-14397

ROTARY WINGS
A flight investigation of blade-section aerodynamics for a helicopter main rotor having 10-64C airfoil sections
[NASA-TM-83226] N82-14058

ROTATING BODIES
Laser speckle doppler velocimeter technique applied to measure torsional vibrations of rotating surfaces N82-14545

ROTATING DISKS
Effects of suspended particles on the rate of mass transfer to a rotating disk electrode
[DE81-028002] N82-14485

ROTATING FLUIDS
Experimental investigation of the flow in a rotating circular channel
[MPIS-21/1980] N82-14490

ROTATION
On spin maneuvers with a symmetric satellite N82-14149

ROTOR AERODYNAMICS
A flight investigation of blade-section aerodynamics for a helicopter main rotor having 10-64C airfoil sections
[NASA-TM-83226] N82-14058

ROTOR BLADES (TURBOMACHINERY)
Aluminum blade development for the Mod-0A 200-kilowatt wind turbine
[NASA-TM-82594] N82-14633

ROUTES
An evaluation of Seasat-A data in relation to optimum track ship weather routing and site specific forecasting for the offshore oil industry N82-14564

RUBY LASERS
Dark-ground illumination: A quantitative diagnostic for plasma density
[DE82-000442] N82-14932

RUGGEDNESS
Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A105717] N82-14919

RUNWAY CONDITIONS
C-5A operational utility evaluation soil tests and analysis
[AD-A105555] N82-14083

RUNWAYS
Requirements for instrument approaches to triple parallel runways
[AD-A105622] N82-14079
Requirements for independent and dependent parallel instrument approaches at reduced runway spacing
[AD-A105673] N82-14080

S

S MATRIX THEORY
On the calculation of the H-plane stepped joint of rectangular waveguides N82-14421

S-N DIAGRAMS
The application of probabilistic design theory to high temperature low cycle fatigue
[NASA-CR-165488] N82-14531

SADDLE POINTS
Geometric data analysis: An interactive graphics program for shape comparison
[AD-A105858] N82-14823

SAFETY
Dynamic safety analysis — first-passage probabilities for linear elastic structures subjected to random base accelerators N82-14546

SAFETY FACTORS
Environmental assessment and industrial cogeneration demonstration plant at the Hoffmann-La Roche Plant Site, Belvidere, New Jersey
[DE81-030180] N82-14681

SAFETY MANAGEMENT
Fire-protection research for energy technology: Fy 80 year end report
[DE82-000970] N82-14649

SAGE SATELLITE
Stratospheric aerosols
[NASA-TM-83217] N82-14691

SALINITY
Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites — aerial photography N82-14574

The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581

SALT BEDS

Analysis of data from line-source thermal-conductivity measurements taken in situ in dome salt at the Ivery Island mine
[DE82-000517] N82-14703

SAMPLING

Some advance thoughts on the data analysis involved in configural polysampling directed toward high performance estimates
[AD-A105906] N82-14866

Kinds of polyconfidence intervals for centers, and some thoughts on identification and selection of confidence procedures using configural polysampling
[AD-A105907] N82-14867

Some computational details of configural sampling methods
[AD-A105932] N82-14868

Assessing the behavior of robust estimates of location in small samples: Introduction to configural polysampling
[AD-A105956] N82-14869

SANDWICH STRUCTURES

Hand-operated honeycomb core expansion set-up
[AE-TN-810901] N82-14284

A theory of laminated composite plates and rods
[AD-A105591] N82-14297

SAPPHIRE

Anomalous dispersion of birefringence of sapphire and magnesium fluoride in the vacuum ultraviolet N82-14917

SATELLITE ANTENNAS

Platform performance factors affecting link budgets of geosynchronous communication satellites N82-14181

Results of tests on the satellite spotbeam antenna --- OTS N82-14182

Results and conclusions of RF performance tests made by ESA --- OTS N82-14184

SATELLITE ATTITUDE CONTROL

Operational loads induced by orbital control of a geostationary satellite --- organizing control networks N82-14131

The attitude control system of AMSAT P 3 satellites N82-14132

Geostationary satellites launched by NASA. Part 1: NASDA tracking and control system --- Nippon Aerospace Development Agency (NASOA) N82-14137

Future in ground base attitude support activities N82-14148

Aspects in measuring and correcting of satellite orbit N82-14155

Inclination control using a pulse mode axial thruster N82-14166

Operational compensation for effect of close Titan flyby on remainder of Voyager 1 Saturn near encounter --- photography N82-14168

ACS performance vertification for IRAS: Software engineering at the Operations Control Centre --- Attitude Control System (ACS), infrared astronomical satellite (IRAS) N82-14169

Model analysis of structures with prestress effects: Application to flexible solar generators
[CNES-81/CT/PRT/SST/SM/178] N82-14687

SATELLITE CONFIGURATIONS

On spin maneuvers with a symmetric satellite N82-14149

Performance of the Orbital Test Satellite (OTS) during its third year of operation in orbit N82-14174

SATELLITE CONTROL

L-SAT stationkeeping N82-14139

Station acquisition and stationkeeping with low thrust systems N82-14142

A European flight dynamics experiment --- GEOS 1 rotation N82-14144

Optimal linear estimation and suboptimal numerical solutions of dynamical systems control problems N82-14145

Partitioning methods for identification and control of flexible spacecraft N82-14147

Quality control for mission-critical flight dynamic operations N82-14158

SATELLITE DESIGN

Use of charging control guidelines for geosynchronous satellite design studies N82-14263

ERS-1: Mission objectives and system concept N82-14554

SATELLITE DRAG

Accurate orbit determinations from laser range observations by LAGEOS, Starlette and GEOS 3 N82-14126

SATELLITE GROUND SUPPORT

SIRIO 2 LASSO mission: Geosynchronous satellite laser station ranging data orbit determination simulations --- laser synchronization from stationary orbit (LASSO) mission N82-14156

The measurement of Earth station performances and its impact on future design --- antenna gain and satellite control N82-14194

Earth station measurement techniques and lessons in Earth station design --- communication networks satellite N82-14195

An overview of the design and construction of small Earth stations used with OTS N82-14196

SATELLITE INSTRUMENTS

POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement
[NASA-TM-76642] N82-14205

A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3
[NASA-CR-166722] N82-14492

SATELLITE NAVIGATION SYSTEMS

Design studies for a technology assessment receiver for global positioning system
[NASA-CR-165046] N82-14074

Navstar Global Positioning System (GPS): Future enhanced capabilities N82-14130

SATELLITE NETWORKS

POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement
[NASA-TM-76642] N82-14205

Promis-90: Future Swedish weather service system N82-14771

SATELLITE OBSERVATION

The observation planning facility for the infrared astronomical satellite (IFAS) N82-14150

The potential and requirements for space oceanography --- National Oceanic Satellite system and U.S. Navy requirements N82-14556

Subsynoptic scale cloud system which moves westward and develops off the south coast of Japan N82-14720

Analysis of rainfall from flash flood producing thunderstorms, using GOES data N82-14724

A study of summer thunderstorms developing over Europe using Meteosat N82-14727

SATELLITE ORBITS

Spacecraft Flight Dynamics --- conference
[ESA-SP-160] N82-14123

Research results from analysis of satellite orbits --- Earth atmosphere and gravitational effects N82-14124

Modeling of orbital perturbations due to radiation pressure for high Earth satellites N82-14128

Present status and future trends in near-Earth satellite orbit determination N82-14152

Validation and operations experience related to orbit and attitude software of Bhaskara N82-14162

SATELLITE ORIENTATION

High precision attitude determination for Magsat N82-14134

Estimates of spacecraft attitude and sensor parameters using adaptive filtering: Meteosat 1 transfer orbit application N82-14135

Orbit and attitude determination for Bhaskara N82-14157

The dynamic attitude reconstruction method N82-14160

The use of ESA starmapper measurements for spacecraft estimation: Estimator design rationale and results N82-14161

Validation and operations experience related to orbit and attitude software of Bhaskara N82-14162

Attitude measurement: Principles and sensors
[NASA-TM-76647] N82-14278

SATELLITE PERTURBATION

An investigation of the anomalous attitude motion of the ISEE B spacecraft N82-14143

East-West stationkeeping maneuver N82-14165

SATELLITE ROTATION

Irregularities in the motion of spin stabilized Earth satellites N82-14133

An investigation of the anomalous attitude motion of the ISEE B spacecraft N82-14143

SATELLITE SOLAR ENERGY CONVERSION

Satellite power system: Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237-VOL-4] N82-14634

SATELLITE SOLAR POWER STATIONS

Satellite power system: Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237-VOL-4] N82-14634

Satellite power system: Concept development and evaluation program. Volume 7: Space transportation
[NASA-TM-58238-VOL-7] N82-14635

SATELLITE SOUNDING

Transfer and distortion of atmospheric information in the satellite temperature retrieval problem N82-14728

Satellite temperature soundings: Microwave satellite observations N82-14729

Structure function analysis of Nimbus 5 SCR data at the mesoscale N82-14730

The use of direct readout tiros Operational Vertical Sounder (TOVS) data from Tiron N and NOAA 6 spacecraft to study a cut-off low and associated mesoscale cold pools N82-14731

Combining satellite and radar data for the short range forecasting of precipitation N82-14745

SATELLITE SURFACES

Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247

SATELLITE TELEVISION

Study on digital television transmission via a television broadcasting satellite (TV-SAT)
[BMFT-FB-W-81-18] N82-14433

SATELLITE TRACKING

Spacecraft Flight Dynamics --- conference
[ESA-SP-160] N82-14123

A SIRIO 2 laser ranging experiment --- in orbit determination N82-14125

Accurate orbit determinations from laser range observations by LAGEOS, Starlette and GEOS 3 N82-14126

Lunar gravitational field determination --- POLO experiment N82-14127

Geostationary satellites launched by NASA. Part 1: NASDA tracking and control system --- Nippon Aerospace Development Agency (NASOA) N82-14137

SIRIO 2 LASSO mission: Geosynchronous satellite laser station ranging data orbit determination simulations --- laser synchronization from stationary orbit (LASSO) mission N82-14156

Spacecraft tracking campaigns and the assessment of orbit determination accuracy N82-14163

The measurement of Earth station performances and its impact on future design --- antenna gain and satellite control N82-14194

SATELLITE TRANSMISSION

OTS: 3rd Year in Orbit --- conference
[ISBN-0-8529-6244-4] N82-14173

Overview of the OTS experimental program N82-14175

General description of the Orbital Test Satellite (OTS) --- satellite links for intra-European telecommunication N82-14176

Depolarization measurements at 11 and 14 GHz with OTS N82-14178

Correlating OTS beacon measurements with radiometer and rainfall data N82-14179

Impact of OTS propagation results on the ECS system --- European Communications Satellite (ECS) N82- .4180

Results and conclusions from the RF classical transmission tests from the point of view of the telecommunication authorities N82-14183

Results and conclusions of the 60 Mbit/sec digital transmission tests --- OTS N82-14185

Results and conclusions of the 120 and 180 Mbit/sec digital transmission tests --- OTS 2-14186

Analogue television tests --- OTS, European Communications Satellite N82-14189

Experimental digital television transmissions through the OTS N82-14190

STELLA and SPINE data transmission experiments: Preliminary results and conclusions --- Satellite Transmission Experiment Linking Laboratories (STELLA); Space Information Network Experiment (SPINE) N82-14197

The use of OTS in the COST 211 project — European cooperation in the field of scientific and technical research (COST) N82-14196

Preliminary analysis of data from SRI international transient pulse monitor on board P78-2 SCATHA satellite N82-14245

Simulation of charging response of SCATHA (P78-2) satellite N82-14250

Computer simulation of spacecraft charging on SCATHA N82-14253

GEM: A simple meteorological buoy with satellite telemetry N82-14779

SATELLITE-BORNE INSTRUMENTS

Atmospheric sounding user's guide [PB81-230476] N82-14208

Development of a dual mode satellite traveling wave tube 11GHz, 12W/6W [BMFT-FB-W-81-001] N82-14466

Low power hybrid circuits for satellite-borne time of flight spectrometers [BMFT-FB-W-81-013] N82-14467

SATELLITE-BORNE PHOTOGRAPHY

Operational compensation for effect of close Titan flyby on remainder of Voyager 1 Saturn near encounter — photography N82-14168

Simple short range models using satellite imagery data N82-14746

The initialization of a mesoscale weather prediction model using satellite and precipitation data N82-14756

Utilizing satellite wind data in a mesoscale numerical model N82-14757

Automated techniques for satellite imagery analysis N82-14766

Combining satellite and conventional data for very short range forecasting purposes N82-14778

SATURN RINGS

Mission operation report: Voyager mission success assessment [NASA-TM-84062] N82-14204

SCALARS

Neutrino, Maxwell and scalar fields in cylindrical and spherical relativistic spaces N82-14894

SCANNERS

A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3 [NASA-CR-166722] N82-14492

SCATHA SATELLITE

Operation of SC5 rapid scan particle spectrometer on SCATHA satellite N82-14240

SCATHA observations of space plasma composition during a spacecraft charging event N82-14242

P78-2 engineering overview N82-14243

Preliminary analysis of data from SRI international transient pulse monitor on board P78-2 SCATHA satellite N82-14245

Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246

Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247

P78-2 satellite and payload responses to electron beam operations on March 30, 1979 N82-14248

Representation and material charging response of geoplasma environments N82-14249

Simulation of charging response of SCATHA (P78-2) satellite N82-14250

SCATHA SSPM charging response: NASCAP predictions compared with data N82-14251

Three-dimensional analysis of charging events on days 87 and 114, 1979, from SCATHA N82-14252

Computer simulation of spacecraft charging on SCATHA N82-14253

Analysis of ambient and beam particle characteristics during the ejection of an electron beam from a satellite in near-geosynchronous orbit on March 30, 1979 N82-14254

Comparison of NASCAP modelling results with lumped circuit analysis N82-14255

P78-2 SCATHA environmental data atlas N82-14264

SCATTERING

Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977 [PHL-1980-28-PT-2] N82-14618

SCHEDULING

Exact and approximation algorithms for a scheduling problem [AD-A105881] N82-14859

SCHOTTKY DIODES

Integrated Schottky Logic N82-14306

SCIENTIFIC SATELLITES

A preliminary design of the cryogenic system for the cooled limb scanning interferometer radiometer (CLIR), phase 3 [NASA-CR-166722] N82-14492

SCINTILLATION

A computer model for high-latitude phase scintillation based on wideband satellite data from Poker Flat [AD-A105620] N82-14702

SCINTILLATION COUNTERS

Two-dimensional beam-profile monitor using the Reticon MC510A array camera [DE81-030853] N82-14496

SEA BREEZE

A finite-element sea-breeze model N82-14712

SEA ICE

ERS-1: Mission objectives and system concept N82-14554

The Norwegian remote sensing experiment (Norsex) in a marginal ice zone N82-14566

Marine activities in Sweden for which remote sensing data may be of interest --- oceanography, weather forecasting, and analysis N82-14576

Measurements of radar backscatter from Arctic Sea ice in the summer [AD-A105586] N82-14592

Measurements of radar backscatter from Arctic Sea ice in the summer, Appendices A and B [AD-A105736] N82-14593

SEA ROUGHNESS

Determination of surface wind speed from remotely measured whitecap coverage, a feasibility assessment N82-14565

A preliminary evaluation of Seasat performance over the area of JASIN and its relevance to ERS-1 N82-14567

Oil spills: Large scale monitoring by LANDSAT N82-14572

SEA STATES

State-of-the-art in using a spaceborne altimeter and scatterometer for the determination of wind, sea state, and marine and ice dynamics --- Seasat instruments N82-14560

An evaluation of Seasat-A data in relation to optimum track ship weather routing and site specific forecasting for the offshore oil industry N82-14564

Scientific studies using Bhaskara satellite microwave radiometer (SAMIR) data: A short overview --- calibration of the instrument and its use in the study of oceanographic parameters N82-14587

Project Noordwijk. Part 1: Measurements of the radar backscatter coefficient gamma (sigma deg) in 1977 and 1978 --- on a sea platform [PHL-1979-49-PT-1] N82-14617

Project Noordwijk. Part 2: Results of North Sea clutter measurements in the I-band performed from the platform Noordwijk in September/October 1977 [PHL-1980-28-PT-2] N82-14618

Remote sensing of sea state by laser altimeters [NASA-CR-165049] N82-14789

SEA TRUTH

Coastal zone research using remote sensing techniques --- calibration of coastal zone color scanner N82-14571

The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581

Necessity of remote sensing for ocean studies. Part 1: Northwest African missions, Sahara-1 and Atlor-1 --- sea truth/remote sensing correlation of offshore upwelling N82-14582

SEA WATER

The color of the sea and its relation to surface chlorophyll and depth of the euphotic zone N82-14562

Light fields in the ocean [NASA-TM-76731] N82-14790

SEASAT SATELLITES

State-of-the-art in using a spaceborne altimeter and scatterometer for the determination of wind, sea state, and marine and ice dynamics --- Seasat instruments N82-14560

The Seasat commercial demonstration program N82-14561

SEASAT-A SATELLITE

An evaluation of Seasat-A data in relation to optimum track ship weather routing and site specific forecasting for the offshore oil industry N82-14564

SECONDARY EMISSION

Numerical simulation of plasma insulator interactions in space. Part 2: Dielectric effects N82-14273

Simple model of beam transport in low-pressure ion-focused regimes [DE82-000242] N82-14898

SEDIMENT TRANSPORT

Mapping of surface currents in Greenland fiords by means of LANDSAT images --- multispectral photography N82-14579

The use of LANDSAT MSS to observe sediment distribution and movement in the Solent coastal area --- multispectral scannel (MSS) N82-14580

Maritime applications of image processing at DFVLR, Oberpfaffenhofen, West Germany --- LANDSAT multispectral scanner images, digital interactive image analysis N82-14585

SEDIMENTS

Recent work in passive optical imaging of water --- space and aircraft derived data N82-14575

The use of LANDSAT MSS to observe sediment distribution and movement in the Solent coastal area --- multispectral scannel (MSS) N82-14580

Geochemistry of recent Lake Michigan sediments [PB81-234429] N82-14622

Salt release from suspended sediments: A simulated model [PB81-231639] N82-14624

Remote sensing of non-point source sediment in Northern Maine [PB81-233603] N82-14663

SEISMIC WAVES

Single channel seismic event detection [AD-A105469] N82-14695

Regional phase processors [AD-A105470] N82-14696

SEISMOGRAPHS

Regional phase processors [AD-A105470] N82-14696

SEISMOLOGY

The seismotectonics of plate boundaries [NASA-CR-165050] N82-14690

SELECTIVE DISSEMINATION OF INFORMATION

Weathervision: A forecasting and dissemination tool for the 1980's N82-14762

Weather 80 --- weather data dissemination for military usage N82-14764

SELF MANEUVERING UNITS

Fish RAGU (Fish, Radio-Receiving and Generally Useful) [AD-A105505] N82-14411

SEMICONDUCTING FILMS

Charging control techniques N82-14232

SEMICONDUCTOR DEVICES

Silicon dew-point sensor for accurate humidity measurement systems N82-14493

Technical change in US industry: A cross-industry analysis [NASA-CR-165047] N82-14986

SEMICONDUCTOR JUNCTIONS

Preparation of GaAs/AlxGal-xAs multilayer structures with predetermined optical and electrical properties by molecular beam epitaxy [BMFT-FB-T-81-042] N82-14951

SEMICONDUCTOR LASERS

Bibliography of Soviet laser developments, no. 47, May - June 1980 [AD-A105585] N82-14510

SEMICONDUCTORS (MATERIALS)

The calculation of the input resistance of a vibrator with dielectric cover by the method of induced EMF N82-14420

SENSITIVITY

Sensitivity analysis of a mesoscale moisture model [AD-A101528] N82-14590

SENTENCES

Enlightened use of passive voice in technical writing N82-14974

Toward defining good writing: A rhetorical analysis of the words, sentences, and paragraphs in 16 industrial scripts N82-14976

SEOCS (SATELLITE)

POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement [NASA-TM-76642] N82-14205

SEPARATED FLOW
Computation of subsonic flow around airfoil systems with multiple separation
[DFVLR-FB-81-24] N82-14050
Low Reynolds number airfoil survey, volume 1
[NASA-CR-165803-VOL-1] N82-14059

SEPARATORS
Helium 2 cooling systems for long term missions in space: phase seperation and hybrid cooling systems
N82-14403
Procedures for the calculation of the separative performance of a countercurrent gas centrifuge
[DE81-025448] N82-14499

SEQUENCING
Flow control in store-and-forward computer network N82-14845

SERVICE LIFE
Composite flywheel durability and life expectancy: Test program
[DE81-028849] N82-14299

SET THEORY
On the relationship between the Hausdorff distance and metric distances of ellipsoids
[AD-A105880] N82-14858

SEWAGE
Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites --- aerial photography N82-14574

SEWAGE TREATMENT
Beneficial uses of nuclear waste program sewage-sludge irradiation project
[DE82-000440] N82-14677

SHADES
Daylighting calculations for nonrectangular interior spaces with shading devices
[DE81-027962] N82-14705

SHALE OIL
Development of superior denitrogenation and isomerization catalysts for processing crude oil derived from shale, part 1
[AD-A105667] N82-14317

SHALES
Evaluation of Devonian shale potential in eastern Kentucky/Tennessee
[DE82-001164] N82-14595
Evaluation of the eastern gas shales in Pennsylvania
[DE82-001165] N82-14596
Evaluation of Devonian shale potential in New York
[DE82-001163] N82-14597

SHALLOW WATER
Variability of acoustic transmissions in a shallow water area
[AD-A103278] N82-14882

SHAPES
Two-dimensional beam-profile monitor using the Reticon MC510A array camera
[DE81-030853] N82-14496
Geometric data analysis: An interactive graphics program for shape comparison
[AD-A105858] N82-14823

SHEAR STRAIN
Stress-strain analysis of very thick plates
[REPT-138] N82-14543

SHEAR STRENGTH
Low-cost forming influence on reinforced thermoplastic mechanical properties
[AD-A106004] N82-14360

SHEAR STRESS
Stress in single lap joints of dissimilar materials
[AD-A105519] N82-14537

SHELL THEORY
A theory of laminated composite plates and rods
[AD-A105591] N82-14297
A geometrically nonlinear finite element shell theory N82-14532

SHIPS
Plan of action and milestones for Navy combustion toxicity
[AD-A105623] N82-14796

SHOCK FRONTS
Shock front rise time in water
[AD-A105704] N82-14479

SHOCK LOADS
Viscoplastic response of beryllium under shock compression
[DE81-026248] N82-14348
Relaxation effects in shock-induced transitions in bismuth
[DE81-028728] N82-14946

SHOCK WAVE PROFILES
Pressure distributions and shock shapes for 12.84 deg/7 deg on-axis and bent-nose biconics in air at Mach 6
[NASA-TM-83222] N82-14054

SHOCK WAVES
Experimental investigation of a transonic potential flow around a symmetric airfoil
[NASA-TM-76676] N82-14057
A class of monotonic shock-capturing difference schemes
[AD-A105601] N82-14480
Relaxation effects in shock-induced transitions in bismuth
[DE81-028728] N82-14946

SHORELINES
SPOT data simulations: Littoral applications
N82-14568

SHORT TAKEOFF AIRCRAFT
MLS vertical guidance and navigation for a STOL airplane landing on an elevated STOLport
[NASA-TM-81338] N82-14101

SIDE-LOOKING RADAR
Use of Side Looking Airborne Radar (SLAR) for oil pollution monitoring in Norway N82-14586

SIGNAL ANALYSIS
Activities of the Department of Systems and Communications
[ENST-D-81003] N82-14434
Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14548

SIGNAL DISTORTION
Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-166717] N82-14548

SIGNAL ENCODING
Study on digital television transmission via a television broadcasting satellite (TV-SAT)
[BMFT-FB-W-81-18] N82-14433

SIGNAL FADING
Results and conclusions from telephone signaling tests through TDMA/DSI system --- Digital Speech Interpolation (DSI) N82-14188

SIGNAL PROCESSING
Design studies for a technology assessment receiver for global positioning system
[NASA-CR-165046] N82-14074
P78-2 satellite and payload responses to electron beam operations on March 30, 1979 N82-14248
Possibility of a new approach to processing space pulse radio signals
[NASA-TM-76746] N82-14412
Adaptive enhancement of finite bandwidth signals in white Gaussian noise
[AD-A105873] N82-14427
Integrated circuits for accurate linear analogue electric signal processing N82-14445
Signal processing theory of Bragg cells
[AD-A100451] N82-14451
Single channel seismic event detection
[AD-A105469] N82-14695
Fabrication of a processor adapted to numerical filtering
[TEL/KAR/81] N82-14812
Wave structure detection through two-dimensional filtering
[AD-A105554] N82-14885
A scattering function approach to underwater acoustic detection and signal design
[AD-A105593] N82-14889
A data reduction procedure for cavitation noise from an oscillating hydrofoil
[AD-A105719] N82-14892

SIGNAL TO NOISE RATIOS
Adaptive enhancement of finite bandwidth signals in white Gaussian noise
[AD-A105873] N82-14427
A scattering function approach to underwater acoustic detection and signal design
[AD-A105593] N82-14889

SIGNAL TRANSMISSION
Design studies for a technology assessment receiver for global positioning system
[NASA-CR-165046] N82-14074

SILICATES
Aerosil for the improvement of the flow behavior of powdered substances
[NASA-TM-76643] N82-14283

SILICON
Flat-plate solar array project. Task 1: Silicon material: Investigation of the hydrochlorination of SiC1sub4
[NASA-CR-165042] N82-14631
Kinetics studies on the nucleation and growth of silicon via chemical vapour deposition N82-14939
Photoelectrochemical depositions of microscopic metal film patterns on Si and GaAs
[AD-A099456] N82-14940
Materials research at Stanford University
[AD-A106108] N82-14957

SILICON CARBIDES
Bending fatigue tests on SiC-Al tapes under alternating stress at room temperature
[NASA-TM-76631] N82-14285
Microanalysis of composite materials --- silicon carbide reinforced titanium alloys N82-14294
Preparation of sinter active silicon carbide powders
[BMFT-FB-T-81-036] N82-14302
Ultrasonic velocity for estimating density of structural ceramics
[NASA-TM-82765] N82-14359

SILICON COMPOUNDS
Silicon dew-point sensor for accurate humidity measurement systems N82-14493

SILICON DIOXIDE
Charging characteristics of silica fabrics
N82-14233

SILICON FILMS
Sub-gap and band edge optical absorption in a-Si:H by photothermal deflection spectroscopy
[DE81-028040] N82-14923

SILICON NITRIDES
Effect of the powder characteristics of Sisub3Nsub4 on the microstructure of sintered bodies
[NASA-TM-76619] N82-14332

SILVER COMPOUNDS
Development of an all-metal thick film cost affective metallization system for solar cells
[NASA-CR-165044] N82-14629

SINE WAVES
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

SINTERING
Preparation of sinter active silicon carbide powders
[BMFT-FB-T-81-036] N82-14302
Effect of the powder characteristics of Sisub3Nsub4 on the microstructure of sintered bodies
[NASA-TM-76619] N82-14332
Mechanisms of elevated-temperature in single phase ceramics
[DE82-000691] N82-14368
Stabilizing platinum in phosphoric acid fuel cells
[NASA-CR-165483] N82-14628

SIRIO SATELLITE
Modeling of orbital perturbations due to radiation pressure for high Earth satellites N82-14128
SIRIO 2 LASSO mission: Geosynchronous satellite laser station ranging data orbit determination simulations --- laser synchronization from stationary orbit (LASSO) mission N82-14156

SITE SELECTION
Sixth Underground Coal-Conversion Symposium
[DE81-027669] N82-14374
Pasco basin hydrometeorological study --- site selection for underground radioactive waste disposal
[DE82-000283] N82-14598
Dealing with regional hydrologic data-base limitations. Case example: The Columbia River basalts --- hydrology models and site selection for radioactive waste storage
[DE81-030086] N82-14609

SKY
Hemispherical sky simulator for daylighting model studies
[DE81-028130] N82-14706

SKY BRIGHTNESS
All-sky, video-based luminance mapper for daylighting research
[DE81-029276] N82-14707

SKY RADIATION
Spectral atmospheric observations at Nantucket Island, May 7-14, 1981
[NASA-TM-83196] N82-14550

SKYLAB PROGRAM
Skylab decay follow-up N82-14167

SLAGS
Quantitative determination of fluorine in steel-making slags by the ion selective electrode
[DRIC-T-6448] N82-14331
Coal conversion solid waste disposal
[DE81-028567] N82-14680

SLENDER BODIES
Evaluation of USSAERO and HABP computer codes for aerodynamic predictions for slender bodies
[AD-A106065] N82-14064
Computational parametric study of the aerodynamics of spinning slender bodies at supersonic speeds
[AD-A106074] N82-14066

SLENDER CONES
Hypersonic slip-flow around slender elliptical cones at a slight angle of attack
[ESA-TT-644] N82-14069

SLIP FLOW
Hypersonic slip-flow around slender elliptical cones at a slight angle of attack
[ESA-TT-644] N82-14069

SLOT ANTENNAS
Antenna (selected articles)
[AD-A107428] N82-14413
Emission of an elementary slot vibrator located in the center of an ideally conducting disk N82-14415

SLUDGE
Beneficial uses of nuclear waste program sewage-sludge irradiation project
[DE82-000440] N82-14677

SMALL PERTURBATION FLOW
Time linearized calculation of two dimensional unsteady transonic potential flow at small disturbances
[DFVLR-FB-81-01] N82-14070

SNOW
Some optical properties of blowing snow
[AD-A103268] N82-14697
Mesoscale disturbances causing a heavy snowfall over the coastal area of the Sea of Japan
N82-14719

SODIUM CHLORIDES
Dissolution kinetics during localized corrosion
[DE81-025092] N82-14350
Thermodynamics of electrolyte solutions over the entire miscibility range
[LBL-12377] N82-14953

SODIUM NITRATES
Interpretation of the nitrogen KVV Auger lineshape from alkali metal nitrates
[AD-A105877] N82-14315

SODIUM SULFATES
Polarization study of hot corrosion phenomena in Ni-Cr alloys
[DE81-029609] N82-14349

SOIL EROSION
Remote sensing of non-point source sediment in Northern Maine
[PB81-233603] N82-14683

SOIL MECHANICS
C-5A operational utility evaluation soil tests and analysis
[AD-A105555] N82-14083

SOIL MOISTURE
A simulation study of the recession coefficient for antecedent precipitation index --- soil moisture and water runoff estimation
[NASA-TM-83660] N82-14549

SOILS
Effect of organic complexants on the mobility of low-level waste radionuclides in soils: Status report
[DE81-030409] N82-14901

SOLAR ARRAYS
Tank testing of a 2500-cm2 solar panel
N82-14228
Charging and discharging characteristics of a rigid solar array N82-14229
Solar cell modules for plasma interaction evaluation
[NASA-CR-161922] N82-14281
Flat-plate solar array project. Task 1: Silicon material: Investigation of the hydrochlorination of SiC1sub4
[NASA-CR-165042] N82-14631
Study of multi-megawatt technology needs for photovoltaic space power systems. Volume 1: Executive summary
[NASA-CR-165323-VOL-1] N82-14636
Modal analysis of structures with prestress effects: Application to flexible solar generators
[CNES-81/CT/PRT/SST/SM/178] N82-14687

SOLAR CELLS
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165040] N82-14358
Development of an all-metal thick film cost affective metallization system for solar cells
[NASA-CR-165044] N82-14629
Development of an all-metal thick film cost effective metallization system for solar cells
[NASA-CR-165043] N82-14630
Satellite power system: Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237-VOL-4] N82-14634
Study of multi-megawatt technology needs for photovoltaic space power systems. Volume 1: Executive summary
[NASA-CR-165323-VOL-1] N82-14636
REPEAT facility. Report for May, June, July
[DE81-028156] N82-14665

SOLAR COLLECTORS
SOLTECH 80
[DE81-901931] N82-14643
Solar Photovoltaic Residential Project. Project Integration Meeting, Agenda and Abstracts
[DE81-028433] N82-14657

SOLAR ELECTRIC PROPULSION
Solar cell modules for plasma interaction evaluation
[NASA-CR-161922] N82-14281

SOLAR ELECTRONS
University of California Electron and X-Ray Experiments on ISEE-3, series 22, issue 5
[NASA-CR-166725] N82-14999

SOLAR ENERGY
Fuels and chemicals made from solar energy
[DE81-025018] N82-14384
Study of multi-megawatt technology needs for photovoltaic space power systems. Volume 1: Executive summary
[NASA-CR-165323-VOL-1] N82-14636
Study of multi-megawatt technology needs for photovoltaic space power systems, volume 2
[NASA-CR-165323-VOL-2] N82-14637
Seminars for private college administrators on solar applications for college buildings
[DE81-027981] N82-14661

SOLAR ENERGY CONVERSION
Market assessment of photovoltaic power systems for agricultural applications in Morocco
[NASA-CR-165477] N82-14627

SOLAR FLARES
University of California Electron and X-Ray Experiments on ISEE-3, series 22, issue 5
[NASA-CR-166725] N82-14999

SOLAR FLUX DENSITY
An energetic particle detector for Giotto and its scientific objectives N82-14113

SOLAR GENERATORS
Systems analysis of thermal storage
[DE81-030288] N82-14658

SOLAR HEATING
Fuels and chemicals made from solar energy
[DE81-025018] N82-14384
REPEAT facility. Report for May, June, July
[DE81-028156] N82-14665
Solar-supplemented, natural air drying of shelled corn: The economic limitations
[PB81-235681] N82-14668

SOLAR PONDS (HEAT STORAGE)
SOLTECH 80
[DE81-901931] N82-14643

SOLAR POSITION
Grid systems for Earth radiation budget experiment applications
[NASA-TM-83233] N82-14818

SOLAR POWER SATELLITES
Three dimensional space charge model for large high voltage satellites --- plasma sheath N82-14274
Satellite power system: Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237-VOL-4] N82-14634
Satellite power system: Concept development and evaluation program. Volume 7: Space transportation
[NASA-TM-58238-VOL-7] N82-14635
Study of multi-megawatt technology needs for photovoltaic space power systems. Volume 1: Executive summary
[NASA-CR-165323-VOL-1] N82-14636
Study of multi-megawatt technology needs for photovoltaic space power systems, volume 2
[NASA-CR-165323-VOL-2] N82-14637

SOLAR RADIATION
Spectral atmospheric observations at Nantucket Island, May 7-14, 1981
[NASA-TM-83196] N82-14550
SOLTECH 80
[DE81-901931] N82-14643
Solar radiation as a sole source of energy for photovoltaics in Las Vegas, Nevada, for July and December
[PB81-224503] N82-14669
An operational method for forecasting stratus and fog N82-14774
Light fields in the ocean
[NASA-TM-76731] N82-14790

SOLAR RADIO EMISSION
University of California Electron and X-Ray Experiments on ISEE-3, series 22, issue 5
[NASA-CR-166725] N82-14999

SOLAR SENSORS
The attitude control system of AMSAT P 3 satellites N82-14132

SOLAR TOTAL ENERGY SYSTEMS
Solar radiation as a sole source of energy for photovoltaics in Las Vegas, Nevada, for July and December
[PB81-224503] N82-14669

SOLAR WIND
Plasma flow and magnetic fields in comets
N82-14109
Dynamics and chemistry of cometary comas: A pre-Giotto view N82-14117
Plasma wave experiment for the ISEE-3 Mission
[NASA-CR-166730] N82-15000

SOLAR X-RAYS
University of California Electron and X-Ray Experiments on ISEE-3, series 22, issue 5
[NASA-CR-166725] N82-14999

SOLENOIDS
Performance of an internally cooled superconducting solenoid
[DE81-028058] N82-14460
Cryogenic tests of glass-epoxy based electrical insulation
[DE81-028144] N82-14461

SOLID PROPELLANT COMBUSTION
Combustion behavior of solid fuel ramjets. Volume 1: Correlation of reacting and non-reacting flow characteristics
[AD-A106061] N82-14316

SOLID ROCKET PROPELLANTS
Application of a Gaussian multilayer diffusion model to characterize dispersion of vertical HCl column density in rocket exhaust clouds
[NASA-TP-1956] N82-14672

SOLID SOLUTIONS
Preparation, thermal properties, solid solution formation and some luminescence properties of rare Earth oxysulfides
[ISBN-951-751-949-4] N82-14443

SOLID STATE DEVICES
Lithium based anodes for solid state batteries
[AD-A105518] N82-14640

SOLID STATE LASERS
Bibliography of Soviet laser developments, no. 47, May - June 1980
[AD-A105585] N82-14510
Bibliography of Soviet laser developments, no. 48, July - August 1980
[AD-A105578] N82-14511
Laser tool: Pulsed solid state laser for welding and ablation of material
[BMFT-FB-T-81-043] N82-14518

SOLID SURFACES
A flow-visualization study of turbulent spots on solid and compliant surfaces [AD-A108073] N82-14478
Application of surface analysis to solve problems of wear [NASA-TM-82753] N82-14519
Influence of a free surface on the elastodynamic field of a finite crack N82-14547
SOLID WASTES
Chemical element concentrations in liquids and solids associated with power plants using FGD systems [DE81-030422] N82-14322
Energy recovery from municipal waste development program for Idaho Falls, Idaho [DE81-029999] N82-14659
Coal conversion solid waste disposal [DE81-028567] N82-14680
Characterization of materials for waste-canister compatibility studies [DE82-000902] N82-14907
SOLID-SOLID INTERFACES
Microstructural analysis of Kovar/molybdenum and copper/molybdenum interdiffusion [DE81-025919] N82-14337
Numerical stability of an explicit finite difference scheme for the solution of transient conduction in composite media [NASA-TM-82453] N82-14476
SOLIDIFICATION
Behavior of radioactive iodine and technetium in the spray calcination of high-level waste [DE81-028405] N82-14909
SOLIDS FLOW
Aerosil for the improvement of the flow behavior of powdered substances [NASA-TM-76643] N82-14283
SOLUBILITY
Compressible fluids investigation [AD-A105703] N82-14483
SOLUTIONS
Application of a site-binding, electrical, double-layer model to nuclear waste disposal [DE81-030231] N82-14908
SOLVENT REFINED COAL
Process development for improved SRC options. Kerr-McGee critical solvent deashing and fractionation studies [DE81-903785] N82-14380
SOLVENTS
Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography [AD-A105588] N82-14312
SOUND TRANSDUCERS
Design study of hydroacoustic impulse source for deep towing, phase 2 [AD-A108066] N82-14884
SOUND TRANSMISSION
Direct broadcasting experiments with OTS: Results of sound transmission tests N82-14192
The effect of the Mid-Atlantic Ridge on long range sound propagation [AD-A105747] N82-14890
SOUND WAVES
Attitudes of the people of France towards the supersonic bang [NASA-TM-76581] N82-14875
SOUTH DAKOTA
Hydrogeochemical and stream sediment reconnaissance basic data for Milbank NTMS Quadrangle, Minnesota; North Dakota; South Dakota [DE81-029657] N82-14611
SPACE CHARGE
Three dimensional space charge model for large high voltage satellites --- plasma sheath N82-14274
Simple model of beam transport in low-pressure ion-focused regimes [DE82-000242] N82-14896
SPACE ENVIRONMENT SIMULATION
Spacecraft Charging Technology, 1980 [NASA-CP-2182] N82-14213
Preliminary comparison of material charging properties using single-energy and multienergy electron beams N82-14223
Charging and discharging characteristics of a rigid solar array N82-14229
Materials characterization study of conductive flexible second surface mirrors N82-14230
Charging control techniques N82-14232
Electron irradiation tests on European meteorological satellite N82-14266
Spacecraft charging technology in the satellite X-ray test facility N82-14267
Simulation of spacecraft charging environments by monoenergetic beams N82-14268
Experimental study of instabilities and motion of a streaming ionospheric plasma in the polar zone --- interpretation of Ionospheric Polar Campaign rocket sounding results [CRPE-NT-78] N82-14710
SPACE EXPLORATION
Orders of magnitude: A history of NACA and NASA, 1915 - 1980 [NASA-SP-4403] N82-14955
Highlights of 1981 activities [NASA-NEWS-RELEASE-81-199] N82-15006
SPACE HEATING (BUILDINGS)
Residential site design and energy conservation. Part 1: General report [DE81-904010] N82-14398
REPEAT facility. Report for May, June, July [DE81-028156] N82-14685
SPACE MANUFACTURING
Study of multi-megawatt technology needs for photovoltaic space power systems, volume 2 [NASA-CR-165323-VOL-2] N82-14637
SPACE PLASMAS
A cometary plasma experiment for the mission to Halley's Comet --- cometary plasme velocity measurement N82-14111
SCATHA observations of space plasma composition during a spacecraft charging event N82-14242
P78-2 engineering overview N82-14243
P78-2 SCATHA environmental data atlas N82-14264
Simulation of spacecraft charging environments by monoenergetic beams N82-14268
Agreement for NASA/OAST - USAF/AFSC space interdependency on spacecraft environment interaction N82-14271
SPACE POWER UNIT REACTORS
Comparative analyses of space-to-space central power stations [NASA-TP-1955] N82-14202
SPACE SHUTTLE ORBITERS
Charging of a large object in low polar Earth orbit --- space shuttle orbiter N82-14275
Satellite power system: Concept development and evaluation program. Volume 7: Space transportation [NASA-TM-58238-VOL-7] N82-14635
SPACE SHUTTLE PAYLOADS
Highlights of 1981 activities [NASA-NEWS-RELEASE-81-199] N82-15006
SPACE SHUTTLES
Introduction to orbital flight planning (1) [NASA-CR-165052] N82-14106
Thermal and aerothermal performance of a titanium multiwall thermal protection system [NASA-TP-1961] N82-14277
Computer program to support remote manipulator system flight planning analysis N82-14820
Highlights of 1981 activities [NASA-NEWS-RELEASE-81-199] N82-15006
SPACE TRANSPORTATION
Satellite power system: Concept development and evaluation program. Volume 7: Space transportation [NASA-TM-58238-VOL-7] N82-14635
SPACE TUGS
Space Tug systems study (storable). Volume 1: Overview presentation [NASA-CR-161919] N82-14209
Space Tug systems study. Volume 2: Compendium [NASA-CR-161920] N82-14210
Space Tug systems study (storable). Volume 3: Executive summary [NASA-CR-161918] N82-14211
SPACE VEHICLE CHECKOUT PROGRAM
In orbit checkout of the IRAS gyroscopes --- infrared astronomy satellite (IRAS) N82-14170
SPACE-TIME FUNCTIONS
Neutrino, Maxwell and scalar fields in cylindrical and spherical relativistic spaces N82-14894
SPACEBORNE ASTRONOMY
Giotto: A mission to Halley's Comet N82-14108
The Giotto magnetometer experiment N82-14110
A Halley multicolor camera --- for the Giotto mission N82-14120
The Halley optical probe experiment --- for the Giotto mission N82-14121
SPACEBORNE EXPERIMENTS
Scientific and experimental aspects of the Giotto mission --- proceedings of International Conference held at Noordwijerhout, Netherlands 27-28 Apr. 1981 [ESA-SP-169] N82-14107
A cometary plasma experiment for the mission to Halley's Comet --- cometary plasma velocity measurement N82-14111
Overview of the OTS experimental program N82-14175
RICAR: Portable test equipment for the integration of the ISOPROBRE experiment on board the ARCAD 3 satellite [CRPE-1078] N82-14279
SPACECRAFT
Satellite power system: Concept development and evaluation program. Volume 7: Space transportation [NASA-TM-58238-VOL-7] N82-14635
SPACECRAFT CHARGING
Spacecraft Charging Technology, 1980 [NASA-CP-2182] N82-14213
Dielectric discharge characteristics in a two-electron simulation environment N82-14214
Electron-beam-charged dielectrics: Internal charge distribution N82-14215
Bulk charging and breakdown in electron-irradiated polymers N82-14216
Charging and discharging Teflon N82-14217
Experimental validation of a numerical model predicting the charging characteristics of Teflon and Kapton under electron beam irradiation N82-14218
Role of energetic particles in charging/discharging of spacecraft dielectrics N82-14219
Electron penetration of spacecraft thermal insulation N82-14220
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221
Dielectric surface discharges: Effects of combined low-energy and high-energy incident electrons N82-14222
Preliminary comparison of material charging properties using single-energy and multienergy electron beams N82-14223
Brushfire arc discharge model N82-14224
Effects of secondary electron emission on charging N82-14225
Secondary electron emission yields N82-14226
Oblique-incidence secondary emission from charged dielectronics N82-14227
Tank testing of a 2500-cm2 solar panel N82-14228
Charging and discharging characteristics of a rigid solar array N82-14229
Design of an arc-free thermal blanket N82-14231
Charging control techniques N82-14232
Charging characteristics of silica fabrics N82-14233
Operational status of the space test program P78-2 spacecraft and payloads N82-14238
Electron angular distributions during charging events N82-14239
SCATHA observations of space plasma composition during a spacecraft charging event N82-14242
P78-2 engineering overview N82-14243
satellite surface potential survey --- Kapton voltage measurement N82-14244
Computer simulation of spacecraft charging on SCATHA N82-14253
Comparison of NASCAP modelling results with lumped circuit analysis N82-14255
NASCAP charging calculations for a synchronous orbit satellite N82-14256
Results from a two dimensional spacecraft charging simulation and comparison with a surface photocurrent model N82-14257
Analytical modeling of satellites in geosynchronous environment N82-14258
Calculation of surface current response to surface flashover of a large sample under grounded and floating conditions N82-14259
Model of coupling discharges into spacecraft structures N82-14260
Disappearance and reappearance of particles of energies 50 keV as seen by P78-2 (SCATHA) near geosynchronous orbit N82-14261

Military standards and SCATHA program update of MIL-STD-1541 N82-14262
Use of charging control guidelines for geosynchronous satellite design studies N82-14263
P78-2 SCATHA environmental data files N82-14264
Meteosat spacecraft charging investigation N82-14265
Electron irradiation tests on European meteorological satellite N82-14266
Spacecraft charging technology in the satellite X-ray test facility N82-14267
Simulation of spacecraft charging environments by monoenergetic beams N82-14268
Importance of differential charging for controlling both natural and induced vehicle potentials on ATS-5 and ATS-6 N82-14269
Electromagnetic fields produced by simulated spacecraft discharges N82-14270
Agreement for NASA/OAST - USAF/AFSC space interdependency on spacecraft environment interaction N82-14271
Charging of a large object in low polar Earth orbit — space shuttle orbiter N82-14275
Solar cell modules for plasma interaction evaluation [NASA-CR-161922] N82-14261

SPACECRAFT COMMUNICATION
Radar correlation with ice depolarization measurements of the 28,56 GHz COMSTAR beacon and associated cross polarization statistics [NASA-CR-166717] N82-14548

SPACECRAFT COMPONENTS
Operational status of the space test program P78-2 spacecraft and payloads N82-14238

SPACECRAFT CONSTRUCTION MATERIALS
Charging and discharging Teflon N82-14217

SPACECRAFT CONTROL
Spacecraft Flight Dynamics — conference [ESA-SP-160] N82-14123
Spacecraft flight dynamics at ESOC N82-14129
Linear programming and suboptimal solutions of dynamical systems control problems N82-14146
Global geometry techniques for mission analysis N82-14159

SPACECRAFT DESIGN
System analysis approach to deriving design criteria (loads) for Space Shuttle and its payloads. Volume 1: General statement of approach [NASA-TP-1949] N82-14203
Space Tug systems study (storable). Volume 1: Overview presentation [NASA-CR-161919] N82-14209
Space Tug systems study. Volume 2: Compendium [NASA-CR-161920] N82-14210
Space Tug systems study (storable). Volume 3: Executive summary [NASA-CR-161918] N82-14211
Spacecraft Charging Technology, 1980 [NASA-CP-2182] N82-14213
Interactive design and analysis of future large spacecraft concepts [NASA-TP-1937] N82-14276

SPACECRAFT LAUNCHING
Highlights of 1981 activities [NASA-NEWS-RELEASE-81-199] N82-15006

SPACECRAFT MANEUVERS
Geostationary satellites launched by NASDA. Part 2: Mission analysis for maneuver N82-14138
The usefulness of auxiliary transfer orbit maneuvers for a near nominal geostationary mission — salvaging N82-14140
A European flight dynamics experiment — GEOS 1 rotation N82-14144
On spin maneuvers with a symmetric satellite N82-14149
East-West stationkeeping maneuver N82-14165

SPACECRAFT MODELS
Brushfire arc discharge model N82-14224
Effects of secondary electron emission on charging N82-14225

SPACECRAFT MOTION
Irregularities in the motion of spin stabilized Earth satellites N82-14133

SPACECRAFT ORBITS
An analytical singularity-free orbit predictor for near-Earth satellites N82-14154

SPACECRAFT PERFORMANCE
Performance of the Orbital Test Satellite (OTS) during its third year of operation in orbit N82-14174

SPACECRAFT PROPULSION
Parametric analysis of diffuser requirements for high expansion ratio space engine [NASA-CR-161924] N82-14280

SPACECRAFT SHIELDING
Electron penetration of spacecraft thermal insulation N82-14220
Secondary electron emission yields N82-14226
Tank testing of a 2500-cm2 solar panel N82-14228
Charging characteristics of silica fabrics N82-14233
Electrostatic charging characteristics of thermal control paints as function of temperature N82-14234
Evaluation of charge control techniques on spacecraft thermal surfaces (electrostatic discharge study) N82-14235
Conduction through punctures in metal-backed dielectrics N82-14236
Electron angular distributions during charging events N82-14239

SPACECRAFT STABILITY
A European flight dynamics experiment — GEOS 1 rotation N82-14144

SPACELAB
System analysis approach to deriving design criteria (loads) for Space Shuttle and its payloads. Volume 1: General statement of approach [NASA-TP-1949] N82-14203

SPACELAB PAYLOADS
Critical analysis of gradient and isothermal furnace concepts for use in Spacelab with special regard for heat pipe technology and connected basic requirements — on crystal growth experiments [BMFT-FB-W-81-019] N82-14200

SPATIAL DISTRIBUTION
Representation and material charging response of geoplasma environments N82-14249
The effect of spatial variability in precipitation on streamflow [AD-A105955] N82-14589

SPATIAL RESOLUTION
Grid systems for Earth radiation budget experiment applications [NASA-TM-83233] N82-14818

SPECIFICATIONS
Specification of parallel processing using production systems N82-14816

SPECTRAL ENERGY DISTRIBUTION
Role of energetic particles in charging/discharging of spacecraft dielectrics N82-14219

SPECTRAL RECONNAISSANCE
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York. Volume 1: Data acquisition, reduction and interpretation [DE82-000650] N82-14599
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000781] N82-14600
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000401] N82-14601
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000780] N82-14602
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000872] N82-14603
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000772] N82-14604
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000785] N82-14605
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000869] N82-14606
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000794] N82-14607
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2 [DE82-000784] N82-14608

SPECTRAL SENSITIVITY
SPOT data simulations: Littoral applications N82-14568

SPECTRAL SIGNATURES
A recommended sensor package for the detection and tracking of oil spills N82-14563

SPECTROMETERS
Operation of SC5 rapid scan particle spectrometer on SCATHA satellite N82-14240

SPECTROPHOTOMETRY
The Halley optical probe experiment — for the Giotto mission N82-14121
Spectral atmospheric observations at Nantucket Island, May 7-14, 1981 [NASA-TM-83196] N82-14550

SPECTROSCOPIC ANALYSIS
Application of resonance Raman spectrometry in high performance liquid chromatography [DRIC-T-6367] N82-14305
Sub-gap and band edge optical absorption in a-Si:H by photothermal deflection spectroscopy [DE81-028040] N82-14923

SPECTRUM ANALYSIS
Operation of SC5 rapid scan particle spectrometer on SCATHA satellite N82-14240
A simplified approach to spectrum estimation of stochastic processes N82-14871
Wave structure detection through two-dimensional filtering [AD-A105554] N82-14885
Acoustooptical spectrum analysis modeling [AD-A105666] N82-14887

SPEECH RECOGNITION
Voice recognition as an input modality for the TACCO preflight data insertion task in the P-3C aircraft [AD-A105568] N82-14821

SPEED INDICATORS
A true air speed sensor for miniature unmanned aircraft [RAE-TM-SPACE-287] N82-14086

SPENT FUELS
Comparison of potential radiological consequences from a spent-fuel repository versus natural-uranium deposits [DE81-028232] N82-14910

SPHERICAL ANTENNAS
The synthesis of difference direction patterns of spherical antennas N82-14419

SPIN DYNAMICS
An investigation of the anomalous attitude motion of the ISEE B spacecraft N82-14143
A European flight dynamics experiment — GEOS 1 rotation N82-14144
On spin maneuvers with a symmetric satellite N82-14149

SPIN STABILIZATION
Computational parametric study of the aerodynamics of spinning slender bodies at supersonic speeds [AD-A106074] N82-14066
Irregularities in the motion of spin stabilized Earth satellites N82-14133

SPLINE FUNCTIONS
Development of an efficient procedure for calculating the aerodynamic effects of planform variation [NASA-CR-3489] N82-14529

SPOT (FRENCH SATELLITE)
SPOT data simulations: Littoral applications N82-14568

SPREAD SPECTRUM TRANSMISSION
Anti-jam analysis of frequency hopping M-ary frequency shift keying communication systems in high frequency Rayleigh fading channels N82-14441
Design and performance of time-frequency-coded signals for spread-spectrum systems N82-14904

SPUTTERING
Synthesis, characterization and optical properties of barium titanate films sputtered under various conditions [AD-A105655] N82-14296

STABILITY
Numerical stability of an explicit finite difference scheme for the solution of transient conduction in composite media
[NASA-TM-82453] N82-14476
STABILIZED PLATFORMS
Platform performance factors affecting link budgets of geosynchronous communication satellites
N82-14181
STAINLESS STEELS
Influence of cyclic load and environmental effects on stress corrosion cracking of sensitized steel
[DE81-904216] N82-14338
Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water
[DE81-028090] N82-14340
High-temperature fatigue behavior of unirradiated V-15Cr-5Ti tested in vacuum
[DE81-028557] N82-14539
STAR TRACKERS
The use of ESA starmapper measurements for spacecraft estimation: Estimator design rationale and results N82-14161
STARK EFFECT
A stark cell for frequency control of a waveguide C02 laser
[AD-A104734] N82-14495
STATE VECTORS
Partitioning methods for identification and control of flexible spacecraft N82-14147
STATIC LOADS
Modular asymmetric parachute for wind-tunnel testing
[DE81-028416] N82-14068
Determination of airloads on certain airport towers due to addition of radomes
[AD-A105854] N82-14397
STATIC TESTS
Prediction of flyover jet noise spectra from static tests
[NASA-TM-83219] N82-14880
STATIONKEEPING
L-SAT stationkeeping N82-14139
Station acquisition and stationkeeping with low thrust systems N82-14142
East-West stationkeeping maneuver N82-14165
Platform performance factors affecting link budgets of geosynchronous communication satellites
N82-14181
STATIONS
Systems operation studies for automated guideway transit systems. Detailed station model functional specification
[PB81-233538] N82-14994
STATISTICAL ANALYSIS
Durability/life of fiber composites in hygrothermomechanical environments
[NASA-TM-82749] N82-14287
Some advance thoughts on the data analysis involved in configural polysampling directed toward high performance estimates
[AD-A105906] N82-14866
Kinds of polyconfidence intervals for centers, and some thoughts on identification and selection of confidence procedures using configural polysampling
[AD-A105907] N82-14867
Some computational details of configural sampling methods
[AD-A105932] N82-14868
The second representing function for compound situations
[AD-A105860] N82-14870
STATISTICAL CORRELATION
Correlating OTS beacon measurements with radiometer and rainfall data N82-14179
The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581
Influences on factorial accuracy: A Monte Carlo investigation N82-14874
STATISTICAL DISTRIBUTIONS
Attenuation statistics obtained with OTS
N82-14177
New estimation methods for log-linear models
[AD-A105745] N82-14864
STATISTICAL WEATHER FORECASTING
Forecast of severe hail processes N82-14742
Short range prediction of precipitation N82-14743
A statistical model of wind distribution in force and in direction: Application to Uccle (Brussels) data and validity of the model for Belgium
[PUBL-SER-B-107] N82-14784
Variability of seasonal precipitation over the conterminous United States, 1948-1976 --- circulation anomalies related to precipitation extremes
N82-14786
STATOR BLADES
Analytic investigation of effect of end-wall contouring on stator performance
[NASA-TP-1943] N82-14051
STATORS
Analytic investigation of effect of end-wall contouring on stator performance
[NASA-TP-1943] N82-14051
STEAM
Energy recovery from municipal waste development program for Idaho Falls, Idaho
[DE81-029999] N82-14659
Progress on catalyzed steam gasification of biomass
[DE81-026198] N82-14663
STEAM FLOW
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026849] N82-14522
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026962] N82-14523
STEELS
Quantitative determination of fluorine in steel-making slags by the ion selective electrode
[DRIC-T-6448] N82-14331
Mechanisms of elevated temperature fatigue damage in 2 1/4 Cr - 1 Mo steel
[AD-A105786] N82-14335
Plastic deformation and fracture of steel under dynamic loading
[AD-A105997] N82-14336
Ultra-high surface speed for metal removal, artillery shell
[AD-A103970] N82-14395
STEERABLE ANTENNAS
A transmitting solid state linear phased array antenna for C band
[PHL-1980-10] N82-14437
STELLAR EVOLUTION
Rotational velocities and ages of solar-type stars
N82-15006
STELLAR MAGNITUDE
Kohoutek, photometric photography experiment (S233)
[NASA-TM-82449] N82-15007
STELLAR MASS
The discovery of 50 minute periodic absorption events from 4U1915-05
[NASA-TM-83839] N82-15001
STELLAR ROTATION
Rotational velocities and ages of solar-type stars
N82-15006
STILLS
Alcohol fuels grant program at Lincoln Land Community College, Springfield, Illinois
[DE82-000744] N82-14375
STOCHASTIC PROCESSES
Numerical methods and approximation and modelling problems in stochastic control theory
[AD-A105490] N82-14847
A simplified approach to spectrum estimation of stochastic processes N82-14871
STOICHIOMETRY
Investigation of the CARS spectrum of water vapor
[AD-A105235] N82-14311
STOKES LAW OF RADIATION
Investigation of the CARS spectrum of water vapor
[AD-A105235] N82-14311
STORABLE PROPELLANTS
Space Tug systems study (storable). Volume 1: Overview presentation
[NASA-CR-161919] N82-14209
Space Tug systems study. Volume 2: Compendium
[NASA-CR-161920] N82-14210
Space Tug systems study (storable). Volume 3: Executive summary
[NASA-CR-161918] N82-14211
STORAGE STABILITY
Assessment of effectiveness of geologic isolation systems: The AEGIS geologic simulation model
[DE81-028007] N82-14704
Characterization of materials for waste-canister compatibility studies
[DE82-000902] N82-14807
STORMS (METEOROLOGY)
Mesoscale aspects of convective storms
N82-14717
Mesoscale weather patterns during April 10-11, 1979: Severe weather outbreak in the southwestern United States N82-14718
The role of mesoscale surface motions in the life of a convective storm in a dry continental climate
N82-14740
The role of near surface outflow in maintaining convective activity --- in storms N82-14741
A mesoscale forecast for 25 August 1975: The Hampstead storm N82-14752
Mesoscale aspects of jet streak coupling and implications for the short term forecasting of severe convective storms --- severe environmental storms and mesoscale experiment (SESAME) N82-14775
On the meteorological meaning of the terms gust, storm, and hurricane
[PUBL-SER-B-109] N82-14785
STRAIN GAGE BALANCES
An afterbody drag balance --- transonic wind tunnel gages
[RAE-TM-AERO-1897] N82-14103
STRAIN RATE
Small strain accompanied by moderate rotation
[AD-A105592] N82-14535
STRAPDOWN INERTIAL GUIDANCE
Description of a dual fail operational redundant strapdown inertial measurement unit for integrated avionics systems research N82-14842
STRATIGRAPHY
Stratigraphy and depositional history of the Iola Limestone Upper Pennsylvanian (Missourian), Northern Midcontinent U.S. N82-14711
STRATOSPHERE
Stratospheric aerosols
[NASA-TM-83217] N82-14691
STRATUS CLOUDS
An operational method for forecasting stratus and fog N82-14774
STRESS ANALYSIS
Whole-field experimental stress analysis using laser speckle interferometry
[AD-A105805] N82-14298
Stress in single lap joints of dissimilar materials
[AD-A105519] N82-14537
Stress-strain analysis of very thick plates
[REPT-138] N82-14543
STRESS CONCENTRATION
H2S adsorption of plasticity strained iron
[DE81-027996] N82-14347
Relating pavement distress to serviceability and performance
[PB81-227852] N82-14410
Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533
Small strain accompanied by moderate rotation
[AD-A105592] N82-14535
Stress distribution around a circular hole in square plates, loaded uniformly in the plane, on two opposite sides of the square. Optimum shapes of central holes in square plates subjected to uniaxial uniform load. Optimization of hole shapes in circular cylindrical shells under axial tension
[AD-A105598] N82-14536
STRESS CORROSION
Dissolution kinetics during localized corrosion
[DE81-025092] N82-14350
Fatigue corrosion resistance of aluminum alloys --- aircraft construction materials
[SNIAS-812-551-104] N82-14354
STRESS CORROSION CRACKING
Influence of cyclic load and environmental effects on stress corrosion cracking of sensitized steel
[DE81-904216] N82-14338
Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water
[DE81-028090] N82-14340
Electrochemical aspects of stress-corrosion cracking in alpha-brass
[DE81-022078] N82-14345

Ultrasonic inspection of full-size bolting specimens
[KAPL-4129] N82-14525

STRESS INTENSITY FACTORS
Fracture mechanics in fiber reinforced composite materials, taking as examples B/Al and CFRP N82-14290
Influence of a free surface on the elastodynamic field of a finite crack N82-14547

STRESS-STRAIN DIAGRAMS
The crack growth resistance curve as a one-parameter representation of stable crack propagation in thin-walled structures
[DFVLR-FB-80-35] N82-14544

STRESS-STRAIN RELATIONSHIPS
Mechanical relaxation response of 2 1/4 Cr-1 Mo steel
[DE81-027301] N82-14344
Stress-strain analysis of very thick plates
[REPT-138] N82-14543

STRESS-STRAIN-TIME RELATIONS
Computer modeling of piezoresistive gauges
[DE81-027964] N82-14500

STRUCTURAL ANALYSIS
La Recherche Aerospatiale, Bi-monthly Bulletin No. 1981-2, March - April 1981 --- aerodynamic research
[ESA-TT-713] N82-14388
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534
Optimization of reinforcement for a class of openings in plate structures
[AD-A105718] N82-14857

STRUCTURAL BASINS
Pasco basin hydrometeorological study --- site selection for underground radioactive waste disposal
[DE82-000283] N82-14598

STRUCTURAL DESIGN
The design of a jet catcher --- for wind tunnels
[RAE-TM-AERO-1891] N82-14102
The application of probabilistic design theory to high temperature low cycle fatigue
[NASA-CR-165488] N82-14531

STRUCTURAL DESIGN CRITERIA
System analysis approach to deriving design criteria (loads) for Space Shuttle and its payloads. Volume 1: General statement of approach
[NASA-TP-1949] N82-14203
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159114] N82-14286

STRUCTURAL MEMBERS
Interactive design and analysis of future large spacecraft concepts
[NASA-TP-1937] N82-14276

STRUCTURAL STABILITY
Effects of a large temperature gradient on the structure of directionally solidified eutectic composites and superalloys N82-14291

STRUCTURAL STRAIN
H2S adsorption of plasticity strained iron
[DE81-027996] N82-14347

STRUCTURAL VIBRATION
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534
Dynamic safety analysis --- first-passage probabilities for linear elastic structures subjected to random base accelerators N82-14546

STUDENTS
The problems inherent in teaching technical writing and report writing to native Americans N82-14975
Writing as decision-making N82-14976

SUBROUTINE LIBRARIES (COMPUTERS)
Software for the rescue of nonnominal missions N82-14151

SUBROUTINES
Compressed air energy storage preliminary design and site development program in an aquifer. Volume 5, part 2, appendix F, dynamic system computer model
[DE82-000671] N82-14646

SUBSONIC FLOW
Computation of subsonic flow around airfoil systems with multiple separation
[DFVLR-FB-81-24] N82-14050

SUBSTRATES
Accelerated Alpha-s deterioration in a geostationary orbit N82-14237
Kinetics studies on the nucleation and growth of silicon via chemical vapour deposition N82-14939
Amorphous-crystalline boundary dynamics in laser crystallization
[AD-A105811] N82-14942

SUGAR CANE
Studies on sugarcane as an energy crop for Punjab
[PB81-232306] N82-14386

SULFIDES
Preparation, thermal properties, solid solution formation and some luminescence properties of rare Earth oxysulfides
[ISBN-951-751-949-4] N82-14443

SULFONATES
Reactivity of pyrylium salts toward basic reactants
[NASA-TM-76675] N82-14310

SULFURIC ACID
Laser-induced fluorescence technique to monitor H2S (PR 16023)
[DE81-028784] N82-14516

SUNLIGHT
Daylighting calculations for nonrectangular interior spaces with shading devices
[DE81-027962] N82-14705

SUPERCONDUCTING MAGNETS
Cycle design for a cryogenic refrigeration system for FED with forced-flow superfluid helium through internally cooled conductors
[DE82-000446] N82-14400
Test of a cryogenic helium pump --- for a superconducting magnet system
[DE81-028629] N82-14401
Performance of an internally cooled superconducting solenoid
[DE81-026058] N82-14480
Conceptual design of superconducting magnet system for Magnetohydrodynamic (MHD) Engineering Test Facility (ETF) 200 MWe power plant
[NASA-CR-165053] N82-14520
Design study for superconducting main field coils for the Oak Ridge Isochronous Cyclotron
[DE81-028066] N82-14912

SUPERCRITICAL FLOW
Test of a cryogenic helium pump --- for a superconducting magnet system
[DE81-028629] N82-14401

SUPERFLUIDITY
Cycle design for a cryogenic refrigeration system for FED with forced-flow superfluid helium through internally cooled conductors
[DE82-000446] N82-14400

SUPERHIGH FREQUENCIES
Development of a dual mode satellite traveling wave tube 11GHz, 12W/6W
[BMFT-FB-W-81-001] N82-14466

SUPERNOVAE
Research in nuclear astrophysics: Stellar collapse and supernovae
[DE81-030041] N82-15005

SUPERPLASTICITY
Mechanisms of elevated-temperature in single phase ceramics
[DE82-000691] N82-14368

SUPERSATURATION
Mechanism of ice crystal growth habit and shape instability development below water saturation
[AD-A105520] N82-14783

SUPERSONIC AIRCRAFT
Experimental and analytical investigation of axisymmetric supersonic cruise nozzle geometry at Mach numbers from 0.60 to 1.30
[NASA-TP-1953] N82-14052

SUPERSONIC DIFFUSERS
Parametric analysis of diffuser requirements for high expansion ratio space engine
[NASA-CR-161924] N82-14280

SUPERSONIC FLOW
Experimental investigation of a transonic potential flow around a symmetric airfoil
[NASA-TM-76676] N82-14057
Simplified Navier-Stokes equations and their mathematical properties N82-14062
Numerical simulation of steady supersonic flow over an ogive cylinder boattail body
[AD-A106060] N82-14065

SUPERSONIC SPEEDS
Computational parametric study of the aerodynamics of spinning slender bodies at supersonic speeds
[AD-A106074] N82-14066
Attitudes of the people of France towards the supersonic bang
[NASA-TM-76581] N82-14675

SURFACE CRACKS
Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water
[DE81-026090] N82-14340

SURFACE EFFECT SHIPS
Test and evaluation of the Bell-Halter 110-foot surface effect ship demonstration craft
[AD-A099000] N82-14399

SURFACE ENERGY
Dielectric surface discharges: Effects of combined low-energy and high-energy incident electrons N82-14222
satellite surface potential survey --- Kapton voltage measurement N82-14244

SURFACE FINISHING
Evaluation of charge control techniques on spacecraft thermal surfaces (electrostatic discharge study) N82-14235

SURFACE NAVIGATION
Feasibility study for an advanced lighted aid to navigation
[AD-A105944] N82-14081

SURFACE PROPERTIES
Simulation of charging response of SCATHA (P78-2) satellite N82-14250
Description and numerical simulation of thermal fatigue tests on smooth specimens --- heat resistant alloys N82-14391
A flow-visualization study of turbulent spots on solid and compliant surfaces
[AD-A106073] N82-14478
The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581

SURFACE REACTIONS
A study of test techniques for evaluating ablative plasma engines in vacuum test cells
[AD-A105875] N82-14282

SURFACE ROUGHNESS
C-5A operational utility evaluation soil tests and analysis
[AD-A105555] N82-14083
Rail roughness study of the Holloman high speed rocket sled test track
[AD-A105778] N82-14105

SURFACE TEMPERATURE
Thin film transducers for temperature and heat flux measurements --- turbomachine blades N82-14390
A short review of an oceanographic use of Meteosat data by the ORSTOM remote sensing service N82-14570
Necessity of remote sensing for ocean studies. Part 1: Northwest African missions, Sahara-1 and Atlor-1 --- sea truth/remote sensing correlation of offshore upwelling N82-14582

SURFACE WAVES
Numerical studies of laminar and turbulent drag reduction
[NASA-CR-3498] N82-14473

SURGES
Preliminary analysis of data from SRI international transient pulse monitor on board P78-2 SCATHA satellite N82-14245
Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246

SURVEYS
An investigation into the current attitudes and perceptions held by educators toward computer-assisted-instruction N82-14828

SWEDEN
Marine activities in Sweden for which remote sensing data may be of interest --- oceanography, weather forecasting, and analysis N82-14576

SWITCHING CIRCUITS
Integrated Schottky Logic N82-14306
Synthesis and optimization of programmable logic arrays N82-14814

SYLLABLES
Toward defining good writing: A rhetorical analysis of the words, sentences, and paragraphs in 16 industrial scripts N82-14978

SYMBOLS
Software modeling studies executive summary [AD-A106810] N82-14822

SYMMETRICAL BODIES
On spin maneuvers with a symmetric satellite N82-14149

SYNCHRONISM
Specification of parallel processing using production systems N82-14816

SYNCHRONOUS SATELLITES
Operational loads induced by orbital control of a geostationary satellite --- organizing control networks N82-14131
Geostationary satellites launched by NASA. Part 1: NASDA tracking and control system --- Nippon Aerospace Development Agency (NASDA) N82-14137
Geostationary satellites launched by NASDA. Part 2: Mission analysis for maneuver N82-14138
The usefulness of auxiliary transfer orbit maneuvers for a near nominal geostationary mission --- salvaging N82-14140
Station acquisition and stationkeeping with low thrust systems N82-14142
Present status and future trends in near-Earth satellite orbit determination N82-14152
East-West stationkeeping maneuver N82-14165
Accelerated Alpha-s deterioration in a geostationary orbit N82-14237
Operational status of the space test program P78-2 spacecraft and payloads N82-14238
Review of hot plasma composition near geosynchronous altitude N82-14241
NASCAP charging calculations for a synchronous orbit satellite N82-14256
Results from a two dimensional spacecraft charging simulation and comparison with a surface photocurrent model N82-14257
Analytical modeling of satellites in geosynchronous environment N82-14258
Calculation of surface current response to surface flashover of a large sample under grounded and floating conditions N82-14259
Model of coupling discharges into spacecraft structures N82-14260
Disappearance and reappearance of particles of energies 50 keV as seen by P78-2 (SCATHA) near geosynchronous orbit N82-14261
Military standards and SCATHA program update of MIL-STD-1541 N82-14262
Use of charging control guidelines for geosynchronous satellite design studies N82-14263

SYNOPTIC METEOROLOGY
The design of the FRONTIERS interactive display system --- forecasting rain optimized using new techniques of interactively enhanced radar and satellite (FRONTIERS) N82-14772
Terminal forecast reference notebook, detachment 9, 12th weather squadron (MAC), Tyndall AFB, Florida [AD-A105085] N82-14782

SYNTAX
Software modeling studies experimental study of a two dimensional language versus FORTRAN for first-course programmers, volume 3 [AD-A106034] N82-14824
Enlightened use of passive voice in technical writing N82-14974

SYNTHESIS (CHEMISTRY)
New epoxy resins: Synthesis and stability N82-14356
Liquid crystal block copolyesters. 2: Preparation and properties of block copolyesters containing cyclohexane and benzene rings [AD-A105556] N82-14362

SYNTHETIC APERTURE RADAR
Seasat SAR processing at the Norwegian Defence Research Establishment --- design and operation of a digital process N82-14584
Remote Sensing Information Bulletin; Issue number 6 N82-14616

SYNTHETIC ARRAYS
Antenna (selected articles) [AD-A107426] N82-14413
Synthesis of a plane impedance antenna of finite length N82-14414

SYNTHETIC FUELS
Potential supply of synthetic fuels from Alaskan hydroelectric power and coal [DE81-025743] N82-14381
Carcinogenic effects of coal-conversion materials [DE81-028108] N82-14803

SYNTHETIC RESINS
Modelling of polymer photodegradation for solar cell modules [NASA-CR-165040] N82-14358

SYSTEM EFFECTIVENESS
On-board computer progress in development of A 310 flight testing program N82-14833
Design and performance of time-frequency-coded signals for spread-spectrum systems N82-14904

SYSTEM FAILURES
Development of a methodology for the detection of system failures and for the design of fault-tolerant control systems [AD-A105900] N82-14811
Description of a dual fail operational redundant strapdown inertial measurement unit for integrated avionics systems research N82-14842

SYSTEMS ANALYSIS
System analysis approach to deriving design criteria (loads) for Space Shuttle and its payloads. Volume 1: General statement of approach [NASA-TP-1949] N82-14203
Systems analysis of thermal storage [DE81-030288] N82-14656
Specification of parallel processing using production systems N82-14816
C2 relevance of selected artificial intelligence systems. Brief examination of several existing AI systems for use in future command and control applications [AD-A105676] N82-14846
Research in applied mathematics related to nonlinear system theory [AD-A106091] N82-14852
A functional technique for decomposing the complexity of requirements analysis [AD-A105517] N82-14876

SYSTEMS ENGINEERING
Advanced crash survivable flight data recorder and Accident Information Retrieval System (AIRS) [AD-A105510] N82-14072
Deep space navigation systems and operations N82-14136
The measurement of Earth station performances and its impact on future design --- antenna gain and satellite control N82-14194
Earth station measurement techniques and lessons in Earth station design --- communication networks satellite N82-14195
An overview of the design and construction of small Earth stations used with OTS N82-14196
Space Tug systems study (storable). Volume 1: Overview presentation [NASA-CR-161919] N82-14209
Space Tug systems study. Volume 2: Compendium [NASA-CR-161920] N82-14210
Space Tug systems study (storable). Volume 3: Executive summary [NASA-CR-161918] N82-14211
Activities of the Department of Systems and Communications [ENST-D-81003] N82-14434
Seminars for private college administrators on solar applications for college buildings [DE81-027981] N82-14661
Design of a short range forecasting system --- Prototype Regional Observing and Forecasting Service (PROFS) N82-14770
Promis-90: Future Swedish weather service system N82-14771
The design of the FRONTIERS interactive display system --- forecasting rain optimized using new techniques of interactively enhanced radar and satellite (FRONTIERS) N82-14772
Initiation into the utilization of programmable industrial robots: Grafcet --- graphic engineering language N82-14805
A tutorial on the CARE III approach to reliability modeling --- of fault tolerant avionics and control systems [NASA-CR-3488] N82-14806
ADAMS executive and operating system N82-14831
Scheme of attributes in multilevel design of computer systems N82-14844
Systems operation studies for automated guideway transit systems: System Availability model user's manual [PB81-233504] N82-14991

SYSTEMS INTEGRATION
RICAR: Portable test equipment for the integration of the ISOPROBRE experiment on board the ARCAD 3 satellite [CRPE-1078] N82-14279
Modular Multi-Function Multi-Band Airborne Radio System (MFBARS). Volume 1: Executive summary [AD-A106057] N82-14423
Modular Multi-Function Multi-Band Airborne Radio System (MFBARS). Volume 2: Detailed report [AD-A106052] N82-14424
Weathervision: A forecasting and dissemination tool for the 1980's N82-14762
The Modular Automated Weather System (MAWS) concept --- airfield weather support N82-14763
Cost 72: European weather radar project N82-14765
A system for the combined use of data from multiple radars and satellites in the United Kingdom N82-14767
Use of software tools in the development of real time software systems N82-14838

SYSTEMS SIMULATION
SIRIO 2 LASSO mission: Geosynchronous satellite laser station ranging data orbit determination simulations --- laser synchronization from stationary orbit (LASSO) mission N82-14156
Results and conclusions from telephone signaling tests through TDMA/DSI system --- Digital Speech Interpolation (DSI) N82-14188

T

TABLES (DATA)
International energy indicators [DE81-028117] N82-14653

TAIL ASSEMBLIES
Stability and control characteristics of a monoplanar missile configuration with triform-tail-fin arrangements at Mach numbers from 1.70 to 2.86 [NASA-TM-83223] N82-14053

TAKEOFF
A method for measuring takeoff and landing performance of aircraft, using an inertial sensing system [NLR-MP-80036-U] N82-14084

TANGENTS
Shock front rise time in water [AD-A105704] N82-14479

TANTALUM
Neutron production by protons (190 to 268 MeV) in a water-cooled tantalum target [DE81-030628] N82-14378

TAR SANDS
Bibliography of publications dealing with tar sands [DE81-026146] N82-14594

TARGET MASKING
Terrain masking analysis for White Sands Missile Range East Center 50 and West Center 50 [AD-A105806] N82-14201

TARGETS
Investigation of methods for fabricating, characterizing and transporting cryogenic inertial-confinement-fusion targets [DE81-029737] N82-14934

TARS
Carcinogenic effects of coal-conversion materials [DE81-028108] N82-14803

TAYLOR INSTABILITY
Experimental investigation of the flow in a rotating circular channel [MPIS-21/1980] N82-14490

TEA LASERS
High power gas laser for material processing of organic and inorganic material [BMFT-FB-T-81-025] N82-14517

TEACHING MACHINES
An investigation into the current attitudes and perceptions held by educators toward computer-assisted-instruction N82-14826

Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication
[NASA-CP-2203-PT-1] N82-14960

TECHNETIUM ISOTOPES
Behavior of radioactive iodine and technetium in the spray calcination of high-level waste
[DE81-028405] N82-14909

TECHNICAL WRITING
What is technical writing? Prolegomenon to a contextual definition N82-14961
Technical writing in America: A historical perspective N82-14962
Technical communication: Notes toward defining discipline N82-14963
Marketing information: The technical report as product N82-14964
How to develop and write a case for technical writing N82-14965
Evaluating the effectiveness of case method instruction in technical communication N82-14966
Using case studies to teach an engineering technology technical writing class N82-14367
Why use case studies rather than simulation-gaming techniques or library research? N82-14968
Teaching graphics in technical communication classes N82-14969
A graphics primer for English Teachers N82-14970
Applied tagmemics: A heuristic approach to the use of graphic aids in technical writing N82-14971
Clinical report writing: Process and perspective N82-14972
Preparing for an influx of foreign students in technical writing courses: Understanding their background N82-14973
Enlightened use of passive voice in technical writing N82-14974
The problems inherent in teaching technical writing and report writing to native Americans N82-14975
Writing as decision-making N82-14976
Integrate oral communication with technical writing: Towards a rationale N82-14977
Toward defining good writing: A rhetorical analysis of the words, sentences, and paragraphs in 16 industrial scripts N82-14978

TECHNOLOGICAL FORECASTING
ADAMS executive and operating system N82-14831
Scenarios of economic development within the European community until the Year 2000
[DFVLR-FB-81-08] N82-14984

TECHNOLOGIES
The changing tide: Federal support of civilian-sector R and D
[NASA-CR-165048] N82-14985
Technical change in US industry: A cross-industry analysis
[NASA-CR-165047] N82-14986
Research activities report in advanced technology --- engineering sciences N82-14988

TECHNOLOGY ASSESSMENT
Manufacturing technology study on radio frequency power modules packaging techniques
[AD-A105692] N82-14426
Study of multi-megawatt technology needs for photovoltaic space power systems. Volume 1: Executive summary
[NASA-CR-165323-VOL-1] N82-14636
Study of multi-megawatt technology needs for photovoltaic space power systems, volume 2
[NASA-CR-165323-VOL-2] N82-14637
Potential energy savings in the residential sector of the United States
[DE81-028673] N82-14662
New starts in research and development, 1982 N82-14834

TECHNOLOGY TRANSFER
New starts in research and development, 1982 N82-14834

TECHNOLOGY UTILIZATION
Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829

TECTONICS
The seismotectonics of plate boundaries
[NASA-CR-165050] N82-14690

TEFLON (TRADEMARK)
Electron-beam-charged dielectrics: Internal charge distribution N82-14215
Charging and discharging Teflon N82-14217
Experimental validation of a numerical model predicting the charging characteristics of Teflon and Kapton under electron beam irradiation N82-14218
Secondary electron emission yields N82-14226
Oblique-incidence secondary emission from charged dielectronics N82-14227
Materials characterization study of conductive flexible second surface mirrors N82-14230
Accelerated Alpha-s deterioration in a geostationary orbit N82-14237

TELECOMMUNICATION
Design and implementation of a telecommunication interface for the TAATM/TCV real-time experiment
[NASA-TM-83231] N82-14075
Activities of the Department of Systems and Communications
[ENST-D-81003] N82-14434
Design and performance of time-frequency-coded signals for spread-spectrum systems N82-14904

TELECONFERENCING
The use of OTS in the COST 211 project --- European cooperation in the field of scientific and technical research (COST) N82-14198

TELEMETRY
General description of the Orbital Test Satellite (OTS) --- satellite links for intra-European telecommunication N82-14176
Results and conclusions of RF performance tests made by ESA --- OTS N82-14184
P78-2 satellite and payload responses to electron beam operations on March 30, 1979 N82-14248

TELEPHONY
OTS: 3rd Year in Orbit --- conference
[ISBN-0-8529-6244-4] N82-14173
Impact of OTS propagation results on the ECS system --- European Communications Satellite (ECS) N82-14180
Results and conclusions from the RF classical transmission tests from the point of view of the telecommunication authorities N82-14183
TDMA/DSI system tests and telephony channel tests via the Orbital Test Satellite (OTS) --- Digital Speech Interpolation (DSI) N82-14187
Results and conclusions from telephone signaling tests through TDMA/DSI system --- Digital Speech Interpolation (DSI) N82-14188

TELEVISION TRANSMISSION
OTS: 3rd Year in Orbit --- conference
[ISBN-0-8529-6244-4] N82-14173
Analogue television tests --- OTS, European Communications Satellite N82-14189
Experimental digital television transmissions through the OTS N82-14190
Direct broadcasting experiments with OTS: Results of picture transmission tests --- at 27 MHz N82-14191
Direct broadcasting experiments with OTS: Results of sound transmission tests N82-14192

TEMPERATURE CONTROL
Design of a control system for the optimum heating of batch reactors
[MS-1296] N82-14387
Thermal behavior of an experimental 2.5-kWh lithium/iron sulfide battery
[DE81-029861] N82-14654

TEMPERATURE DEPENDENCE
Temperature dependence of O2 (1 Delta) + O2 (1 Delta) and I (2P sub 1/2) + O2 (1 Delta) energy pooling
[AD-A105817] N82-14507
Temperature dependence of H saturation and isotope exchange
[DE81-026633] N82-14902

TEMPERATURE DISTRIBUTION
Satellite temperature soundings: Microwave satellite observations N82-14729

TEMPERATURE EFFECTS
Integrated Schottky Logic N82-14306
Influence of cyclic load and environmental effects on stress corrosion cracking of sensitized steel
[DE81-904216] N82-14338

TEMPERATURE GRADIENTS
Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites --- aerial photography N82-14574

TEMPERATURE MEASURING INSTRUMENTS
Silicon dew-point sensor for accurate humidity measurement systems N82-14493

TEMPERATURE PROFILES
The temperature structure of a turbulent vortex ring
[MPIS-4/1980] N82-14487

TEMPORAL RESOLUTION
Possibility of a new approach to processing space pulse radio signals
[NASA-TM-76748] N82-14412
Grid systems for Earth radiation budget experiment applications
[NASA-TM-83233] N82-14818

TENNESSEE
Evaluation of Devonian shale potential in eastern Kentucky/Tennessee
[DE82-001164] N82-14595

TENSILE CREEP
Mechanisms of elevated-temperature in single phase ceramics
[DE82-000691] N82-14368

TENSILE DEFORMATION
A geometrically nonlinear finite element shell theory N82-14532

TENSILE TESTS
Influence of neutron irradiation at 55 deg C on the properties of austenitic stainless steels
[DE81-028065] N82-14342
Study of the fatigue behavior of welded joints, cross stressed --- influence of inclusions
[CETIM-12-Y-200] N82-14541
The crack growth resistance curve as a one-parameter representation of stable crack propagation in thin-walled structures
[DFVLR-FB-80-35] N82-14544

TENSOR ANALYSIS
A geometrically nonlinear finite element shell theory N82-14532

TERMINAL BALLISTICS
Measurement problems in high velocity impact experiments
[AD-A105550] N82-14521

TERMINAL CONFIGURED VEHICLE PROGRAM
Influence of display and control compatibility on pilot-induced oscillations
[NASA-TP-1936] N82-14804

TERMINOLOGY
On the meteorological meaning of the terms gust, storm, and hurricane
[PUBL-SER-B-109] N82-14785

TERRESTRIAL RADIATION
POMS, Polar Meteorological Satellite: A contribution for global radiation budget measurement
[NASA-TM-76642] N82-14205

TEST EQUIPMENT
Manufacture and testing of a prototype holographic series tire tester
[BMFT-FB-T-80-192] N82-14501

TEST FACILITIES
Sixth Underground Coal-Conversion Symposium
[DE81-027669] N82-14374

THEMATIC MAPPING
All-sky, video-based luminance mapper for daylighting research
[DE81-029276] N82-14707

THEODORSEN TRANSFORMATION
Optimization and performance calculation of dual-rotation propellers
[NASA-TP-1948] N82-14049

THERMAL CONDUCTIVITY
Ideal transport in transition metals: The rigid-muffin-tin approximation and beyond
[DE81-028073] N82-14346
Analysis of data from line-source thermal-conductivity measurements taken in situ in dome salt at the Ivery Island mine
[DE82-000517] N82-14703

THERMAL CONTROL COATINGS
Experimental validation of a numerical model predicting the charging characteristics of Teflon and Kapton under electron beam irradiation N82-14218
Electrostatic charging characteristics of thermal control paints as function of temperature N82-14234
Evaluation of charge control techniques on spacecraft thermal surfaces (electrostatic discharge study) N82-14235
Conduction through punctures in metal-backed dielectrics N82-14236

Development of improved high temperature coatings for IN-792 + HF [NASA-CR-165395] N82-14333
THERMAL CYCLING TESTS
Materials characterization study of conductive flexible second surface mirrors N82-14230
THERMAL DECOMPOSITION
Preparation of sinter active silicon carbide powders [BMFT-FB-T-81-038] N82-14302
Mass spectrometric studies of the thermal decomposition of some Azido polymetric binders [AD-A106090] N82-14361
THERMAL FATIGUE
Development of improved high temperature coatings for IN-792 + HF [NASA-CR-165395] N82-14333
Description and numerical simulation of thermal fatigue tests on smooth specimens --- heat resistant alloys N82-14391
High-temperature fatigue behavior of unirradiated V-15Cr-5Ti tested in vacuum [DE81-028557] N82-14539
THERMAL INSULATION
Electron penetration of spacecraft thermal insulation N82-14220
Design of an arc-free thermal blanket N82-14231
THERMAL MAPPING
Reliable aerial thermography for energy conservation [NASA-TM-81766] N82-14552
A recommended sensor package for the detection and tracking of oil spills N82-14563
THERMAL POLLUTION
Airborne remote sensing of the coastal zone N82-14577
THERMAL PROTECTION
Thermal and aerothermal performance of a titanium multiwall thermal protection system [NASA-TP-1961] N82-14277
Fabrication of titanium multiwall Thermal Protection System (TPS) curved panel [NASA-CR-165754] N82-14530
THERMAL RESOURCES
Geology and geochemistry of samples from Los Alamos National Laboratory HDR well EE-2, Fenton Hill, New Mexico [DE81-026068] N82-14708
THERMAL STABILITY
New epoxy resins: Synthesis and stability N82-14356
THERMAL STRESSES
Cool-down flow-rate limits imposed by thermal stresses in LNG pipelines [DE81-028731] N82-14484
The application of probabilistic design theory to high temperature low cycle fatigue [NASA-CR-165488] N82-14531
THERMISTORS
Characterization and comparison of thermistor thick films [DE82-000831] N82-14459
THERMOCHEMISTRY
Thermodynamics of electrolyte solutions over the entire miscibility range [LBL-12377] N82-14953
THERMODYNAMIC EFFICIENCY
Evaluation of coal gasification/combined cycle power plant feasibility at the Sewells Point Naval Complex, Norfolk, Virginia [AD-A103674] N82-14639
THERMODYNAMIC EQUILIBRIUM
Application of a site-binding, electrical, double-layer model to nuclear waste disposal [DE81-030231] N82-14906
THERMODYNAMIC PROPERTIES
Preparation, thermal properties, solid solution formation and some luminescence properties of rare Earth oxysulfides [ISBN-951-751-949-4] N82-14443
Energy and technology review [DE82-000304] N82-14647
Thermal behavior of an experimental 2.5-kWh lithium/iron sulfide battery [DE81-029861] N82-14654
Thermodynamics of electrolyte solutions over the entire miscibility range [LBL-12377] N82-14953
THERMODYNAMICS
Testing program for concrete at temperatures to 894 deg K [DE81-029144] N82-14536
THERMOPHYSICAL PROPERTIES
Mechanical and thermophysical properties of hot-pressed SYNROC B [DE81-029299] N82-14301
THERMOPLASTIC RESINS
Low-cost forming influence on reinforced thermoplastic mechanical properties [AD-A106004] N82-14360
THERMOSPHERE
On the identification of planetary-scale waves during disturbed conditions [ISSN-0340-9821] N82-14694
THICK FILMS
Characterization and comparison of thermistor thick films [DE82-000831] N82-14459
Development of an all-metal thick film cost affective metalization system for solar cells [NASA-CR-165044] N82-14629
Development of an all-metal thick film cost effective metalization system for solar cells [NASA-CR-165043] N82-14630
THICK PLATES
Stress-strain analysis of very thick plates [REPT-138] N82-14543
THICKNESS
Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core [NASA-TP-1942] N82-14090
THICKNESS RATIO
Shock front rise time in water [AD-A105704] N82-14479
THIN FILMS
Deposition of thin insulation layers from the gas phase [NASA-TM-76607] N82-14307
Thin film transducers for temperature and heat flux measurements --- turbomachine blades N82-14390
Dispenser cathode physics [AD-A105126] N82-14450
Comparison of thin-film resistance heat-transfer gages with thin-skin transient calorimeter gages in conventional hypersonic wind tunnels [NASA-TM-83197] N82-14474
High power gas laser for material processing of organic and inorganic material [BMFT-FB-T-81-025] N82-14517
Amorphous-crystalline boundary dynamics in laser crystallization [AD-A105811] N82-14942
THIN PLATES
The crack growth resistance curve as a one-parameter representation of stable crack propagation in thin-walled structures [DFVLR-FB-80-35] N82-14544
THIN WALLED SHELLS
A geometrically nonlinear finite element shell theory N82-14532
Linear and geometric nonlinear analysis of shells by an isoparametric three dimensional degenerated element [REPT-140] N82-14862
THREE DIMENSIONAL FLOW
Plasma flow and magnetic fields in comets N82-14109
THREE DIMENSIONAL MOTION
Three-dimensional analysis of charging events on days 87 and 114, 1979, from SCATHA N82-14252
THROTTLING
External fuel vaporization study [NASA-CR-165513] N82-14371
THRUST VECTOR CONTROL
Inclination control using a pulse mode axial thruster N82-14166
THUNDERSTORMS
Analysis of rainfall from flash flood producing thunderstorms, using GOES data N82-14724
A study of summer thunderstorms developing over Europe using Meteosat N82-14727
Life cycle of mesoscale convective systems N82-14776
The enhanced V, a satellite observable severe storm signature [PB81-230328] N82-14786
THYMIDINE
Polyploidization delay in rat hepatocytes under liver growth inhibition by hypokinesia [NASA-TM-76515] N82-14794
TIDES
Global ocean tides. Part 4: The semidiurnal elliptical lunar tide (N2), atlas of tidal charts and maps [AD-A105949] N82-14791
The NSWC Global Ocean Tide Data Tape (GOTD). Its features and applicaton: Random-Point Tide program [AD-A105974] N82-14792
TILES
Thermal and aerothermal performance of a titanium multiwall thermal protection system [NASA-TP-1961] N82-14277
TIME DIVISION MULTIPLE ACCESS
TDMA/DSI system tests and telephony channel tests via the Orbital Test Satellite (OTS) --- Digital Speech Interpolation (DSI) N82-14187
Results and conclusions from telephone signaling tests through TDMA/DSI system --- Digital Speech Interpolation (DSI) N82-14188
TIME OF FLIGHT SPECTROMETERS
Low power hybrid circuits for satellite-borne time of flight spectrometers [BMFT-FB-W-81-013] N82-14467
TIME SHARING
MIKE: A network operating system for the distributed double-loop computer network N82-14843
TIN OXIDES
Secondary electron emission yields N82-14226
TIRES
Manufacture and testing of a prototype holographic series tire tester [BMFT-FB-T-80-192] N82-14501
TIROS OPERATIONAL SATELLITE SYSTEM
The use of direct readout tiros Operational Vertical Sounder (TOVS) data from Tiron N and NOAA 6 spacecraft to study a cut-off low and associated mesoscale cold pools N82-14731
TISSUES (BIOLOGY)
Inborn anemias in mice [DE81-029128] N82-14795
TITAN
Operational compensation for effect of close Titan flyby on remainder of Voyager 1 Saturn near encounter --- photography N82-14168
TITANATES
Mechanical and thermophysical properties of hot-pressed SYNROC B [DE81-029299] N82-14301
TITANIUM
Thermal and aerothermal performance of a titanium multiwall thermal protection system [NASA-TP-1961] N82-14277
Temperature dependence of H saturation and isotope exchange [DE81-026633] N82-14902
TITANIUM ALLOYS
Microanalysis of composite materials --- silicon carbide reinforced titanium alloys N82-14294
Fabrication of titanium multiwall Thermal Protection System (TPS) curved panel [NASA-CR-165754] N82-14530
TOMOGRAPHY
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment [DE81-030168] N82-14801
TOPOGRAPHY
Terminal forecast reference notebook, detachment 9, 12th weather squadron (MAC), Tyndall AFB, Florida [AD-A105085] N82-14782
TOPOLOGY
On the relationship between the Hausdorff distance and matric distances of ellipsoids [AD-A105880] N82-14858
TOROIDAL PLASMAS
Dark-ground illumination: A quantitative diagnostic for plasma density [DE82-000442] N82-14932
TORPEDOES
The effect of scattering and absorption on noise from a cavitating noise source in the subsurface ocean layer [AD-A105756] N82-14886
TORQUE
The attitude control system of AMSAT P 3 satellites N82-14132

TORSIONAL VIBRATION
Coupled flexural torsional vibration of an eccentrically stretched strip
[AE-TN-8131] N82-14528
Laser speckle doppler velocimeter technique applied to measure torsional vibrations of rotating surfaces
N82-14545

TOWING
Test and evaluation of the Bell-Halter 110-foot surface effect ship demonstration craft
[AD-A099000] N82-14399

TOXIC HAZARDS
Hazardous waste sites pose investigation, evaluation, scientific, and legal problems
[CED-81-57] N82-14671
Plan of action and milestones for Navy combustion toxicity
[AD-A105623] N82-14796

TOXICITY
Plan of action and milestones for Navy combustion toxicity
[AD-A105623] N82-14796
Evaluation of short-term bioassays to predict functional impairment. Selected short-term pulmonary toxicity tests
[AD-A103766] N82-14797

TOXICITY AND SAFETY HAZARD
Evaluation of short-term bioassays to predict functional impairment. Development of plumonary bioassays in small animals: Directory of institutions; individuals involved in utilization
[AD-A103767] N82-14798

TRACE ELEMENTS
Chemical element concentrations in liquids and solids associated with power plants using FGD systems
[DE81-030422] N82-14322

TRACKING (POSITION)
A general aviation simulator evaluation of a rate-enhanced instrument landing system display
[NASA-TP-1960] N82-14085

TRACKING NETWORKS
Geostationary satellites launched by NASA. Part 1: NASDA tracking and control system --- Nippon Aerospace Development Agency (NASOA)
N82-14137
Skylab decay follow-up N82-14167

TRAFFIC
Systems operation studies for automated guideway transit systems. Feeder systems model functional specification
[PB81-233496] N82-14990

TRAINING ANALYSIS
Education and training implications of biomass energy system use
[DE81-029956] N82-14664
An investigation into the current attitudes and perceptions held by educators toward computer-assisted-instruction N82-14828

TRAINING DEVICES
Introduction to orbital flight planning (1)
[NASA-CR-165052] N82-14106
Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication
[NASA-CP-2203-PT-1] N82-14960
Using case studies to teach an engineering technology technical writing class N82-14967
Why use case studies rather than simulation-gaming techniques or library research? N82-14968

TRAINING EVALUATION
Software modeling studies experimental study of a two dimensional language versus FORTRAN for first-course programmers, volume 3
[AD-A106034] N82-14824

TRAJECTORY ANALYSIS
Trajectory predictions for a 75 mm solid fuel ramjet tubular projectile
[AD-A105551] N82-14207
Short range prediction of clouds using trajectories
N82-14754

TRAJECTORY OPTIMIZATION
Optimization of Apogee Kick Motor (AKM) firing attitude N82-14164

TRANSDUCERS
La Recherche Aerospatiale, Bi-monthly Bulletin No. 1981-2, March - April 1981 --- aerodynamic research
[ESA-TT-713] N82-14388
Elevated-temperature (600 deg F), manual contact ultrasonic examination
[CONF-811003-2] N82-14540
Acoustooptical spectrum analysis modeling
[AD-A105866] N82-14887

TRANSFER ORBITS
The usefulness of auxiliary transfer orbit maneuvers for a near nominal geostationary mission --- salvaging N82-14140
Comparative analyses of space-to-space central power stations
[NASA-TP-1955] N82-14202
Space Tug systems study (storable). Volume 1: Overview presentation
[NASA-CR-161919] N82-14209
Space Tug systems study. Volume 2: Compendium
[NASA-CR-161920] N82-14210

TRANSIENT OSCILLATIONS
Preliminary analysis of data from SRI international transient pulse monitor on board P78-2 SCATHA satellite N82-14245
Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246

TRANSIENT RESPONSE
Simulation of transient behavior of a compression-evaporation refrigeration system
[WTHD-133] N82-14405

TRANSISTORS
Development of fabrication technology for the permeable base transistor
[AD-A105532] N82-14456

TRANSITION POINTS
Determination of the transition point in a boundary layer by the measurement of pressure fluctuation
[NASA-TM-76639] N82-14475

TRANSMISSION CIRCUITS
AFCC technical report. Use of Short Range Modems (SRM)
[AD-A105597] N82-14422

TRANSMISSION EFFICIENCY
Impact of OTS propagation results on the ECS system --- European Communications Satellite (ECS)
N82-14180
Results of tests on the satellite spotbeam antenna --- OTS N82-14182
Results and conclusions from the RF classical transmission tests from the point of view of the telecommunication authorities N82-14183
Results and conclusions of the 60 Mbit/sec digital transmission tests --- OTS N82-14185
Results and conclusions of the 120 and 180 Mbit/sec digital transmission tests --- OTS N82-14186
Direct broadcasting experiments with OTS: Results of sound transmission tests N82-14192

TRANSMISSION LINES
Manufacturing methods and technology program for ruggedized tactical fiber optic cable
[AD-A105717] N82-14919

TRANSMISSOMETERS
Results of a slant range visibility field experiment with the modified DFVLR-minilidar
[DFVLR-MITT-81-01] N82-14439

TRANSMITTANCE
Dust cloud models: Sensitivity of calculated transmittances to variations in input parameters
[AD-A103310] N82-14918

TRANSMITTERS
Earth station measurement techniques and lessons in Earth station design --- communication networks satellite N82-14195

TRANSONIC FLOW
Experimental investigation of a transonic potential flow around a symmetric airfoil
[NASA-TM-76676] N82-14057

TRANSONIC WIND TUNNELS
An afterbody drag balance --- transonic wind tunnel gages
[RAE-TM-AERO-1897] N82-14103
Research on an induction driven cryogenic wind tunnel N82-14394

TRANSPORT PROPERTIES
Hot electron effects of importance for micron and submicron devices
[AD-A105616] N82-14513

TRANSVERSE ACCELERATION
The transverse Rf accelerator
[AD-A105896] N82-14457

TRANSVERSE OSCILLATION
Coupled flexural torsional vibration of an eccentrically stretched strip
[AE-TN-8131] N82-14528

TRAPPED PARTICLES
Nonadiabatic corrections and detrapping for variable parameter free electron lasers
[DE81-028425] N82-14515
Studies of resonance-light pressure
[ISBN-951-45-2131-5] N82-14914

TRAVELING WAVE TUBES
Development of a dual mode satellite traveling wave tube 11GHz, 12W/6W
[BMFT-FB-W-81-001] N82-14466

TREES (MATHEMATICS)
Value tree analysis of energy supply alternatives
[AD-A105629] N82-14875

TRIBOLOGY
Application of surface analysis to solve problems of wear
[NASA-TM-82753] N82-14519

TRITIUM
Tandem-mirror technology demonstration facility
[DE81-030878] N82-14933

TROPOSPHERE
Forecast of severe hail processes N82-14742

TROPOSPHERIC SCATTERING
Lidar monitoring of the tropospheric water vapor mixing ratio N82-14739

TRUCKS
Occupant response and vehicle acceleration in a 30 mph frontal impact test, 1981 Ford F150 Custom Explorer Styleside, pickup, NHTSA 810602
[PB81-231045] N82-14409

TTL INTEGRATED CIRCUITS
Integrated circuits for industrial controller applications
[BMFT-FB-T-80-116] N82-14463

TUNABLE LASERS
A stark cell for frequency control of a waveguide C02 laser
[AD-A104734] N82-14495

TURBINE BLADES
Long-term stability of finely cast alloys for gas turbine blades under hot gas corrosion conditions
[DECHEMA-PROJ-4.2/1] N82-14100

TURBINE ENGINES
Corrosion inhibiting engine oils
[AD-A106127] N82-14099

TURBINES
Analytic investigation of effect of end-wall contouring on stator performance
[NASA-TP-1943] N82-14051

TURBOCOMPRESSORS
The use of optimization techniques to design controlled diffusion compressor blading
[NASA-TM-82763] N82-14094
Optimization of compressor vane and bleed settings
[AD-A106059] N82-14097

TURBOGENERATORS
Aluminum blade development for the Mod-OA 200-kilowatt wind turbine
[NASA-TM-82594] N82-14633

TURBOJET ENGINES
Parametric analysis of diffuser requirements for high expansion ratio space engine
[NASA-CR-161924] N82-14280

TURBOMACHINE BLADES
Thin film transducers for temperature and heat flux measurements --- turbomachine blades N82-14390

TURBULENCE
Angle of arrival and irradiance statistics of laser beams in turbulence
[AD-A105639] N82-14509

TURBULENCE EFFECTS
Comparison of experimental and theoretical turbulence reduction characteristics for screens, honeycomb, and honeycomb-screen combinations
[NASA-TP-1958] N82-14055
Numerical studies of laminar and turbulent drag reduction
[NASA-CR-3498] N82-14473

TURBULENT BOUNDARY LAYER
Transformation and reflection of vortex rings impinging on a plate inclined with respect to their translation direction
[MPIS-12/1980] N82-14488

TURBULENT FLOW
Combustion behavior of solid fuel ramjets. Volume 1: Correlation of reacting and non-reacting flow characteristics
[AD-A106061] N82-14316
Subsonic flow in a corner --- laminar and turbulent flow in a wing-fuselage junction N82-14393
Determination of the transition point in a boundary layer by the measurement of pressure fluctuation
[NASA-TM-76639] N82-14475
A flow-visualization study of turbulent spots on solid and compliant surfaces
[AD-A106073] N82-14478
Generalized algebraic relation for predicting developing curved channel flow with a k-epsilon model of turbulence
[DE81-028131] N82-14486
The temperature structure of a turbulent vortex ring
[MPIS-4/1980] N82-14487
Experimental investigation of instability phases of a laminar vortex ring, in light of comparable instability events in turbulent shear layer, boundary layer, and channel flows
[MPIS-17/1980] N82-14489

TURBULENT MIXING
The temperature structure of a turbulent vortex ring
[MPIS-4/1980] N82-14487

TWO DIMENSIONAL BODIES
Low Reynolds number airfoil survey, volume 1
[NASA-CR-165803-VOL-1] N82-14059

U

U.S.S.R.
Mesoscale structure of atmospheric fronts in the European part of the U.S.S.R. N82-14777

ULTRAHIGH FREQUENCIES
Spacecraft tracking campaigns and the assessment of orbit determination accuracy N82-14163
MOS field effect transistors for UHF applications
[BMFT-FB-T-81-030] N82-14465

ULTRAHIGH VACUUM
Molecular wake shield gas analyzer
[NASA-CR-161926] N82-14212

ULTRASONIC DENSIMETERS
Ultrasonic velocity for estimating density of structural ceramics
[NASA-TM-82765] N82-14359

ULTRASONIC FLAW DETECTION
Ultrasonic inspection of full-size bolting specimens
[KAPL-4129] N82-14525

ULTRASONIC TESTS
Ultrasonic velocity for estimating density of structural ceramics
[NASA-TM-82765] N82-14359
Ultrasonic inspection of full-size bolting specimens
[KAPL-4129] N82-14525
Elevated-temperature (600 deg F), manual contact ultrasonic examination
[CONF-811003-2] N82-14540

ULTRASONICS
Ultrasound characterization of disturbed flow patterns N82-14893

UNDERGROUND STORAGE
Mathematical modelling of some chemical and physical processes in underground coal gasification
[DE81-027941] N82-14613
Assessment of effectiveness of geologic isolation systems: The AEGIS geologic simulation model
[DE81-028007] N82-14704
Application of a site-binding, electrical, double-layer model to nuclear waste disposal
[DE81-030231] N82-14908
Comparison of potential radiological consequences from a spent-fuel repository versus natural-uranium deposits
[DE81-028232] N82-14910

UNDERGROUND STRUCTURES
Sixth Underground Coal-Conversion Symposium
[DE81-027669] N82-14374

UNDERWATER ACOUSTICS
Variability of acoustic transmissions in a shallow water area
[AD-A103278] N82-14882
On the design of an acoustically isolating bubble screen for the Carr Inlet acoustic range
[AD-A105830] N82-14883
Design study of hydroacoustic impulse source for deep towing, phase 2
[AD-A106066] N82-14884
The effect of scattering and absorption on noise from a cavitating noise source in the subsurface ocean layer
[AD-A105758] N82-14886
A scattering function approach to underwater acoustic detection and signal design
[AD-A105593] N82-14889
The effect of the Mid-Atlantic Ridge on long range sound propagation
[AD-A105747] N82-14890

UNDERWATER COMMUNICATION
Fish RAGU (Fish, Radio-Receiving and Generally Useful)
[AD-A105505] N82-14411

UNDERWATER OPTICS
Light fields in the ocean
[NASA-TM-76731] N82-14790

UNITED STATES OF AMERICA
Variability of seasonal precipitation over the conterminous United States, 1948-1976 --- circulation anomalies related to precipitation extremes
N82-14788

UNIVERSITIES
Seminars for private college administrators on solar applications for college buildings
[DE81-027981] N82-14861

UNSTEADY FLOW
Ultrasound characterization of disturbed flow patterns N82-14893

UPLINKING
Results and conclusions of RF performance tests made by ESA --- OTS N82-14184
TDMA/DSI system tests and telephony channel tests via the Orbital Test Satellite (OTS) --- Digital Speech Interpolation (DSI) N82-14187

UPPER ATMOSPHERE
Research results from analysis of satellite orbits --- Earth atmosphere and gravitational effects
N82-14124
The effect of multiburst NO production on electron densities and HF attenuation at 60 KM altitude
[AD-A105676] N82-14701

UPWELLING WATER
A short review of an oceanographic use of Meteosat data by the ORSTOM remote sensing service
N82-14570
Necessity of remote sensing for ocean studies. Part 1: Northwest African missions, Sahara-1 and Atlor-1 --- sea truth/remote sensing correlation of offshore upwelling N82-14582

URANIUM
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000781] N82-14600
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000401] N82-14601
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000780] N82-14602
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000872] N82-14603
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000772] N82-14604
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000785] N82-14605
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000869] N82-14606
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000794] N82-14607
NURE aerial gamma-ray and magnetic reconnaissance survey of Maine and portions of New York, volume 2
[DE82-000784] N82-14608
Hydrogeochemical and stream sediment reconnaissance basic data for Broken Bow NTMS Quadrangle, Nebraska
[DE81-030295] N82-14610
Hydrogeochemical and stream sediment reconnaissance basic data for Milbank NTMS Quadrangle, Minnesota; North Dakota; South Dakota
[DE81-029657] N82-14611
Environmental readiness document. Advanced Isotope Separation Program
[DE81-029952] N82-14900
Comparison of potential radiological consequences from a spent-fuel repository versus natural-uranium deposits
[DE81-028232] N82-14910

URBAN PLANNING
Systems operation studies for automated guideway transit systems. Feeder systems model functional specification
[PB81-233496] N82-14990
Systems operation studies for automated guideway transit systems. Availability model functional specification
[PB81-233512] N82-14992
Systems Operation Studies for Automated Guideway Transit systems. System availability model programmer's manual
[PB81-233520] N82-14993
Systems operation studies for automated guideway transit systems. Detailed station model functional specification
[PB81-233538] N82-14994

UREAS
Acceleration of the epoxy resin-dicyandiamide cure cycle by trisubstituted ureas
[AD-A105870] N82-14363

USER MANUALS (COMPUTER PROGRAMS)
Computer program for solving an inverse problem with one variable. Part 2: User manual
[CRPE-NT-81-VOL-2] N82-14826
Systems Operation Studies for Automated Guideway Transit systems. System availability model programmer's manual
[PB81-233520] N82-14993

USER REQUIREMENTS
The potential and requirements for space oceanography --- National Oceanic Satellite system and U.S. Navy requirements N82-14556
Offshore petroleum industry environmental data requirements: Emphasis on remote sensing
N82-14557
Requirements in pollution monitoring and coastal management N82-14558
Fisheries investigations and management benefits from remote sensing --- fish tracking N82-14559
Studies of the Indian continental shelf: Application of remote sensing data N82-14569
A look at nonsatellite remote sensing systems for marine use --- together with satellite systems, overall view of the technology N82-14586
Short-range weather forecasts and current weather information: User requirements and economic values N82-14759
Requirements of a water authority for short period local forecasts N82-14760
Operative warnings; routine services and ongoing experimental work in Finland N82-14781
The NSWC Global Ocean Tide Data Tape (GOTD). Its features and applicaton: Random-Point Tide program
[AD-A105974] N82-14792
Ruggedized minicomputer hardware and software topics, 1981: Proceedings of the 4th ROLM MIL-SPEC Computer User's Group Conference
[NASA-CP-2206] N82-14829
Systems operation studies for automated guideway transit systems. Feeder systems model functional specification
[PB81-233496] N82-14990

UTILITIES
Analysis of potential cogeneration impacts on electricity generation by the Central Maine Power Company
[DE81-029991] N82-14650

V

V/STOL AIRCRAFT
An empirical method for estimating the effect of ground proximity on the jet-induced lift of V/STOL aircraft employing rectangular jets
[AD-A105666] N82-14067

VACANCIES (CRYSTAL DEFECTS)
Studies of vacancy: Type defects in metals --- positron annihilation technique N82-14938
Point-defect sources and sinks
[DE82-000655] N82-14944

VACUUM
Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334

VACUUM CHAMBERS
Spacecraft charging technology in the satellite X-ray test facility N82-14267

VACUUM EFFECTS
High-temperature fatigue behavior of unirradiated V-15Cr-5Ti tested in vacuum
[DE81-028557] N82-14539

VALIDITY
Infrared radiance model variation by sensor flight measurements N82-14171

VALUE ENGINEERING
Value tree analysis of energy supply alternatives
[AD-A105629] N82-14875

VANADIUM ALLOYS
High-temperature fatigue behavior of unirradiated V-15Cr-5Ti tested in vacuum
[DE81-028557] N82-14539

VANES
Gas turbine ceramic-coated-vane concept with convection-cooled porous metal core
[NASA-TP-1942] N82-14090

VAPOR DEPOSITION
Vapor deposition tests with NiCoCrAlY alloys: First results for the mechanical high temperature characteristics of the coated superalloy IN 738 LC
N82-14292
Deposition of thin insulation layers from the gas phase
[NASA-TM-76607] N82-14307
Kinetics studies on the nucleation and growth of silicon via chemical vapour deposition N82-14939

VARIABLE GEOMETRY STRUCTURES
Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165386] N82-14095

VARIANCE (STATISTICS)
Bayesian forecasting for switching regression and autoregressive processes N82-14873

VARIATIONAL PRINCIPLES
Stress-strain analysis of very thick plates
[REPT-138] N82-14543

VARIATIONS
Determination of the transition point in a boundary layer by the measurement of pressure fluctuation
[NASA-TM-76639] N82-14475

VECTOR ANALYSIS
Equations of flight mechanics considering atmospheric turbulence N82-14063
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

VEGETATION
SHF-EHF propagation through vegetation on Colorado east slope
[AD-A105672] N82-14429

VELOCITY DISTRIBUTION
Studies of resonance-light pressure
[ISBN-951-45-2131-5] N82-14914

VELOCITY MEASUREMENT
Rotational velocities and ages of solar-type stars
N82-15006

VERBAL COMMUNICATION
Technical communication: Perspectives for the eighties, part 1. Proceedings of the technical communications sessions at the 32nd Annual Meeting of the Conference on College Composition and Communication
[NASA-CP-2203-PT-1] N82-14960
Integrate oral communication with technical writing: Towards a rationale N82-14977

VERTICAL AIR CURRENTS
Impact of data and initialization procedures on variations of vertical motion and precipitation in mesoscale models N82-14755

VERTICAL DISTRIBUTION
Application of a Gaussian multilayer diffusion model to characterize dispersion of vertical HCl column density in rocket exhaust clouds
[NASA-TP-1956] N82-14672
The use of direct readout tiros Operational Vertical Sounder (TOVS) data from Tiron N and NOAA 6 spacecraft to study a cut-off low and associated mesoscale cold pools N82-14731

VERTICAL MOTION SIMULATORS
Influence of display and control compatibility on pilot-induced oscillations
[NASA-TP-1936] N82-14804

VERY HIGH FREQUENCIES
A computer model for high-latitude phase scintillation based on wideband satellite data from Poker Flat
[AD-A105620] N82-14702
The capabilities of VHF radar for meteorological observations N82-14738

VIBRATION
On spin maneuvers with a symmetric satellite
N82-14149

VIBRATION EFFECTS
A study of the viscous dissipation and surface loading on a vibrating surface
[NASA-CR-3499] N82-14878

VIBRATION ISOLATORS
On the design of an acoustically isolating bubble screen for the Carr Inlet acoustic range
[AD-A105830] N82-14883

VIBRATION MEASUREMENT
Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

VIBRATION METERS
Single channel seismic event detection
[AD-A105469] N82-14695

VIBRATION TESTS
Emission of an elementary slot vibrator located in the center of an ideally conducting disk N82-14415

VIBRATIONAL SPECTRA
Investigation of luminescence in the charge exchange process of Ar++ with N2 of N(+) with CO
[MPIS-3/1980] N82-14326

VIDEO DATA
Direct broadcasting experiments with OTS: Results of picture transmission tests --- at 27 MHz
N82-14191
Teletext and data broadcasting experiments with OTS N82-14193
All-sky, video-based luminance mapper for daylighting research
[DE81-029276] N82-14707

VIGNETTING
Kohoutek, photometric photography experiment (S233)
[NASA-TM-82449] N82-15007

VINYL COPOLYMERS
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165040] N82-14358
Porous polymers as new sorptive materials
[PML-1980-77] N82-14369

VISCOMETRY
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357

VISCOPLASTICITY
Viscoplastic response of beryllium under shock compression
[DE81-028248] N82-14348

VISCOSITY
A study of the viscous dissipation and surface loading on a vibrating surface
[NASA-CR-3499] N82-14878

VISCOUS FLOW
Simplified Navier-Stokes equations and their mathematical properties N82-14062
Hypersonic slip-flow around slender elliptical cones at a slight angle of attack
[ESA-TT-644] N82-14069
Comparison of viscous and pressure energy exchange in fluid flow induction
[AD-A105808] N82-14481

VISIBILITY
Some optical properties of blowing snow
[AD-A103268] N82-14697

VISUAL AIDS
Teaching graphics in technical communication classes N82-14969
A graphics primer for English Teachers
N82-14970

VOICE DATA PROCESSING
Voice recognition as an input modality for the TACCO preflight data insertion task in the P-3C aircraft
[AD-A105568] N82-14821

VOLCANOES
Satellite observations of the Mt. St. Helens' eruption of 18 May 1980
[AD-A105784] N82-14591
Stratospheric aerosols
[NASA-TM-83217] N82-14691

VOLTAGE CONVERTERS (DC TO DC)
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 1: Technical report
[NASA-CR-165538] N82-14447

VOLTAGE REGULATORS
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 1: Technical report
[NASA-CR-165538] N82-14447

VORTEX RINGS
The temperature structure of a turbulent vortex ring
[MPIS-4/1980] N82-14487
Transformation and reflection of vortex rings impinging on a plate inclined with respect to their translation direction
[MPIS-12/1980] N82-14488
Experimental investigation of instability phases of a laminar vortex ring, in light of comparable instability events in turbulent shear layer, boundary layer, and channel flows
[MPIS-17/1980] N82-14489

VORTICES
Lifting surface theory for wings in low frequency small amplitude yawing and side slipping oscillating motions at low speeds N82-14061
Ultrasound characterization of disturbed flow patterns N82-14893

VOYAGER PROJECT
Mission operation report: Voyager mission success assessment
[NASA-TM-84062] N82-14204

VOYAGER 1 SPACECRAFT
Operational compensation for effect of close Titan flyby on remainder of Voyager 1 Saturn near encounter --- photography N82-14168

VOYAGER 2 SPACECRAFT
Highlights of 1981 activities
[NASA-NEWS-RELEASE-81-199] N82-15008

VULNERABILITY
Erosivity of LOVA propellants
[AD-A106081] N82-14373

W

WAKES
Molecular wake shield gas analyzer
[NASA-CR-161926] N82-14212

WALL FLOW
Analytic investigation of effect of end-wall contouring on stator performance
[NASA-TP-1943] N82-14051
Numerical studies of laminar and turbulent drag reduction
[NASA-CR-3498] N82-14473
Generalized algebraic relation for predicting developing curved channel flow with a k-epsilon model of turbulence
[DE81-028131] N82-14486

WALSH FUNCTION
Single channel seismic event detection
[AD-A105469] N82-14695

WARNING
Operative warnings; routine services and ongoing experimental work in Finland N82-14781

WASHINGTON
Pasco basin hydrometeorological study --- site selection for underground radioactive waste disposal
[DE82-000283] N82-14598

WASTE DISPOSAL
Mechanical and thermophysical properties of hot-pressed SYNROC B
[DE81-029299] N82-14301
Chemical element concentrations in liquids and solids associated with power plants using FGD systems
[DE81-030422] N82-14322
Securing containerized hazardous wastes with welded polyethylene encapsulates
[PB81-231292] N82-14370
Operational use of remote sensing for coastal zone management and possible contribution of specialized satellites --- aerial photography N82-14574
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670
Hazardous waste sites pose investigation, evaluation, scientific, and legal problems
[CED-81-57] N82-14671
Volume reduction of used High-Efficiency Particulate Air (HEPA) filters
[DE81-028529] N82-14679
Coal conversion solid waste disposal
[DE81-028567] N82-14680
Assessment of effectiveness of geologic isolation systems: The AEGIS geologic simulation model
[DE81-028007] N82-14704
Characterization of materials for waste-canister compatibility studies
[DE82-000902] N82-14907
Application of a site-binding, electrical, double-layer model to nuclear waste disposal
[DE81-030231] N82-14908
WASTE ENERGY UTILIZATION
Waste heat and chill storage in aquifer systems
[DE81-028016] N82-14652
WASTE TREATMENT
Behavior of radioactive iodine and technetium in the spray calcination of high-level waste
[DE81-028405] N82-14909
WASTE UTILIZATION
Energy balance and utilization of agricultural waste on a farm
[PB81-229262] N82-14385
Energy recovery from municipal waste development program for Idaho Falls, Idaho
[DE81-029969] N82-14659
Development of a biomass energy system for drying corn
[DE81-029027] N82-14660
Beneficial uses of nuclear waste program sewage-sludge irradiation project
[DE82-000440] N82-14677
WASTE WATER
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670
WATER
Shock front rise time in water
[AD-A105704] N82-14479
WATER COLOR
The color of the sea and its relation to surface chlorophyll and depth of the euphotic zone
N82-14562
Coastal zone research using remote sensing techniques --- calibration of coastal zone color scanner N82-14571
The feasibility of using remotely sensed color as an index of Irish coastal water properties --- statistical correlation of sea truth data N82-14581
WATER COOLED REACTORS
Neutron production by protons (190 to 268 MeV) in a water-cooled tantalum target
[DE81-030628] N82-14378
WATER CURRENTS
Maritime applications of image processing at DFVLR, Oberpfaffenhofen, West Germany --- LANDSAT multispectral scanner images, digital interactive image analysis N82-14585
WATER DEPTH
Recent work in passive optical imaging of water --- space and aircraft derived data N82-14575
WATER FLOW
The effect of spatial variability in precipitation on streamflow
[AD-A105955] N82-14589
WATER MANAGEMENT
Requirements of a water authority for short period local forecasts N82-14760
WATER POLLUTION
Algal assay studies of the Chowan River, North Carolina
[PB81-231821] N82-14621
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670
The chemical characterization of pollutants in waste water from Volunteer Army Ammunition Plant
[AD-A105705] N82-14676
Radiological and environmental research 1980: Ecology
[DE82-000154] N82-14678
Remote sensing of non-point source sediment in Northern Maine
[PB81-233603] N82-14683
Laboratory studies of priority pollutant treatability
[PB81-231235] N82-14684
WATER QUALITY
Recent work in passive optical imaging of water --- space and aircraft derived data N82-14575
Hydrogeology of spoil at three abandoned surface mines in Illinois: Preliminary results
[PB81-231664] N82-14620
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670
Remote sensing of non-point source sediment in Northern Maine
[PB81-233603] N82-14683
WATER RESOURCES
Flood plain mapping using computer graphics
[PB81-231670] N82-14625
WATER RUNOFF
A simulation study of the recession coefficient for antecedent precipitation index --- soil moisture and water runoff estimation
[NASA-TM-83860] N82-14549
WATER TABLES
Water problems and research needs for New Mexico
[PB81-231979] N82-14619
WATER TEMPERATURE
Fisheries investigations and management benefits from remote sensing --- fish tracking N82-14559
WATER TREATMENT
Water aeration with plunging jets
[ISBN-90-6231-088-5] N82-14551
Billions could be saved through waivers for coastal wastewater treatment plants
[CED-81-68] N82-14670
Laboratory studies of priority pollutant treatability
[PB81-231235] N82-14684
WATER VAPOR
Investigation of the CARS spectrum of water vapor
[AD-A105235] N82-14311
Crack tip plasticity associated with corrosion assisted fatigue
[AD-A105529] N82-14334
Improvement of humidity analyses by direct use of Meteosat water vapour channel radiances
N82-14726
Lidar monitoring of the tropospheric water vapor mixing ratio N82-14739
WATER WAVES
Determination of surface wind speed from remotely measured whitecap coverage, a feasibility assessment N82-14565
Airborne remote sensing of the coastal zone
N82-14577
The directional energy distribution of wind generated waves as inferred from stereophotographic observations of the sea surface N82-14715
WATERSHEDS
A simulation study of the recession coefficient for antecedent precipitation index --- soil moisture and water runoff estimation
[NASA-TM-83860] N82-14549
Remote sensing of non-point source sediment in Northern Maine
[PB81-233603] N82-14683
WAVE DISPERSION
Anomalous dispersion of birefringence of sapphire and magnesium fluoride in the vacuum ultraviolet
N82-14917
WAVE EXCITATION
Study of a discharge caused by a surface wave --- microwave discharge plasmas
[LP-190] N82-14937
WAVE PROPAGATION
SHF-EHF propagation through vegetation on Colorado east slope
[AD-A105672] N82-14429
Modeling the influence of static acceleration on surface wave (quartz) oscillators
[ONERA-NT-1981-3] N82-14470
On the identification of planetary-scale waves during disturbed conditions
[ISSN-0340-9821] N82-14894
The effect of the Mid-Atlantic Ridge on long range sound propagation
[AD-A105747] N82-14890
WAVE REFLECTION
Interior and exterior resonances in acoustic scattering. 1: Spherical targets. 2: Targets of arbitrary shape (T-matrix approach)
[AD-A105534] N82-14866
WAVE RESISTANCE
The design of the critical wave number and wave resistance of a coaxial line with interior conductor of cross-shaped section N82-14418
WAVEFORMS
The design of the critical wave number and wave resistance of a coaxial line with interior conductor of cross-shaped section N82-14418
Wave structure detection through two-dimensional filtering
[AD-A105554] N82-14865
WAVEGUIDE ANTENNAS
Antenna (selected articles)
[FTD-ID(RS)T-0943-81] N82-14416
The design of the critical wave number and wave resistance of a coaxial line with interior conductor of cross-shaped section N82-14418
On the calculation of the H-plane stepped joint of rectangular waveguides N82-14421
WAVEGUIDES
Radiation loss from a curved dielectric channel waveguide in a dense substrate
[AD-A105928] N82-14425
A stark cell for frequency control of a waveguide C02 laser
[AD-A104734] N82-14495
WEAR
Relating pavement distress to serviceability and performance
[PB81-227852] N82-14410
Application of surface analysis to solve problems of wear
[NASA-TM-82753] N82-14519
WEATHER
Ultra-high surface speed for metal removal, artillery shell
[AD-A103970] N82-14395
Marine activities in Sweden for which remote sensing data may be of interest --- oceanography, weather forecasting, and analysis N82-14576
WEATHER FORECASTING
The Seasat commercial demonstration program
N82-14561
An evaluation of Seasat-A data in relation to optimum track ship weather routing and site specific forecasting for the offshore oil industry N82-14564
Nowcasting: Mesoscale observations and short-range prediction --- conference proceedings, Hamburg, 25-28 Aug. 1981
[ESA-SP-165] N82-14716
Mesoscale studies of weather hazards to aviation
N82-14723
Infrared parameters for nowcasting severe rainstorms N82-14725
A study of summer thunderstorms developing over Europe using Meteosat N82-14727
Topoclimatological measurements at Bielefeld and its surroundings as an example of mesoscale observations N82-14732
Automated airfield cloud observation and prediction N82-14734
A total system approach to a weather radar network N82-14735
Nowcasting applications of Doppler radar
N82-14736
Ground based remote sensing for meteorological nowcasting N82-14737
The capabilities of VHF radar for meteorological observations N82-14738
The role of near surface outflow in maintaining convective activity --- in storms N82-14741

The use of a single Doppler radar in short range forecasting and real time analysis of extratropical cyclones N82-14744
Combined use of radar with mesoscale surface network for very short range prediction of precipitation N82-14747
Objective rainfall forecasting using data from the United Kingdom weather radar network N82-14748
The use of climatological and synoptic data for forecasting orographic enhancement of rainfall N82-14749
Use of precipitation measurements by radar in short range forecasting of precipitation N82-14750
Utilizing satellite wind data in a mesoscale numerical model N82-14757
Short-range weather forecasts and current weather information: User requirements and economic values N82-14759
Requirements of a water authority for short period local forecasts N82-14760
A beach comfort index used by the national weather service in the Netherlands N82-14761
Weathervision: A forecasting and dissemination tool for the 1980's N82-14762
Weather 80 --- weather data dissemination for military usage N82-14764
Cost 72: European weather radar project N82-14765
The Swiss network of 2 digital radars and 60 automatic weather stations N82-14766
A system for the combined use of data from multiple radars and satellites in the United Kingdom N82-14767
Design of a short range forecasting system --- Prototype Regional Observing and Forecasting Service (PROFS) N82-14770
The design of the FRONTIERS interactive display system --- forecasting rain optimized using new techniques of interactively enhanced radar and satellite (FRONTIERS) N82-14772
An assessment of mesoscale forecast experiments --- at airfields N82-14773
An operational method for forecasting stratus and fog N82-14774
Mesoscale aspects of jet streak coupling and implications for the short term forecasting of severe convective storms --- severe environmental storms and mesoscale experiment (SESAME) N82-14775
Combining satellite and conventional data for very short range forecasting purposes N82-14778
Operative warnings; routine services and ongoing experimental work in Finland N82-14781
The enhanced V, a satellite observable severe storm signature
[PB81-230328] N82-14786

WEATHERING
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165040] N82-14358

WEDGES
Elevated-temperature (600 deg F), manual contact ultrasonic examination
[CONF-811003-2] N82-14540

WELDED JOINTS
Study of the fatigue behavior of welded joints, cross stressed --- influence of inclusions
[CETIM-12-Y-200] N82-14541

WELDED STRUCTURES
Evaluation of stress-corrosion cracking of sensitized 304SS in low-temperature borated water
[DE81-028090] N82-14340
Influence of neutron irradiation at 55 deg C on the properties of austenitic stainless steels
[DE81-028065] N82-14342
Elevated-temperature (600 deg F), manual contact ultrasonic examination
[CONF-811003-2] N82-14540
Fatigue test program on notched implanted specimens, cracked and uncracked --- welded punch implant tests
[CETIM-12-Y-261] N82-14542

WELLS
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026849] N82-14522
Field demonstration of the conventional steam drive process with ancillary materials
[DE81-026962] N82-14523

WHISKER COMPOSITES
Electrodes and diaphragms for fuel cells
[BMFT-FB-T-81-047] N82-14666

WHITE DWARF STARS
The discovery of 50 minute periodic absorption events from 4U1915-05
[NASA-TM-83839] N82-15001

WHITE NOISE
Adaptive enhancement of finite bandwidth signals in white Gaussian noise
[AD-A105873] N82-14427
Wave structure detection through two-dimensional filtering
[AD-A105554] N82-14885

WIGGLER MAGNETS
Nonadiabatic corrections and detrapping for variable parameter free electron lasers
[DE81-028425] N82-14515

WIND DIRECTION
Utilizing satellite wind data in a mesoscale numerical model N82-14757
A statistical model of wind distribution in force and in direction: Application to Uccle (Brussels) data and validity of the model for Belgium
[PUBL-SER-B-107] N82-14784
Statistical measurement of the 1978 lidar measurements --- aerosols and meteorology
[PHL-1980-41] N82-14924

WIND EFFECTS
Equations of flight mechanics considering atmospheric turbulence N82-14063
The directional energy distribution of wind generated waves as inferred from stereophotographic observations of the sea surface N82-14715

WIND MEASUREMENT
Scientific studies using Bhaskara satellite microwave radiometer (SAMIR) data: A short overview --- calibration of the instrument and its use in the study of oceanographic parameters N82-14587
Mesoscale structure of atmospheric fronts in the European part of the U.S.S.R. N82-14777

WIND TUNNEL APPARATUS
The design of a jet catcher --- for wind tunnels
[RAE-TM-AERO-1891] N82-14102
Comparison of thin-film resistance heat-transfer gages with thin-skin transient calorimeter gages in conventional hypersonic wind tunnels
[NASA-TM-83197] N82-14474

WIND TUNNEL NOZZLES
Research on an induction driven cryogenic wind tunnel N82-14394

WIND TUNNEL TESTS
Wind tunnel tests of engine-equipped models: Comparison of two jet wash simulation methods
[NASA-TM-76764] N82-14091
Heat-transfer and pressure tests on an oblate elliptic nosetip in the NSWC/WO hypersonic tunnel at Mach Number 5 (STR-1346)
[AD-A106058] N82-14482

WIND TUNNELS
La Recherche Aerospatiale, Bi-monthly Bulletin No. 1981-2, March - April 1981 --- aerodynamic research
[ESA-TT-713] N82-14388

WIND VELOCITY
State-of-the-art in using a spaceborne altimeter and scatterometer for the determination of wind, sea state, and marine and ice dynamics --- Seasat instruments N82-14560
Project Noordwijk. Part 1: Measurements of the radar backscatter coefficient gamma (sigma deg) in 1977 and 1978 --- on a sea platform
[PHL-1979-49-PT-1] N82-14617
A statistical model of wind distribution in force and in direction: Application to Uccle (Brussels) data and validity of the model for Belgium
[PUBL-SER-B-107] N82-14784

WIND VELOCITY MEASUREMENT
Determination of surface wind speed from remotely measured whitecap coverage, a feasibility assessment N82-14565

WINDOWS (APERTURES)
Daylighting calculations for nonrectangular interior spaces with shading devices
[DE81-027962] N82-14705

WINDPOWERED GENERATORS
Aluminum blade development for the Mod-OA 200-kilowatt wind turbine
[NASA-TM-82594] N82-14633

WING LOADING
Development of an efficient procedure for calculating the aerodynamic effects of planform variation
[NASA-CR-3489] N82-14529

WING OSCILLATIONS
Lifting surface theory for wings in low frequency small amplitude yawing and side slipping oscillating motions at low speeds N82-14061

WING PANELS
Development of an efficient procedure for calculating the aerodynamic effects of planform variation
[NASA-CR-3489] N82-14529

WING PLANFORMS
Development of an efficient procedure for calculating the aerodynamic effects of planform variation
[NASA-CR-3489] N82-14529

WING TIPS
Optimization and performance calculation of dual-rotation propellers
[NASA-TP-1948] N82-14049

WIRING
AFCC technical report. Use of Short Range Modems (SRM)
[AD-A105597] N82-14422

WOOD
Progress on catalyzed steam gasification of biomass
[DE81-028198] N82-14663

WORDS (LANGUAGE)
Technical writing in America: A historical perspective N82-14962
Technical communication: Notes toward defining discipline N82-14963

WORKLOADS (PSYCHOPHYSIOLOGY)
Electronic master monitor and advisory display system, operational fuctions report
[AD-A105516] N82-14087

X

X RAY ANALYSIS
Direct analysis of plutonium metal for gallium, iron and nickel by energy dispersive X-ray spectrometry
[DE81-028046] N82-14324
Evaluative studies in nuclear medicine research. Emission-computed tomography assessment
[DE81-030168] N82-14801

X RAY IRRADIATION
Spacecraft charging technology in the satellite X-ray test facility N82-14267

X RAY SPECTROSCOPY
Application of surface analysis to solve problems of wear
[NASA-TM-82753] N82-14519

Z

ZINC
Potentiometric stripping as a detector for flow injection analysis of metal ions N82-14304

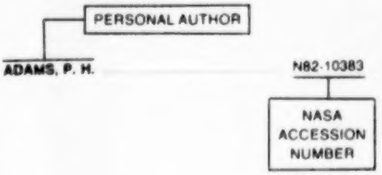
ZIRCONIUM OXIDES
Fracture toughness of Al2O3-ZrO2 composites
[DE81-028575] N82-14300

ZODIACAL LIGHT
Preparatory tasks on the definition and optimization of the Out of Ecliptic Zodiacal Light experiment --- International Solar Polar Mission
[BMFT-FB-W-81-009] N82-14199

PERSONAL AUTHOR INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 5

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

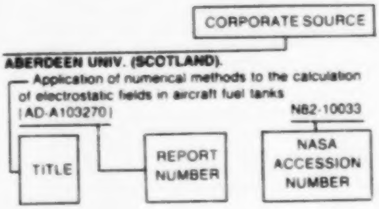
CORPORATE SOURCE INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 5

Typical Corporate Source Index Listing



CORPORATE SOURCE
ABERDEEN UNIV. (SCOTLAND).
Application of numerical methods to the calculation of electrostatic fields in aircraft fuel tanks
[AD-A103270]
N82-10033
TITLE
REPORT NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

AEG-TELEFUNKEN, HEILBRONN (WEST GERMANY).

MOS field effect transistors for UHF applications
[BMFT-FB-T-81-030] N82-14465

AEG-TELEFUNKEN, ULM (WEST GERMANY).

Development of a dual mode satellite traveling wave tube 11GHz, 12W/6W
[BMFT-FB-W-81-001] N82-14466

AERONAUTICAL RESEARCH ASSOCIATES OF PRINCETON, INC., N. J.

A study of the viscous dissipation and surface loading on a vibrating surface
[NASA-CR-3499] N82-14878

AEROSPACE CORP., EL SEGUNDO, CALIF.

Navstar Global Positioning System (GPS): Future enhanced capabilities N82-14130

Effects of secondary electron emission on charging N82-14225

Electron angular distributions during charging events N82-14239

P78-2 engineering overview N82-14243

satellite surface potential survey N82-14244

Aspect dependence and frequency spectrum of electrical discharges on the P78-2 (SCATHA) satellite N82-14246

Flight evidence of spacecraft surface contamination rate enhancement by spacecraft charging obtained with a quartz crystal microbalance N82-14247

Military standards and SCATHA program update of MIL-STD-1541 N82-14262

Temperature dependence of O2 (1 Delta) + O2 (1 Delta) and I (2P sub 1/2) + O2 (1 Delta) energy pooling
[AD-A105817] N82-14507

Satellite observations of the Mt. St. Helens' eruption of 18 May 1980
[AD-A105784] N82-14591

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.

Operation of SC5 rapid scan particle spectrometer on SCATHA satellite N82-14240

Computer simulation of spacecraft charging on SCATHA N82-14253

Analysis of ambient and beam particle characteristics during the ejection of an electron beam from a satellite in near-geosynchronous orbit on March 30, 1979 N82-14254

Automated airfield cloud observation and prediction N82-14734

Simple short range models using satellite imagery data N82-14746

The Modular Automated Weather System (MAWS) concept N82-14763

An assessment of mesoscale forecast experiments N82-14773

AIR FORCE GLOBAL WEATHER CENTRAL, OFFUTT AFB, NEBRASKA.

The initialization of a mesoscale weather prediction model using satellite and precipitation data
N82-14756

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.

Mechanism of ice crystal growth habit and shape instability development below water saturation
[AD-A105520] N82-14783

AIR FORCE SPACE DIV., LOS ANGELES, CALIF.

Operational status of the space test program P78-2 spacecraft and payloads N82-14236

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.

ACTA Mechanica Sinica (selected articles)
[AD-A107322] N82-14060

Lifting surface theory for wings in low frequency small amplitude yawing and side slipping oscillating motions at low speeds N82-14061

Simplified Navier-Stokes equations and their mathematical properties N82-14062

Equations of flight mechanics considering atmospheric turbulence N82-14063

Antenna (selected articles)
[AD-A107428] N82-14413

Synthesis of a plane impedance antenna of finite length N82-14414

Emission of an elementary slot vibrator located in the center of an ideally conducting disk N82-14415

Antenna (selected articles)
[FTD-ID(RS)T-0943-81] N82-14416

The design of phased annular antenna arrays of interacting radiators, excited by a Butler circuit
N82-14417

The design of the critical wave number and wave resistance of a coaxial line with interior conductor of cross-shaped section N82-14418

The synthesis of difference direction patterns of spherical antennas N82-14419

The calculation of the input resistance of a vibrator with dielectric cover by the method of induced EMF
N82-14420

On the calculation of the H-plane stepped joint of rectangular waveguides N82-14421

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.

Evaluation of USSAERO and HABP computer codes for aerodynamic predictions for slender bodies
[AD-A106065] N82-14064

Synthesis, characterization and optical properties of barium titanate films sputtered under various conditions
[AD-A105655] N82-14296

Determination of selected distillate blending solvents in simple and complex aircraft fuel matrices via glass capillary gas chromatography
[AD-A105588] N82-14312

Determination of pyridine in modified JP-4 via High Performance Liquid Chromatography (HPLC)
[AD-A105589] N82-14313

Cathodoluminescence characterization of ion implanted GaAs
[AD-A105656] N82-14314

Determination of complex characteristics values and vectors from sinusoidal excitations at near resonance frequencies
[AD-A105624] N82-14534

AIRESEARCH MFG. CO., PHOENIX, ARIZ.

Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165386] N82-14095

ERBS fuel addendum: Pollution reduction technology program small jet aircraft engines, phase 3
[NASA-CR-165387] N82-14096

AMERICAN BAR ASSOCIATION, WASHINGTON, D.C.

Need for power and the choice of technologies: State decisions on electric power facilities
[DE81-025960] N82-14644

AMSAT-DEUTSCHLAND E.V., MARBURG (WEST GERMANY).

The attitude control system of AMSAT P 3 satellites N82-14132

ANALYTICAL AND COMPUTATIONAL MATHEMATICS, ZURICH (SWITZERLAND).

An analytical singularity-free orbit predictor for near-Earth satellites N82-14154

ANDCO ENVIRONMENTAL PROCESSES, INC., BUFFALO, N.Y.

Feasibility study for an alcohol-fuels plant for Buffalo, New York
[DE82-000032] N82-14377

APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.

Feasibility study for an advanced lighted aid to navigation
[AD-A105944] N82-14081

Radar correlation with ice depolarization measurements of the 28.56 GHz COMSTAR beacon and associated cross polarization statistics
[NASA-CR-168717] N82-14548

APPROVED ENGINEERING TEST LABS., FULLERTON, CALIF.

STATE UNIV. OF NEW YORK, ALBANY.
Fundamental studies in isotope chemistry [DE82-000651] N82-14321
Research in nuclear astrophysics: Stellar collapse and supernovae [DE81-030041] N82-15005

STATE UNIV. OF NEW YORK AT STONY BROOK.
Research in nuclear astrophysics: Stellar collapse and supernovae [DE81-030041] N82-15005

STRASBOURG UNIV. (FRANCE).
Economic effects induced by ESA contracts, phase 2. Volume 1: Summary [ESA-CR(P)-1462-VOL-1] N82-14981
Economic effects induced by ESA contracts, phase 2. Volume 2: Main report [ESA-CR(P)-1462-VOL-2] N82-14982
Economic effects induced by ESA contracts. Phase 2. Volume 3: Theory and method [ESA-CR(P)-1462-VOL-3] N82-14983

SWEDISH METEOROLOGICAL AND HYDROLOGICAL INST., NORKOEPING.
Marine activities in Sweden for which remote sensing data may be of interest N82-14576
Automated techniques for satellite imagery analysis N82-14768
Promis-90: Future Swedish weather service system N82-14771

SWEDISH MILITARY WEATHER SERVICE, STOCKHOLM.
Weather 80 N82-14764
An operational method for forecasting stratus and fog N82-14774

SWEDISH TELECOMMUNICATIONS ADMINISTRATION, FARSTA.
Correlating OTS beacon measurements with radiometer and rainfall data N82-14179

SWISS INST. OF METEOROLOGY, LOCARNO-MONTI.
The Swiss network of 2 digital radars and 60 automatic weather stations N82-14766

SYRACUSE UNIV., N. Y.
Polymeric microelectronics [AD-A105707] N82-14366
Preparing for an influx of foreign students in technical writing courses: Understanding their background N82-14973

SYSTEMS SCIENCE AND SOFTWARE, LA JOLLA, CALIF.
Representation and material charging response of geoplasma environments N82-14249
Simulation of charging response of SCATHA (P78-2) satellite N82-14250

SYSTEMS SCIENCE AND SOFTWARE, SAN DIEGO, CALIF.
Calculation of surface current response to surface flashover of a large sample under grounded and floating conditions N82-14259
Charging of a large object in low polar Earth orbit N82-14275

SZOLGALAT METEOROLOGICAL ORGANIZATION, BUDAPEST (HUNGARY).
Use of precipitation measurements by radar in short range forecasting of precipitation N82-14750

T

TECHNISCHE HOCHSCHULE, DARMSTADT (WEST GERMANY).
Long-term stability of finely cast alloys for gas turbine blades under hot gas corrosion conditions
[DECHEMA-PROJ-4.2/1] N82-14100
High power gas laser for material processing of organic and inorganic material
[BMFT-FB-T-81-025] N82-14517

TECHNISCHE HOGESCHOOL, DELFT, (NETHERLANDS).
Accurate orbit determinations from laser range observations by LAGEOS, Starlette and GEOS 3 N82-14126
Simulation of transient behavior of a compression-evaporation refrigeration system
[WTHD-133] N82-14405
Integrated circuits for accurate linear analogue electric signal processing N82-14445
Silicon dew-point sensor for accurate humidity measurement systems N82-14493
A geometrically nonlinear finite element shell theory N82-14532
Water aeration with plunging jets
[ISBN-90-6231-088-5] N82-14551
Gravity waves on water with non-uniform depth and current N82-14692
The directional energy distribution of wind generated waves as inferred from stereophotographic observations of the sea surface N82-14715

TECHNISCHE HOGESCHOOL, EINDHOVEN (NETHERLANDS).
Integrated Schottky Logic N82-14306

TECHNISCHE UNIV., BERLIN (WEST GERMANY).
Preparation of sinter active silicon carbide powders
[BMFT-FB-T-81-038] N82-14302
Experimental investigation of the influence of the casing geometry upon the flow conditions and the noise of a centrifugal fan
[DFVLR-FB-81-20] N82-14472

TECHNISCHE UNIVERSITAET, BRUNSWICK (WEST GERMANY).
The Giotto magnetometer experiment N82-14110
Sounding rocket program Magnetosphere: The search coil magnetometer experiment in the substorm phenomena payload
[BMFT-FB-W-81-010] N82-14709

TECHNISCHE UNIVERSITAET, HANOVER (WEST GERMANY).
Topoclimatological measurements at Bielefeld and its surroundings as an example of mesoscale observations N82-14732

TECHNOLOGY, INC., HOUSTON, TEX.
Laboratory data manipulation tools basic data handling programs. Volume 2: Detailed software/hardware documentation
[NASA-CR-167478-VOL-2] N82-14819

TEKNEKRON, INC., MCLEAN, VA.
Environmental readiness document. Advanced Isotope Separation Program
[DE81-029952] N82-14900

TELEDYNE GEOTECHNICAL, ALEXANDRIA, VA.
Single channel seismic event detection
[AD-A105469] N82-14695
Regional phase processors
[AD-A105470] N82-14696

TELESPAZIO, S.P.A., ROME (ITALY).
SIRIO 2 LASSO mission: Geosynchronous satellite laser station ranging data orbit determination simulations N82-14156
Attenuation statistics obtained with OTS N82-14177
Results and conclusions of the 120 and 180 Mbit/sec digital transmission tests N82-14186
Analogue television tests N82-14189
The measurement of Earth station performances and its impact on future design N82-14194

TELSPACE, PARIS (FRANCE).
An overview of the design and construction of small Earth stations used with OTS N82-14196

TEMPLE UNIV., PHILADELPHIA, PA.
Neutrino, Maxwell and scalar fields in cylindrical and spherical relativistic spaces N82-14694

TENNESSEE UNIV., KNOXVILLE.
A simplified approach to spectrum estimation of stochastic processes N82-14871
Influences on factorial accuracy: A Monte Carlo investigation N82-14874

TEST GROUP (6585TH), HOLLOMAN AFB, N. MEXICO
Rail roughness study of the Holloman high speed rocket sled test track
[AD-A105778] N82-14105

TETRA TECH, INC., COLUMBUS, OHIO.
Evaluation of Devonian shale potential in eastern Kentucky/Tennessee
[DE82-001164] N82-14595
Evaluation of the eastern gas shales in Pennsylvania
[DE82-001165] N82-14596
Evaluation of Devonian shale potential in New York
[DE82-001163] N82-14597

TEXAS A&M UNIV., COLLEGE STATION.
Design studies for a technology assessment receiver for global positioning system
[NASA-CR-165046] N82-14074
High performance liquid chromatography/video fluorometry. Part 3: Applications
[AD-A105945] N82-14318

TEXAS INSTRUMENTS, INC., DALLAS.
Development of fabrication technology for the permeable base transistor
[AD-A105532] N82-14456

TEXAS SOUTHERN UNIV., HOUSTON.
Introduction to orbital flight planning (1)
[NASA-CR-165052] N82-14106

TEXAS TECHNOLOGICAL UNIV., LUBBOCK.
Pulsed Power Research colloquium
[AD-A105770] N82-14636

TEXAS UNIV., DALLAS.
Molecular wake shield gas analyzer
[NASA-CR-161926] N82-14212

TEXTRON, INC., SPRINGFIELD, VT.
Ultra-high surface speed for metal removal, artillery shell
[AD-A103970] N82-14395

TORONTO UNIV. (ONTARIO).
Dielectric surface discharges: Effects of combined low-energy and high-energy incident electrons N82-14222
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165041] N82-14357
Modelling of polymer photodegradation for solar cell modules
[NASA-CR-165040] N82-14358

TOULOUSE UNIV. (FRANCE).
The Copernic experiment to measure three dimensional electron distribution and the composition of thermal positive ions including water clusters near Halley's Comet N82-14112

TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF.
Electron penetration of spacecraft thermal insulation N82-14220
Brushfire arc discharge model N82-14224
NASCAP charging calculations for a synchronous orbit satellite N82-14256
Monolithic microwave preamplifier
[AD-A104857] N82-14449
Plasma wave experiment for the ISEE-3 Mission
[NASA-CR-166730] N82-15000

TRW, INC., REDONDO BEACH, CALIF.
Compressible fluids investigation
[AD-A105703] N82-14483

TRW SYSTEMS GROUP, REDONDO BEACH, CALIF.
Global geometry techniques for mission analysis N82-14159

U

UNITED KINGDOM ATOMIC ENERGY AUTHORITY, HARWELL (ENGLAND).
Electrostatic discharging behaviour of Kapton irradiated with electrons N82-14221

UNITED TECHNOLOGIES CORP., SOUTH WINDSOR, CONN.
Investigation of the in-situ oxidation of methanol in fuel cells
[AD-A105947] N82-14642

UNITED TECHNOLOGIES RESEARCH CENTER, EAST HARTFORD, CONN.
Investigation of the CARS spectrum of water vapor
[AD-A105235] N82-14311
External fuel vaporization study
[NASA-CR-165513] N82-14371

UNIVERSAL ENERGY SYSTEMS, INC., DAYTON, OHIO.
Investigation of plasma excitation. Volume 1: Electron impact studies of selected ground state and excited state rare gas atoms
[AD-A105494] N82-14927
Investigation of plasma excitation. Volume 2: Microwave plasmas
[AD-A105495] N82-14928
Investigation of plasma excitation. Volume 3: Advanced optical diagnostics of plasmas
[AD-A105496] N82-14929

UNIVERSITE CATHOLIQUE DE LOUVAIN (BELGIUM).
Partitioning methods for identification and control of flexible spacecraft N82-14147

UNIVERSITY COLL., CARDIFF (WALES).
Interstellar grains investigated and comets proposed as a vehicle for Panspermia
[PREPRINT-65] N82-14995
Interstellar grains N82-14996
Comets: A vehicle for panspermia N82-14997
The 3.4 micron interstellar absorption feature and the organic composition of interstellar grains
[PREPRINT-61] N82-15002
The 3.4 micrometer interstellar absorption feature N82-15003
The organic composition of interstellar grains N82-15004

UNIVERSITY COLL., GALWAY (IRELAND).
Determination of surface wind speed from remotely measured whitecap coverage, a feasibility assessment N82-14565
The feasibility of using remotely sensed color as an index of Irish coastal water properties N82-14581

UNIVERSITY COLL., LONDON (ENGLAND).
A cometary plasma experiment for the mission to Halley's Comet N82-14111
A study of summer thunderstorms developing over Europe using Meteosat N82-14727

UNIVERSITY COLL. OF SWANSEA (WALES).
Hierarchical finite element approaches error estimates and adaptive refinement
[AD-A105899] N82-14855

UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.
Analysis and design of fault-tolerant computer systems
[AD-A105491] N82-14809
Value tree analysis of energy supply alternatives
[AD-A105629] N82-14875
Reliability vs. diagnosticity in hierarchical inference
[AD-A105628] N82-14956

UTAH AGRICULTURAL EXPERIMENT STATION, LOGAN.
Salt release from suspended sediments: A simulated model
[PB81-231839] N82-14624

UTAH WATER RESEARCH LAB., LOGAN.
Calcium carbonate precipitation as influenced by stream primary production
[PB81-231946] N82-14623

V

VARIAN ASSOCIATES, PALO ALTO, CALIF.
Dispenser cathode physics
[AD-A105126] N82-14450

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.
Potentiometric stripping as a detector for flow injection analysis of metal ions N82-14304

Modeling and Analyses of Power Processing Systems (MAPPS). Volume 1: Technical report
[NASA-CR-165696] N82-14447
Use of two-dimensional transmission photoelastic models to study stresses in double-lap bolted joints
[NASA-CR-165812] N82-14533

VIRGINIA UNIV., CHARLOTTESVILLE.
The effect of spatial variability in precipitation on streamflow
[AD-A105955] N82-14589
The use of mesoscale meteorological and climatological information in nowcasting and short range prediction N82-14751

W

WACKER-CHEMIE G.M.B.H. BURGHAUSEN (WEST GERMANY).
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Production of gallium phosphide crystals
[BMFT-FB-T-81-021] N82-14948
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, crucible pulling of Ga As crystals
[BMFT-FB-T-81-022] N82-14949
Research and development on technologies for the preparation of III-V semiconductor materials and on methods for evaluation of the quality of these materials: Gallium arsenide crystals, gradient freeze crystal growth and measurement techniques
[BMFT-FB-T-81-023] N82-14950

WALK, HYDEL AND ASSOCIATES, INC., NEW ORLEANS, LA.
Laboratory studies of priority pollutant treatability
[PB81-231235] N82-14684

WASHINGTON UNIV., SEATTLE.
Mesoscale structures in midlatitude frontal systems N82-14721
The use of a single Doppler radar in short range forecasting and real time analysis of extratropical cyclones N82-14744
Writing as decision-making N82-14976

WAYNE STATE UNIV., DETROIT, MICH.
How to develop and write a case for technical writing N82-14965

WEATHER WING (5TH), LANGLEY AFB, VA.
Terminal forecast reference notebook, detachment 9, 12th weather squadron (MAC), Tyndall AFB, Florida
[AD-A105086] N82-14782

WESSEX WATER AUTHORITY, BRISTOL (ENGLAND).
Requirements of a water authority for short period local forecasts N82-14760

WESTERN RESEARCH CORP., SAN DIEGO, CALIF.
The transverse Rf accelerator
[AD-A105696] N82-14457

WESTINGHOUSE ELECTRIC CORP., BALTIMORE, MD.
Fault isolation techniques N82-14840

WESTINGHOUSE ELECTRIC CORP., CONCORDVILLE, PA.
Compressed air energy storage preliminary design and site development program in an aquifer. Volume 5, part 2, appendix F, dynamic system computer model
[DE82-000671] N82-14646

WILLIAMS BROS. ENGINEERING CO., TULSA, OKLA.
Sixth Underground Coal-Conversion Symposium
[DE81-027669] N82-14374

WISCONSIN UNIV. - MADISON.
Block iterative methods for elliptic and parabolic difference equations
[AD-A105898] N82-14850

WISCONSIN UNIV., MADISON.
Utilizing satellite wind data in a mesoscale numerical model N82-14757

WYOMING UNIV., LARAMIE.
Analysis of crack propagation as an energy absorption mechanism in metal matrix composites
[NASA-CR-165051] N82-14266

Y

YALE UNIV., NEW HAVEN, CONN.
The influence of mountains on the atmosphere: Recent advances N82-14722

YORK UNIV., TORONTO (ONTARIO).
Results from a two dimensional spacecraft charging simulation and comparison with a surface photocurrent model N82-14257

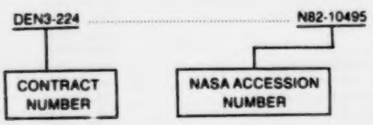
Z

ZEISS (CARL), OBERKOCHEN (WEST GERMANY).
Development of new production technologies for optical components with spherical surfaces
[BMFT-FB-T-81-032] N82-14402
Electronic image analysis
[BMFT-FB-T-80-126] N82-14464
PMP 80 automatic photometer
[BMFT-FB-T-81-051] N82-14504

CONTRACT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 5

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

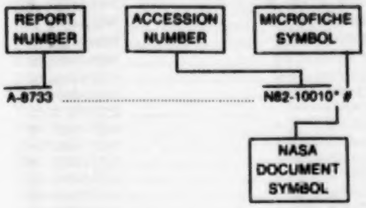
REPORT / ACCESSION NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 5

Typical Report / Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an '*' following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols '#' and '*', from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402, United States of America.

Semimonthly issues...

Annual subscription rates: $90.00 domestic; $112.00 foreign. Price per single copy: $4.75 domestic; $5.95 foreign.

Annual index issues...

Pricing based upon pagination.

Domestic subscription rates...

Apply to the United States, Canada, Mexico, and all Central and South American countries, except as noted below.

Foreign subscription rates...

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH
Scientific and Technical Aerospace Reports, Volume 20, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through March 31, 1982.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR*, and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

HOW TO USE *STAR* SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer.*

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche(1) are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Adminstration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its' Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free. (See discussion of patents and patent applications below.)

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02 ($6.00 domestic; $12.00 foreign). Microfiche are sold at price code A01 ($4.00 domestic; $8.00 foreign). The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at 50 cents per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP-1
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services, in addition to the distribution of NASA scientific and technical reports and of *STAR* and its cumulative indexes, is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;
2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
Attn.: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $50.00 North America; $100.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

VOLUME 20 NUMBER 6/MARCH 23, 1982

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics.*

01 AERONAUTICS (GENERAL) 717

02 AERODYNAMICS 717

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*

03 AIR TRANSPORTATION AND SAFETY 719

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation.*

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 720

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications.*

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 720

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics.*

06 AIRCRAFT INSTRUMENTATION 721

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography.*

07 AIRCRAFT PROPULSION AND POWER 721

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *44 Energy Production and Conversion.*

08 AIRCRAFT STABILITY AND CONTROL 726

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 727

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space).*

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*

12 ASTRONAUTICS (GENERAL) 728

For extraterrestrial exploration see *91 Lunar and Planetary Exploration.*

13 ASTRODYNAMICS N.A.

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) 730

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air).*

15 LAUNCH VEHICLES AND SPACE VEHICLES 731

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 733

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation.*

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING N.A.

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications.*

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 733

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support.* For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics.*

19 SPACECRAFT INSTRUMENTATION N.A.

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography.*

20 SPACECRAFT PROPULSION AND POWER 733

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels,* and *44 Energy Production and Conversion.*

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) 734
Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS 734
Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY 736
Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.
For related information see also *77 Thermodynamics and Statistical Physics*.

26 METALLIC MATERIALS 741
Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS 745
Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS 748
Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.
For related information see also *Physics*.

31 ENGINEERING (GENERAL) 751
Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS 755
Includes land and global communications; communications theory; and optical communications.
For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING 759
Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.
For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER 767
Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.
For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY 771
Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.
For aerial photography see *43 Earth Resources*. For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation*.

36 LASERS AND MASERS 778
Includes parametric amplifiers.

37 MECHANICAL ENGINEERING 779
Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY 780
Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS 781
Includes structural element design and weight analysis; fatigue; and thermal stress.
For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.
For related information see also *Space Sciences*.

42 GEOSCIENCES (GENERAL) 783

43 EARTH RESOURCES 784
Includes remote sensing of earth rescurces by aircraft and spacecraft; photogrammetry; and aerial photography.
For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION 790
Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION 799
Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 807
Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.
For space radiation see *93 Space Radiation*.

47 METEOROLOGY AND CLIMATOLOGY 810
Includes weather forecasting and modification.

48 OCEANOGRAPHY 813
Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) **815**
Includes genetics.

52 AEROSPACE MEDICINE **821**
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES **825**
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT **825**
Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY **N.A.**
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) **N.A.**

60 COMPUTER OPERATIONS AND HARDWARE **827**
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering.*

61 COMPUTER PROGRAMMING AND SOFTWARE **830**
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS **832**
Includes computer networks.

63 CYBERNETICS **N.A.**
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support.*

64 NUMERICAL ANALYSIS **832**
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY **834**
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS **834**
Includes mathematical modeling; network analysis, and operations research.

67 THEORETICAL MATHEMATICS **N.A.**
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering.*

70 PHYSICS (GENERAL) **834**
For geophysics see *46 Geophysics.* For astrophysics see *90 Astrophysics.* For solar physics see *92 Solar Physics.*

71 ACOUSTICS **835**
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution.*

72 ATOMIC AND MOLECULAR PHYSICS **836**
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS **840**
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation.*

74 OPTICS **841**
Includes light phenomena.

75 PLASMA PHYSICS **847**
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics.* For space plasmas see *90 Astrophysics.*

76 SOLID-STATE PHYSICS **850**
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers.*

77 THERMODYNAMICS AND STATISTICAL PHYSICS **853**
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer.*

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) **N.A.**
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT **853**
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE **854**

Includes information storage and retrieval technology; micrography; and library science.

For computer documentation see *61 Computer Programming and Software*.

83 ECONOMICS AND COST ANALYSIS **N.A.**

Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE **N.A.**

Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION **857**

Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.

For related information see *03 Air Transportation and Safety*, *16 Space Transportation*, and *44 Energy Production and Conversion*.

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.

For related information see also *Geosciences*.

88 SPACE SCIENCES (GENERAL) **859**

89 ASTRONOMY **859**

Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS **859**

Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION **860**

Includes planetology; and manned and unmanned flights.

For spacecraft design see *18 Spacecraft Design, Testing and Performance*. For space stations see *15 Launch Vehicles and Space Vehicles*.

92 SOLAR PHYSICS **860**

Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION **861**

Includes cosmic radiation; and inner and outer earth's radiation belts.

For biological effects of radiation see *52 Aerospace Medicine*. For theory see *73 Nuclear and High-Energy Physics*.

DEVELOPMENT AND EVALUATION OF AUTOMATIC LANDING CONTROL LAWS FOR LIGHT WING LOADING STOL AIRCRAFT
B. Feinreich, O. Degani, and G. Gevaert Jul. 1981 371 p refs
(Contract NAS2-9410)
(NASA-CR-166160) Avail: NTIS HC A16/MF A01 CSCL 01C

Automatic flare and decrab control laws were developed for NASA's experimental Twin Otter. This light wing loading STOL aircraft was equipped with direct lift control (DLC) wing spoilers to enhance flight path control. Automatic landing control laws that made use of the spoilers were developed, evaluated in a simulation and the results compared with these obtained for configurations that did not use DLC. The spoilers produced a significant improvement in performance. A simulation that could be operated faster than real time in order to provide statistical landing data for a large number of landings over a wide spectrum of disturbances in a short time was constructed and used in the evaluation and refinement of control law configurations. A longitudinal control law that had been previously developed and evaluated in flight was also simulated and its performance compared with that of the control laws developed. Runway alignment control laws were also defined, evaluated, and refined to result in a final recommended configuration. Good landing performance, compatible with Category 3 operation into STOL runways, was obtained. Author

01 AERONAUTICS (GENERAL)

N82-15009# Societe Nationale Industrielle Aerospatiale, Suresnes (France). Direction de la Qualite.
THE AIRBUS PROGRAM: QUALITY POLICY [LE PROGRAMME AIRBUS: STRATEGIE DE LA QUALITE]
Georges Sertour 1981 17 p In FRENCH Presented at Congr. EOQC, Jun. 1981
(SNIAS-812-551-101) Avail: NTIS HC A02/MF A01

The organization of a management system for quality which is based on key points, compromise quality/cost, optimization and intention to satisfy certification authorities and customers alike is described. The commercial success of Airbus is reviewed. Marketing and the manufacturing consortium are discussed. The principal phases of product construction and life are treated, (design, procurement, fabrication, inspection, and utilization). Particularities of the management system for quality are revealed at each stage. Author (ESA)

N82-15010# Societe Nationale Industrielle Aerospatiale, Suresnes (France). Lab. Central.
AERONAUTICAL APPLICATIONS OF BONDING [LES APPLICATIONS AERONAUTIQUES DU COLLAGE]
G. Briens 23 Jun. 1981 23 p In FRENCH Presented at Journee d'Information sur le Collage Organisee, Senlis, France, 17 Jun. 1981; sponsored by Federation des Industries Mecaniques et Transformatrices des Metaux and Centre Technique des Industries Mecaniques
(SNIAS-812-551-102; C.42-886) Avail: NTIS HC A02/MF A01

Adhesive bonding agents and techniques and their utilization in aircraft construction are reviewed. Adhesives are classified by their physical presentation, chemical nature, normal application, hardening temperature, and by service temperature and life. The principal structures in which adhesives are used include: honeycomb sandwich constructions, panel stiffeners, reinforcing backing, crack arresters, and laminates. Advantages in bonding assembly are mentioned. Mechanical limitations like shear strength, tensile strength, and resistance to peeling or cleaving, are discussed. The growing importance of bonding in the aerospace industry is emphasized. Author (ESA)

ADVANTAGES AND LIMITATIONS IN THE USE OF DIVERSE MATERIALS FOR AIRCRAFT CONSTRUCTION [ATOUTS ET LIMITES D'EMPLOIS DES DIVERS MATERIAUX UTILISES DANS LA CONSTRUCTION DES CELLULES]
G. Hilaire 1981 37 p In FRENCH Presented at 9th Colloq. Aciers et Alliages Speciaux dans les Ind. Aerospatiales, Le Bourget, France, 11 Jun. 1981
(SNIAS-811-551-104) Avail: NTIS HC A03/MF A01

The properties and applications of steels, light alloys, titanium, and carbon composites are compared. A percentage evaluation of their use in civil aircraft, military aircraft, helicopters, and spacecraft shows trends in airframe materials selection. Criteria for the choice of materials are discussed. Mechanical static characteristics, fatigue behavior, ruggedness, and cost are considered. A more widespread utilization of composites is indicated. Author (ESA)

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

INFLUENCE OF THREE-DIMENSIONAL EFFECTS ON THE SUPERSONIC FLOW FIELD AT THE LEADING EDGE OF A TURBOMACHINE CASCADE [EINFLUSS VON DREIDIMENSIONALEN EFFEKTEN AUF DIE VORDERKANTENSTROEMUNG AN UEBERSCHALL-TURBOMASCHINENSCHAUFEN]
Herms Schelle Zurich Juris-Verlag 1980 84 p refs In GERMAN; ENGLISH summary
(EPFL-ITA-9; ISBN-3-260-04851-0) Avail: Issuing Activity

A three-dimensional bi-characteristic method was developed. Results are compared with those of two-dimensional models. Three-dimensional effects are expected to play an important role because of the variation of flow velocity along the turbine radius cascade height. The mathematical model, the system of characteristic equations, the numerical algorithm and the test procedures are discussed. Results of the shock wave position and of the flow characteristics behind the shock as a function of logarithmic pressure function, Laval velocity, entropy, direction of velocity and edge angle show little or no difference between the three-dimensional analysis and a piecewise two-dimensional one. FLAP-LAG-TORSIONAL DYNAMICS OR EXTENSIONAL AND INEXTENSIONAL ROTOR BLADES IN HOVER AND IN FORWARD FLIGHT Semiannual Progress Report, Jul. - Dec 1981
M. R. M. CrespoDaSilva Dec. 1981 6 p refs
(Grant NAG2-38)
(NASA-CR-165078) Avail: NTIS HC A02/MF A01 CSCL 01A

The differential equations describing the flap-lag-torsional motion of a flexible rotor blade including third-order nonlinearities were derived for hover and forward flight. Making use of the two boundary conditions, those equations were reduced to a set of three integro partial differential equations written in terms of the flexural deflections and the torsional variable. N82-15014*# Vigyan Research Associates, Inc., Hampton, Va
SUBSONIC BALANCE AND PRESSURE INVESTIGATION OF A 60-DEG DELTA WING WITH LEADING-EDGE DEVICES (DATA REPORT)
Dhanvada M. Rao and Stephen A. Tingas (North Carolina State Univ., Raleigh) Hampton, Va. NASA. Langley Research Center Nov. 1981 126 p refs
(Contract NAS1-16259)
(NASA-CR-165806) Avail: NTIS HC A07/MF A01 CSCL 01A

The drag reduction potential of leading edge devices on a 60 degree delta wing at high lift was examined. Geometric variations of fences, chordwise slots, pylon type vortex generators leading edge vortex flaps, and sharp leading edge extensions were tested individually and in specific combinations to improve high-alpha drag performance with a minimum of low-alpha drag penalty. The force, moment, and surface static pressure data for angles of attack up to 23 degrees, at Mach and Reynolds numbers of 0.16 and 3.85 x 10 to the 6th power per meter are documented.

LOW-SPEED AERODYNAMIC PERFORMANCE OF A HIGH-ASPECT-RATIO SUPERCRITICAL-WING TRANSPORT MODEL EQUIPPED WITH FULL-SPAN SLAT AND PART-SPAN DOUBLE-SLOTTED FLAPS
Harry L. Morgan, Jr. and John W. Paulson, Jr. Dec. 1979 145 p refs
(NASA-TP-1580; L-13201) Avail: NTIS HC A07/MF A01 CSCL 01A

An investigation was conducted in the Langley V/STOL tunnel to determine the static longitudinal and lateral-directional aerodynamic characteristics of an advanced high-aspect-ratio supercritical-wing transport model equipped with a full-span leading-edge slat and part-span double-slotted trailing-edge flaps. This wide-body transport model was also equipped with spoiler and aileron control surfaces, flow-through nacelles, landing gear, movable horizontal tails, and interchangeable wing tips with aspect ratios of 10 and 12. The model was tested with leading-edge slat and trailing-edge flap combinations representative of cruise, climb, takeoff, and landing wing configurations. The tests were conducted at free-stream conditions corresponding to Reynolds numbers (based on mean geometric chord) of 0.97 to 1.63 x 10 to the 6th power and corresponding Mach numbers of 0.12 to 0.20, through an angle-of-attack range of -2 deg to 24 deg and a sideslip-angle range of -10 deg to 5 deg.

DONBOL: A COMPUTER PROGRAM FOR PREDICTING AXISYMMETRIC NOZZLE AFTERBODY PRESSURE DISTRIBUTIONS AND DRAG AT SUBSONIC SPEEDS
Lawrence E. Putnam May 1979 99 p refs
(NASA-TM-78779; L-12658) Avail: NTIS HC A05/MF A01 CSCL 01A

A Neumann solution for inviscid external flow was coupled to a modified Reshotko-Tucker integral boundary-layer technique, the control volume method of Presz for calculating flow in the separated region, and an inviscid one-dimensional solution for the jet exhaust flow in order to predict axisymmetric nozzle afterbody pressure distributions and drag. The viscous and inviscid flows are solved iteratively until convergence is obtained. A computer algorithm of this procedure was written and is called DONBOL. A description of the computer program and a guide to its use is given. Comparisons of the predictions of this method with experiments show that the method accurately predicts the pressure distributions of boattail afterbodies which have the jet exhaust flow simulated by solid bodies. For nozzle configurations which have the jet exhaust simulated by high-pressure air, the present method significantly underpredicts the magnitude of nozzle pressure drag. This deficiency results because the method neglects the effects of jet plume entrainment. This method is limited to subsonic free-stream Mach numbers below that for which the flow over the body of revolution becomes sonic.

HIGH LIFT SELECTED CONCEPTS Final Report, Aug. 1977 - Jul. 1978
M. L. Henderson Hampton, Va. NASA Aug. 1979 108 p refs
(Contract NAS1-14742)
(NASA-CR-159093) Avail: NTIS HC A06/MF A01 CSCL 01A

The benefits to high lift system maximum life and, alternatively, to high lift system complexity, of applying analytic design and analysis techniques to the design of high lift sections for flight conditions were determined and two high lift sections were designed to flight conditions. The influence of the high lift section on the sizing and economics of a specific energy efficient transport (EET) was clarified using a computerized sizing technique and an existing advanced airplane design data base. The impact of the best design resulting from the design applications studies on EET sizing and economics were evaluated. Flap technology trade studies, climb and descent studies, and augmented stability studies are included along with a description of the baseline high lift system geometry, a calculation of lift and pitching moment when separation is present, and an inverse boundary layer technique for pressure distribution synthesis and optimization.

NATURAL LAMINAR FLOW AIRFOIL ANALYSIS AND TRADE STUDIES Final Report, Aug. 1977 - Jun. 1978
May 1979 86 p refs
(Contract NAS1-14742)
(NASA-CR-159029; B-7220) Avail: NTIS HC A05/MF A01 CSCL 01A

An analysis of an airfoil for a large commercial transport cruising at Mach 0.8 and the use of advanced computer techniques to perform the analysis are described. Incorporation of the airfoil into a natural laminar flow transport configuration is addressed and a comparison of fuel requirements and operating costs between the natural laminar flow transport and an equivalent turbulent flow transport is addressed.

CORRELATION OF TRANSONIC-CONE PRESTON-TUBE DATA AND SKIN FRICTION Semiannual Progress Report, May - Oct. 1981
T. D. Reed Oct. 1981 144 p refs
(Grant NAG2-76)
(NASA-CR-165065) Avail: NTIS HC A07/MF A01 CSCL 01A

The distribution of Preston tube pressures within turbulent boundary layers along the surface of a sharp-nosed, ten degree cone was correlated with theoretical values of turbulent skin friction for freestream Mach numbers less than one. The mini-basic computer code, the Wu and Lock computer code, and the STAN-5 computer code were used to analyze the data and to solve the boundary layer conservation equations. The skin friction which results from using Preston tube pressures in the correlation equation, has a rms error of 1.125 percent. It was found that the effective center of the probe is not a constant but increases as the surface distance increases. For a specified unit Reynolds number, the effective center of the probe decreases as the Mach number increases. The variation of the fluid (air) properties across the face of the probe may be neglected for subsonic flows. The possible transverse errors caused by the use of the concept of a vitural origin for the turbulent boundary layer were investigated and found to be negligible.

COMPARISON OF TWO AND THREE DIMENSIONAL FLOW COMPUTATIONS WITH LASER ANEMOMETER MEASUREMENTS IN A TRANSONIC COMPRESSOR ROTOR
Rodrick V. Chima and Anthony J. Strazisar 1982 16 p refs
Proposed for presentation at the 27th Gas Turbine Conf., London, 18-22 Apr. 1982; sponsored by ASME
(NASA-TM-82777; E-1007) Avail: NTIS HC A02/MF A01 CSCL 01A

A procedure for using an efficient axisymmetric code to generate downstream pressure input for more costly Euler codes is discussed. Two and three dimensional inviscid solutions for the flow within a transonic axial compressor rotor at design speed are compared to laser anemometer measurements at maximum flow and near stall operating points. Computational details of the 2-D axisymmetric stream function solution and the 3-D full Euler solution are described. Relative Mach number contours, shock location, and shock strength as measured and as predicted by the 3-D code are compared. Downstream of the rotor the inviscid computations agree with each other but predict higher pressure ratios than those measured. Euler codes require a downstream pressure as input. Since that pressure controls the computed mass flow and shock system, it must be consistent with an inviscid solution. E.A.K.

COMPUTATION OF SUBSONIC FLOW AROUND AIRFOIL SYSTEMS WITH MULTIPLE SEPARATION

Klaus Jacob 1981 64 p refs In GERMAN; ENGLISH summary

(DFVLR-FB-81-24) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 13,10

A numerical method for computing the subsonic flow around multielement airfoil systems was developed allowing for flow separation at one or more elements. Besides multiple rear separation, short bubbles on the upper surface and cove bubbles can be taken into account. Also, compressibility effects for pure subsonic flow are accounted for. After presentation the method is applied to several examples and improved in some details. Finally the limitations and desirable extensions are discussed. Author

STABILITY MEASURING AND DISPERSION OF SHELLS WITH DIFFERENT LENGTHS OF LOW AERODYNAMIC DRAG TIP [STABILITETSMAETNING OCH SPRIDNINGSSKJUTNINGAV PROJEKTILER MED OLIKA LAANG LAAGMOTSTAANDSSPETS. MALFOM 4.4831 ETAPP 6]

Sven Nordstroen Jul. 1981 68 p refs In SWEDISH; ENGLISH summary

(FOA-C-20418-D2) Avail: NTIS HC A04/MF A01

All four types had sufficient static (gyroscopic) as well as dynamic stability, except the shortest type at subsonic velocity, where three of six rounds were dynamically unstable, indicating a state of equilibrium at a yaw amplitude of approx. 3 deg. The range increases with increasing nose length. The dispersion is almost independent of the nose length and is of the same magnitude as that of the original HE shell. The only exception is the projectile with the next longest nose at the highest velocity, where an assumed big initial yaw amplitude in some rounds has caused a decrease of the mean range and approx. 65% greater dispersion. A gain in range of 15 to 20 percent relative to the original shell should be obtainable by decreasing the bearing length and increasing the nose length to 3.5 - 4.0 caliber. The short bearing length caused no greater initial yaw than what was measured in several tests with earlier types. A.R.H.

DEVELOPMENT OF THE ARIES PARACHUTE SYSTEM

William B. Pepper (Sandia National Labs., Albuquerque) and Francis M. Collins 1981 11 p refs Presented at the 7th AIAA Aerodyn. Decelerator and Balloon Technol. Conf., San Diego, Calif., 21-23 Oct. 1981

(Contract DE-AC04-76DP-00789)

(NASA-TM-84082; DE81-012161; SAND-81-0208C; CONF-811002-1) Avail: NTIS HC A02/MF A01 CSCL 01A

The design and testing of a two-stage parachute system to recover a space telescope weighing up to 2000 pounds is described. The system consists of a 15-ft dia ribbon parachute reefed to 50% for 10 seconds and a 73-ft dia paraform or cross second stage reefed to 10% for 10 seconds. The results of eight drop tests and one operational rocket launched flight and recovery are presented. A successful operational recovery of a 1600-lb NASA space telescope was conducted. The payload was launched by a second stage Minuteman rocket to an altitude of about 300 miles above sea level. DOE

DESIGN, PERFORMANCE, AND SIMILARITY LAWS OF SUBSONIC PARACHUTES

C. Saliaris Bonn Bundesministerium der Verteidigung 1981 39 p refs In GERMAN; ENGLISH summary

(Contract DEA-AF-68-G-7415)

(BMVg-FBWT-81-4) Avail: NTIS HC A03/MF A01; DOKZENTBw, Bonn DM 30

The performance data of ribless subsonic parachutes were determined theoretically and experimentally, with special consideration of scale effects. A theoretical model for parachute behavior during opening was developed, showing satisfactory agreement with experiments on filling force, filling time and load velocity. The Froude number Fr and the massparameter mu/sub T/, i.e., the ratio of the total mass to that of the displaced air, are identified as the most important dimensionless numbers. The parachute strength and stability were also tested and the test facilities and equipment are described. All results and those of similar experiments by other groups were stored in a data bank. DETECTION OF OBSTACLES BY LOW FLYING AIRCRAFT

Dietmar Letalick Aug. 1981 42 p refs

(FOA-C-30227-E1) Avail: NTIS HC A03/MF A01

A model which calculates reflection from cylindrical obstacle surfaces, e.g., power cables is presented. Measurements of reflection of 10.6 micron radiation from various types of wires, cables and framework are reported. The measurements were performed in the laboratory using a CO2 laser and direct detection, with the targets a few meters away. Detection at distances of 500 and 1100 m using a coherent laser was also performed. Calculations of detection range for typical situations indicate that detection at km distances is possible. ANALYSIS OF TWO AIR TRAFFIC SAMPLES IN THE TERMINAL AREA OF FRANKFURT AM MAIN, 3 AUGUST 1979

Manfred Schubert and Uwe Voelckers Jun. 1981 119 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-740)
(DFVLR-Mitt-81-17; ESA-TT-740) Avail: NTIS HC A06/MF A01; DFVLR, Cologne DM 26.50

The random deviation of air traffic arrivals in the terminal area, the different structure of standard arrival routes and a multitude of operational procedures affect the overall planning of arrival traffic. The necessary time-balance between arrivals can be established partly by coordination between approach control and enroute controller and by flight path planning within the terminal area. The effect of the applied control procedures on arrival distributions, traffic handling, traffic sequence, and traffic density in the terminal area are analyzed for the recorded air traffic periods on August 3rd, 1979. The findings are discussed in comparison with the results of a proceeding analysis of approach traffic on August 4th, 1978.

HELICOPTER LANDING GEAR DESIGN AND TEST CRITERIA INVESTIGATION Final Report
David Crist and L. H. Symes Aug. 1981 192 p refs
(Contract DAAK51-79-C-8011; DA Proj. 1L1-62209-AH-76)
(AD-A105512; BHT-699-099-026;
USAAVRADCOM-TR-81-D-15) Avail: NTIS HC A09/MF A01 CSCL 01/3

This program was an investigation of the criteria relating to helicopter landing gears. A computerized literature search was conducted and a bibliography is included in this report. Existing criteria were reviewed and conflicts were identified. An analysis of survivable Army helicopter accidents was performed. The results were used to formulate a tentative criterion. A design study was conducted to evaluate the practicality of the tentative criteria. This investigation compared wheel and skid-type landing gears designed to the tentative criteria and to MIL-S-8698. A crashworthiness analysis of the tentative criteria tailwheel tricycle gear was performed. Weights and landing loads were calculated. A cost comparison was made between tailwheel tricycle gears designed to the two criteria. The gear designed to the new criteria was cost-effective. The results of the investigation were used to modify the tentative criteria and recommendations were made for a new helicopter landing gear military specification and for changes to the existing criteria. SURVEY OF THE OBSERVER'S PERFORMANCE WITH REMOTELY PILOTED VEHICLES
H. Mutschler Bonn Bundesministerium der Verteidigung 1981 61 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium der Verteidigung
(BMVg-FBWT-81-3) Avail: NTIS HC A04/MF A01; DOK-ZENTBw, Bonn DM 30

The parameters affecting observer performance in air to surface target recognition with remotely piloted vehicles (RPV) under reconnaissance mission conditions and using television sensors are surveyed. The parameters are divided into scene, system and observer parameters. Contrast and context are identified as the most important scene parameters. The system is defined as the RPV and the television system. Image quality, monitor times and resolution are of prime importance and their dependence on flight conditions and the sensor system are discussed. The observer parameters concern the sensory and cognitive capabilities of the observer. A critical evaluation of the combined effects of these parameters leads to the conclusion that RPV operation is capable of only rough and incomplete target recognition. Improvements are expected from image storage applications and, primarily, from image quality improvements. Author (ESA)

ESTIMATION METHODS FOR THE DETERMINATION OF DYNAMIC RESPONSES OF ELASTIC AIRCRAFT
S. Vogel Bonn Bundesministerium der Verteidigung 1981 123 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium der Verteidigung
(BMVg-FBWT-81-6) Avail: NTIS HC A06/MF A01; DOK-ZENTBw, Bonn DM 40

A method for establishing the dynamic response of an elastic aircraft structure to external excitation, such as random gusts or arbitrarily timed maneuver loads is presented. The solution is based on an analytic representation of the admittance functions by partical fractions. The time response frequency dependence of the aerodynamic forces induced by motion are approximated to allow analytical solutions which are shown to be as accurate, but more economical, than more elaborate numerical Fourier methods. Elasticity is introduced through eigenfrequencies and generalized masses. Several examples are shown which also include the influence of control systems and of elasticity on loads and accelerations. Depending on the quality of the structural and aerodynamical input, the method may be used as an estimation method or as an inexpensive approximation method for all dynamic problems in which elasticity, control systems and excitation time lag effects play a role. COMPUTER PROGRAM FOR AERODYNAMIC AND BLADING DESIGN OF MULTISTAGE AXIAL-FLOW COMPRESSORS
James E. Crouse and William T. Gorrell Dec. 1981 105 p refs Prepared in cooperation with Army Aviation Research and Development Command, St. Louis, Mo.
(NASA-TP-1946; AVRADCOM-TR-80-C-21; E-280) Avail: NTIS HC A06/MF A01 CSCL 21E

A code for computing the aerodynamic design of a multistage axial-flow compressor and, if desired, the associated blading geometry input for internal flow analysis codes is presented. Compressible flow, which is assumed to be steady and axisymmetric, is the basis for a two-dimensional solution in the meridional plane with viscous effects modeled by pressure loss coefficients and boundary layer blockage. The radial equation of motion and the continuity equation are solved with the streamline curvature method on calculation stations outside the blade rows. The annulus profile, mass flow, pressure ratio, and rotative speed are input. A number of other input parameters specify and control the blade row aerodynamics and geometry. In particular, blade element centerlines and thicknesses can be specified with fourth degree polynomials for two segments. The output includes a detailed aerodynamic solution and, if desired, blading coordinates that can be used for internal flow analysis codes. Author

EFFECT OF FUEL INJECTOR TYPE ON PERFORMANCE AND EMISSIONS OF REVERSE-FLOW COMBUSTOR

Carl T. Norgren and Stephen M. Riddlebaugh Dec. 1981 40 p refs

(NASA-TP-1945; E-556) Avail: NTIS HC A03/MF A01 CSCL 21E

The combustion process in a reverse-flow combustor suitable for a small gas turbine engine was investigated to evaluate the effect of fuel injector type on performance and emissions. Fuel injector configurations using pressure-atomizing, spill-flow, air blast, and air-assist techniques were compared and evaluated on the basis of performance obtained in a full-scale experimental combustor operated at inlet conditions corresponding to takeoff, cruise, low power, and idle and typical of a 16:1-pressure-ratio turbine engine. Major differences in combustor performance and emissions characteristics were experienced with each injector type even though the aerodynamic configuration was common to most combustor models. Performance characteristics obtained with the various fuel injector types could not have been predicted from bench-test injector spray characteristics. The effect of the number of operating fuel injectors on performance and emissions is also presented. Author

N82-15041*# National Aeronautics and Space Administration. Lewis Research Center, Cleveland, Ohio.

INTERACTIVE-GRAPHIC FLOWPATH PLOTTING FOR TURBINE ENGINES

Robert R. Corban Nov. 1981 51 p refs

(NASA-TM-82756; E-1074) Avail: NTIS HC A04/MF A01 CSCL 21E

An engine cycle program capable of simulating the design and off-design performance of arbitrary turbine engines, and a computer code which, when used in conjunction with the cycle code, can predict the weight of the engines are described. A graphics subroutine was added to the code to enable the engineer to visualize the designed engine with more clarity by producing an overall view of the designed engine for output on a graphics device using IBM-370 graphics subroutines. In addition, with the engine drawn on a graphics screen, the program allows for the interactive user to make changes to the inputs to the code for the engine to be redrawn and reweighed. These improvements allow better use of the code in conjunction with the engine program. T.M.

CALCULATION OF HYDRODYNAMIC INTERACTION OF THE ARBITRARY PROFILE CASCADES IN THE FLOW OF IDEAL LIQUID

V. E. Saren and V. A. Yudin *In* Ecole Polytechnique de Lausanne Aeroelasticity in Turbomachines 1981 p 17-26 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

The influence of blade shape on the intensity of cascades potential interaction and the influence of vortex wakes on the forces emerging on the downstream cascade blades are examined. Hydrodynamic interaction of two mutually moving blade cascades is based, first, on the displacement of each cascade in nonuniform potential flow in the neighborhood of the adjacent cascade (potential interaction) and, second, on the intersection of vortex wakes due to boundary layer coming off the upstream cascade blades (vortex interaction) by the downstream cascade blades. The contribution of either mechanism to nonstationary lift depends presumably on the axial distance between cascades and on cascade blade shape. Comparison results of the calculations of potential interaction and the interaction including vortex wakes with experimental data show that both models correctly reflect the qualitative nature of the nonstationary force to time relationship. AERODYNAMIC ANALYSIS OF CASCADED AIRFOILS IN UNSTEADY ROTATIONAL FLOW

John E. Caruthers *In* Ecole Polytechnique de Lausanne Aeroelasticity in Turbomachines 1981 p 31-64 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

An analytical numerical method for the prediction of wake and vibration-induced unsteady pressure distributions acting on thick, cambered airfoils in cascade is presented. The unsteady method is two dimensional, rotational and compressible. The unsteady flow field is treated as a small nonpotential perturbation about a mean nonlinear potential flow field. The unsteady velocity field is further split into potential and nonpotential parts. Linearized field equations are obtained for the perturbation entropy, vorticity, rotational velocity, and perturbation potential which are solved successively, using a combination of analytical and numerical methods. The pressure distributions on the airfoil surfaces are obtained after solution of the field equations from the integrated linearized momentum equation. Comparisons are made with results for rigid body translation of a 20% thick double circular arc airfoil and for flat plate cascades. Computations are also made for wake gust excitation of a cambered compressor stator.

UNSTEADY PRESSURE DISTRIBUTIONS IN A CASCADE TAKING INTO ACCOUNT PROFILE THICKNESS AND STEADY CIRCULATION

V. Carstens *In* Ecole Polytechnique de Lausanne Aeroelasticity in Turbomachines 1981 p 65-83 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

Based on the assumption of an inviscid incompressible flow, the Martensen procedure for calculating unsteady pressure and lift on harmonically oscillating cascades with arbitrarily shaped profiles is described. Application of this procedure then allows the description of parameter interaction in a very complicated, but linear integral equation. Numerical calculations were performed for bending oscillations with the two standard profiles NACA 0012 and NACA 8412. The results for pressure distributions are presented, showing the influence of reduced frequency, turning angle and profile shape. The sharp increase in unsteady blade loading when the reduced frequency is doubled accompanied by a phase shift between real and imaginary parts is revealed. It seems that aerodynamic damping represented by the imaginary part of the pressure, increases with growing turning angle, whereas the real part remains nearly constant. Author (ESA)

FORCE AND MOMENT COEFFICIENTS FOR HIGH DEFLECTION CASCADES

D. S. Whitehead and R. J. Grant (Central Electricity Generating Board, Southampton, England) *In* Ecole Polytechnique de Lausanne Aeroelasticity in Turbomachines 1981 p 85-127 refs Sponsored by Rolls Royce Ltd. (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A computer program using a finite element approach for the prediction of force and moment coefficients for the vibration of compressor and turbine blades having a large amount of deflection of the mean flow is explained. The program is limited to subsonic inlet and outlet flows (but can deal with local supersonic patches) and to flow without inlet vorticity and without shock waves. In order to deal with the effects of camber, incidence, or blade thickness, the unsteady flow is assumed to be a small perturbation of a steady flow with substantial deflection of the fluid as it passes through the cascade. For blades which have substantial camber and thickness, as is usual with turbine blades, it is necessary to use a field method of calculation; hence finite elements. Results for the moment coefficients on a turbine cascade show good agreement with experiment. Author (ESA)

AERODYNAMIC RESPONSE OF A BLADE IN PITCHING OSCILLATION WITH PARTIAL AND FULL SEPARATION

H. Tanaka, I. Fujimoto, and S. Ishii *In* Ecole Polytechnique de Lausanne Aeroelasticity in Turbomachines 1981 p 129-142 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

The aerodynamic responses of a blade in pitching oscillation with separation bubble and trailing edge separation are analyzed, and the mechanism of energy transfer between the oscillating blade and the air flow is elucidated. In the state of partial separation and leading edge separation, the aerodynamic response of a Goe801 model airfoil vibrating in pitching motion around a midchord of the blade was observed in a blowdown low speed wind tunnel. The dynamic pressure distribution along the blade surface was measured. By considering physical phenomena on the blade surface, it is understood how the phase shift of the unsteady pressure on the blade surface is affected by the deformation of the pressure wave caused by the movement of the reattaching point of the separation bubble and the separation point of trailing edge separation. DAMPING FOR TURBOMACHINE BLADE VARIATIONS IN SUBSONIC FLOW

G. S. Pisarenko, A. A. Kaminer, V. A. Balalayev, N. Y. Nastenko, A. L. Stelmach, and A. V. Dunayev *In its* Aeroelasticity in Turbomachinery 1981 p 151-161 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

The reduction of dynamic stresses in turbomachine blades through an increase in aerodynamic damping of blade vibration is discussed. The influence of camber and stagger angle are investigated. An aeroelastic damping analysis for the case of stalled flow is presented. An experimental investigation of aerodynamic damping for planar bending and torsional vibrations of a flat cascade of model blades was carried out. In the range of camber variation from 0.025 to 1.0 dependence turns out not to be substantial; increased aerodynamic damping that never exceeds 10 to 15% accompanies an increase in camber. The influence of stagger angle on damping is also revealed to be relatively slight for angle variations from 0 to 60 deg. Author (ESA)

SELF EXCITED FLOW OSCILLATION IN THE LOW PRESSURE STEAM TURBINE CASCADE

T. Araki, Y. Okamoto, and F. Ohtomo *In* Ecole Polytechnique de Lausanne Aeroelasticity in Turbomachines 1981 p 171-186 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

The problem of unsteady flow in a turbine cascade with subsonic inlet and supersonic outlet flow was approached through experiments. The type of flow considered occurs at the tip of the last stages of low pressure steam turbine rotors. Experiments were made on a linear cascade over a range of outlet Mach numbers up to 1.8. The measurements included unsteady flow visualization by the Schlieren method and time traces of pressure on the blade surface by transducers on nonoscillating and oscillating blades. In addition, unsteady aerodynamic moments were measured. Results show that the transonic flow field at the tip section of the rotor blades of large steam turbines is steady, operating at rated conditions. Operating under partial load, the steady flow breaks down. Aerodynamic damping in pitching motion for unsteady flow conditions is negative, leading to the possibility that self excited vibration exists in the case of a free standing blade. Author (ESA)

STABILITY AND FLUTTER ANALYSIS OF TURBINE BLADES AT LOW SPEED

T. J. Akai and H. Atassi *In* Ecole Polytechnique de Lausanne Aeroelasticity in Turbomachines 1981 p 187-201 refs (For primary document see N82-15042 06-07)

(Contract F49620-76-C-0014)

Avail: Issuing Activity

An aeroelastic analysis for highly loaded turbine blades at low speed is carried out for various vibratory modes. These include pure bending and torsion as well as coupled oscillatory modes. The analysis is based on a complete aerodynamic theory which fully accounts for the blade geometry, flow conditions and cascade parameters. A damping coefficient simulating structural damping is also included. The results clearly show that classical flutter can occur for low speed turbine cascades at typical operating conditions. This is directly attributable to high blade loading and thickness. Author (ESA)

CALCULATION OF QUASI-STATIONARY AERODYNAMIC FORCE ACTING ON A CASCADE OF OSCILLATING AIRFOILS IN SUBSONIC FLOW

V. B. Kurzin and V. P. Ryabchenko *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 203-210 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

Nonstationary aerodynamic characteristics of the cascade of thin airfoils in a subsonic gas flow are investigated showing that the influence of gas compressibility on their behavior can be characterized by two parameters: Mach number M and the wave number K. For the cascade of arbitrary airfoils, a theoretical statement of this problem for K tends to zero is considered; here nonstationary aerodynamic characteristics of the cascade are described well by their quasi-stationary approximation. A mathematical model of the nonstationary ideal gas flow at subsonic velocities through an arbitrary airfoil cascade in a quasi-stationary state is formulated. In accordance with the model, functions for the velocity potential wholly define the nonstationary gas flow through the cascade in a quasi-stationary approximation at any time moment. The determination problems for these functions are solved, using Chaplygin's approximation. Author (ESA)

NUMERICAL EXPERIMENTS ON UNSTEADY FLOWS THROUGH VIBRATING CASCADES

Maurizio Pandolfi *In its* Aeroelasticity of Turbomachines 1981 p 211-228 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A numerical approach is presented for computing the inviscid compressible two-dimensional unsteady flow in a vibrating cascade. The full Euler equations are considered and no restrictive assumptions are required about geometry of the blading. The analysis is confined to subsonic flows. The modeling of the boundaries and the numerical methodology is described. Particular attention is paid to the explicit treatment of the wake behind the blade during the unsteady flow. Checks on the accuracy of the computations are made. Calculation results on the steady shockless transonic flow in an impulse cascade, where the exact solution is available, show acceptable agreement at least for the space-like discretization. Further evaluation of accuracy is hindered by a lack of benchmark solutions with which to compare. Author (ESA)

COMPUTER AIDED INVESTIGATION OF TURBOMACHINE AERODYNAMICS AND AEROELASTICITY

S. M. Belotserkovskii, A. S. Volmir, V. V. Kuleshov, M. I. Nisht, G. U. Stepanov, and R. M. Ejodorov *In its* Aeroelasticity of Turbomachines 1981 p 229-249 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

Computer aided solutions of aeroelasticity problems related to turbomachines are presented. A synthesis of numerical methods from nonstationary aerodynamics and elasticity theory are employed. Solutions derive from an understanding of general characteristics and aerodynamic loads acting on each turbomachine blade while taking into account the interference of the blades and blade rows. Aerodynamic stationary characteristics, aerodynamic derivatives at various values of the vibration frequencies, and aerodynamic characteristics with arbitrary dependence of the kinematic parameters on time were investigated. Elastic deformation of blade and blade/disk systems is explained. A flow chart for the computerized evaluation of these phenomena is shown, the results of which support a turbomachine aeroelasticity mathematical model. Author (ESA)

ON THE NUMERICAL ANALYSIS OF STALL FLUTTER IN TURBINE CASCADES

S. Takahara, T. Adachi, and Y. Kadoya *In* Ecole Polytechnique de Lausanne Aerolasticity of Turbomachines 1981 p 251-262 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A numerical method using a triangular finite element mesh pattern is applied in order to solve the problem of unsteady stalled flow through a turbine cascade. The flow in the blade-to-blade plane is assumed to be viscous, and in addition, the friction drag on the blade surface is considered. The basic equations for two-dimensional compressible viscous flow are described. Boundary conditions and a vibration condition are also explained. Numerical results for low pressure end blades of a steam turbine are compared with flutter test data on aerodynamic damping and satisfactory agreement is obtained between calculation and experiment. A METHOD FOR FORCE DETERMINATION FROM VIBRATION RESPONSE MEASUREMENTS

D. J. Ewins and B. Hillary *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 263-283 refs Sponsored by Rolls Royce Ltd. (For primary document see N82-15042 06-07)

Avail: Issuing Activity

Dynamic force determination from response measurements was studied numerically and experimentally. Application to turbomachine blades undergoing steady or transient vibration is considered. In theory, the case of harmonic excitation and response is expressed as an inverse input/output equation. A cantilever beam and an isolated turbomachine blade were used as test pieces for the experimental study. Results show that application of the pseudoinverse force determination method is subject to a form of conditioning in the region of the fundamental mode. However, the results of tests on an actual compressor blade suggest that with very accurate dynamic modeling of the test structure and careful curve fitting this method is feasible, using current techniques and equipment. AERODYNAMIC CONSIDERATIONS IN THE PREDICTION OF UNSTALLED SUPERSONIC FLUTTER IN TRANSONIC FANS

D. G. Halliwell *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 309-322 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

Two methods for the prediction of unsteady lift and moment coefficients for blades with supersonic entry flow pertaining to coupled flutter in turbofans are discussed. The first method uses a linearized supersonic model, with only weak pressure waves, while the second uses a strong normal shock model, however both are based on flat plate cascades. A basic problem in the application of the first model is discussed and a correction procedure to obtain a more rational solution is suggested. For the second model, although its shock structure is closer to the real case, overall comparison with experiment shows no improvement on the simpler model. However, results are qualitatively consistent with implied working line differences. Author (ESA)

EFFECT OF MEAN BLADE LOADING ON SUPERSONIC CASCADE FLUTTER

M. Namba and R. Minami *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 323-332 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A theory for supersonic cascade flutter with nonzero mean blade loadings was developed. An inviscid supersonic flow past a rectilinear two-dimensional cascade with subsonic leading edge locus was investigated. The theory allows for the effect of displacement of mass source and body force singular points which represent blades with nonzero thickness and mean lift force, but it neglects the effect of deviation of the local convection velocity and local speed of sound from the undisturbed uniform ones. The theory also predicts the occurrence of supersonic bending flutter at higher blade loadings. Author (ESA)

A METHOD OF CHARACTERISTICS SOLUTION FOR A FINITE OSCILLATING SUPERSONIC CASCADE WITH THICKNESS EFFECTS

K. Vogeler *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 333-347 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A method of characteristics approach to a nonlinear oscillating supersonic cascade is presented. The method is extended to a complete cascade computation for cascades with blades of nonzero thickness on the upper and lower sides. The flow field behind a single oscillating airfoil in a supersonic flow is treated and compared with an analytical flat plate solution. The technique is merged with an existing algorithm. The performance is compared with flat plate and slender blade solutions for infinite cascades. The effect of slender blades in comparison with flat plates on the unsteady aerodynamic response of an oscillating supersonic cascade are calculated for a nonlinear cascade in both the subresonant and superresonant region. CALCULATION OF NONSTATIONARY FORCE RATIOS ON BLADES OF A ROTATING ROW IN INCOMPRESSIBLE FLOW

V. P. Ryabchenko *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 349-356 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A numerical solution to a three-dimensional problem of unsteady vortex-free (in the coordinate system coupled with the cascade) flow of ideal incompressible fluid past a rotating annular cascade, based on propeller vortex and finite wing span theory, is presented. The geometry of blade edge is modeled as an annular cascade whose blades are parts of helical surfaces. Aerodynamic force calculations are given only for a large number of blades since it is essential to this method. Analysis results also show the effect of flow three-dimensionality on aerodynamic forces acting on the annular cascade blade when their number is small. Author (ESA)

THREE-DIMENSIONAL ANALYSIS OF CASCADE FLUTTER IN PARALLEL SHEAR FLOW

S. Kaji, H. Takata, and N. Niwa *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 357-370 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

The effect of spanwise nonuniformity of stream velocity as well as that of oscillation amplitude on flutter characteristics were studied. The main stream is assumed incompressible and to be a parallel shear flow with linear velocity profile. Flutter characteristics vary in spanwise direction in accordance with the variation of flow incidence and flow velocity. The cascade model of a semiactuator disk composed of a number of flat plate blades undergoing bending oscillation is used. It is indicated that the flow shear effect becomes noticeable in connection with oscillation modes. For uniform oscillation it is weak and for linear and quadratic modes it is significant. It is found that weak shear deteriorates aerodynamic damping and extends the unstable frequency range. Author (ESA)

THE EFFECT OF ASPECT RATIO ON THE UNSTEADY AERODYNAMIC FORCES INDUCED BY VIBRATION OF A CASCADE BLADE

J. M. R. Graham and I. Kullar *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 371-381 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A correction for three dimensionality made to strip theory when calculating the aerodynamic forces due to vibration of a cascade blade in incompressible flow is discussed. The three dimensional effects arise from the spanwise variation of unsteady velocity induced at the blade by the mode of vibration. Results are presented for simple cantilever type modes of vibration, using a three dimensional unsteady cascade theory for the Fourier transform of the spanwise upwash distribution. An integral equation is formulated which is solved numerically. The integral equation is also used to derive a perturbation solution for the correction terms as a series in inverse powers of the blade aspect ratio. The effect of three dimensionality on the critical reduced frequency for torsional flutter. Author (ESA)

THREE-DIMENSIONAL PERIODIC DISTURBANCES ACTING UPON AIRFOILS IN CASCADES

H. Atassi *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 383-398 refs (For primary document see N82-15042 06-07)

(Grant NsG-3195; Contract F49620-76-C-0014)

Avail: Issuing Activity CSCL 21E

A theory for three dimensional periodic gusts interacting with loaded airfoils was developed. The unsteady disturbances are linearized with respect to the mean potential flow of the airfoils. The vorticity transport equation is integrated analytically in a Lagrangian form. The vorticity vector shows strong variations in its magnitude and wavelength as it interacts with the flow field of a lifting airfoil. The streamwise component of vorticity increases significantly with flow acceleration and flow turning. The rectangular fan approximation is used and a single Helmholtz equation is derived that characterizes the unsteady three dimensional flow field. Author (ESA)

PRACTICAL EXPERIENCE WITH A NONCONTACT BLADE VIBRATION MEASURING SYSTEM IN INDUSTRIAL TURBOCOMPRESSORS

R. Jenny, C. Gremli, and H. B. Guemoes *In its* Aeroelasticity in Turbomachines 1981 p 419-428 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

Blade vibration measurement with noncontact stationary probes in turbomachines is discussed. Due to the low sampling rate, the problem of nondefinite vibration reconstruction arises. This complicates vibration mode identification which is necessary for stress calculation. A method of probability analysis of the stress amplitude in connection with frequency analysis is presented. Two examples are given and blade flutter and rotating stall identification from turbocompressor measurements are shown. Author (ESA)

N82-15066 Tokyo Univ. (Japan). Inst. of Space and Aeronautical Science.

INLET DISTORTION AND BLADE VIBRATION IN COMPRESSIBLE FLOW BETWEEN PARALLEL WALLS

Y. Tanida and T. Nagashima *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 429-441 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

The two dimensional semiactuator disk model which obtains a three dimensional disturbance model with uniform mean flow between parallel walls is discussed. The inertial effects of the fluid inside the blade passages and the distortion induced vibration of rotor blades are considered. Under the assumption of small perturbations on compressible, isentropic, uniform mean flow, the equations of continuity, momentum and the isentropic flow relationship are linearized. Perturbations outside the cascade and cascade field perturbations are solved. The solutions in the usptream, cascade, and downstream flow fields are matched at the leading and trailing edges of the cascade by conservation laws of mass, momentum and total enthalpy. Bending vibration of blades is derived. Author (ESA)

N82-15067 Tennessee Univ., Tullahoma. Space Inst.

LINEAR AND NONLINEAR ANALYSIS OF VORTEX WHISTLE: ANOTHER BLADE BUSTER

M. Kurosaka *In* Ecole Polytechnique de Lausanne Aeroelasticity of Turbomachines 1981 p 443-453 refs (For primary document see N82-15042 06-07)

Avail: Issuing Activity

A flow induced vibration problem in gas turbines, the vortex whistles, is discussed. The whistle is caused by high swirl flow and its characteristics are such that the frequency of fluctuation is discrete (a pure tone). The frequency becomes higher as the swirl or flow rate increases. An incident of vortex whistle is cited. Besides dynamic behavior of the flow field, the data reveal an unexpected change in the steady or time averaged flow field when the whistle is present. It is implicated that dynamic flow can affect even the steady flow field in turbomachinery, which causes damage. Author (ESA)

COST 50: MATERIALS FOR GAS TURBINES Progress Report
Wolfgang Bunk and Joern Hansen 7 Jun. 1981 126 p refs Partly in GERMAN and ENGLISH
Avail: NTIS HC A07/MF A01

Welding tests with samples U 700 PM/U were performed varying the welding parameters within a wide area. Good bonding qualities could only be achieved using high welding temperatures. Contaminants and oxide inclusions in the welding zone were eliminated by using a multiple chemical cleaning procedure combined with an additional annealing of the separated specimen halfs under high vacuum conditions immediately before welding. Diffusion bonding experiments for welding IN 100 PM/IN 100 PM were carried out within a temperature range between 870 and 1100 C. Welds below 1000 C resulted in unsatisfactory bonds. Promising but not yet enough reproducible bonding strength could be obtained at welding temperatures between 1050 and 1100 C. Using special hot tensile test equipment, which is linked to an electron scanning microscope, the origin and progress of fracture processes were investigated for selected diffusion welded samples of U 700 PM. In the field of electron-beam welding some more outgassing experiments were carried out using different PM-materials of Udimet 700/Astroloy and IN 100 including wire material. Results show differences, expecially in the argon-, hydrogen- and carbon-contents. To get more exact data, similar experiments should be performed within small UHV-equipment.

Techniques of directional solidification for air cooled turbine blades and vanes made of eutectic alloys were evaluated based on results for rod-like specimens. Directionally solidified eutectic alloys (in situ composites) show superior creep properties in comparison with common superalloys used both in aeronautical and industrial gas turbines. An adequate facility for the process of directional solidification (D S) was designed and built; suitable D S parameters, ceramic shell molds and ceramic cores were developed. The results of the experiments prove the possibility of production of air cooled aeronautical engine blades and vanes by application of the D S process on eutectic alloys of type C 73, using ceramic cores. The D S process is also satisfactory as to the production of large blades for industrial gas turbines. Regarding the macrostructure of large internally cooled vanes, the process still needs improvement. Author (ESA)

IN-FLIGHT INVESTIGATION OF THE EFFECTS OF PILOT LOCATION AND CONTROL SYSTEM DESIGN ON AIRPLANE FLYING QUALITIES FOR APPROACH AND LANDING Final Report
Norman C. Weingarten and Charles R. Chalk Jan. 1982 215 p refs Sponsored jointly by Dryden Flight Research Facility and USAF Flight Dynamis Labs.
(Contract F33615-79-C-3618)
(NASA-CR-163115; CALSPAN-6645-F-7) Avail: NTIS HC A10/MF A01 CSCL 01C

The handling qualities of large airplanes in the approach and landing flight phase were studied. The primary variables were relative pilot position with respect to center of rotation, command path time delays and phase shifts, augmentation schemes and levels of augmentation. It is indicated that the approach and landing task with large airplanes is a low bandwidth task. Low equivalent short period frequencies and relatively long time delays are tolerated only when the pilot is located at considerable distance forward of the center of rotation. The control problem experienced by the pilots, when seated behind the center of rotation, tended to occur at low altitude when they were using visual cues of rate of sink and altitude. A direct lift controller improved final flight path control of the shuttle like configurations. E.A.K.

LONGITUDINAL AND LATERAL STATIC STABILITY AND CONTROL CHARACTERISTICS OF A 1/6-SCALE MODEL OF A REMOTELY PILOTED RESEARCH VEHICLE WITH A SUPERCRITICAL WING
Thomas A. Byrdsong and James B. Hallissy May 1979 118 p refs
(NASA-TP-1360; L-12059) Avail: NTIS HC A06/MF A01 CSCL 01C

An investigation was conducted in the Langley 8-foot transonic pressure tunnel to determine the longitudinal and lateral-directional static stability and control characteristics of a 1/6-scale force model of a remotely piloted research vehicle. The model was equipped with a supercritical wing and employed elevons for pitch and roll control. Test conditions were as follows: Reynolds number of about 6.6 x 10 to the 6th power per meter, variations of sideslip from -6 deg to 6 deg, elevon deflection angle (symmetrically and asymmetrically) from -9 deg to 3 deg, and rudder deflection angle from 0 deg to -10 deg. The model was longitudinally statically stable at angles of attack up to about 7 deg, which is significantly greater than the angle of attack for the cruise condition (approximately 4 deg). In the range of test Mach numbers, the model was directionally stable and had positive effective dihedral, sufficient pitch control, and positive effectiveness of roll and yaw control. Author

Active wing load alleviation to extend the wing span by 5.8 percent, giving a 3 percent reduction in cruise drag is covered. The active wing load alleviation used symmetric motions of the outboard ailerons for maneuver load control (MLC) and elastic mode suppression (EMS), and stabilizer motions for gust load alleviation (GLA). Slow maneuvers verified the MLC, and open and closed-loop flight frequency response tests verified the aircraft dynamic response to symmetric aileron and stabilizer drives as well as the active system performance. Flight tests in turbulence verified the effectiveness of the active controls in reducing gust-induced wing loads. It is concluded that active wing load alleviation/extended span is proven in the L-1011 and is ready for application to airline service; it is a very practical way to obtain the increased efficiency of a higher aspect ratio wing with minimum structural impact. ACCELERATED DEVELOPMENT AND FLIGHT EVALUATION OF ACTIVE CONTROLS CONCEPTS FOR SUBSONIC TRANSPORT AIRCRAFT. VOLUME 2: AFT C.G. SIMULATION AND ANALYSIS Final Report
D. M. Urie Hampton, Va. NASA Sep. 1979 89 p
(Contract NAS1-14690)
(NASA-CR-159098; LR-29003-Vol-2) Avail: NTIS HC A05/MF A01 CSCL 01C

Relaxed static stability and stability augmentation with active controls were investigated for subsonic transport aircraft. Analytical and simulator evaluations were done using a contemporary wide body transport as a baseline. Criteria for augmentation system performance and unaugmented flying qualities were evaluated. Augmentation control laws were defined based on selected frequency response and time history criteria. Flying qualities evaluations were conducted by pilots using a moving base simulator with a transport cab. Static margin and air turbulence intensity were varied in test with and without augmentation. Suitability of a simple pitch control law was verified at neutral static margin in cruise and landing flight tasks. Neutral stability was found to be marginally acceptable in heavy turbulence in both cruise and landing conditions. Author

AN OBSERVER APPROACH TO THE IDENTIFICATION AND ISOLATION OF SENSOR FAILURES IN FLIGHT CONTROL SYSTEMS Ph.D. Thesis - Tech. Univ., Carolo-Wilhelmina, West Germany
Norbert Stuckenberg Jul. 1981 140 p refs Report will also be announced as translation (ESA-TT-738)
(DFVLR-FB-81-26; ESA-TT-738) Avail: NTIS HC A07/MF A01; DFVLR, Cologne DM 32

A reliability concept for flight control sensors is presented providing a duplex sensor configuration with fail-operational capabilities by using analytical redundancy with deterministic observers. Without disregarding disturbances and plant parameter variations the identification performance is evaluated with respect to the failure signal properties. The concept is applied to a command and stability augmentation system for the lateral motion of the executive aircraft HFB 320. Author

THE LINK-MILES DRIVER TRAINING SIMULATOR FOR TRACKED VEHICLES: A VALIDATION STUDY
J. Moraal and K. J. Poll 1979 29 p refs In DUTCH; ENGLISH summary
(Contract A76/KL/148)
(IZF-1979-23; TDCK-73404) Avail: NTIS HC A03/MF A01

The validity of the Link-Miles driver training simulator was investigated for tracked vehicles in use with the Dutch Army. Transfer of training, behavioral validity and required training time could be assessed for four different driving tasks, based on the performance of experienced as well as inexperienced subjects. It is concluded that the simulator is to be regarded as a valuable training aid, provided that: (1) a number of technical imperfections are corrected; (2) the users' know-how with regard to possibilities and limitations of the simulator is increased; and (3) the demands made on the instructors and the contents of the instruction

program are reconsidered, as well as the way the simulator is used in the context of the complete military training program.

OPTICAL PROPERTIES OF AIRFIELD LIGHTING FIXTURES OF THE ROYAL NETHERLANDS AIRFORCE. PART 1: COLOR MEASUREMENTS
P. Padmos and R. vanLeeuwen 1980 20 p In DUTCH; ENGLISH summary 2 Vol.
(Contract A78/KLu/085)
(IZF-1980-1-Vol-1; TDCK-73414) Avail: NTIS HC A02/MF A01

Airfield lighting fixtures in use in the Royal Netherlands' Airforce were sampled and used to measure to what extent the chromaticity coordinates are corresponding to the NATO-Standardization Agreements. For the yellow and red filters, especially, it is important to measure the chromaticity of the mounted lamp-filter combinations, because heating may cause a considerable shift in chromaticity. For each fixture the measurements were performed at nominal maximum luminous intensity. Moreover, for a number of representative colors, measurements were made at the reduced intensity settings normally in use. Conclusions regarding, rejecting, or accepting are tabulated.

OPTICAL PROPERTIES OF AIRFIELD LIGHTING FIXTURES OF THE ROYAL NETHERLANDS AIRFORCE. PART 2: INTENSITY MEASUREMENTS
P. Padmos and R. vanLeeuwen 1980 38 p In DUTCH; ENGLISH summary 2 Vol.
(Contract A78/KLu/085)
(IZF-1980-12-Vol-2; TDCK-75011) Avail: NTIS HC A03/MF A01

Most lighting fixtures did not fulfill NATO-Standardization requirements in one or another way. The most conspicuous error was found in a taxiway fixture, where the beam maximum appeared to be directed downwards. Many red filters have a deep red color, which lessens the light output. In most cases a considerable improvement in light output can be obtained by applying a more orange-red-color, for which the color requirements give room. It appears that for some red glass filters the transmission is lowered considerably by heating. Author

DEVELOPMENT AND TRIAL OF A ROTARY BALANCE FOR THE 3 m-LOW SPEED WIND TUNNELS IN THE FEDERAL REPUBLIC OF GERMANY Final Report, Dec. 1979
Bernd Schulze Bonn Bundesministerium fuer Forschung und Technologie Jul. 1981 70 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-022; ISSN-0170-1339) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 14.70

A rotary balance was developed for determining aerodynamic damping due to rolling by means of a stationary measuring procedure. Due to the uniform rotation around the wind tunnel axis, vortex relaxation effects that might result from oscillatory balances are avoided. Layout, instrumentation, and data processing are described. Results obtained by using the apparatus during different wind tunnel tests with a calibration model correlate well with existing reference data and flight test data. Dynamic stability derivates due to rolling can be measured for angles of attack up to 90 deg and for extreme angles of inclination.

The atmospheric general circulation experiment (AGCE) uses a rotating fluid flow cell assembly. The key technical areas affecting the feasibility of the design and operation of the AGCE are investigated. The areas investigated include materials for the flow cell assembly, thermal design, high voltage power supply design, effective retrieval and handling of experiment data and apparatus configuration. Several materials, DMSO and m-tolunitrile, were selected as candidate fluids for the flow cell principally for their high dielectric constant which permits the high voltage power supply design to be held to 15 kV and still simulate terrestrial gravity. Achievement of a low dissipation factor in the fluid to minimize internal heating from the applied electrical field depends strongly on purification and handling procedures. The use of sapphire as the outer hemisphere for the flow cell provides excellent viewing conditions without a significant impact on attaining the desired thermal gradients. Birefringent effects from sapphire can be held to acceptably low limits. Visualization of flow fluid is achieved through the motion of a dot matrix formed by photochromic dyes. Two dyes found compatible with the candidate fluids are spiropyran and triarylmethane. The observation of the dot motion is accomplished using a flying spot scanner.

The diffusion kinetics of the oxidation and nitridation of silica and the oxidation of aluminum were investigated below and above the melting point of the two metals under high-purity conditions. The electromagnetic levitation technique was used for the containerless positioning of the metal melts in a gas stream. Using gravimetric data, the growth constants, the diffusion coefficients, and activation energies were calculated. With the experimental conditions presented here, Al_2O_3 and SiO_2 samples can be prepared at time intervals which can be expected to be available during the future Spacelab missions. The levitation technique could not be used for the nitridation of Si-melts at temperatures higher than 1540 C because of instabilities in positioning and increased decomposition rates.

APPLICATION OF SKIN TECHNOLOGY: TEXUS 2 EXPERIMENT Final Report, Dec. 1979
Heinz Sprenger and Klaus Schweitzer (Motoren- und Turbinen-Union Muenchen GmbH) Bonn Bundesministerium fuer

Forschung und Technologie Aug. 1981 63 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-028; ISSN-0170-1339) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 13.25

To avoid the deformation caused by the volume expansion of the sample during melting observed in TEXUS 1, the samples were provided with a small hole in order to compensate for this effect. The possibility of transforming a powder metallurgically prepared sample into a case uniform structure was investigated. The sample consisted of a yttria-dispersed IN 738 superalloy. Though the heating chamber failed in the TEXUS 2 flight before reaching the final temperature, the samples were melted up to half their volume. The shape retaining effect of the skin was however not very pronounced because one of the samples had been free flying within the cartridge and had been in contact with the TZM material, while the second sample became inflated due to gas left in the micropores after the powder-metallurgical processing. In order to evaluate the effects of microgravity on vacuum brazing and the phenomena involved (i.e., flow of braze metal, joint filling, microstructure), an experiment was performed in the isothermal heating furnace of the TEXUS II sounding rocket. The specimen, consisting of four Ni-cylinders inserted one inside the other to form a 200 um cylindrical gap and a 0-2000 um sickle-shaped gap, was brazed with a near eutectic Ag-Cu alloy. This brazing alloy contained a small amount of Li to promote spreading (58 Ag: 39 Cu: 3 Li at. pct), and radioactive 110 m Ag as tracer metal. The specimen was evaluated by X-ray radiography, autoradiography and metallographic techniques. This experiment was carried out in preparation of the FSLP-experiment ES 304/ES 305. Author

INTERNAL CONVECTION UNDER LOW GRAVITY DUE TO ORTHOGONAL GRADIENTS OF TEMPERATURE AND CONCENTRATION Final Report, Dec. 1980

Bernd Fuessel, Wolfgang Kottler, and Dieter Langbein Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 106 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-041; ISSN-0170-1339) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 22.30

The existence of an interface energy between miscible fluids was demonstrated with the system methanol-cyclohexane. When carefully overlaying methanol saturated with cyclohexane on pure methanol, the saturated methanol forms distinct droplets, which migrate aside and dissolve within a few seconds. After about twenty minutes a curved interface develops between the pure methanol at the bottom and the overlayed methanol, which then contains only about four mol percent cyclohexane. Internal convection in the presence of non-parallel gradients of temperature and concentration is made evident by detailed investigations into the intermolecular attraction. The basic equations of this attraction were derived. Internal convection arises whenever it reduces the medium distance of molecules of the same species, i.e., if regions of equal concentration approach each other. T.M.

INVESTIGATIONS OF MICROMETEORITE IMPACTS ON LARGE SURFACES AND DURING LONG-TERM MISSIONS [UNTERSUCHUNGEN VON MIKROMETEORITEN-EINSCHLAEGEN IN GROSSEN FLAECHEN UND BEI LANGZEITMISSIONEN]

E. Igenbergs and H. Fechtig (Max-Planck Inst. fuer Kernphysik) Oct. 1980 73 p refs In GERMAN Sponsored by Bundesministerium fuer Forschung und Technology
(TUM-RT-TB-80/12) Avail: NTIS HC A04/MF A01

The number of dust particle impacts expected during space missions was investigated and a long-term experiment is presented in order to study the suitability of Spacelab as a micrometeorite detector. A detailed inventory was made of available information on the dust environment. The dust particle expectancy values are given for several planetary and interplanetary missions mentioned in the Lunar and Planetary Mission Handbook. The heat shield surface of Spacelab modules is not suited for micrometeorite detection due to the relatively short flight time. An experiment is proposed for the second mission of the Long Duration Exposure Facility. This experiment is to obtain information on the dust environment close to the Earth and is to contribute to the development of interplanetary dust measuring devices. Author (ESA)

INVESTIGATION ON THE APPLICABILITY OF SLIP CASTING FOR THE PRODUCTION OF CERMETS UNDER MICROGRAVITY CONDITIONS Final Report, Jul. 1978

Gisela Seufert Bonn Bundesministerium fuer Forschung und Technologie Apr. 1981 77 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium Forschung und Technologie
(BMFT-FB-W-81-017; ISSN-0170-1339) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 16.20

The feasibility of slip casting for the production of cermets, with homogeneous distribution of metal particles in the ceramic matrix to establish whether phase separation by sedimentation is so critical that it necessitates space processing was studied. Procedures were developed for the casting of compositions of 95% oxide and 5% metal powder of grain. It is shown that sedimentation of the metal particles does not occur below some density and viscosity threshold of the slip and that the solvent concentration plays a lesser role. Conditions are found where an homogeneous distribution is obtained, as borne out by X-ray and electron microscope testing. Author (ESA)

PREPARATION OF SPACELAB EXPERIMENTS ON Si, CdTe, AND ZnS CRYSTAL GROWTH DURING THE E1 AND D1 MISSIONS AND CONSTRUCTION AND TESTING OF A SINGLE ELLIPSOID MIRROR HEATING FACILITY Final Report, May 1980

Achim Eyer, Harald Leiste, Magarete Schumacher, and Herbert Walcher Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 189 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-023; ISSN-0170-1339) Avail: NTIS HC A09/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 35.40

Spacelab experiments on the growth of Si, CdTe, and ZnS crystals were prepared by improving growth techniques, by adapting existing furnaces, and by the development of heating facilities. Dislocation-free silicon single crystals were grown by the floating-zone technique. Space experiments are indicated to be extremely useful in determining which type of convection in the melt is responsible for the striations observed in all crystals. Purification of Cd and Te, synthesis of high purity CdTe, and C coated growth ampules were improved. Growth by sublimation is shown to yield numerous twinned single crystals. High purity ZnS could be synthesized and single crystals were grown in a resistance furnace in quartz ampules with well defined gaseous zones. Single ellipsoid mirror furnaces were constructed which are particularly suited for growth experiments in ampules. Their thermal properties were studied and compared with those of the existing double ellipsoid furnace. The latter was further improved and supplemented by a control system regulating the integral radiation of the furnace. Author (ESA)

INVESTIGATIONS ON THE INFLUENCE OF GRAVITY ON JOINING PROCESSES WITH LIQUID MELTS, AND OF BRAZING AND WELDING EXPERIMENTS UNDER WEIGHTLESSNESS Final Report, Jul. 1980
Hans Hoffmeister and Juergen Ruediger Bonn Bundesministerium fuer Forschung und Technologie Jun. 1981 94 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-024; ISSN-0170-1339) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19.75

Physical mechanisms in welding and brazing likely to be affected by space conditions are considered and the literature on actual space experiments is reviewed. Proposed Spacelab test experiments and complementary testing on Earth are described. Further development needs are identified in arc welding. It is proposed to analyze the influence of gravity on material transfer, on the shape and structure of seam, and on the segregation of the phases by: (1) taking advantage of rotary motions on Earth in order to raise the g level or to create short time weightlessness; (2) working in an aircraft or rocket under longer microgravity conditions; and (3) performing arc-spot welding in a vacuum so as to develop this process for use in space. THE ROLE OF THE WETTABILITY FOR THE PRODUCTION OF COMPOSITE MATERIALS IN SPACE: QUANTITIES, INFLUENCES AND MODELS Final Report, Mar. 1980
Josef Haag Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 283 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Bundesministerium
(BMFT-FB-W-81-021; ISSN-0170-1339) Avail: NTIS HC A13/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 44.80

Unsatisfactory first results of remelting pressed powder mixtures in American and German space experiments form the basis for a discussion of the role of wettability in processing particle composites in space. Considering the meaning of Young's wetting angle for the description of wetting behavior, the character of a non-equilibrium wetting angle as a geometric value is clearly established. A geometric dependance of the kinetics also results from the wetting kinetics, which is usually described using the energetic driving force, namely the wetting tension. As a consequence, the geometry changes during the remelting and wetting process have to be considered. Regarding special materials combinations, it was attempted to give access to surface to thermodynamic properties from both experimental and theoretical ways of getting the data and estimating possible external influences. A logical view of the applications data service (ADS) as a distributed system was adopted. A hierarchical classification scheme of ADS features comprising 70 modes was developed. The framework for a preliminary assessment of the applicability Federal, national, and international standards to ADS was provided by the classification. Approximately 300 standards were gathered, screened, and documented. The survey was enlarged to incorporate standards from NASA headquarters and centers. Two efforts were initiated to (1) survey methodologies of the three ADS pilots, and (2) identify the requirements for standards of ADS members based on a survey of the pilots and on representative future members. Preliminary results of the requirements survey were used in the development of criteria for the evaluation of candidate standards. An evaluation process was designed incorporating these criteria. STRUCTURAL SAFETY ANALYSIS OF PROPOSED HARPOON TEST FACILITY [VEILIGHEIDSANALYSE HARPOON TESTCELLEN]
J. Schippers Nov. 1979 32 p refs In DUTCH; ENGLISH summary
(Contract A77/KM/149)
(PML-1979-74; TDCK-73394) Avail: NTIS HC A03/MF A01

An analysis was performed on the basis of existing plans to build two missile test cells. The first solution is a cell with reinforced concrete walls and one wall functioning as a venting surface and the second a cell with walls consisting of multiple layers through which the effect of the explosion is contained in the cell structure. Disadvantages of the first solution are the fairly large structural deformations of the walls, the occurrence of spalling and the loading of the neighoring buildings by the shock wave emerging from the cell. The advantage of this method is that it is a conventional solution whose dangerous aspects are known. The advantage of the second solution is the fact that the entire explosion is confined in a special cell structure. The effect on the environment will be negligible. Disadvantage of this solution is that it is a new, unknown and untested technique. T.M.

15 LAUNCH VEHICLES AND SPACE VEHICLES

SYSTEM ANALYSIS APPROACH TO DERIVING DESIGN CRITERIA (LOADS) FOR SPACE SHUTTLE AND ITS PAYLOADS. VOLUME 2: TYPICAL EXAMPLES
Robert S. Ryan, Tulon Bullock, Wayne B. Holland, Dennis A. Kross, and Larry A. Kiefling Dec. 1981 128 p refs
(NASA-TP-1950; M-359-Vol-2) Avail: NTIS HC A07/MF A01 CSCL 22B

The achievement of an optimized design from the system standpoint under the low cost, high risk constraints of the present day environment was analyzed. Space Shuttle illustrates the requirement for an analysis approach that considers all major disciplines (coupling between structures control, propulsion, thermal, aeroelastic, and performance), simultaneously. The Space Shuttle and certain payloads, Space Telescope and Spacelab, are examined. The requirements for system analysis approaches and criteria, including dynamic modeling requirements, test requirements, control requirements, and the resulting design verification approaches are illustrated. A survey of the problem, potential approaches available as solutions, implications for future systems, and projected technology development areas are addressed. E.A.K.

ROBISAT: CONCEPT AND FEASIBILITY STUDY, PHASE A Final Report
Eberhard Achtermann, Karl-Ludwig Bitzer, Ludwig Borucki, Klaus Ernsberger, Paul Gillett, Manfred Granzow, Wolfgang Kriegl, Guenter Lehn, Gerhard Lippner, Rolf Ockert et al Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 35 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-80-033; ISSN-0170-1339) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7,20

The results of a feasibility study on an X-ray satellite (ROBISAT) are summarized. Within the framework of this study alternative systems concepts were analyzed, and a preferred satellite concept has evolved for a telescope with 80 cm aperture. It is shown that the required sky survey can easily be accomplished by means of a spinning satellite in a Sun-synchronous dawn-dusk orbit. J.M.S.

AERONOMY SATELLITES AEROS A AND B: THE ASSISTANCE TO THE PROJECT BY THE PROJECT SCIENTIST Final Report, Apr. 1981
Peter Laemmerzahl Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 43 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-029; ISSN-0170-1339) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 9,05

With the German-U.S. research satellite AEROS-A and the German satellite AEROS-B the most important aeronomic parameters in the upper atmosphere were measured between December 1972 and September 1975. Simultaneous observations of densities, composition, and temperatures of both the atmospheric neutral gas and the ionospheric plasma and, in addition, of the solar energy influx in the extreme ultraviolet was essential to allow for an integrated analysis of the aeronomic interactive processes. The responsibility within the project management for all scientific matters was with the project scientist, and this report is on his contribution to meet the goal of the mission. Also the experimental and mission aspects, the management organization, the project development, and the major science return from the AEROS program are explained. Author

METEOROLOGICAL SATELLITES
16 Oct. 1981 7 p refs Transl. into ENGLISH from Skrzydlata Polska (Poland) no. 27, 1979 21 p
(AD-A107427; FTD-ID(RS)T-1059-81) Avail: NTIS HC A02/MF A01 CSCL 22B

Meteor-2 (second generation meteorological satellite) and an experimental satellite on which instruments are being tested and modified for the requirements of hydrometeorology and a determination of natural resources are presently operational in the U.S.S.R. Television devices with a 1-10 km terrain image resolution operating in the visible and infrared region are used to determine the space system, velocity ahd direction of cloud movements and provide information about the snow and ice cover, cyclones, storms, vortices in the atmosphere, and velocity and direction of wind. Images with a 50-1000 m resolution make possible geological and hydrological surveys, an evaluation of the state of vegetation and crops, detection of forest fires, determination of pollution of the atmosphere and sea and determination of optimal fishing regions in the ocean. Measurement of the intensity of atmospheric radiation in narrow infrared regions and very high frequencies allows remote evaluation of the temperature and humidity distribution in the vertical cross section of the Earth's atmosphere. SENSOR FOOTPRINTS AND HOMING RANGE OF TERMINAL GUIDANCE MUNITION [SENSOR-FOOTPRINT UND NACHLENKBEREICH BEI ENDPHASENGELENKTER MUNITION]
K.-D. Leuthaeuser and H. Wessel Bonn Bundesministerium der Verteidigund 1981 56 p refs In GERMAN Sponsored by Bundesministerium der Verteidigung
(BMVg-FBWT-81-5) Avail: NTIS HC A04/MF A01; DOKZENTBw, Bonn DM 30

The footprints of terminal guidance projectiles were analyzed. These footprints, which correspond to the accessible target range on the surface, depend on the vision range of the sensor and on the homing range of the projectile. The sensor vision range is calculated as a function of trajectory parameters, sensor aperture, and sensor range. The extent of the homing range is determined for the special case of circular trajectories, i.e., proportional navigation, in dependence of flight height, angle of incidence, and maximal transverse acceleration. The resulting footprints are represented in overlay diagrams. Author (ESA)

THE AERODYNAMICS OF BODIES IN A RAREFIED IONIZED GAS WITH APPLICATIONS TO SPACECRAFT ENVIRONMENTAL DYNAMICS
Nobie H. Stone Nov. 1981 320 p refs
(NASA-TP-1933; M-361) Avail: NTIS HC A14/MF A01 CSCL 22B

The objectives are to provide a parametric description of the electrostatic interaction of a mesosonic, collisionless plasma with conducting bodies on the order of 1 to 10 Debye lengths in size, and to extend this description to the satellite-ionospheric interaction, where possible. Experimental findings include: the wake of the geometrically complex body appears to be a linear superposition of the wakes of its simple geometric components; and vector ion flux measurements show converging ion streams at the wake axis and direct evidence of ion streams deflected from the wake axis by the positive space charge potential associated with the axial ion peak. The extension to the satellite-ionospheric interaction utilizes qualitative scaling and indicates that similar, but smaller amplitude, wake structures may be expected for small or highly charged bodies. However, for large bodies at small potentials, the structure may be diffused by the thermal ion motion and the dispersion resulting for space charge potentials. T.M.

CRYOGENIC FLUID MANAGEMENT EXPERIMENT Final Report, Dec. 1978 - Oct. 1981
R. N. Eberhardt, W. J. Bailey, and D. A. Fester Oct. 1981 237 p refs
(Contract NAS3-21591)
(NASA-CR-165495; MCR-81-597) Avail: NTIS HC A11/MF A01 CSCL 22B

The cryogenic fluid management experiment (CFME), designed to characterize subcritical liquid hydrogen storage and expulsion in the low-g space environment, is discussed. The experiment utilizes a fine mesh screen fluid management device to accomplish gas-free liquid expulsion and a thermodynamic vent system to intercept heat leak and control tank pressure. The experiment design evolved from a single flight prototype to provision for a multimission (up to 7) capability. A detailed design of the CFME, a dynamic test article, and dedicated ground support equipment were generated. All materials and parts were identified, and components were selected and specifications prepared. Long lead titanium pressurant spheres and the flight tape recorder and ground reproduce unit were procured. Experiment integration with the shuttle orbiter, Spacelab, and KSC ground operations was coordinated with the appropriate NASA centers, and experiment interfaces were defined. Phase 1 ground and flight safety reviews were conducted. Costs were estimated for fabrication and assembly of the CFME, which will become the storage and supply tank for a cryogenic fluid management facility to investigate fluid management in space. ELECTROTHERMAL HYDRAZINE THRUSTER Final Report
C. B. Taylor Paris ESA 1981 203 p
(Contract ESTEC-2067/73/HP)
(BAe-RPT/EHT/40212-Vol-1: ESA-CR(P)-1466) Avail: NTIS HC A10/MF A01

An electrothermal hydrazine thruster used for satellite attitude and orbit control was designed. A series of laboratory and engineering models verified mathematical analyses and design concept. The final engineering model showed diminished performance due to a build up of metallic sponge in the screen pack, which caused progressive reduction in gas flow. The contaminant was absorbed by the hydrazine from the supply system and carried in solution to the thruster. Results of 500,000 100 msec pulses show that the required holding condition temperature and pulse mode performance are achieved.

THERMODYNAMICS AND KINETICS OF THE SULFATION OF POROUS CALCIUM SILICATE
Robert A. Miller and Fred J. Kohl 1981 18 p refs Presented at the Fall Meeting of the Electrochem. Soc., Inc., Denver, 11-17 Oct. 1981
(NASA-TM-82769; E-1023) Avail: NTIS HC A02/MF A01 CSCL 11G

The sulfation of plasma sprayed calcium silicate in flowing SO2/air mixtures at 900 and 1000 C was investigated thermogravimetrically. Reaction products were analyzed using electron microprobe and X-ray diffraction analysis techniques, and results were compared with thermodynamic predictions. The percentage, by volume, of SO2 in air was varied between 0.036 and 10 percent. At 10 percent SO2 the weight gain curve displays a concave downward shoulder early in the sulfation process. An analytical model was developed which treats the initial process as one which decays exponentially with increasing time and the subsequent process as one which decays exponentially with increasing weight gain. At lower SO2 levels the initial rate is controlled by the reactant flow rate. At 1100 C and 0.036 percent SO2 there is no reaction, in agreement with thermodynamic predictions.

DEVELOPMENT OF AN ENGINEERING ANALYSIS OF PROGRESSIVE DAMAGE IN COMPOSITES DURING LOW VELOCITY IMPACT Final Report, 3 Aug. 1979 - 15 Sep. 1981
E. A. Humphreys Jul. 1981 118 p refs
(Contract NAS1-15888)
(NASA-CR-165778; MSC-TFR-1205/0208) Avail: NTIS HC A06/MF A01 CSCL 11D

A computerized, analytical methodology was developed to study damage accumulation during low velocity lateral impact of layered composite plates. The impact event was modeled as perfectly plastic with complete momentum transfer to the plate structure. A transient dynamic finite element approach was selected to predict the displacement time response of the plate structure. Composite ply and interlaminar stresses were computed at selected time intervals and subsequently evaluated to predict layer and interlaminar damage. The effects of damage on elemental stiffness were then incorporated back into the analysis for subsequent time steps. Damage predicted included fiber failure, matrix ply failure and interlaminar delamination. Author

INDENTATION LAW FOR COMPOSITE LAMINATES
S. H. Yang 31 Jul. 1981 47 p refs
(Grant NsG-3185)
(NASA-CR-165460; CML-81-1) Avail: NTIS HC A03/MF A01 CSCL 11D

Static indentation tests are described for glass/epoxy and graphite/epoxy composite laminates with steel balls as the indentor. Beam specimens clamped at various spans were used for the tests. Loading, unloading, and reloading data were obtained and fitted into power laws. Results show that: (1) contact behavior is not appreciably affected by the span; (2) loading and reloading curves seem to follow the 1.5 power law; and (3) unloading curves are described quite well by a 2.5 power law. In addition, values were determined for the critical indentation, alpha sub cr which can be used to predict permanent indentations in unloading. Since alpha sub cr only depends on composite material properties, only the loading and an unloading curve are needed to establish the complete loading-unloading-reloading behavior.

THERMOMECHANICAL RESPONSE OF Gr/Pi COMPOSITES Final Report, 1 Oct. 1979 - 30 Mar. 1981
B. Walter Rosen, Aniruddha P. Nagarkar, and Zvi Hashin Mar. 1981 93 p refs
(Contract NAS1-15841)
(NASA-CR-165753; MSC-TFR-1202/0207) Avail: NTIS HC A05/MF A01 CSCL 11D

The effects of temperature changes upon the stresses and strains in composite laminates having carbon fibers in a polyimide matrix were evaluated. Composites having laminae in which there were nonlinear stress-strain relations for stresses transverse to the fibers and for axial shear stresses were treated. Material properties were considered to be temperature dependent. Separately, the effects of laminae viscoelastic response were also treated. The results suggest that, for this material, nonlinearities due either to stress or time dependent effects do not appear to be of major practical importance for conventional high temperature composite structures. Avail: NTIS HC A06/MF A01

Conditions under which application of resin-fiber composite materials is possible are defined. Materials were characterized (thermomechanical, electrical, electromechanical and aging properties) and their utilization was examined. Results show that applications of composites in missiles and missile launchers are much more limited than in aircraft manufacturing. In particular, for short-range missiles of small diameter, composites are not as cost effective as metal materials, e.g., aluminum. However, when weight reduction is of primary concern, wider use of composites can be expected. Author (ESA)

SELECTION AND TESTING OF SUITABLE COATING SYSTEMS FOR STEEL PIPES USED FOR LONG DISTANCE HEAT TRANSFER Final Report, May 1980
Ernst Braches Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 85 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-138; ISSN-0340-7608) Avail: NTIS HC A05/MF A01

Anticorrosion properties of buried plastics-coated steel pipes for long-distance heat supply lines, with regard to the possible application limits are considered. Quantitative measuring methods were used to determine the influence of various media, temperatures, and temperature changes on the protective effect of the composites systems. Electrochemical measuring methods (impedance and potential measurement), bond strength measurements and optical tests were employed. It was possible to achieve a very good differentiation between the level of protection offered by the individual coating systems and show how they were affected by the various kinds of stress applied. The electrochemical measuring methods, in particular, were outstandingly suitable for a quasi-nondestructive evaluation of a composite system subjected to various stresses. It was also possible to show that the PU coating system did not lose any of its protective properties in any of the tests. J.M.S.

(DE81-028632; CONF-810835-7) Avail: NTIS HC A02/MF A01

A new method to produce multifilamentary (MF) Nb3Sn superconductor called modified jellyroll has been recently developed by Teledyne Wah Chang, Albany. The novel technique shows real promise to simplify the manufacture of MF superconducting wires. Unlike the conventional, internal bronze process which employs niobium in either rod or tube form, modified jellyroll (MJR) uses an expanded niobium foil in its billet assembly. Simply by rolling thin expanded niobium foil along with other metal sheets, as desired (e.g., copper, bronze, tantalum, etc.), into a jellyroll form, the resultant billet can then be extruded and processed as conventional wires. This paper presents results of systematic evaluation tests performed on such composites. The results are analyzed and discussed in terms of critical current density, diffusion time constant, ac losses (magnetization), and the effective filamentary diameter. DOE

DISSOLUTION OF SURFACE OXIDE LAYERS ON TITANIUM AND TITANIUM SUBHYDRIDE BETWEEN 25 AND 700 C
T. N. Wittberg (Dayton Univ.) and P. S. Wang 1981 18 p refs Presented at the 11th Symp. on Explosives and Pyrotechniques, Philadelphia, 15 Sep. 1981
(Contract DE-AC04-76DP-00053)
(DE81-028044; MLM-2856-OP; CONF-810926-4) Avail: NTIS HC A02/MF A01

The surface sensitive, spectroscopic techniques of Auger electron spectroscopy (AES) and X-ray photoelectron spectroscopy (XPS) have been applied to the study of oxide dissolution on titanium and titanium subhydride. It was shown that the rate of oxygen dissolution into titanium increased sharply at about 350 C temperatures at which an exothermic reaction, corresponding to the reaction of free titanium with atmospheric oxygen, was occurring. The work has been expanded to include studies of TiH/ sub x/ (x = 1.15, 1.62). It was found that dissolution of the native oxide on titanium subhydride occurs at a substantially higher temperature (about 500 C) than for titanium. It appears that the onward diffusion of hydrogen is inhibiting the inward diffusion of oxygen on the subhydride samples below 500 C. Studies in the range of 300 to 350 C have shown a semilogarithmic relationship between the surface oxygen level and the time at temperatue, in agreement with earlier gravimetric studies on titanium oxidation in this tempeature range. DOE

HIGH TEMPERATURE ELECTRICAL CONDUCTIVITY AND THERMAL DECOMPOSITION OF PHENOLIC AND SILICON BASED DIELECTRICS FOR FIRESET HOUSINGS
R. T. Johnson, Jr. and R. M. Biefeld Aug. 1981 67 p refs
(Contract DE-AC04-76DP-00789)
(DE81-031919; SAND-81-0786) Avail: NTIS HC A04/MF A01

The temperature dependence of the electrical conductivity and thermal decomposition characteristics of several phenolic- and silicone-based materials of interest for fireset case housings have been measured to 600 C to 700 C. The materials are phenolic or silicone resins reinforced with glass chopped fabric or cloth. The conductivity temperature dependence was measured during decomposition in a nitrogen atmosphere at a heating rate of approximately 10 C/minute. Applied electric fields were from 4 x 400 to 4000 volts/cm. Thermal decomposition characteristics were investigated by mass spectroscopy in vacuum and thermal gravimetric analysis in nitrogen and air. Nearly ohmic voltage-current characteristics were obtained, except where decomposition and/or outgassing was pronounced. DOE

STUDY OF TRACTION RUPTURE STRENGTH OF GRAPHITE-EPOXY COMPOSITE MATERIAL LAMINATES T300/5208, WITH AND WITHOUT A CENTRAL HOLE Ph.D. Thesis - Univ. of Technol. de Compiegne, France [ETUDE JUSQU'A RUPTURE EN TRACTION DE STRATIFIES EN MATERIAU COMPOSITE GRAPHITE-EPOXY T 300/5208, AVEC OU SANS TROU CENTRAL]
Tat Sinh Vong Sep. 1980 283 p refs In FRENCH; ENGLISH summary
(Rept-137) Avail: NTIS HC A13/MF A01

Composite laminated plates were subjected to traction uniaxial loading and their failure behavior was studied. Theory is proposed for specimen geometry effects, i.e., free edges, stacking sequence, and hole diameter. Load transfer mechanisms and damage propagation to complete failure are explained by a variational approach to the uniform extension problem. Tensile test results are interpreted with the T300/5208 graphite-epoxy unidirectional composite taken as a transverse isotropic material and all the elastic moduli are found. Experiments confirm that the hole diameter effect can be predicted with an approximation. Analysis based on the finite element method gives the distribution of the in-plane stresses within each ply (distant, near or around the hole). An incremental procedure determines the propagation of damage and the stress redistribution of broken fibers; the initiation of damage is shown to be near the hole and perpendicular to the tension axis. CHEMICAL MODIFICATION OF TiO2 SURFACES WITH METHYLSILANES AND CHARACTERIZATION BY INFRARED ABSORPTION SPECTROSCOPY
Harry O. Finklea and R. Vithanage [1982] 14 p refs
(Grant NAG1-89)
(NASA-CR-165063) Avail: NTIS HC A02/MF A01 CSCL 07D

Infrared absorption spectra of methylsilanes bonded to a TiO2 powder were obtained. The reacting silanes include Me sub (4-n)SiX sub n (n = 1-4; X = Cl, OMe) and hexamethyldisilazane (HMDS). Reactions were performed on hydroxylated-but-anhydrous TiO2 surfaces in the gas phase. IR spectra confirm the presence of a bonded silane layer. Terminal surface OH groups are found to react more readily than bridging OH groups. By-products of the modification adsorp tenaciously to the surface. The various silanes show only small differences in their ability to sequester surface OH groups. Following hydrolysis in moist air, Si-OH groups are observed only for the tetrafunctional silanes. With the conventional pyrolysis technologies it was formerly possible to treat one specific waste only. A new technology which enables to process a great number of hydrocarbonaceous industrial wastes, even in mixture was developed. The technology was developed in both, a laboratory and in a testing plant with a capacity of 200 kg/h and within 3000 operating hours successfully proved. Residues from car shredding plants, plastics, used cables and acid tars were pyrolysed separately as well as in a mixture. The pyrolysis products thus gained are upgraded in a succeeding stage to meet market demands or for use in a secondary refinery. The calculation of profitability for a large plant proves that a balanced operating result can be reached. In industrial areas this technology will play an important part with regard to waste disposal as well as resource recovery. Author

(BMFT-FB-T-81-102; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 8

During the described phase of testing, the waste-water-free Walther-process could be advanced considerably and tried in the final process conception after a coal-fired power-station block. The ammonia sulfate obtained as a waste-product, meets the requirements of the fertilizer industry. Further processing of this pulverous waste-product to obtain a marketable end-product was investigated and demonstrated in a pelletizing unit with subsequent drying in a drum-type drier. The possibility of reheating the gases in a FGD-plant (flue-gas desulfurization plant) without application of energy from foreign source was proven by the use of a regenerative heat exchanger. As regards spray-drying, a variant was investigated: a partial flow of the high-temperature flue-gas was branched before the airheater and spray-drying of the oxidized scrubbing liquid resulting from the desulfurization process was carried out in this partial flow. MATERIALS CHARACTERIZATION OF SILICON AND ANALYSIS OF COMBINATION PROCESSES AND IMPURITIES Final Report, Jul. 1980

Wolfgang Schmid and Manfred H. Pilkuhn Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 80 p refs Partly in GERMAN; Partly in ENGLISH Sponsored by Bundesministerium fuer Forschung und Technologie und Deutsche Forschungsgemeinschaft
(BMFT-FB-T-81-114; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 16,80

Photoluminescence of silicon is discussed as a method of materials characterization, and an analysis of impurities, defects and lifetimes is made. The nature and concentration of shallow impurities can be determined by bound exciton luminescence. In silicon, an isoelectronic defect was discovered and investigated. Silicon liquid phase epitaxy layers were produced for the investigation of the deep acceptor In. These layers exhibited significant changes in the defect properties, e.g., discrete donor acceptor pair spectra. A quantitative relation between minority carrier lifetime and the concentration of majority carriers was determined for a device modelling. The case of the simultaneous presence of gold recombination centers was of particular interest. M.G.

For many display applications active, flat solid state panels are gaining increasing interest. The aim of this investigation was the determination of the relevant preparational parameters as well as the electro-optic characterization of the transducer. Electroluminescing MISIM (metal-Al_2O_3 - II-VI semiconductor - Al_2O_3-metal) structures were prepared by sputtering and evaporation techniques. The most efficient layers were produced with yellow emitting ZnS:0.5 weight percent Mn films. Luminance values above 3000 cd/sq m, good multiplexability due to extremely nonlinear voltage-brightness relation and luminous efficiency of 0.5 lm/W could be achieved. The long-time stability of the devices, however, still has to be improved. Author

THE ELECTROCHEMISTRY OF MOLTEN LITHIUM CHLORATE AND ITS POSSIBLE USE WITH LITHIUM IN A BATTERY

Su-Chee Simon Wang and Douglas N. Bennion Dec. 1980 36 p refs Submitted for publication
(Contract N00014-80-C-0345; NR Proj. 359-551)
(AD-A105968; BYU-TR-1) Avail: NTIS HC A03/MF A01 CSCL 07/4

Lithium chlorate, $LiClO_3$, has a reported melting point of 127.6 C or 129 C. The specific conductance of molten lithium chlorate is relatively high compared to most electrolytic solutions used at room temperature. Therefore, lithium chlorate offers the chance to operate a new lithium battery system at a temperature between 130 C and 150 C. It is found from experiments that lithium chlorate is stable in the potential range between 3.2 V and 4.6 V. A $Li\text{-}Cl_2$ secondary battery system has an open circuit potential of 3.97 V, making a $Li\text{-}Cl_2$ secondary battery in molten lithium chlorate, in principle, possible. Lithium negative electrode performance is hindered by corrosion and possible runaway reactions with $LiClO_3$ and dendrite formation on charging. The solubility of Li_2O and LiCl in $LiClO_3$ at 145 C is .000075 mol/cubic cm and .00178 mol/cubic cm respectively. The diffusion coefficients are 1.5 x 10 to the -7th power sq cm/s for Li_2O and 3.4 x 10 to the -7th power sq. cm/s for LiCl. Platinum appeared to be an inert positive electrode for chlorate, chlorine, or oxygen reactions for short term runs, order of several hours. Nickel shows active-passive behavior and appears suitable for primary cell, cathodic discharge of $LiClO_3$, but not suitable for a Cl_2 or O_2 electrode. GRA

STEREOCHEMISTRY OF REACTION INVOLVING CYCLIC PEROXIDES Final Report, 1 May 1978 - 30 Apr. 1981
Ned A. Porter 25 Sep. 1981 11 p refs
(Grant NSF CHE-77-26088)
(AD-A105999; ARO-15618.1-C) Avail: NTIS HC A02/MF A01 CSCL 07/4

Several aspects of chemistry related to autoxidation, peroxy free radicals, and peroxides have been explored. Methods for preparation of complex unsaturated hydroperoxides have been developed and peroxy radicals derived from these hydroperoxides were studied as models for polyunsaturated fatty acid and polyolefin (i.e., polybutadiene and polyisoprene) autoxidation. We have established that peroxy radical cyclization and bicyclization occurs in models of polyunsaturated fatty acid oxidation and a new type of cyclization, serial cyclization, has been observed in polybutadiene oxidation models. Kinetic and stereochemical aspects of these cyclization reactions have been explored. The free radical oxidation of polyunsaturated fatty acids has been studied mechanistically. In particular, we believe that the H atom donating ability of the medium in which oxidation occurs is an important factor in determining the partitioning of peroxy free radicals between competitive pathways (i.e., beta scission and cyclization). The results of these studies provide a firm basis for understanding the degradation of materials, foodstuffs, etc.

CHEMICALLY MODIFIED ELECTRODES FOR ELECTROCATALYSIS
Royce W. Murray 8 Sep. 1981 39 p refs Prepared for publication
(Contract N00014-76-C-0817; NR Proj. 350-623)
(AD-A105563; TR-18) Avail: NTIS HC A03/MF A01 CSCL 07/4

At a modified electrode, electrocatalysis is accomplished by an immobilized redox substance acting as an electron transfer mediator between the electrode and a reaction substrate. Such mediated electrocatalysis is possible with monomolecular and multimolecular layers of the redox substance. The electron transfer mediation can assume several special forms which are identified and experimental examples are given. The differences between electrocatalytic behavior of monomolecular and multimolecular layers are discussed; electrocatalysis in the latter circumstance can include reaction rate elements of electrochemical charge and substrate migration through the multilayer in addition to the chemical rate. Theoretical ideas are presented which interconnect these three rate elements, to show that either all of the multilayer sites can participate in the electrocatalytic reaction, or only ca. a monolayer's worth, depending on the relative rates of the electrochemical charge transport, the diffusion of the substrate, and the chemical reaction rate. CHEMISTRY AND APPLICATION OF OZONE AND OZONE/UV LIGHT FOR WATER REUSE Final Technical Report, 15 Sep. 1979 - 15 Sep. 1980
E. Leitis, J. D. Zeft, and M. M. Smith 8 May 1981 152 p refs
(Contract DI-14-34-0001-9436)
(PB81-238578; W81-04656; OWRT-C-90110-R(9436)(1); OWRT/RU-80/14) Avail: NTIS HC A08/MF A01 CSCL 07D

Ways to reduce fixed and operating costs of ultraviolet light (UV) enhancement of ozone (03) oxidation of refractory organics in wastewater and the chemistry involved as well as the predictability of degradation rates for different classes of refractory compounds were investigated. Major emphasis was placed on: (1) role of UV wavelength and intensity on the oxidation rate of organics; (2) effect of pH and concentration of substrates on ozonation and UV ozonation rates; and (3) feasibility of using Oc/UV to oxidize phenanthrene, used as a model compound of polyclear aromatic hydrocarbons found in synthetic fuel wastewater. Experimental results indicate that there is a concerted attack by UV light and ozone on the carbon-halogen bond, followed by a reaction of the dehalogenated carbon with ozone. Additional results are described. GRA

PHOTOTHERMAL SPECTROSCOPY OF AEROSOLS
Anthony J. Campillo and Horn Bond Lin Apr. 1981 10 p refs Presented at the SPIE Tecnical Symp., Washington, D.C., 20 Apr. 1981 Submitted for publication
(Contract DE-AC02-76CH-00016)
(DE81-026098; BNL-29792; CONF-8104104-1) Avail: NTIS HC A02/MF A01

In situ aerosol absorption spectroscopy was performed using two novel photothermal detection schemes. The first, based on a photorefractive effect and coherent detection, called phase fluctuation optical heterodyne spectroscopy, yields, depending on the geometry employed, particle specific or particle and gas absorption data. Single particles of graphite as small as 1 micrometer were detected in the particle specific mode. In another geometrical configuration, the total absorption (both gas and particle) of submicron sized aerosols of ammonium sulfate particles in equilibrium with gaseous ammonia and water vapor were measured at varying CO_2 laser frequencies. The second scheme is a hybrid visible Mie scattering scheme incorporating photothermal modulation. Particle specific data on ammonium sulfate droplets were obtained. DOE

THERMOLYSIS OF NAPHTHOLS
M. L. Poutsma and C. W. Dyer 1981 6 p refs Presented at the Intern. Conf. on Coal Sci., Dusseldorf, 7 Sep. 1981
(Contract W-7405-eng-26)
(DE81-029684; CONF-810914-6) Avail: NTIS HC A02/MF A01

A significant portion of the oxygen content of native coals and of the coal-derived liquids used as process solvents during hydroliquefaction of coal is present as phenolic hydroxyl groups. Various reported phenomenological effects of the phenolic content of process solvents on liquefaction performance were reviewed.

Background data concerning the chemical behavior of phenols under conditions representative of liquefaction were found lacking. The thermolysis of representative phenols under carefully defined conditions was studied. The behavior of the isomeric naphthols at 400 C in the absence of any purposely added reagents or catalysts is described. The results reveal a set of previously unrecognized thermal reactions by which phenols may be condensed to furans, be deoxygenated to arenes, and serve as hydrogen donors. These processes, the latter two generally desirable and the former one undesirable, are inherently related. M.D.K.

PRECISE TRACE RARE EARTH ANALYSIS BY RADIOCHEMICAL NEUTRON ACTIVATION

J. C. Laul, E. A. Lepel, W. C. Weimer, and N. A. Wogman Jun. 1981 19 p refs From the Modern Trends in Activation Anal. Conf., Toronto, 15-19 Jun. 1981 Submitted for publication
(Contract DE-AC06-76RL-01830)
(DE81-030009; PNL-SA-9143; CONF-8106153-1) Avail: NTIS HC A02/MF A01

A rare Earth group separation scheme followed by normal Ge(Li), low energy photon detector (LEPD), and Ge(Li)-NaI(T1) coincidence-noncoincidence spectrometry, significantly enhances the detection sensitivity of individual rare Earth elements (REE) at or below the ppB level. Based on the selected gamma ray energies, normal Ge(Li) counting is favored for 140La, 170Tb, and 169Yb; LEPD is favored for low gamma ray energies of 147Nd, 153Sm, 166 Ho, and 169Yb; and noncoincidence counting is favored for 141Ce, 143Ce, 142Pr, 153Sm, 171Er, and 175Yb. The detection of radionuclides 152mEu, 159Gd, and 177 Lu is equally sensitive by normal Ge(Li) and noncoincidence counting; 152Eu is equally sensitive by LEPD and normal Ge(Li); and 153Gd and 170Tm are equally favored by all the counting modes. Noncoincidence counting is favored for most of the REE. Precise measurements of the REE were made in geological and biological standards. DOE

OXIDATION OF FORMIC ACID AND METHANOL ON SINGLE CRYSTAL PLATINUM ELECTRODES

R. R. Adzic, A. V. Tripkovic, and W. E. Grady (Brookhaven National Lab.) 1981 13 p refs Presented at the Symp. on Electrocatalysis, Minneapolis, 10-15 May 1981
(Contract DE-AC02-76CH-00016)
(DE81-028330; BNL-29817; CONF-8105105-3) Avail: NTIS HC A02/MF A01

The oxidation of formic acid and methanol involves strong adsorption prior to the charge transfer process and the intermediates formed in these reactions are even more strongly adsorbed. It was found that these processes are highly dependent on the surface orientation of the single crystal electrodes. The highest activity has been found with (111) orientation and the lowest with (100). The highest activity of (111) orientation was explained with the low hydrogen adsorption on this plane, and the low adsorption of strong bond intermediates which require two or three sites for their adsorption. This more than compensates for the low reactivity of the (111) plane toward formic acid and methanol themselves. Further studies of this oxidation are summarized. M.D.K.

INTERFACIAL STRUCTURES IN NICKEL-BASED TRANSITION JOINTS AFTER LONG TERM SERVICE

R. D. Nicholson Sep. 1980 25 p refs
(DE81-903971; RD/M/N-1131) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries

Three transition joints were examined after service of between 57,087 and 65,396 hours at temperatures of 570 to 605 C. Specimens were examined using microhardness, optical and scanning electron microscopy (SEM). Variations in chemical composition across the joints were determined using the EDAX attachment on the SEM. For detailed examination of the ferritic/weld metal interface, carbon extraction replicas were examined in the transmission electron microscope and selected area electron diffraction and EDAX analysis used to identify the precipitates. The effects of renormalizing for 1/2 hour at 960 C and subsequently stress relieving for 3 hours at 700 C on the interfacial structure of the joints were also investigated. Factors determining the interfacial structures are discussed and a mechanism for the formation of the long term aged structure is suggested. DOE

USE OF ALKALI METAL-ACID PHOSPHATES FOR ELEVATED TEMPERATURE WATER ELECTROLYSIS

P. Shell, Margaret Steinbugler, and Oscar H. Krikorian 31 Aug. 1981 4 p Presented at the Intern. Energy Agency Annex 1 Workshop on Thermochem. Hydrogen, Juelich, West Germany 23-25 Sep. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-029607; UCRL-86623; CONF-810942-3) Avail: NTIS HC A02/MF A01

The use of molten salts containing water as electrolytes for the high temperature electrolysis of water is being investigated as part of a research program on thermochemical cycles for the production of hydrogen. The behavior of phosphate-based electrolytes during electrolysis was observed. The cell potential was measured as a function of time at constant current densities up to 1 A/cu cm using platinum electrodes. The cell resistance monitored before and after polarization in order to correlate the electrolyte conductivity to the degree of dehydration. The following characteristics of the electrolyte were observed: tendency to dehydrate in an open container; dehydration affect was most pronounced in the sodium-and lithium-based electrolytes, with the potassium-based electrolytes showing a relatively slow dehydration rate; tendency of the sodium-and lithium-based electrolytes to become viscous and form hard crusts on the electrolyte surface; the potassium electrolyte did not form these viscous melts or surface crusts; lowest cell potentials were obtained for the sodium- and potassium-based electrolytes at 300 and 350 C. DOE

MECHANISTIC STUDIES OF CARBON MONOXIDE REDUCTION Progress Report, 1 Aug. 1980 - 1 Aug. 1981

Gregory L. Geoffroy 20 Jul. 1981 42 p refs
(Contract DE-AC02-79ER-10345)
(DE81-030063; DOE/ER-10345/2) Avail: NTIS HC A03/MF A01

The mechanisms by which carbon monoxide is reduced by hydrogen on the surface of metal particles and in homogeneous solutions is investigated. The mechanism of the heterogeneous, metal particle catalyzed reduction of carbon monoxide is investigated by using transition metal cluster complexes to model the metal surfaces. The mechanism of synthesis gas chemistry is carried out in homogeneous solution, focusing on a few key mechanistic steps. Methanol homologation reaction is considered. Progress reports are presented for stepwise reduction of CO to CH4 on a triosmium cluster face; conversion of Os3(CO)11 (muCH2) into H2Os3(CO)g(CCO) - a model for chain growth on metal surface; structures of tetranuclear FeRu clusters as models for CO activation; reactions directed toward the preparation of acyl and alkyl substituted clusters; and fragmentation of tetranuclear mixed metal clusters by reaction with CO. DOE

ALPHA-SPECTROSCOPIC TECHNIQUES FOR FIELD MEASUREMENT OF RADON DAUGHTERS

W. W. Nazaroff, A. V. Nero, and K. L. Revzan Jun. 1981 15 p refs Presented at the 2nd Spec. Symp. on Nat. Radiation Environ., Bombay, 19-23 Jan. 1981
(Contract W-7405-eng-48)
(DE81-029846; LBL-10769; CONF-810153-1) Avail: NTIS HC A02/MF A01

Alpha spectroscopic techniques using portable instruments to measure the low concentrations of radon daughters typically found indoors are evaluated. One of two procedures may be used, two-count or single-count, depending on whether precision of measurement or rapidity of measurement is the more important objective. The two-count method permits individual radon daughter concentrations to be measured at the low level of one picocurie per liter with a relative standard deviation of about 20 percent within a total measurement time of 40 minutes (assuming the product of detector efficiency and sampling flow rate is one liter per minute). With the single-count procedure, using the same assumption, potential alpha energy concentration can be estimated within a total measurement time of 11 minutes with less than 20 percent relative procedural error for common equilibrium conditions; the relative standard deviation is about 20 percent at 0.005 working level. These findings are compared with results obtained by other commonly used procedures. DOE

MICROANALYSIS BY ELECTRON-SPINNING SPECTROMETER FOR MATERIAL AND PROCESS CONTROL IN SEMICONDUCTOR TECHNOLOGY Final Report, Mar. 1980
Horst Neubrand Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 82 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-193; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17.20

A K-band electron spin resonance (ESR) spectrometer for high sensitivity detection of impurities in silicon semiconductor slices was constructed. Spectrometer characteristics are superheterodyne detection, low frequency field modulation, and variable sample temperature between 4 and 300K. Detection sensitivity is, e.g., 2 exp 11 P cm exp (-3), 4 exp 10 Fe cm exp (-3), with sample dimensions of 1.7 X 2.3 X 0.04 cm exp 3. The time needed for sample change and spectrum registration is about one hour. The occurence and the behavior of iron in silicon after high temperature processes were investigated with the ESR spectrometer. The time dependent pairing of iron and boron in silicon samples at room temperature was studied. Author (ESA)

INVESTIGATION BY MEANS OF LASER MAGNETIC RESONANCE OF THE OH/HO2 REACTION YIELDING H2O/O2 [UNTERSUCHUNG DER REAKTION OH + HO2 YIELDS H2O + O2 MIT HILFE DER LASER-MAGNETISCHEN RESONANZ]
F. Temps and H. G. Wagner Sep. 1980 44 p refs In GERMAN
(MPIS-18A/1980; ISSN-0436-1199) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 9.60

The rate constants of the reactions OH + HO2 yields H2O + O2 and OH + H2O2 yields HO2 + H2O were measured at room temperature in an isothermal discharge flow reactor. The O-atoms and OH- or HO2-radicals were monitored with an optically pumped lmr-spectrometer. For the investigation of the second reaction, OH-radicals were produced by F+H2O yields OH+HF. The rate constant was found to be k sub 2 (296 K) = (1.05 + or - 0.20) time 10 to the 12th power cu cm/mol s. The rate constant of the first reaction was measured in three different kinetic systems using the HO2-sources, F+H2O2 yields HO2+HF or H+O2+M yields HO2+M and was found to be k sub 1 (296 K) = (3.9 + or - 1.5) x 10 to the 13th power cu cm/mol s. In the range 2 mbar < or - P < or - 14 mbar, k sub 1 is invariant with pressure. Author

Selected data are presented with value judgements for an additional set of 107 salt systems of interest as candidate materials for thermal energy storage sub-systems, for electrochemical energy storage systems, and in electrochemical aluminum production. The physical properties assessed are: melting points; phase diagrams; eutectic compositions; density; surface tension; viscosity; electrical conductivity; diffusion constants for ions; heat of fusion; heat capacity; volume change on fusion; vapor pressure; thermal conductivity (liquid and solid); and cryoscopic constant. The status of corrosion studies in the form of annotated bibliographic summaries, and salient observations on safety and hazards are also reported. A summarizing series of tables is provided as index to the data-gaps status for this set of candidate materials. GRA

VAPORIZATION AND CHEMICAL TRANSPORT UNDER COAL GASIFICATION CONDITIONS
J. W. Hastie, D. W. Bonnell, E. R. Plante, and W. S. Horton Dec. 1980 114 p refs
(Contract DOE-EA-77-A-01-6010)
(PB81-245839; NBSIR-80-2178-DOE) Avail: NTIS HC A06/MF A01 CSCL 07D

Transpiration mass spectrometry for the quantitative analysis of high vapor temperature gases and vapors is described. This technique was applied to vapor transport and thermodynamic activity determinations for real and synthetic coal slag samples in reactive coal gas components at atmospheric pressure. A highly nonideal and nonmonotonic (with temperature and composition variables) behavior for alkali metal vapor transport was indicated. Thus a priori predictions of alkali metal transport in coal gasifiers without actual activity data are virtually impossible at the present time. Surface segregation and diffusion limitations of alkali species in slags are also possible complicating effects. Author

EFFECTS OF MISALIGNMENT ON MECHANICAL BEHAVIOR OF METALS IN CREEP Final Report

Han C. Wu 20 Dec. 1981 14 p refs
(Grant NsG-1499)
(NASA-CR-165055; G302-81-003) Avail: NTIS HC A02/MF A01 CSCL 11F

Creep tests were conducted by means of a closed loop servocontrolled materials test system. The strain history prior to creep is carefully monitored. Tests were performed for aluminum alloy 6061-O at 150 C and were monitored by a PDP 11/04 minicomputer at a preset constant plastic strain rate prehistory. The results show that the plastic strain rate prior to creep plays a significant role in creep behavior. The endochronic theory of viscoplasticity was applied to describe the observed creep curves. Intrinsic time and strain rate sensitivity function concepts are employed and modified according to the present observation. S.L.

HIGH-TEMPERATURE FATIGUE LIFE OF TYPE 316 STAINLESS STEEL CONTAINING IRRADIATION INDUCED HELIUM

M. L. Grossbeck and K. C. Liu 1981 5 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028879; CONF-810831-28) Avail: NTIS HC A02/MF A01

Specimens of 20%-cold-worked AISI type 316 stainless steel were irradiated in the High Flux Isotope Reactor at 550 C to a maximum damage level of 15 dpa and a transmutation produced helium level of 820 at. ppM. Fully reversed strain controlled fatigue tests were performed in a vacuum at 550 C. No significant effect of the irradiation on low-cycle fatigue life was observed; however, the strain range of the 10 to the 7th power cycle endurance limit decreased from 0.35 to 0.30%. The relation between total strain range and number of cycles to failure was found to be Delta epsilon sub Tau = 0.02 Nu sub f(-06) for Nu sub f < 10 to the 7th power cycles. DOE

SWELLING, MICROSTRUCTURAL DEVELOPMENT AND HELIUM EFFECTS IN TYPE 316 STAINLESS STEEL IRRADIATED IN HFIR AND EBR-II

P. J. Maziasz and M. L. Grossbeck 1981 5 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028603; CONF-810831-29) Avail: NTIS HC A02/MF A01

The swelling and microstructural development of a single heat of 20 percent-cold-worked type 316 stainless steel irradiated to produce displacement damage and a high, continuous helium generation rate, in the High Flux Isotope Reactor (HFIR) are examined. Similar irradiation of the same heat of steel in the Experimental Breeder Reactor EBR-2 is used as a base line for comparing displacement damage accompanying a very low continuous helium generation rate. At temperatures above and below the void swelling regime approximately 350 C to 625 C swelling is greater in HFIR than in EBR-2. In the temperature range of 350 C to 625 C, cavity formation, precipitation and dislocation recovery are both enhanced and accelerated in HFIR. In HFIR cavities appear to be bubbles rather than voids and are smaller and more numerous than voids in EBR-2. Swelling becomes greater in EBR-2 than in HFIR for 20 percent-CW 316 in the void swelling temperature ranges as fluence increases. DOE

CORROSION OF TYPE 316 STAINLESS STEEL IN MOLTEN LiF-LiCl-LiBr

P. F. Tortorelli, J. H. DeVan, and J. R. Keiser 1981 11 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028633; CONF-810831-27) Avail: NTIS HC A02/MF A01

The corrosion of type 316 stainless steel by flowing (about 15 mm/s) LiF-LiCl-LiBr salt at a maximum temperature of 535 C was studied to determine whether the salt is compatible with the structural material. The corrosion rate was found to be < 2 microns/year except immediately after the addition of a small amount of lithium metal to the salt. The lithium addition increased the corrosion rate to 13.5 microns/year at 535 C (approximately that of type 316 stainless steel exposed to lithium flowing at a similar velocity). At the proposed operating temperature it appears that type 316 stainless steel has acceptable compatibility with the tritium processing salt LiF-LiCl-LiBr for use with a fusion reactor lithium blanket. DOE

CORROSION OF HIGH-TEMPERATURE MATERIALS IN AFBC ENVIRONMENTS. PART 2: 4600-h TESTS

T. G. Godfrey and J. H. DeVan Aug. 1981 82 p refs
(Contract W-7405-eng-26)
(DE81-028024; ORNL/TM-7734/P2) Avail: NTIS HC A04/MF A01

Candidate heat exchanger tube materials were tested for times to 4500 h in a small atmospheric-pressure fluidized bed combustor (AFBC). The materials included alloy 800H; types 304, 310, and 316 stainless steel; and aluminized alloy 800H and type 310 stainless steel. These air-cooled tubes were exposed to the AFBC environment with wall temperatures ranging from 820 to 875 C, a Ca/S molar ratio of 3.3 to 5.3, 2.5 to 3.5 percent excess O2, and a fluidizing velocity of 0.7 m/s (2.3 fps). A set of low-temperature tubes also included in the test for the final 3000-h period, were composites of 2-1/4 Cr/1Mo steel and type 304 stainless steel and were air-cooled to temperatures in the range 480 C to 590 C. Tubes were given metallographic examination. Metal wastage was at the lower limit of detection and intergranular corrosion was not not severe. Most high-temperature samples contained subsurface specks of metal sulfides, primarily of manganese, extending to depths of about 50 micrometers. The position of the one affected tube in the bed may have been a more significant corrosion factor than the steel composition per se.

PRECIPITATION AND CAVITY FORMATION IN AUSTENITIC STAINLESS STEELS DURING IRRADIATION

E. H. Lee, A. F. Rowcliffe, and L. K. Mansur 1981 6 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028062; CONF-810831-33) Avail: NTIS HC A02/MF A01

Microstructural evolution in austenitic stainless steels subjected to displacement damage at high temperature is strongly influenced by the interactions between helium atoms and second phase particles. Cavity nucleation occurs by the trapping of helium at partially coherent particle-matrix interfaces. The recent precipitate point defect collector theory describes the more rapid growth of precipitate-attached cavities compared to matrix cavities where the precitate-matrix interface collects point defects to augment the normal point deflect flux to the cavity.Data are presented which support these ideas. It is shown that during nickel ion irradiation of a titanium modified stainless steel at 675 C the rate of injection of helium has a strong effect on the total swelling and also on the nature and distribution of precipitate phases.

COMPUTER SIMULATION OF BULK AND SURFACE CHEMICAL DIFFUSION OF LIGHT ATOMS IN METALS

1981 15 p refs Presented at the Symp. on Interatomic Potentials and Computer Simulation of Defects in Metals, Pittsburgh, 6-7 Oct. 1981
(Contract W-31-109-eng-38)
(DE81-025159; CONF-811019-1) Avail: NTIS HC A02/MF A01

The lattice gas as a model for interstitial solid solution and adsorption systems is reviewed with emphasis on the generation of ordered structures. Then, as a prelude to the main discourse on chemical diffusion, the tracer diffusion coefficient is discussed in conjunction with the presentation of Monte Carlo results. Chemical diffusion is treated in detail with emphasis on the Danken equation. Monte Carlo results are then presented for the chemical diffusion coefficient. The large maximum in the chemical diffusivity observed within the ordered phase is traced back to the very strong driving force provided by the chemical potential derivative.

SPUTTER DEPOSITION WITH NEARLY-PARALLEL COATING FLUX

J. W. Patten, E. D. McClanahan, R. W. Moss, and M. A. Bayne (Exxon Nuclear Co., Inc., Richland, Wash.) Apr. 1981 22 p refs
(Contract DE-AC06-76RL-01830)
(DE81-030107; PNL-SA-8969A) Avail: NTIS HC A02/MF A01

A method for producing a dense, nearly-parallel flux of sputtered atoms, that allows sputter depositing films having substantially 100% of theoretical density is described. The experimental sputtering chamber contains a target having a surface that is substantially parallel to the direction of the particles impinging upon the substrate surface, the distance between the most remote portion of the substrate surface receiving the particles and the target surface emitting the particles in a direction parallel to the substrate surface being relatively small. The pressure in the vessel is maintained less than about .65 Pa to limit scattering and permit line-of-sight deposition. Angles of incidence of the particles impinging upon the substrate surface do not vary greatly. Deposition rates are given as a function of distance from the target edge and distance from the target plane. Metallography of sputter deposited Ni is presented.
DOE

N82-15177# Oak Ridge National Lab., Tenn.

RECENT RESULTS ON THE GETTERING OF TRITIUM FROM MOLTEN LITHIUM

J. B. Talbot, P. W. Fisher, and S. D. Clinton 1981 7 p refs Presented at the 2nd Topical Meeting on Fusion Reactor Mater., Seattle, 9-12 Aug. 1981 Submitted for publication
(Contract W-7405-eng-26)
(DE81-028214; CONF-810831-20) Avail: NTIS HC A02/MF A01

Recent sorption experiments confirm that the mass transfer resistance in the yttrium solid phase controls the rate of tritium uptake from liquid lithium. Physical and chemical characteristics of different yttrium sorbers were measured to identify those properties that have the greatest effect on the tritium recovery rate. The BET surface areas of the five samples tested ranged from 0.005 to 0.4 m(2)g; concentrations of carbon, hydrogen, nitrogen, and oxygen impurities in the sample lots increased with increasing surface area. The sample showing the highest effective sorption rate had the largest surface area but also contained the highest concentration of impurities.

INTERACTION OF STRESS WITH THE MARTENSITIC PHASE TRANSITION IN A15 COMPOUNDS

David O. Welch 1981 10 p refs Presented at the Cryogenic Eng. Conf., San Diego, Calif., 10 Aug. 1981
(Contract DE-AC02-76CH-00016)
(DE81-030527; BNL-30016; CONF-810835-26) Avail: NTIS HC A02/MF A01

The effect of the martensitic phase transition which occurs in many A15 compounds on superconductivity and on elastic and anelastic behavior is examined. Since in many practical applications, A15 compounds are subject to considerable stress and strain, it is of interest to examine the interaction of stress with the martensitic transition. An examination of the effects of stress predicted by a simple Landau model which successfully describes many features of the transition and the related temperature dependence of the elastic modulus (c11-c12)/2 was made. The effect of stress on the temperature ranges of stability and metastability of various types of martensitic domain and the nonlinearity of the stress-strain relation in a polycrystalline A15 are discussed.

SLIP SYSTEMS AND SOLID SOLUTION SOFTENING/HARDENING IN BCC METALS

M. Meshii 1981 9 p refs Presented at the US NSF and Japan Soc. for the Promotion of Sci. Seminar, Honolulu, Hawaii, Mar. 1981
(Contract DE-AS02-76ER-01367)
(DE81-028883; CONF-810391-1; COO-1367-121) Avail: NTIS HC A02/MF A01

The solid solution softening phenomenon is re-examined with special attention to intrinsic/extrinsic mechanism controversy. It appears that the existence of intrinsic solid solution softening is gaining support in many bcc metals. The existence however, is still questioned in Nb and Ta. In this report the recent observations supporting the intrinsic mechanism in Nb are reviewed. Solid solution hardening is observed in cases where the solvent metal deforms extensively by the coplanar double slip mode and softening in those which deform primarily by the single slip mode.

PREIRRADIATION MICROSTRUCTURAL DEVELOPMENT DESIGNED TO MINIMIZE PROPERTIES DEGRADATION DURING IRRADIATION IN AUSTENITIC ALLOYS

P. J. Maziasz and T. K. Roche 1981 5 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028612; CONF-810831-11) Avail: NTIS HC A02/MF A01

The first generation Prime Candidate Alloy (PCA) for the austenitic stainless steel class of alloys for application as a magnet fusion energy first wall material is a 14 Cr-16 Ni-0.25 Ti modification of Type 316 stainless steel. A key parameter for material performance is wall lifetime. The ability of the material to resist swelling and resist embrittlement during irradiation is important to longer wall lifetimes. The microstructure that evolves during irradiation is primarily responsible for both the swelling and embrittlement responses, and helium plays a central role in this microstructural evolution. This paper indicated how preirradiation microstructures that employ control of MC precipitation and dislocation density are designed and produced for fusion application of PCA. DOE

NOTCH TENSILE BEHAVIOR OF IRRADIATED 20 PERCENT COLD-WORKED TYPE 316 STAINLESS STEEL

F. F. Huang and R. L. Fish Dec. 1980 22 p Presented at the Am. Nucl. Soc. Ann. Meeting, Miami Beach, 7-12 Jun. 1981
(Contract DE-AC14-76FF-02170)
(DE81-028170; HEDL-SA-2317; CONF-810606-95) Avail: NTIS HC A02/MF A01

Test results show that the notch sensitivity of 20% cold worked Type 316 stainless steel is dependent on irradiation temperature as well as test temperature. The temperature dependence becomes evident as the test temperature increases to 600C. At 232C, significant irradiation effects on the strength of 20% cold worked Type 316 stainless steel were observed. Irradiation hardening results from the introduction of various microstructural components which impede moving dislocations. For irradiation temperature < or = 500C, the strength of irradiated 20% cold worked Type 316 stainless steel increases with increasing fluence up to a fluence of about 4 x 10 cm sq. Little additional hardening occurs beyond this fluence. The notch sensitivity changes from a notch strengthening at lower fluences to a notch weakening at a fluence of 7.8 x 10 to the 22nd power n/cm sq. because of the inability of the material to relieve stress concentration around a notch. DOE

N82-15182# Ames Lab., Iowa. Dept. of Materials, Science and Engineering.

EFFECT OF APPLIED STRESS ON THE TRANSFORMATION BEHAVIOR OF Ni-Ti

C. H. Hsu and M. S. Wechsler 1981 5 p refs Presented at the ASM Intern. Conf. on Solid-Solid Phase Transformations, Pittsburgh, 10-14 Aug. 1981
(Contract W-7405-eng-82)
(DE81-029838; IS-M-338; CONF-810860-1) Avail: NTIS HC A02/MF A01

Measurements of axial strain, circumferential strain, and electrical resistivity were made on Ni-Ti tubes of approximate composition 55 wt percent nickel as a function of temperature cycling through the austenite-martensite transformation range. The tests were performed under various constant deadweight tensile loads. It was observed that the magnitudes of the transformation strain increased with increasing applied tensile stress. The results are interpreted in terms of crystallographic multiplicity of the martensite plates and the alteration of the martensite plate substructure in response to the applied stress. DOE

RELATIVE EFFECTS OF S, Sb AND P ON THE INTERGRANULAR FRACTURE OF IRON AND NICKEL TESTED AT CATHODIC POTENTIALS

R. H. Jones, S. M. Bruemmer, M. T. Thomas, and D. R. Baer May 1981 5 p Presented at the NATO Advanced Study Inst. on Atomistics of France, Corsica, France, 22 May 1981
(Contract DE-AC06-76RL-01830)
(DE81-030076; PNL-SA-9446; CONF-810584-3) Avail: NTIS HC A02/MF A01

Evidence that S, Sb, and P participate in the embrittlement of iron and nickel tested at cathodic potentials by decreasing the critical intergranular fracture stress or by enhancing hydrogen permeation was examined. It is concluded that some elements may affect one or the other or possibly both processes. DOE

N82-15184# Union Carbide Corp., Oak Ridge, Tenn. Nuclear Div.

EFFECTS OF TENSILE DEFORMATION ON THE STRAIN MEMORY BEHAVIOR OF URANIUM-NIOBIUM ALPHA DOUBLE PRIME MARTENSITE

R. A. Vandermeer, D. A. Carpenter, W. G. Northcutt, Jr., and J. C. Ogle Aug. 1981 9 p refs Presented at the ASM Intern. Conf. on Solid-Solid Phase Transformations, Pittsburgh, 10-14 Aug. 1981
(Contract W-7405-eng-26)
(DE81-030285; Y/DV-134; CONF-810860-2) Avail: NTIS HC A02/MF A01

Tensile testing, dilatometry and X-ray diffraction techniques were used to characterize the effects of deformation on the strain memory behavior of alpha double prime martensite in a U + 14.63 at percent (6.25 wt percent) Nb alloy. The reversible strain limit in tension was determined to be 7 percent. The reversible deformation was accompanied by a reorientation of martensite. Certain favored orientations increased in volume fraction at the expense of less favored ones, suggesting that deformation occurred by the movement of intervariant interfaces and/or twin boundaries. When plastic deformation prevailed, a reversal in the reorientation mechanism resulted and the ensuing strain recovery was diminished in extent. The heat-activated strain reversal attained a maximum value of 4.2 percent and was associated with martensite reversion. Increasing amounts of deformation caused the strain recovery kinetics to be inhibited, resulting in a broader temperature range over which strain reversal was detected. DOE

Predictive methods are developed for estimating the bond energies and free energy functions of volatile species having the general formula MO sub x (OH) sub y, in order to shed some light on the mechanisms and extent of steam accelerated volatilization processes. A specific example of applying the data is illustrated for the case of a proposed underground radioactive waste disposal process, where oxides of radionuclides are allowed to equilibrate with 100 atm steam and .01 atm oxygen at 1000 to 2000 K. Vapor species found to have high volatilities include C2(OH)2, CsOH, AmO2(OH)2, AmO(OH)3, UO2(OH)2, NbO(OH)3, PuO2(OH)2, CeO(OH)2, Ba(OH)2, and Eu(OH)3.

Thermodynamic data are tabulated for all possible monomeric species for this specific example. DOE

PULSED-IRRADIATION CREEP IN NICKEL

E. P. Simonen and C. H. Henager, Jr. Jul. 1981 5 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9-12 Aug. 1981
(Contract DE-AC06-76RL-01830)
(DE81-030078; PNL-SA-9266; CONF-810831-53) Avail: NTIS HC A02/MF A01

Results from a series of pulsed irradiation creep tests have indicated a significant effect of beam heating on pulsed irradiation creep behavior. A pulsing effect due to intermittent atomic displacement damage was not observed. Sheet metal specimens were irradiated at 473 K using 15 MeV deuterons and a stress of 200 MPa. The pulse cycle consisted of 1000 seconds of irradiation followed by 100 seconds of annealing. Pulsed irradiation creep behavior was compared with steady irradiation creep behavior. The experimental results were interpreted using models of intermittent displacement damage and theories of temperature history effects. DOE

EFFECT OF CYCLIC PULSED TEMPERATURE ON VOID GROWTH IN METALS DURING IRRADIATION

L. N. Kmetyk, W. F. Sommer, and J. Weertman 1981 7 p refs Presented at the 2nd Fusion Reactor Mater. Meeting, Seattle, 9-12 Aug. 1981
(Contract W-7405-eng-36)
(DE81-030112; LA-UR-81-2437; CONF-810831-55) Avail: NTIS HC A02/MF A01

Analysis on radiation-produced point defect transport to lattice sinks and analysis of pulsed radiation have been extended to include the effects of radiation-induced temperature oscillations. These temperature pulses enhance void growth if the ambient temperature is below the peak swelling temperature and, conversely, decrease void growth when the ambient temperature is above the peak swelling temperature. When the temperature pulses were supposed, no difference was seen between void growth under steady and pulsed irradiation. The same effects on void growth can be obtained by superposing externally-produced temperature pulses on material under steady irradiation. Calculations were done for aluminum and molybdenum for sinusoidal temperature pulses of many amplitudes and frequencies. DOE

DAMAGE DEVELOPMENT AND HARDENING IN 14 MeV NEUTRON IRRADIATION OF COPPER ALLOYS AT 25 DEG C

H. R. Brager, F. A. Garner, and N. F. Panayotou Jul. 1981 6 p refs Presented at Second Topical Meeting Fusion Reactors Mater., Seattle, 9-12 Aug. 1981
(Contract DE-AC14-76FF-02170)
(DE81-029780; HEDL-SA-2357; CONF-810831-44) Avail: NTIS HC A02/MF A01

Copper and copper alloyed with five atom percent of either aluminum, nickel or manganese were irradiated at 25 C with 14 MeV neutrons to fluences up to 7.5 x 10 to the 17th power n/sq cm (0.003 dpa). The radiation-induced microstructure of these materials was characterized by the coupled use of electron microscopy and microhardness. The irradiation-induced microhardness changes were found to be independent of alloy identity and the magnitude of the solute-induced hardening. It appears that at least 70 percent of the defect clusters are smaller than resolvable by microscopy (approximately 1 nm). The point defects at 25 C which survive recombination and aggregate in either visible or invisible clusters constitute at least 8 percent of those produced in the cascades. DOE

EFFECTS OF TRANSMUTATION PRODUCTS ON SWELLING IN 316 STAINLESS STEEL

J. F. Bates, F. A. Garner, and F. M. Mann 1981 5 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9-12 Aug. 1981
(Contract DE-AC14-76FF-02170)
(DE81-029805; HEDL-SA-2342-FP; CONF-810831-47) Avail: NTIS HC A02/MF A01

Application of the extensive data base developed in fission reactors to the design of fusion reactors requires an understanding of the differences in the characteristics of the two neutron spectra. Results of a study in which the isotopic evolution of AISI 316 was calculated for two breeder reactors, two fusion devices, and the High Flux Isotope Reactor (HFIR) are presented. The largest changes in composition arise in HFIR, where the manganese is strongly depleted and substantial vanadium is generated. Both of these elements increase in fusion reactors but much more slowly. Data on the swellings of AISI 316 is presented to show that depletion of manganese in HFIR will lead to changes in the swelling behavior. Swelling behavior may be altered by vanadium in a manner typical of other strong MC-carbide forming elements such as titanium. DOE

SWELLING OF SEVERAL COMMERCIAL ALLOYS FOLLOWING HIGH FLUENCE NEUTRON IRRADIATION

R. W. Powell, D. T. Peterson, M. K. Zimmerschied, and J. F. Bates Jan. 1981 6 p refs Presented at the 2nd Topical Meeting on Fusion Reactor Mater., Seattle, 9-12 Aug. 1981
(Contract DE-AC14-76FF-02170)
(DE81-029804; HEDL-SA-2341; CONF-810831-48) Avail: NTIS HC A02/MF A01

Swelling values for a set of commercial alloys irradiated over the temperature range of 400 to 650 C. The alloys studied fall into three classes: the ferritic alloys AISI 430 F, AISI 416, EM-12, H-11 and 2 1/4 Cr-1 Mo; the superalloys Inconel 718 and Inconel X-750; and the refractory alloys TZM and Nb-1 Zr. After irradiation to a peak fluence approaching goal exposures envisioned for advanced fusion reactor first walls, all of the alloys display swelling resistance far superior to cold worked AISI 316. Of the three alloy classes examined the swelling resistance of the ferritics is the least sensitive to composition. DOE

MICROSTRUCTURAL EXAMINATION OF SEVERAL COMMERCIAL FERRITIC ALLOYS IRRADIATED TO HIGH FLUENCE

D. S. Gelles 1981 6 p refs Presented at the 2nd Topical Meeting on Fusion Reactor Mater., Seattle, 9-12 Aug. 1981
(Contract DE-AC14-76FF-02170)
(DE81-029800; HEDL-SA-2338-FP; CONF-810831-45) Avail: NTIS HC A02/MF A01

Microstructural observations are reported for a series of five commercial ferritic alloys, 2 1/4 Cr-1 Mo, H-11, EM-12, 416, and 430F, covering the composition range 2.25 to 17% chromium, following EBR-II irradiation over the temperature range 400C to 650C and to a maximum fluence of 17.6 x 10 to the 22nd power n/sq cm E > 0.1 MeV). These materials were confirmed to be low void swelling with maximum swelling of 0.63% measured in EM-12 following irradiation at 400C to 14.0 x 10 to the 22nd power n/sq cm. A wide range of precipitation response was found both as a function of alloy and irradiation temperature. Precipitates observed included M6C, Mo2C, Chi, Laves, M23C6, Alpha and a low temperature phase as yet unidentified. It is predicted, based on these results, that the major impact of irradiation on the ferritic alloy class will be changes in postirradiation mechanical properties due to precipitation. DOE

REQUIREMENTS FOR HEAT RESISTANT AND HIGHLY HEAT RESISTANT MATERIALS IN THE CONSTRUCTION OF STATIONARY TURBINES [ANFORDERUNGEN AN WARMFESTE UND HOCHWARMFESTE WERKSTOFFE IM STATIONAEREN TURBINENBAU]

B. Deblon 1980 28 p refs In GERMAN Presented at Status-Sem. on Waermebehandlung warmfester u. hochwarmfester Werkstoffe, Schloss Dachau, West Germany, 12-13 Jun. 1980

Avail: NTIS HC A03/MF A01

The requirements for the characteristics of construction materials for turbines are discussed as regards design and cost estimates in order to cope with the demand for higher power and efficiency in the field of electric energy production. This demand entails larger dimensions and higher pressure and temperature at the turbine entrance. The material requirements for blades, rotor parts, housing, and components in contact with hot vapor and hot gas are deduced. It is impossible to fulfill all requirements at the same time. Optimization stresses the important material characteristics, bearing in mind that results on small workpieces are not necessarily transferable to larger ones. Author (ESA)

QUANTITATIVE STRUCTURAL ANALYSIS OF CHROMATICALLY CONTRASTED REFRACTORY ALLOYS

H. J. Blumenkamp, E. Wallura, H. Hoven, K. Koizlik, and H. Nickel Aug. 1980 80 p refs In GERMAN; ENGLISH summary Original contains color illustrations
(Juel-1673; ISSN-0366-0885) Avail: NTIS HC A05/MF A01

A chromatic contrasting technique, using gas ion etching, was introduced for metallography of refractory alloys to improve quantitative metallography. Refractory alloys, such as iron and nickel alloys were subjected to long-term creep tests and corrosion experiments. Phase discrimation in the chromatically contrasted alloys is increased by using monochromatic light for visual examination and the application of quantitative image analysis to these materials is made possible. ION BEAM SURFACE MODIFICATION

David W. Dwight [1982] 5 p
(Grant NsG-3204)
(NASA-CR-165062) Avail: NTIS HC A02/MF A01 CSCL 07C

The essential details of a study on the practical applications and mechanisms of polymer sputtering via Argon ion impact are summarized. The potential to modify the properties of polymer surfaces to improve their adherence, durability, biocompatibility, or other desirable properties by ion beam sputtering was emphasized. Ion beam milling can be of benefit as an analytical tool to obtain composition versus depth information. Ion impact from a directed ion gun source specifically etches polymer structures according to their morphologies, therefore this technique may be useful to study unknown or new morphological features. Factors addressed were related to: (1) the texture that arises on a polymer target after ion impact; (2) the chemistry of the top surface after ion impact; (3) the chemistry of sputtered films of polymeric material deposited on substrates placed adjacent to targets during ion impact; and (4) practical properties of textured polymer targets, specifically the wettability and adhesive bonding properties. NITRIDATION OF SILICON M.S. Thesis Case Western Reserve Univ.

Nancy J. Shaw Oct. 1981 113 p refs
(NASA-TM-82722; E-921) Avail: NTIS HC A06/MF A01 CSCL 11G

Silicon powders with three levels of impurities, principally Fe, were sintered in He or H_2. Non-densifying mechanisms of material transport were dominant in all cases. High purity Si showed coarsening in He while particle growth was suppressed in H_2. Lower purity powder coarsened in both He and H_2. The same three Si powders and Si /111/ single crystal wafers were nitrided in both N_2 and N_2/H_2 atmospheres. Hydrogen increased the degree of nitridation of all three powders and the alpha/beta ratio of the lower purity powder. Some Si_3N_4 whiskers and open channels through the surface nitride layer were observed in the presence of Fe, correlating with the nitridation-enhancing effects of Fe. Thermodynamic calculations showed that when SiO_2 is present on the Si, addition of H_2 to the nitriding atmosphere decreases the amount of SiO_2 and increases the partial pressure of Si-containing vapor species, that is, Si and SiO. Large amounts of NH_3 and SiH_4 were also predicted to form. R.J.F.

GEOMETRICAL ASPECTS OF THE TRIBOLOGICAL PROPERTIES OF GRAPHITE FIBER REINFORCED POLYMIDE COMPOSITES

Robert L. Fusaro 1982 36 p refs Presented at the Ann. Meeting of the Am. Soc. of Lubrication Engrs., Cincinnati, 10-13 May 1982
(NASA-TM-82757; E-1076) Avail: NTIS HC A03/MF A01 CSCL 11D

A latin square statistical experimental test design was used to evaluate the effect of temperature, load and sliding speed on the tribological properties of graphite fiber reinforced polymide (GFRPI) composite specimens. Hemispherically tipped composite riders were slid against 440 C HT stainless steel disks. comparisons were made to previous studies in which hemispherically tipped 440 C HT stainless steel riders were slid against GFRPI composite disks and to studies in which GFRPI was used as a liner in plain spherical bearings. The results indicate that sliding surface geometry is especially important, in that different geometries can give completely different friction and wear results. Load, temperature, and sliding distance were found to influence the friction and wear results but sliding speed was found to have little effect. Experiments on GFRP1 riders with 10 weight percent additions of graphite fluoride showed that this addition has no effect on friction and wear. Author

Polyolefins were selected that are crosslinkable by radiation including the copolymers of ethylene and polyolefin elastomer blends. Effective stabilizing systems against thermo-oxidative ageing and copper-catalized oxidation were developed. The influence of crosslink-reforcing, coagents fillers, and pigments was studied. For the materials XLPE, EPR and EVA the optimization of compounds in a scope of production trials resulted in useful proposals for solutions for 1kV insulating compounds.

CROSSLINKING OF POLYOLEFIN INSULATIONS OF CABLES AND INSULATED WIRES BY THE USE OF ENERGY-RICH RADIATION. PART 2: PHYSICS OF ELECTRON BEAM IRRADIATION OF CABLES AND WIRES Final Report, Mar. 1980
Rudolf Baeuerlein Bonn Bundesministerium fuer Forschung und Technologie Jul. 1981 94 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-123-Vol-2; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19.70

Physical quantities having an important effect on the electron beam radiation of plastic are dealt with and in some cases measurements are given. Major criteria for the setting up of an electron beam irradiation device, e.g. beam voltage, beam power and method of imparting the radiation, are presented and discussed with reference to the radiation crosslinking of IkV cable insulation core. These irradiation parameters were calculated with the aid of a computer program and compared with the test results. For programming purposes, experiments were conducted to ascertain the necessary current density distribution at the wire handling level. To check the computer results, the radiation dose was ascertained with the aid of the Young's modulus of a crosslinked high polymer in a rubber-elastic state.

(BMFT-FB-T-81-124-Vol-3; ISSN-0340-7608) Avail: NTIS HC A10/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 38.90

Crosslinking of the PE insulations of electrical conductors by means of electron beams represents a perfect alternative to existing thermic and chemical procedures. From projecting-up to running-in of the plant there were no difficulties of general nature. For an essential range of products the most important production parameters could be determined. Some problems occuring during the radiation of products, such as straightening of the conductor, non-performance of the exactly specified adhesion power of the insulation to the conductor and non-uniform thickness of insulation could be eliminated by an optimization of the concerned parts of the plant. With the exception of three greater repairs within 4 years, up to now no defects were to be observed in the radiation plant. Heavy corrosion in the radiation part by ozone and nitrogen oxides in the beginning was reduced to an acceptable degree by suitable measures.

LOW PRESSURE HUGONIOT CUSP IN POLYMERIC MATERIALS
S. A. Sheffield and D. D. Bloomquist 1981 5 p refs Presented at the APS Conf. on Shock Waves in Condensed Matter, Menlo Park, Calif., 23 Jun. 1981
(Contract DE-AC04-76DP-00789)
(DE81-028267; SAND-81-0052C; CONF-810684-46) Avail: NTIS HC A02/MF A01

Polymethyl methacrylate (PMMA) exhibits a cusp in the shock Hugoniot at about 2.0 GPa which corresponds with the beginning of shock induced polarization and the begining of an exothermic studies. Other polymers have similar behavior at about the same pressure. Quartz guage impact experiments were performed using polypyromellitimide (Vespel) and polysulfone impactors to obtain Hugoniot information and the stress history at the impact plane. In the case of Vespel a slight Hugoniot cusp was observed at about 1.8 GPa which coincides with the start of shock induced polarization. Polysulfone does not appear to have a cusp but does show stress relaxation at the impact plent beginning at about 1.8 GPa, again coinciding with the start of shock induced polarization. The abnormal behavior in PMMA is the result of a shock induced chemical reaction. A stress of about 2 GPa is a threshold for shock induced chemical reaction in several polymers.

MECHANICAL STRENGTH OF LOW-TEMPERATURE-IRRADIATED POLYIMIDES: A FIVE-TO-TENFOLD IMPROVEMENT IN DOSE RESISTANCE OVER EPOXIES
R. R. Coltman, Jr. and C. E. Klabunde Jun. 1981 6 p refs Presented at the 2nd Topical Meeting on Fusion Reactor Mater., Seattle, 9-12 Aug. 1981 Submitted for publication
(Contract W-7405-eng-26)
(DE81-025469; CONF-810831-15) Avail: NTIS HC A02/MF A01

Neutronics calculations by Engholm show that without additional shielding even the first-fusion test reactors such as the Fusion Engineering Device will produce lifetime doses at magnet insulator locations that exceed the radiation tolerance of glass-fabric-filled (gff) epoxies now used. To explore the possible use of an alternative insulator, the mechanical strength of pure and recently available gff polyimides was studied as a function of gamma-ray irradiation at 4.9 K to 100 MGy 10 to the 10th power. After a postirradiation anneal at 307 K the flexure and compressive strengths of the gff materials measured at 77K were reduced by up to 40 percent for 100 MGy while the pure material changed little. Testing done at 300 K gave similar results, but all stress values were about 40 percent less. Compared to earlier epoxy studies we find that, overall, the gff polyimides are 5 to 10 times more radiation resistant than comparably prepared gff epoxies.

THIN FILM ADHESION AND DEADHESION

D. M. Mattox 1981 8 p refs Presented at the Intern. Soc. for Hybrid Microelectron. Meeting, Chicago, 12 Oct. 1981
(Contract DE-AC04-76DP-00789)
(DE81-028415; SAND-81-0590C; CONF-811029-1) Avail: NTIS HC A02/MF A01

Adhesion is a microscopic property of a system and the failure of adhesion or deadhesion involves failure of large areas of material the surfaces of which rarely separate at a sharp boundary between two materials. Good adhesion is prompted by: (1) strong bonding in the interfacial region; (2) absence of high stresses; (3) absence of easy fracture modes; and (4) no long-term degradation modes. Each of these factors may be influenced by the materials involved, the deposition method used, the deposition parameters and the services/test conditions. A number of these factors which determine the adhesion of film-substrate systems are reviewed and attempts to outline some methods for resolving adhesion problems are outlined. DOE

TOUGHENING IN GLASS CERAMICS THROUGH MICROSTRUCTURAL DESIGN

J. J. Mecholsky 1981 16 p refs Presented at the Intern. Symp. on the Fracture Mech. of Ceramics, University Park, Pa., 15 Jul. 1981
(Contract DE-AC04-76DP-00789)
(DE81-030209; SAND-81-0064C; CONF-810746-2) Avail: NTIS HC A02/MF A01

Pertinent literature was reviewed to establish the effect of several material parameters on fracture toughness, K sub IC, of glass ceramics. Important parameters considered included phase separation in glass, size, shape and quantity of the crystalline phase, and internal stress. By applying toughening mechanisms established for ceramic materials to glass ceramic systems, techniques for toughening glass ceramics are developed. Phase separation, internal stress, morphological interaction, stress induced phase transformation, and combinations of these techniques were considered. DOE

ELECTRICAL CONDUCTIVITY AND THERMAL DECOMPOSITION OF HIGH TEMPERATURE PHENOLIC- AND SILICONE-BASED MATERIALS

R. T. Johnson, Jr. and R. M. Biefeld 1981 22 p refs Presented at the Conf. on Elec. Insulation and Dielec. Phenomena, Whitehaven, Pa., 25 Oct. 1981
(Contract DE-AC04-76DP-00789)
(DE81-023177; SAND-81-0786C; CONF-811016-1) Avail: NTIS HC A02/MF A01

The temperature dependence of the electrical conductivity and thermal decomposition characteristics of several phenolic and silicone resins reinforced with glass chopped fabric or cloth were measured to 600C to 700C in a nitrogen atmosphere. The electrical results were correlated with mass loss and thermal decomposition product data obtained using mass spectroscopy and thermal gravimetric analysis. Peaks in the conductivity temperature dependence and deviations from ohmic behavior were found to be associated with material decomposition and/or outgassing. Results show a direct correlation between thermal stability and temperature dependent electrical characteristics. DOE

CROSSLINKING OF POLYETHYLENE IN VIEW OF AN APPLICATION IN WIRE COATING Final Report, Dec. 1979

Bernd Franzkoch and Karl Beiss Bonn Bundesministerium fuer Forschung und Technologie Apr. 1981 261 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-058; ISSN-0340-7608) Avail: NTIS HC A12/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 42,60

Different polyethylene crosslinking methods to improve the characteristics of the material as wire coating were tested. It was determined that polyethylene curing by UV radiation is not suitable for application in wire coating. At higher insulation thickness, too much radiation is absorbed to cure deeper layers of the insulation. Using a shear gap die, melt temperatures can be raised within a very short time to a level high enough to initiate peroxide decay, thus starting the crosslinking reaction. Application of microwaves and use of special microwave-sensitive peroxides is recommended. These peroxides have to be polar to absorb energy from the alternating field. The energy splits the peroxy group of the molecule, thus generating radicals, and the crosslinking reaction takes place. Author (ESA)

THERMOMECHANICAL DYNAMIC ANALYSIS OF A PREPREG: APPLICATIONS TO INDUSTRIAL BAKING [ANALYSE THERMOMECANIQUE DYNAMIQUE D'UN PREIMPREGNE APPLICATIONS AUX CUISSONS INDUSTRIELLES]

J. Hognat 8 Sep. 1980 13 p In FRENCH Presented at 4th Natl. and 1st Intern. Meeting on Composite Mater., Milan, 19-21 Nov. 1980
(SNIAS-812-551-105; C.41-629) Avail: NTIS HC A02/MF A01

The rheological characteristics of the resin used in the fabrication of a polymer matrix composite were studied. The fabrication of an organic matrix composite supposes both a thermal cycle for the polymerization of the resin and compacting pressure on the stack of prepregs at a point in the thermal cycle where the viscosity of the resin is adequate for good fiber/resin contact, obtaining a composite without porosity that has high mechanical strength. Composite sheets were produced, applying compacting pressure at different characteristic stages in the resin gelation process. Structural porosity is assessed and optimal temperature and baking time are determined. Author (ESA)

CHARACTERIZATION OF THE POLYMERIZATION OF AN

IMPREGNATION RESIN: APPLICATION TO INDUSTRIAL BAKING [AUTOPSIE DE LA POLYMERISATION D'UNE RESINE D'IMPREGNATION. APPLICATIONS AUX CUISSONS INDUSTRIELLES]
Jacques Hognat and A. Dortus 28 Apr. 1980 12 p In FRENCH Presented at 3rd Intern. Conf. on Materieux Composites et 2nd Journees Natl. sur les Composites, Paris, 26-29 Aug. 1980
(SNIAS-812-551-107; C.41247) Avail: NTIS HC A02/MF A01

Thermomechanical, physicochemical, and electrical tests were conducted to study their adequacy, with a given thermal cycle, to follow matrix polymerization and to determine the zone of gelation initiation favorable as a pressure point on a prepreg stack to obtain the best composite possible. Composite sheets were fabricated with pressure applied at varying stages in the thermal cycle and structural porosity was assessed. It is concluded that the thermomechanical technique is prefered for industrial purposes because of its greater simplicity in application.

EFFECT OF ADDITIVES ON SINTERING OF SILICON NITRIDE-ALUMINA-ALUMINUM NITRIDE COMPOSITIONS
B. W. Jong (Bureau of Mines, Boulder City, Nevada) and H. Heystek Jun. 1981 20 p refs
(PB81-231086; BM-RI-8546) Avail: NTIS HC A02/MF A01 CSCL 11B

The effect of additives and starting materials on the sintering and strength properties of sialon (silicon-aluminium-oxynitride) compositions fabricated by conventional pressing and sintering techniques are evaluated. Sintering and modulus of rupture (MOR) data were developed for sialon compositions produced from three components, Si3N4, Al2O3, and AlN. When doped with Y2O3 to aid in sintering, the highest MOR values were obtained with compositions containing between 20 and 30 mole pct (Al2O3 + AlN).

The penetration behavior of various phlegmatizer/solvent systems in nitrocellulose propellant grains was measured by applying the radiotracer technique. The tracer methods used for these measurements of the distribution of phlegmatizers such as di-iso-octylphthalate, di-n-nonylphthalate and di-iso-nonylphthalate labelled with carbon-14 are based on the profile sectioning technique in conjuction with liquid scintillation counting and autoradiography. The measurements yield the values for diffusion coefficients, activation energies and frequency factors.

ACCELERATED AGING OF HTPB-BASED COMPOSITE PROPELLANTS AND LINERS
Bengt Nilsson and Roland Sanden Apr. 1981 21 p refs In SWEDISH; ENGLISH summary
(FOA-C-20405-D1) Avail: NTIS HC A02/MF A01

Samples of rocket propellants based on HTPB of the type R-45HT were stored in closed pots at temperatures of 20, 40, 60 and 80 C for two to three years. Two types of antioxidants, PBN and BKF, were tested. One of the propellants contained 1 percent Fe2O3. Tensile and hardness tests were performed at different times. All the propellants show excellent aging properties. Some HTPB-based liner materials were tested. Samples were stored for long times at room temperature and at 70 C and were tested in respect to mechanical properties and adhesion to steel plates. The results indicate excellent aging properties also for these materials.

DEVELOPMENT OF A SOLID PROPELLANT WITH A HIGH LEVEL FUEL CONTENT FOR VOLVO ROCKET ENGINE AB(VFA) [UTVECKLING AV EN KRUTLADDNING MED ETT BRAENSLERIKT KRUT AAT VOLVO FLYGMOTOR]
Torsten Liljegren and Bert Anderson Sep. 1981 23 p ref In SWEDISH; ENGLISH summary
(FOA-C-20421-D3) Avail: NTIS HC A02/MF A01

The propellant contains 40% ammonium perchlorate and 1.5% iron oxide (Fe2O3) as the burning catalyst. The fuel is a mixture of hydroxy terminated polybutadiene and polystyrene in the ratio 1:1. The charge, which is tubular, is case-bonded and the ends are not inhibited. The charge configuration gives a nearly constant pressure-time curve and the desired performance: mass flow 0.130 kg/s and burning time 12 s.

Progress on the Fuel Performance Improvement Program's fuel test and demonstration irradiations is reported for the period of October 1980-March 1981. The purpose of the program is to test and demonstrate improved light water reactor fuel concepts that are more resistant to failure from pellet-cladding interaction during power increases than standard pellet fuel. This would also offer extended burnup potential and, hence, improved uranium utilization.

SURVEY OF PROPOSED METHODS OF BURNING ALCOHOL IN DIESEL ENGINES
D. E. Foster 1980 10 p refs Presented at the Canadian Natl. Power Alcohol Conf., Winnipeg, Manitoba, 20 Jun. 1980
(Contract DE-AC02-79CS-50025)
(DE81-025834; CONF-8006185-1) Avail: NTIS HC A02/MF A01

Different methods of burning alcohol in diesel engines are discussed. The primary difficulty in using alcohol as a diesel fuel is initiation of the flame. The methods are categorized by the ignition technique used; spark or hot surface; pilot injection which includes twin injection and fumigation, cetane improvement and diesel/alcohol mixtures. Each method is analyzed on the basis of the maximum amount of alcohol that can be substituted for diesel fuel and the likelihood for retrofitting on current engines. It is concluded that emulsification and fumigation are currently the two most feasible methods for adapting diesel engines to burn alcohol.

FAILURE MODES AND EFFECTS ANALYSIS OF A COAL-SLURRY PREHEATER

H. A. Mitchell, L. F. Parsly, and A. N. Smith Sep. 1981 33 p refs

(Contract W-7405-eng-26)

(DE81-030425; ORNL/TM-7664) Avail: NTIS HC A03/MF A01

Some 55 potential failure modes were identified in a coal slurry preheater, a critical component in a typical coal direct liquefaction plant. Fourteen of these events, if they should occur, would result in losses of sufficient magnitude to require special consideration in the design or operating phase to assure control of risk at an acceptable level. It is concluded that the failure modes and effects analysis technique (FMEA) could be a valuable tool in the identification of critical components for coal conversion systems. For maximum effect, FMEA needs to be used during the initial design phase. Its principal value is to determine high-risk failure modes, which could have unacceptable impacts on system safety and reliability/availability. The usefulness of FMEA can be improved if it is supplemented by the development of a failure data base; this data base could also be of value in selected cases as input to a more detailed technique such as a fault-free analysis. COAL AND LIMESTONE FEED TESTING FOR ATMOSPHERIC FLUIDIZED BED COMBUSTION

C. S. Daw, J. F. Thomas, and M. E. Lackey Sep. 1981 78 p

(Contract W-7405-eng-26)

(DE81-030629; ORNL/TM-7724) Avail: NTIS HC A05/MF A01

Pneumatic conveying tests of coal and coal limestone mixtures were performed on a conveying system designed to represent the branch feed lines in the TVA 20 MW(e) atmospheric fluidized bed combustor pilot plant. Test conditions were chosen to cover the operating ranges anticipated for the pilot plant. These tests led to a basic understanding of the design and operating problems associated with coal surface moisture, air velocity, fines content, solids loading, and limestone to coal ratio. Coal surface moisture was found to be the most important parameter affecting handling properties. Above a critical level of about six %, surface moisture caused severe compaction problems in the feed hopper and impact plugging in the conveyor line. When surface moisture was less than six %, conveyor line plugging resulted only from saltation and filling. DOE

HEATING OILS, 1981

Ella Mae Shelton Aug. 1981 44 p refs

(DE81-030833; DOE/BETC/PPS-81/4) Avail: NTIS HC A03/MF A01

The properties of 249 heating oils manufactured by 28 petroleum refining companies in 92 domestic refineries and marketed in the United States were studied and compiled. The data are tabulated according to six grades of fuel and subdivided into five geographic regions in which the fuels are marketed. The six grades of fuels are defined by ASTM Specification D396. The five regions containing a total of 16 marketing districts are shown on a map. Trend charts are included showing average properties of the six grades of fuel for the past several years. Summaries of the results of the tests by grade and by region for 1981 are compared with data for 1980. Analyses of grade 6 foreign import oils are also tabulated. DOE

MOTOR GASOLINES, WINTER 1980-81

E. M. Shelton Jul. 1981 67 p refs

(DE81-030845; DOE/BETC/PPS-81/3) Avail: NTIS HC A04/MF A01

A compilation of analytical data for 546 samples of motor gasoline produced by 23 manufacturers is presented. The data are tabulated by groups according to brands (unlabeled) and grades for 17 marketing districts into which the country is divided. A map showing marketing areas, districts, and sampling locations is induced. Trends of selected properties of motor fuels since 1959 are charted. Octane distribution percent charts for areas 1, 2, 3, and 4 for unleaded antiknock index (R + M)/2 below 90.0, unleaded antiknock index (R + M)/2 below 93.0, and leaded antiknock index (R + M)/2 93.0 and above grades of gasoline are presented. The antiknock (octane) index (R + M)/2 averages of gasoline sold in this country were 87.6 unleaded below 90.0, 91.4 unleaded 90.0 and above, 89.1 leaded below 93.0, and 93.3 leaded 93.0 and above grades of gasoline. ASSESSMENT OF IN-PLACE SOLUTION METHANE IN TERTIARY SANDSTONES: TEXAS GULF COAST

A. R. Gregory, M. M. Dodge, J. S. Posey, and R. A. Morton 1981 8 p refs Presented at the 5th Geopressured-geothermal Energy Conf., Baton Rouge, La., 13 Oct. 1981

(Contract DE-AC08-78ET-11397)

(DE81-029772; CONF-811026-5) Avail: NTIS HC A02/MF A01

The total volume of in place methane dissolved in formation waters of deep sandstone reservoirs of the onshore Texas Gulf Coast within the stratigraphic section extending from the base of significant hydrocarbon production (8000 ft) to the deepest significant sandstone occurrence is appraised. Reservoir bulk volume, porosity, and methane solubility were evaluated. The latter is controlled by the temperature, pressure, and salinity of formation waters. Regional assessment of the volume and distribution of potential sandstone reservoirs was made from a data base of 880 electrical well logs, from which a grid of 24 structural dip cross sections and 4 strike cross sections was constructed. These cross sections extend from near the Wilcox outcrop to the coastline. The structural and stratigraphic framework of Tertiary sandstone units was mapped. Structual and stratigraphic frame-boundaries were used to divide the Texas Gulf Coast into 24 subdivisions. Methane content in each of nine formations or divisions of formations was determined for each subdivision. The total in place methane for Tertiary sandstones below 8000 ft in the Texas Gulf Coast was found to be 690 TCF. The total in place methane for effective Tertiary sandstones (sandstone units greater than 30 ft thick) below 8000 ft was 325 TCF. DOE

THERMOCHEMICAL PRODUCTION OF LIQUIDS FROM BIOMASS

D. C. Elliott 1981 8 p refs Presented at Solar World Forum, Brighton, England, 23 Aug. 1981

(Contract DE-AC06-76RL-01830)

(DE81-030085; PNL-SA-9246; CONF-810865-1) Avail: NTIS HC A02/MF A01

The chemistry of this process is essentially that of the CO-steam process wherein carbon monoxide and water, catalyzed by sodium carbonate, are the reducing agents for the biomass. A water slurry process involving a prehydrolysis step for wood chips has been used to produce the first biomass-derived oil on a large scale. A second variation which requires recycle of a portion of the product for use as the carrier vehicle for wood flour has also been developed to the point of producing multi-barrel quantities of product. An extensive amount of product analysis has been completed on both types of product. They are similar, being highly phenolic and approximately 10% by weight of oxygen. Utilization of the product as a boiler fuel has been tested and other uses of the product are now being investigated. Analytical results and product application tests are discussed. DOE

HIGH-PRESSURE SOLVENT EXTRACTION OF METHANE FROM GEOPRESSURED FLUIDS

R. Quong, H. H. Otuski, F. E. Locke, and R. Netherton Aug. 1981 6 p refs Presented at the 5th Geopressured-Geothermal Energy Conf., Baton Rouge, La., 13-15 Oct. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-027713; UCRL-86515; CONF-811026-2) Avail: NTIS HC A02/MF A01

Technical and economic aspects of solvent extraction as a means of recovering dissolved methane from geopressured-geothermal brines at high pressures are considered. Economic assessment shows that additional investment in a high pressure solvent extraction plant preceding direct injection disposal of brines into isolated aquifers can be profitable. Solvent extraction is compared with other injection methods. The contributions of hydraulic (pressure) energy recovery and geothermal power production are also assessed. The solubilities of a promising solvent, n-hexadecane, and a potential low cost solvent, No. 2 Diesel fuel, were measured in 15 wt percent NaCl solutions at temperatures up to 150 C. Preliminary results of initial extraction tests at 150 C and 1000 psi in sub-pilot scale equipment are also presented.

HIGH-EXPLOSIVE DETONATIONS IN VARYING-OXYGEN ATMOSPHERES

F. R. Kovar, K. R. Trigger, L. G. Guymon, and J. R. Harvey 13 Aug. 1981 6 p refs Presented at the APS Conf. on Shock Waves in Condensed Matter, Menlo Park, Calif., 23-25 Jun. 1981
(Contract W-7405-eng-48)
(DE81-028179; UCRL-86563; CONF-810684-48) Avail: NTIS HC A02/MF A01

Small spheres of PBX9404 AND TNT were detonated in atmospheres of varying oxygen content to study the magnitude of the effects of oxygen on afterburn of high explosive (HE) detonation products (DPs). Each of the fireballs (FBs) formed by the HEDPs was observed by high-speed cameras and radiometers in the visible and near infrared. It was found that afterburn dominates the FB radiation, while having much less influence on FB size than do instabilities and turbulence. One-dimensional nonreactive fluid flow calculations of the FB radius-time (R-T) history and shock characteristics within the FB were performed. The R-T results are in good agreement with the experiment at early times, while the internal shock agreement extends over a much longer period.

GLOBAL KINETICS FOR THE SHOCK-INDUCED DECOMPOSITION OF HETEROGENEOUS EXPLOSIVES

Jerry Wackerle and Allan B. Anderson 1981 13 p refs Presented at the Symp. on Kinetics of Chem. and Phys. Processes, 10th North Am. Thermal Analysis Soc. Conf., New Orleans, 19 Oct. 1981 Submitted for publication
(Contract W-7405-eng-36)
(DE81-025252; LA-UR-81-1835; CONF-811014-3) Avail: NTIS HC A02/MF A01

Methods were developed to determine empirical rate laws for the shock-induced decomposition of condensed explosives. Pressure-field histories are measured with embedded gauges in planewave shock-initiation experiments. A Lagrangian analysis is used to integrate the fluid-dynamic conservation relations, giving the histories of density and energy fields in the reactive flow. A reactant-product equation of state is assumed and a global reaction progress variable and the associated reaction rate are calculated. Correlations of the rate to other state variables provide empirical rate laws, which prove successful in the numerical modeling of numerous initiation and detonation phenomena. Heterogeneous explosive rate laws combining three factors - shock-strength, depletion, and heating - are consistent with many shock-initiation observations and the favored nucleation and growth concept of shock-induced decomposition.

REACTION RATES FROM PRESSURE-GAUGE MEASUREMENTS IN REACTING EXPLOSIVES

M. J. Ginsberg, Allan B. Anderson, and Jerry Wackerl 1981 15 p refs Presented at the 1st Symp. on Gauges and Piezoresistive Mater., Archchon, France, 29-30 Sep. - 1 Oct. 1981
(Contract W-7405-eng-36)
(DE81-030252; LA-UR-81-2482; CONF-810931-3) Avail: NTIS HC A02/MF A01

Hydrodynamic data and an equation of state describing the reaction rates of the explosives PETN, PBX 9404, TATB, and TNT during the shock-to-detontion transition are presented. The data were provided by Manganin pressure gauges embedded in the reacting explosive. Once a pressure-field history was assembled from individual pressure histories at different depths in the explosive, the conservation equations were applied in a Lagrangian analysis of the data. A reactant-product equation of state is combined with this analysis and the extent of reaction and reaction rate are calculated. Successful correlation of the calculated reaction rate values with other thermodynamic variables, such as pressure or temperature, allows formulation of a rate law and the prediction of initiation behavior under circumstances quite different from the experiments that led to the rate law. The relatively thick insulation required on the pressure gage perturbs the flow to some extent. Pressure measurements in reactive flow can now be made routinely with gages that successfully produce data leading to a description of the flow and a powerful predictive capability.

AN ASSESSMENT OF NONFOSSIL HYDROGEN Final Report

E. Fein and T. Munson Dec. 1980 221 p refs Prepared for Gas Research Inst.
(GRI Proj. 50 14-310-0274)
(PB81-246522; GRI-79/0108) Avail: NTIS HC A10/MF A01 CSCL 21D

The potential for hydrogen produced from nonfossil energy sources as an energy carrier is examined. Water electrolysis, thermochemical systems, and various solar radiation processes are evaluated as hydrogen production methods. Long-term and short-term hydrogen storage technologies were also considered. Various possible hydrogen end-uses were appraised, including its role as an industrial chemical, a heating fuel for stationary applications, a vehicular fuel, and an aircraft fuel. The role of coal in future hydrogen production was seen as providing the major competitive technology to nonfossil hydrogen production. Conditions (constraints placed on the use of natural fossil fuels an synthetic fossil fuels) under which hydrogen might be produced primarily from nonfossil energy sources are analyzed. A possible scenario was suggested for the transition to a nonfossil energy era, and areas where hydrogen could be expected contribute to domestic energy needs were indicated.

LIQUID NATURAL GAS RAPID PHASE TRANSITIONS Topical Report, Sep. 1979 - Sep. 1980

George A. Corbin and Robert C. Reid Jan. 1981 99 p refs Prepared for Gas Research Inst.
(PB81-244774; GRI-80/0031) Avail: NTIS HC A05/MF A01 CSCL 21D

An apparatus was constructed to test the concept of initiating a rapid phase transition (RPT) in methane-rich LNG on water by collapsing the vapor film with a shock wave. Helium overpressures were achieved by breaking a diaphragm in a high-pressure helium chamber. Pressure transducers recorded subsequent events. NORPT were noted for liquid nitrogen, liquid ethane, liquid methane or methane-rich LNG even with helium driver pressures up to 62 bar. The helium did, however, greatly enhance the boiling rate of the cryogen on water. On the basis of analytical modelling, it was concluded that a RPT would be very improbable for a methane-rich LNG contacting ambient water in a mode where the surface pressures were high. In the course of the project, a new thermodynamic model was developed as a possible explanation for a RPT in cases where the hot liquid temperature would exceed the critical temperature of the cryogen. CHARACTERIZATION OF DIESEL EMISSIONS AS A FUNCTION OF FUEL VARIABLES Final Report, Sep. 1979 - Mar. 1981
Bruce B. Bykowski Mar. 1981 288 p refs
(Contract EPA-68-03-2707)
(PB81-244048; EPA/460-3-81-015) Avail: NTIS HC A11/MF A01 CSCL 21D

Several properties of a refinery 'straight run kerosene', which have a narrow boiling range approximating the middle of a No. 1 diesel fuel, were altered to study their effects on regulated and unregulated exhaust emissions. Eleven fuel blends, representing changes in nitrogen content, aromatic level, boiling point distribution, olefin content, and cetane number, were evaluated. Statistical analysis, including regression, was performed using selected fuel properties as independent variables. Higher aromatic levels are generally associated with increased emissions, while increased olefin levels are generally associated with decrease emissions. GRA

(PB81-241424; NSF/CPE-81007) Avail: NTIS HC A03/MF A01 CSCL 06A

The growth of Miami BG 7 (Oscillatoria sp.) in seawater was studied using 2.8 liters of Fernbach batch cultures, 14 liters of Carboy batch cultures, and 7 liters of a controlled environment system. In the batch culture tests, both 'instant ocean' and natural seawater from the local environment were used. The effects of adding supplemental nitrate and ammonia to the seawater bases were also examined. The 7-liter controlled environment culture system provides for the control and monitoring of physical and chemical parameters, and can be used for continuous culture experiments. Work on the comparative study of Anabaena cylindrica and Miami BG 7 indicates that their hydrogen metabolism is quite different having a direct bearing on their applied potential. Author

PRESENT POSSIBILITIES FOR THE USE OF MICROWAVES IN CIVIL ENGINEERING: BIBLIOGRAPHICAL STUDY
G. Baillot Jun. 1980 69 p refs In GERMAN; ENGLISH summary
(LBC-95; ISSN-0222-8394) Copyright. Avail: Issuing Activity

The physics which govern the use of microwaves are reviewed. The laws of propagation in different media, the properties of microwaves and resulting possible applications in civil engineering are presented. Concepts are set forth concerning the directional propagation of electromagnetic waves and the generation and amplification of microwaves. Present applications are classed in two categories, according to the physical properties of which use is made. The first deals with applications connected with properties of propagation. These properties provide solutions to various problems, such as the detection of structural defects, the measurement of thicknesses, and the geometric characterization of surfaces. The second class of applications are connected with phenomena of interaction between radiation and matter. Possibilities exist for the measurement of the humidity and temperature of materials. Numerous applications of microwaves as energy sources are cited in fields such as the fusion of hydrocarbon compounds and the drying or the embrittlement of materials. Problems posed by the use of microwaves (electromagnetic pollution, protection against radiation hazards) and legislation in this field are also covered. Author (ESA)

Worldwide research activities were carried out in the field of rock destruction. Approximately 30 different techniques are concerned. These techniques were tested for applicability to the deep drilling technique as an alternative drilling method within the range of 6000 to 10,000 m. Approximately 3 to 5 of the drilling techniques can be rated functionally practicable but inferior to the rotary drilling systems. The potential of the drilling speed cannot be utilized due to the limitation of the secondary systems. The rotary drilling system is superior to other systems in economy, efficiency, and reliability. Improvement in the present rotary drilling system can be obtained by intensive research and development. N.W.

DEVELOPMENT OF CRYOREFRIGERATORS Final Report, Sep. 1980
Hans-Hermann Klein Bonn Bundesministerium fuer Forschung und Technologie Jun. 1981 63 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-107; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 13.25

Two types of two-stage Gifford-McMahon- (GM) Refrigerators were developed with different cooling capacities. The GM Refrigerator consists of two components: the coldhead, which produces the cooling capacity, and the compressor unit, which delivers the high pressure helium for the GM-cycle. The design of the coldhead and the compressor unit are described and a short theory of the GM-cycle is presented. Details of the most critical parts such as regenerators, seals at low temperature, dynamic seals, and oil separators are given. Author

USER'S GUIDE: COMPUTER PROGRAM FOR THREE-DIMENSIONAL ANALYSIS OF BUILDING SYSTEMS (CTABS80) Final Report
Edward L. Wilson, H. H. Dovey, and Ashraf Habibullah Aug. 1981 113 p Sponsored by Army
(AD-A105513; WES-IR-K-81-9) Avail: NTIS HC A06/MF A01 CSCL 13/3

This report is a user's guide for CTABS80, a computer program for the linear three dimensional structural analysis of multistory frame and shear wall buildings subjected to static or dynamic loadings. In CTABS80, the building is idealized as an assemblage of vertical independent frame and shear wall systems interconnected by horizontal floor diaphragms which are rigid in their own plane. The frame and shear wall systems must basically be of rectangular geometry (in elevation) with vertical columns (or piers) and horizontal beams (or spandrels). However, with special modeling techniques, very complex situations may be considered. A special shear panel element is developed to enable modeling of discontinuous shear walls and shear walls with arbitrary openings. A diagonal bracing element to model braced frames (X-braced, K-braced, or eccentrically braced systems) is also presented. The column, shear panel, and diagonal formulations include the effects of bending, axial, and shear deformations. Bending and shear deformations are also included in the beam formulation; however, the effects of axial deformations are neglected. The effects of the finite dimensions of the beams and columns on the stiffness of a frame or shear wall system are automatically included.

THEORETICAL BASIS OF THE DOE-2 BUILDING ENERGY USE ANALYSIS PROGRAM
Richard B. Curtis Apr. 1981 15 p refs Presented at the Intern. Energy Agency Conf., West Berlin, 6-10 Apr. 1981
(Contract W-7405-eng-48)
(DE81-028896; LBL-12300) Avail: NTIS HC A02/MF A01

A user-oriented, public domain, computer program was developed that will enable architects and engineers to perform design and retrofit studies of the energy-use of buildings under realistic weather conditions. The DOE-2.1A has been named by the US DOE as the standard evaluation technique for the Congressionally mandated building energy performance standards (BEPS). A number of program design decisions were made that determine the breadth of applicability of DOE-2.1. Such design decisions are intrinsic to all building energy use analysis computer programs and determine the types of buildings or the kind of HVAC systems that can be modeled. In particular, the weighting factor method used in DOE-2 has both advantages and disadvantages relative to other computer programs.

CONTINUING DEVELOPMENT OF THE DEROB SYSTEM Quarterly Report, 1 Apr. - 30 Jun. 1981
Arumi-Noe Francisco Jun. 1981 100 p
(Contract DE-AC02-80CS-30254)
(DE81-027971; DOE/CS-30254/4) Avail: NTIS HC A05/MF A01

The daylighting sky factors were calculated for an arbitrary point. The point represents a light meter that can be located anywhere in the simulated structure, and it can be oriented in any direction desired. It reads the sky factor and it can disaggregate the first incidence component from the contributions due to reflections from surfaces, and transmissions from other spaces. The reflected and transmitted components show a marked spatial dependence. The results are compared with standard calculation methods. These standard calculation methods are not capable of discerning the spatial dependence, and they have no capability to account for transmissions from other spaces. The fact that the dynamic energy response of buildings (DEROB) program can describe in detail multispatial interactions allows it to calculate the effect of light-wells, courtyards, solariums on the illumination pattern of simulated spaces. A description of the results of the first set of comparisons, as well as the mathematical theory for multispace coupling is included.

MOBILE INFILTRATION TEST UNIT: ITS DESIGN AND CAPABILITIES, PRELIMINARY EXPERIMENTAL RESULTS
A. K. Blomsterberg, M. P. Modera, and D. T. Grimsrud Jan. 1981 21 p refs
(Contract W-7405-eng-48)
(DE81-031927; LBL-12259) Avail: NTIS HC A02/MF A01

The mobile infiltration test unit (MITU), a 12 sq m construction-site office trailer modified to provide long-term field data for air infiltration studies, is described. The trailer and its instrumentation, including some preliminary tests of the individual measurement systems, are discussed. It has a completely automated data acquisition system that records air infiltration rates, surfaces pressures, and weather as half-hour averages. The shell of the trailer is well sealed, and the quantity, type, and distribution of leakage area are controlled using removable leakage panels in 16 window openings. Using the trailer's fan pressurization system, the background leakage area of the shell was measured to be 12 sq cm while the two types of leakage panels have leakage areas of 13 sq cm and 17 sq cm. The infiltration measurement system was tested by inducing a known flow rate with the fan pressurization system, and predicted the flow rates to within 10% in all cases.

HEATING REMOTE ROOMS IN PASSIVE SOLAR BUILDINGS
J. Douglas Balcomb 1981 6 p refs Presented at the Solar World Forum, Brighton, Eng., 23-28 Aug. 1981
(Contract W-7405-eng-36)
(DE81-030247; LA-UR-81-2518; CONF-810865-2) Avail: NTIS HC A02/MF A01

The heating of remote rooms by convection through a connecting doorway is investigated. A simple steady-state equation is developed for design purposes. Validation of a dynamic model was achieved using data obtained over a 13-day period. Dynamic effects were investigated using a simulation analysis for three different cases of driving temperature; the effect is to reduce the temperature difference between the driving room and the remote room compared to the steady-state model. For large temperature swings in the driving room a strategy which uses the intervening door in a diode mode is effective. The importance of heat-storing mass in the remote room is also investigated. CYCLE DESIGN FOR THE ISABELLE HELIUM REFRIGERATOR
D. P. Brown, A. P. Schlafke, K. C. Wu, and R. W. Moore (Koch Process Systems) 1981 8 p refs Presented at the Cryogenic Eng. Conf., San Diego, Calif., 10-14 Aug. 1981
(Contract DE-AC02-76CH-00016)
(DE81-030551; BNL-30006; CONF-810835-21) Avail: NTIS HC A02/MF A01

The superconducting magnets for the ISABELLE storage ring/accelerator are designed to be operated at 3.8 K using a forced-flow supercritical helium cooling system. The ISABELLE refrigerator has been designed subject to these special requirements. The design output is 13.65 KW of refrigeration below 4.2 K (for cooling the magnet and distribution system), 55 KW at 55 K (to cool heat shields for the whole system) and 100 g/s of liquefaction (for magnets power leads cooling). The system incorporates a sub-cooler section that produces liquid helium at 5.3 atm and 2.6 K and circulates it through the loads, and a Claude-type main refrigerator section. The main refrigerator section has five stages of cooling, with four of them below liquid nitrogen temperature. Liquid nitrogen precooling is not used. With 60% isothermal compressors the efficiency of the refrigerator system will be about 26% of Carnot. DOE

ANALYSIS OF COOLDOWN PERFORMANCE FOR ISABELLE HELIUM REFRIGERATOR
K. C. Wu, D. P. Brown, and R. W. Moore (Koch Process Systems) 1981 7 p refs Presented at the 1981 Cyrog. Eng. Conf., San Diego, Calif, 10 Aug. 1981
(Contract DE-AC02-76CH-00016)
(DE81-030548; BNL-30009; CONF-810835-22) Avail: NTIS HC A02/MF A01

The ISABELLE refrigerator was designed to provide cooling for 1000 superconducting magnets. It has the dual duty of providing cooling at steady-state operating conditions and to cooldowm massive magnets from ambient temperature. During the cooldown, tremendous quantities of heat must be removed from the magnets and 75,000 liters of cold helium must be supplied to fill the system. In the planning for ISABELLE, this procedure has been estimated to require approximately two weeks. Because of this long cooldown time and the fact that during cooldown the refrigerator will be operated quite differently from its steady-state design configuration, it is important to maximize the cooling capacity and identify the cooldown procedure. COMPARISON OF HYDROSTATIC EXTRUSION VERSUS WIRE DRAWING AS A METHOD OF PRODUCING NbSUB3Sn SUPERCONDUCTING WIRE
V. Thadani, B. Avitzur, Y. T. Chou, and T. S. Luhman 1981 5 p refs Presented at the 9th North Am. Manuf. Research Conf., University Park, Penn., 19-22 May 1981
(Contract DE-AC02-76CH-00016)
(DE81-030275; BNL-29941; CONF-8105111-1) Avail: NTIS HC A02/MF A01

The conventional manufacturing process for Nb3Sn multifilamentary superconducting wire is a combination of hot extrusion and wire drawing. An alternative process, cold hydrostatic extrusion, was developed. All experimental data pertaining to the hydrostatic extrusion process are presented, and a comparison is made between the two manufacturing methods. The results show that monofilamentary Nb3Sn wire produced by hydrostatic extrusion not only has good superconducting properties, but also that larger reductions are achieved per pass, and fewer and shorter intermediate anneals are required in its manufacture. LIGHT DEPOLARIZATION AS A MEASURE OF PAVEMENT SURFACE TEXTURE Final Report, May 1974 - Mar. 1981
W. C. Spring, III and W. L. King, Jr. Aug. 1981 75 p refs
(PB81-241507; NSWC/WOL-E-24; FHWA/RD-81/108) Avail: NTIS HC A04/MF A01 CSCL 13B

The feasibility of using light depolarization to measure pavement surface textures was determined. A prototype vehicle-mounted depolarization measuring instrument was used. The wavelength that produces the highest correlation between the depolarization values and the conventional measurements was determined. It is indicated that improved correlations occur in the near infrared region. It is concluded that a vehicle mounted depolarization instrument can be constructed that will correlate satisfactorily with skid numbers or other textural measurements. GRA

VERTICAL MOTION OF HIGHWAY BRIDGE STRUCTURE DUE TO AN EARTHQUAKE
Chai Hong Yoo, Samir V. Acra, and Jao-Shiun Kao Jan. 1981 142 p refs
(Grant NSF PFR-78-22845)
(PB81-235319; MUCE-81-1; NSF/CEE-81021) Avail: NTIS HC A07/MF A01 CSCL 13B

The dynamic response of continuous highway bridge superstructures due to pulsating support settlements induced by an earthquake is investigated. A governing differential equation for the dynamic behavior of bridge superstructures under pulsating support settlements was formulated and a Fourier series type solution method is presented. The results are compared to those obtained by a dynamic three moment equation. Four separate computer programs were developed to facilitate the analysis and comparisons. The concept of dynamic amplification factors as the ratios of dynamic responses to static responses was developed and subsequent charts were plotted. Unusually high dynamic amplifications were observed, particularly in shearing forces. GRA

HC A03/MF A01 CSCL 13M

A method was developed for making up thick cellulosic specimens with thermocouples implanted at various depths to determine the time dependent temperature profiles when exposed to external radiant fluxes. Specimens of alpha cellulose, both untreated and treated with 2 percent by weight of $Na_2B_4O_7$, were exposed to an applied radiant flux of 3.7 W/sq cm in the heat release rate calorimeter in order to examine the effect of the fire retardants on the heat release rate. The results on a limited number of tests suggest that the char enhancement, produced by the presence of $Na_2B_4O_7$, reduces the heat release rate mainly by the reduction of the caloric value of the volatile products rather than by the insulating effect of the increased char layer thickness. GRA

HYSTERESIS IDENTIFICATION OF MULTI-STORY BUILDINGS
Sassan Toussi and James T. P. Yao May 1981 96 p refs
(Grant NSF PFR-79-06296)
(PB81-235921; CE-STR-81-15) Avail: NTIS
HC A05/MF A01 CSCL 13M

Results of the estimation of the behavior of multi-degree-of-freedom (MDOF) structural systems are reported. First, the hysteresis identification method and the corresponding error criterion are presented. The error criterion is a least-squares estimation procedure which is applied to both a constrained and an unconstrained problem. Then, a lumped-mass model used to form 'M' different independent responses from the response of an 'M' degrees of freedom structure is described. The model allows each one of the 'M' responses to be considered as the output of a single-degree-of-freedom (SDOF) structural system. Finally, the identification technique is applied to estimate the inter-story behavior of a laboratory tested, reinforced concrete frame. In addition, the effect of damping in the response of high-rise buildings was examined. GRA

PROBABILISTIC ANALYSIS FOR LIQUEFACTION
M. K. Yegian and B. M. Vitelli Mar. 1981 109 p refs
(Grant NSF PFR-78-23082)
(PB81-249724; NSF/CEE-81029) Avail: NTIS HC A06/MF A01 CSCL 08M

A comprehensive review of liquefaction case histories was made and an expanded data set was prepared. The newly compiled field data are presented together with a criterion for liquefaction based on the field observations of liquefaction and nonliquefaction. A simple model for calculating the probability of liquefaction conditional to the occurrence of a particular seismic event is given. Applications of the proposed criterion and the probability model are discussed and comparisons are made between the results of this research and those previously published. Specific applications of the proposed method include an evaluation of overall liquefaction risk at a site and estimation of earthquake-generated excess pore pressures. It is concluded that liquefaction analysis procedures, which are invariably based on field observations, include significant uncertainties because of the imperfect nature of the data used. Use of the probability model presented herein permits proper evaluations of these uncertainties.

PREDICTION AND CONTROL OF FIELD SWELL PRESSURES OF COMPACTED MEDIUM PLASTIC CLAY Interim Report
Gregory M. Terdich 17 Mar. 1981 188 p refs Sponsored in part by Indiana State Highway Commission and Federal Highway Administration
(PB81-242471; JHRP-81-4; FHWA/IN/JHRP-81/4) Avail: NTIS HC A05/MF A01 CSCL 08M

The swelling pressure response of a medium plastic clay (AASHTO A-6) compacted both in the field and in the laboratory was investigated. Correlation was attempted to provide a prediction process for the field result. Swelling pressure was controlled by water content deviation from optimum, compactive effort, dry density, and various interactions among these terms. Regression models for laboratory and field results are different. Variability in dry density and swelling pressure was sizeable but predictable, with the field variability being larger. Prediction models were developed for expected average and maximum swelling pressure. Charts enable the engineer to select the compaction variables that will control the swelling pressure to desired maximum value. A computer program was created to predict maximum swelling pressure. GRA

IMPROVEMENT OF RADAR TARGET SEARCHES BY A RANGE DEPENDENT DETECTION THRESHOLD OR SIGNAL AMPLIFICATION [VERBESSERUNG DER RADARZIELSUCHE DURCH EINE ENTFERNUNGSABHAENGIGE ENTDECKUNGSSCHWELLE ODER SIGNALVERSTARKUNG]
E. Hanle Oct. 1980 22 p refs In GERMAN; ENGLISH summary
(FFM-301) Copyright. Avail: Issuing Activity

The impact of signal amplification on the search for targets with different radar cross sections was studied. A clear presentation of the whole range dependence with minimum computing expense was obtained by restriction to single pulse operation. Through a suitable range controlled threshold with half the transmitting energy, the same detection probability at maximum range is obtained as with a fixed threshold. The detection probability at short ranges is reduced, resulting in a reduced detection range for targets with small cross sections or under strong electronic countermeasures conditions. Author (ESA)

AN MS43 BLOCK CODE HAVING AN ERROR MULTIPLICATION SMALLER THAN THAT OF THE MMS43 CODE AND A REDUCED PORTION OF THE POWER DENSITY SPECTRUM NEAR THE FREQUENCY ZERO
Guenter Morgenstern May 1981 18 p refs In GERMAN; ENGLISH summary
(FTZ-FI-044-TBr-88) Avail: Issuing Activity

Analysis of the code tables show that both in the case of MMS43 and of V-MS43, the error multiplication occuring in block-by-block decoding can be reduced by permutations without changes in the signal spectrum by about 15%. Since the V-MS43 block code in addition decreases the portion of the power density spectrum of the signal near the frequency zero the signal interference with neighboring blocks is reduced. The design of digital transmission systems for coaxial cables using redundancy-free line signals and for systems which are to occupy non-utilized frequency bands below the carrier frequencies requires exact knowledge of the attenuation behavior of the frequency range coming into question. Starting from the determination of the load per unit length, the effective attenuation and its components (attenuation constant, reflection loss, interaction loss) are calculated and discussed for the lengths of coaxial pairs existing in the German Bundespost network. A 16 QAM MODEM FOR A 140 Mbit/SEC RADIO RELAY SYSTEM [EIN 16 QAM-MODEM FUER 140 Mbit/SEC-RICHTFUNKSYSTEME]
Werner Lorek May 1981 34 p refs In GERMAN; ENGLISH summary
(FTZ-FI-21-TBR-20) Avail: Issuing Activity

Various frequency-economical modulation procedures for the planned change-over of the 4 GHz radio-relay band to 140 Mbit/s digital signals are compared. The structure of a 16 QAM modem, and the circuit design are described. The functions of the individual components are illustrated by measurement results or circuit diagrams. For the carrier recovery, the received 16 QAM signal is converted into a 4 PSK signal, from which a fixed reference phase for the phase control of the carrier can be derived with the aid of frequency quadruplication. First measurements of the

error rate by means of an analog radio-relay channel show an acceptable approximation to the theoretical expectation. It is demonstrated that, with the aid of 16 QAM, 140 Mbit/s signals will probably fit in with the analog 80 MHz channel bandwidth of the radio-relay system.

The description and measurement of the macroscopic and microscopic characteristics of rain and rain systems are discussed. The statistical relationships of these characteristics and their effect on polarization and attenuation are considered. Macroscopic characteristics include the size, distribution, and movements of rain cells, the height of melting layers, and the presence of ice crystals. Microscopic characteristics include the size distribution, density, and oblateness of rain drops and ice crystals. The estimation of a major propagation effect, specific attenuation, is described.

The key features of the Rice-Holmberg, Dutton-Dougherty, Global, Lin, and Piecewise Uniform Rain Rate models for estimation of cumulative attenuation statistics on Earth-space millimeter paths are summarized. The models provide either rain rate statistics or attenuation statistics, which can be related by use of the specific attenuation and the effective path length relation. The effective path length is defined. The advantages and disadvantages of each model for specific applications are discussed. The Global model is recommended as the design tool for predicting propagation effects in Earth-space communication systems.

Sources of depolarization effects on the propagation paths of orthogonally-polarized information channels are considered. The main sources of depolarization at millimeter wave frequencies are hydrometeor absorption and scattering in the troposphere. Terms are defined. Mathematical formulations for the effects of the propagation medium characteristics and antenna performance on signals in dual polarization Earth-space links are presented. Techniques for modeling rain and ice depolarization are discussed.

The corresponding between a given propagation phenomenon and system performance is considered. Propagation data are related to system performance parameters, allowing the systems engineer to perform the analyses determining how well requirements are met by a given system design, and enabling the systems engineer to modify that design if necessary. The various ways of specifying performance criteria for different kinds of systems are discussed, and a general procedure for system design is presented and demonstrated.

INVESTIGATION OF SEMICONDUCTOR CLAD OPTICAL WAVEGUIDES Semiannual Status Report,
T. E. Batchman and G. M. McWright Dec. 1981 25 p refs
(Grant NAG1-177)
(NASA-CR-165074; UVA/528207/EE81/101) Avail: NTIS HC A02/MF A01 CSCL 14N

The properties of semiconductor-clad optical waveguides based on glass substrates were investigated. Computer modeling studies on four-layer silicon-clad planar dielectric waveguides indicated that the attenuation and mode index should behave as exponentially damped sinusoids as the silicon thickness is decreased below one micrometer. This effect can be explained as a periodic coupling between the guided modes of the lossless structure and the lossy modes supported by the high refractive index silicon. The computer studies also show that both the attenuation and mode index of the propagating mode are significantly altered by conductivity charges in the silicon. Silicon claddings were RF sputtered onto AgNO3-NaNO3 ion exchanged waveguides and preliminary measurements of attenuation were made. An expression was developed which predicts the attenuation of the silicon clad waveguide from the attenuation and phase characteristics of a silicon waveguide. Several applications of these clad waveguides are suggested and methods for increasing the photo response of the RF sputtered silicon films are described. M.G.

INTEGRATED CIRCUITS FOR TV AND RADIO APPLICATIONS Final Report, Dec. 1979

Helmut Bichler, Helmut Deppe, Josef Fenk, Gerhard Gehring, Guenter vonHaefen, Walter Haberl, Walter Kellner, Hans Kriedt, Dietmar Mallon, Gerald Muendel et al Bonn Bundesministerium fuer Forschung und Technologie Jun. 1981 117 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-088; ISSN-0340-7608) Avail: NTIS HC A06/MF A01

This was achieved by: improving the electrical properties of existing IC's and simultaneously reducing the peripheral circuitry and the manufacturing costs; combining several circuits in a single complex IC; and replacing of circuitry previously made from discrete components by new integrated circuits. The newly developed IC's are described. All problems and their solutions connected with the development, the manufacture and the testing of the circuits are reported. The circuits described are mainly for use in the RF-, IF- and AF-sections, the power supply and the display and control sections of radio and TV-receivers. The development of two new process lines for the manufacture of RF-circuits and circuits operating at supply voltages of up to 45 volts is also reported. T.M.

DATA PROTECTION OF COMPUTER AIDED TELECOMMUNICATION SYSTEMS Final Report, Oct. 1980

Peter Berger, Gunnar Grugelke, Guenter Jensen, Johanna Kratzsch, Rolf Kreibich, Helgomar Pichlmayer, and Jochen Peter Spohn Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 448 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FR-DV-81-006; ISSN-0170-9011) Avail: NTIS HC A19/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 61-20

The aim of the investigation of computer aided telecommunication systems. Existing and/or planned data protection problems that accompany emergency alert systems in the transportation sector, in interactive videotex, in two-way-cable TV, and in integrated office communication systems were examined. The services offered by the telecommunication systems imply the processing of user (participants) data and of data originated by the telecommunication process itself. It is concluded that data protection problems of computer aided telecommunication systems can not be reduced to the fact of simple misuse. T.M.

HC A02/MF A01

There are several perceived advantages to using Electromagnetic (EM) launching for weapons applications. Higher muzzle velocities than can be achieved with conventional ordnance will minimize the projectile time-of-flight to the target; this is of particular interest for air-defense applications against maneuvering targets and for penetrator launching. The potential for precise current (hence acceleration) control promises lower peak accelerations that the projectile must withstand, and much more precise muzzle velocity control, permitting the use of smart projectiles and continuous zoning for artillery applications. The principles behind EM accelerators, particularly dc accelerators (railguns), the recent history of their development, their advantages for weapons applications, the general requirements, potential problem areas that must be faced by designers, and the work that has been done by researchers at Livermore and Los Alamos National Laboratories in accelerating 3-g projectiles to 10 km/s, and larger masses to lower velocities are discussed.

(BMFT-FB-T-81-112; ISSN-0340-7608) Avail: NTIS
HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 20,60

The performance of a linear prediction vocoder was tested by computer simulations and the selected algorithm was optimized concerning intelligibility and naturalness of the speech. For the purpose of realtime simulations of digital speech transmission systems a fast digital signal processor was developed using commercial available LSI components. The major components of the processor are a microprogram control unit, a 24 bit word length arithmetic - logic unit based on the AMD 2900 family - and a fast hardware multiplier unit capable of 5 million multiplications per second. The signal processor is interfaced to a host computer PDP 11, on which comfortable software development aids are available. A powerful operating system was developed for the signal processor itself to support and debug user software.

(ENST-D-80010) Avail: NTIS HC A04/MF A01

Functional reliability of data communications networks, based on packet switching, at the level of the network links was studied. Fault diagnostic theory for systems in a nonbinary state was applied, necessitating adaptations due to the characteristics of protocols and link architectures. Results indicate that the packets can be considered as random test signals, intended to verify on line the proper functioning of the network links, channels, and protocols. It is indispensable to generate priority service packet series (test and surveillance packets) which gather at each link, and along the selected route, information on the state of the links and channels. Functional reliability is increased by local suboptimal control of traffic transitions. Author (ESA)

STUDY OF THE INFLUENCE OF PRECIPITATIONS AND CLOUDS ON THE PERFORMANCE OF SYNTHETIC APERTURE RADARS
A. Guissard and M. DeCoster Paris ESA Mar. 1981 199 p refs
(Contract ESTEC-4153/79/NL-PP(SC))
(ESA-CR(P)-1465) Avail: NTIS HC A09/MF A01

The principles of synthetic aperture radar (ASAR) are introduced, and the parameters (spatial resolution, image contrast, radiometric accuracy and resolution, and reduction in reflectivity dynamics) which describe SAR image quality are discussed in relation with ground reflectivity models. Attenuation depolarization and backscattering due to rain and clouds investigated through mathematical models. For incidence angles > 20 deg, copolarized reflectivity is lower than -5 db. Cross polarized reflectivity is always lower than copolarized. The difference > 5 db. Instrument threshold = -18 db. Image quality is best at the lowest frequency tested (53 GHz) and lowest incidence angle (20 deg from vertical). Ground reflectivity intensifies with frequency increase.

ESTIMATION OF THE PARAMETERS OF AN UNMODULATED CARRIER SIGNAL DISTURBED BY COMPLEX-MULTIPLICATIVE AND ADDITIVE GAUSSIAN NOISE Ph.D. Thesis - Technischen Univ.
Franz Edbauer Jun. 1981 144 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-737)
(DFVLR-FB-81-23) Avail: NTIS HC A07/MF A01; DFVLR, Cologne DM 29,70

Estimation of the channel state and the parameters of a noisy unmodulated receiver input signal (pilot tone) is investigated for fast Rayleigh and Rician fading channels. The channel state is estimated by Kalman-filtering. Estimation of parameters, namely the frequency offset, the phase and the amplitude of the direct component at the time origin, the ratio of the power of the direct and the scattered component, and the fading bandwidth, is performed by maximum-likelihood-identification. This is applied to the design of a suboptimum phase locked loop, which makes use of the properties of the fading channel. Results are achieved analytically and by means of computer simulations. (PB81-245268; MIT-CE-R81-2; NSF/CEE-81019) Avail: NTIS
HC A10/MF A01 CSCL 08M

A technique for the numerical analysis of wave motion in layered media is developed. Semidiscrete particular solutions satisfying inhomogeneous boundary conditions are calculated by the finite element method. These solutions are combined with semidiscrete modes of an appropriate eigenvalue problem also obtained by the finite element method. The boundary conditions corresponding to rigid and rough footings on a layered stratum are treated in detail. Applications are considered which illustrate the use of the technique developed. GRA

DERIVATIVE MEASUREMENT SYSTEM FOR CURRENT-VOLTAGE AND LIGHT-CURRENT-VOLTAGE CHARACTERISTICS [MESSUNG VON STROM-SPANNUNGS- UND LICHT-STROM-KENNLINIEN MIT HILFE DER ABLEITUNGSTECHNIK]

H. Burkhard Nov. 1980 35 p refs In GERMAN; ENGLISH summary

(FTZ-FI-512-TBr-6) Copyright. Avail: Issuing Activity

A modulation apparatus, based on derivative measurements of current voltage characteristics to investigate double heterostructure lasers was examined. Modulation at constant modulation index yields a direct measurement of I, dV/dI and in the same apparatus at the fundamental and first harmonic of the modulation frequency. The method makes pulsed measurements. Thermal influence due to ohmic losses in lser diodes are largely eliminated. Diodes are tested before mounting on a heat sink to make a preselection. The dioue series resistance is measured including contact resistance, and a possible current dependence is shown. Author (ESA)

(BMFT-FB-T-81-085; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17.85

Besides some analog integrated circuits, the PAL-color decoder of a color TV set consists of various filters. Some of them can be integrated with modern semiconductor technologies. The advantages are a reduction in costs and adjustment and an increased reliability and performance. A concept was developed which uses CCD filters for the PAL-comb-filter, the luminance-delay-line and the color trap. These filters were fabricated and their performance was proved by measurement and by simulation with video signals. A PAL-video-IC, which includes the demodulation, amplifying matrix and controlling was designed. It is matched to the CCD-filters. Author

TOPOGRAPHY OF THE ELECTRICAL PROPERTIES OF THE SILICON/OXIDE INTERFACE AND THE INFLUENCE OF TECHNOLOGIC TREATMENTS Final Report, Sep. 1980
Helmut Bernt and Christoph Werner Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 123 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-086; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 25.85

Using the experience in automatic measurements of the parameters, turning point voltage, density of surface states and relaxation time of a MOS-capacitor the following methods were developed or improved by: simultaneous measurement of relaxation time and bulk lifetime at the same spot of a wafer; separation of the contributions to the relaxation time from bulk and surface generation; and automatic measurement of break down voltage and behavior under high voltage stress at room temperature. To explain the behavior of SiO2 layers under voltage-stress at normal and elevated temperature, additional measurements of fluctuations of the surface potential (caused by fixed oxide-charge) are presented. T.M.

EDDY: A PROGRAM FOR CALCULATING THE BEHAVIOR OF ELECTROMAGNETS
B. Aldefeld (Philips Zentrallab. GmbH, Hamburg) and D. Steimer (Philips Zentrallab. GmbH, Hamburg) Sep. 1980 97 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(KfK-CAD-168; HH-PHI/103) Avail: NTIS HC A05/MF A01

The program EDDY can be used for calculating the static and dynamic behavior of electromagnets having rotationally symmetrical geometry. It is particularly suited for applications where the electromagnets are operated under pulse exitation and where the motion of an armature and its mechanical energy are of interest. Special attention is also given to the nonlinearity of magnetization curves of ferromagnetic materials and to the effects of eddy currents. The underlying numerical procedure is based on the diffusion equation for the electromagnetic field. The mathematical methods, the structure of the program, and practical applications are described. ON THE EFFICIENCY OF SMALL AIR COIL MOTORS [OVER HET RENDEMENT VAN KLEINE LUCHTSPOELMOTOREN]
Paul Horowitz May 1981 134 p refs In DUTCH; ENGLISH summary
(WTHD-131) Avail: NTIS HC A07/MF A01

The efficiency of two types of small ironless motors in the output range of 5 to 500 mW was investigated for use in driving a miniature roller pump for a portable infusion system. One motor has a continuous rotating coil (commutator motor) and one has an oscillating coil. In this case a ratchet and ratchet wheel is needed to generate a rotating motion (ratchet wheel motor). The electromechanical transducer and a mechanical transformation and support system are discussed as well as frictional losses. The influence of the size of the motor is discussed. An expression for the total efficiency is obtained which enables the calculation of the speed of rotation of a certain motor at maximum efficiency for a certain required output. This optimal speed of rotation is hardly influenced by the required speed of rotation at the output shaft of the driving. The transmission, if required, has only a small effect on the optimum speed of rotation of the motor. A.R.H.

SEMICONDUCTOR TECHNOLOGY FOR VLSI: PLASMA ETCHING AND HIGH PRESSURE OXIDATION Final Report, Mar. 1980
Konrad Eisele Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 100 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-115; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 20.80

The large scale integration of electronic circuits on silicon requires etching of structures in the range of 1 micrometer or smaller. This cannot be achieved by wet chemical means. Dry etching processes, however, do produce an exact replica of the desired structure in those materials which are common in silicon planar technology. These procedures depend on the RF-energy, on how this is coupled to the substrate to be etched, and on the pressure. They are, accordingly, called plasma etching or reactive ion etching. Their etch rate and selectivity of the relevant materials for various gases was examined. MOS properties can be restored to their original level by annealing. The design of a practical etch reactor is outlined. T.M.

ELECTRICAL SCREENING OF INTEGRATED CIRCUITS BY SEMI-INSULATING SILICON LAYERS Final Report, Nov. 1980
Heinz Mitlehner Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 83 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-134; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17.50

Insulating layers of high quality like SiO2 are a non-neglectable risk for the reliability of high voltage integrated circuits because these layers cannot completely screen the chip against external charges, especially in case of high resistive epitaxial layers surface charges. Deposition of semi-insulating amorphous silicon layers directly onto the crystal surface makes it possible to fully screen the chip with reproducible performance, and because of the high density of localized states in the amorphous silicon, external charges influence their countercharge in the layer itself. The properties of the various deposition methods (evaporation, glow-discharge, CVD) are compared and the decision for the evaporation is proved by the better interface properties. T.M.

ELECTROCHROMIC DISPLAYS Final Report, Jan. 1981
Helmut Freller, Hans Peter Lorenz, and Konrad Mund Bonn Bundesministerium fuer Foschung und Technologie Aug. 1981 37 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-141; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7.80

Prototypes of large size displays with number sizes up to 190 mm were developed. To achieve this goal the evaporation technique for the electrochromic tungsten trioxide films, the display electrode pattern and the backwall electrode were adapted to the requirements. A sealing technique based on the use of silicon rubber was developed which allows use of the display-cells in a temperature region of -20 C to +80 C with leakage. By adding

1 - 3 percent water to the aprotic propylenecarbonate LiClO4 electrolyte, display performance was enhanced. For coloring and bleaching of the displays two driving circuits were developed which allow sequential counting. T.M.

DEVELOPMENT OF A THIN FILM PREPARATION TECHNIQUE FOR ZrO2(Y2O3) ELECTROLYTES ON POROUS SUPPORT STRUCTURES Final Report, Jun. 1980

Guenter Dietrich, Wolfgang Doenitz, Hajo Hermeking, Guenter Oehme, and Jochen Wahl Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 84 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-143; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17.65

An experimental study demonstrated that it is technologically feasible to deposit thin electrolyte layers of yttria-stabilized zirconia on porous substrates. Such structures were developed for application in high-temperature water vapor electrolysis. Thin film electrolytes were prepared by the electrochemical vapor deposition (EVD) technique. With this method, homogeneous, gas-tight layers of yttria-stabilized zirconia were prepared with a thickness of 20-50 micrometers. The thin film electrolytes show specific resistivities that are comparable to electrolyte sinters as applied in high-temperature water vapor electrolysis. T.M.

IMPROVEMENT OF TETRODE POWER AMPLIFIER EFFICIENCY BY ADDING HARMONICS TO THE CARRIER OSCILLATION AND ENERGY SAVINGS RESULTING FROM VOLUME-DEPENDENT PULSE-DURATION MODULATION (PDM) CONTROL Final Report, Nov. 1980

Helmut Krebs, Dietmar Kroll, Manfred Lodahl, and Bodo Wysocki Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 94 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FT-T-81-163; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19.80

The method of improving efficiency by adding the 3rd harmonic to the carrier oscillation is common in triode power amplifiers. For a transfer of this technical method to modern high-power tetrodes, the circuitry for the generation of 3f current was fundamentally changed. A qualitative as well as quantitative description of the functioning is given with the aid of diagrams. The introduction of pulse-duration modulation into transmitter technology makes possible an economical application of a volume-dependent carrier control method. The method is distinguished for a special carrier control characteristic in relation to the saving of energy and for improved transmission performance achieved by use of a controlled clipper. T.M.

DETERMINATION OF DIFFUSION COEFFICIENTS OF ANIONS AT A ROTATING SILVER DISC ELECTRODE

Kunio Shimizu and Robert A. Osteryoung 1 Sep. 1981 18 p refs

(Contract N00014-79-C-0682; NR Proj. 051-715)

(AD-A105828; TR-6) Avail: NTIS HC A02/MF A01 CSCL 09/1

A silver rotating disc electrode has been employed to obtain diffusion coefficients for a number of anions which form insoluble films at the electrode surface (sulfide, selenide, thiocyanate, selenocyanate, iodide and bromide) and one which does not (cyanide). It is found that the Levich equation is obeyed even though a film is continuously forming on the silver surface. Except for cyanide, the electrode reactions appear irreversible, based on the shape of the anodic voltammograms and the cathodic stripping peaks. GRA

HIGH TEMPERATURE ELECTRONIC REQUIREMENTS IN AEROPROPULSION SYSTEMS

William C. Nieberding and J. Anthony Powell *In its* Proc. of The Conf. on High-Temp. Electron. 1981 p 13-16 refs (For primary document see N82-15311 06-33)

(E-708) Avail: NTIS HC A07/MF A01 CSCL 09C

The needs for high temperature electronic and electro-optic devices as they would be used on aircraft engines in either research and development applications, or operational applications are discussed. The conclusion reached is that the temperature at which the devices must be able to function is in the neighborhood of 500 to 600 C either for R&D or for operational applications. In R&D applications the devices must function in this temperature range when in the engine but only for a moderate period of time. On an operational engine, the reliability requirements dictate that the devices be able to be burned-in at temperatures significantly higher than those at which they will function on the engine. The major point made is that semiconductor technology must be pushed well beyond the level at which silicon will be able to function. M.G.

PASSIVE COMPONENTS FOR HIGH TEMPERATURE OPERATION

L. S. Raymond, D. R. Clark, D. O. Black, D. J. Hamilton, and

W. Kerwin *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 21-23 Sponsored by DOE (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

The development of resistors, capacitors, and interconnect metalizations utilizing a low pressure chemical vapor deposition (LPCVD) process is described. The LPCVD process allows the passive components to be fabricated at temperatures higher than their highest operating temperatures. The deposition of thin films by LPCVD is accomplished by reacting one or more gases on the surface of a heated substrate. The substrates to be coated are placed on a graphite susceptor and then loaded into the center of a quartz reaction tube. The RF power is applied to the coil on the outside of the reaction tube which in turn is coupled into the graphite susceptor causing it to heat. Pressures of several torr or less are typical, with carrier flow rates of 0.1 to 2.0 liters/min. Nitrogen, hydrogen, and helium are typical carrier gases. These are controlled with mass flow controllers and the pressure is continuously monitored with a capacitive manometer. Materials selection and device testing are also discussed. M.G.

DEVELOPMENT OF AN 1100 DEG F CAPACITOR
Robert E. Stapleton *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 25-28 ref Prepared in cooperation with Westinghouse Electric Corp., Pittsburgh, Pa. (For primary document see N82-15311 06-33) (Contracts NAS3-6465; NAS3-10941)
Avail: NTIS HC A07/MF A01 CSCL 09C

The feasibility of developing a high temperature capacitor for 1100 F operation which is as small and light as conventional capacitors for normal operating temperatures is discussed. Pyrolyic boron nitride (PBN) was selected for the dielectric. The PBN capacitors were made by slicing and lapping material from thick blocks and then sputtering thin film electrodes. These capacitors had breakdown strengths of 7,000 volts per mil and a dissipation factor of less than 0.001 at 1100 F. Additional processing improvements were made after testing a multi-layer or stacked PBN capacitor for 1,000 hours at 1100 F. Sputter etching the wafers before depositing electrodes resulted in a reduction in dissipation factor. A sputtered boron nitride film applied to the outer electrode surfaces produced a more stable capacitor. A design for a 0.1 mu F capacitor and a summary of PBN wafer fabrication costs are given. M.G.

ASSESSMENT OF HIGH TEMPERATURE METALLIZATIONS FOR I(2)L AND CMOS TECHNOLOGIES
A. Christou and B. R. Wilkins *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 33-34 refs (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

High temperature barrier metallizations were assessed and tested for I(2)L and CMOS applications. Life tests were accelerated to 375 C in view of the -55 C to +300 C temperature range established for engine-located electronics without fuel cooling. The gold-refractory metallizations evaluated were Au-TiW-PtSi, Au-TiW/TiO2/TiW-PtSi and Au-TiW(N)-PtSi. These metallization systems were thermally annealed to at least 375 C for up to 250 hours. The critical requirement for stable diffusion barrier is the TiW grain size. Small grain (250A-500A) films were observed to be stable up to 375 C. Deposition to TiW diffusion barrier in the presence of oxygen and nitrogen also results in an effective diffusion barrier. Auger electron spectroscopy profiles of the PtSi indicates some penetration by the TiW. In the case of PtSi/TiW interface, the redistribution of oxygen further passivates the system by forming a TiO2 layer at the interface. M.G.

N82-15318*# Wisconsin Univ. - Madison. Dept. of ECE.
AMORPHOUS METALLIZATIONS FOR HIGH-TEMPERATURE SEMICONDUCTOR DEVICE APPLICATIONS
J. D. Wiley, J. H. Perepezko, J. E. Nordman, and Guo Kang-Jin (Chinese Academy of Sciences, Shanghai) *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 35-37 refs (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

The initial results of work on a class of semiconductor metallizations which appear to hold promise as primary metallizations and diffusion barriers for high temperature device applications are presented. These metallizations consist of sputter-deposited films of high T sub g amorphous-metal alloys which (primarily because of the absence of grain boundaries) exhibit exceptionally good corrosion-resistance and low diffusion coefficients. Amorphous films of the alloys Ni-Nb, Ni-Mo, W-Si, and Mo-Si were deposited on Si, GaAs, GaP, and various insulating substrates. The films adhere extremely well to the substrates and remain amorphous during thermal cycling to at least 500 C. Rutherford backscattering and Auger electron spectroscopy measurements indicate atomic diffussivities in the 10 to the -19th power sq cm/S range at 450 C. M.G.

N82-15319*# Naval Research Lab., Washington, D. C.
OHMIC CONTACTS TO GaAs FOR HIGH-TEMPERATURE DEVICE APPLICATIONS
W. T. Anderson, Jr., A. Christou, J. F. Giuliani, and H. B. Dietrich *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 39-42 refs (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

Ohmic contacts to n-type GaAs were developed for high temperature device applications up to 300 C. Refractory metallizations were used with epitaxial Ge layers to form the contacts: TiW/Ge/GaAs, Ta/Ge/GaAs, Mo/Ge/GaAs, and Ni/Ge/GaAs. Contacts with high dose Si or Se ion implantation of the Ge/GaAs interface were also investigated. The contacts were fabricated on epitaxial GaAs layer grown on N+ or semi-insulating GaAs substrates. Ohmic contact was formed by both thermal annealing (at temperatures up to 700 C) and laser annealing (pulsed Ruby). Examination of the Ge/GaAs interface revealed Ge migration into GaAs to form an N+ doping layer. The specific contact resistances of specimens annealed by both methods are given. M.G.

GALLIUM PHOSPHIDE HIGH TEMPERATURE DIODES

R. J. Chaffin and L. R. Dawson *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 55-57 refs (For primary document see N82-15311 06-33)
(Contract DE-AC04-76DP-00789)
Avail: NTIS HC A07/MF A01 CSCL 09C

High temperature (300 C) diodes for geothermal and other energy applications were developed. A comparison of reverse leakage currents of Si, GaAs, and GaP was made. Diodes made from GaP should be usable to 500 C. A Liquid Phase Epitaxy (LPE) process for producing high quality, grown junction GaP diodes is described. This process uses low vapor pressure Mg as a dopant which allows multiple boat growth in the same LPE run. These LPE wafers were cut into die and metallized to make the diodes. These diodes produce leakage currents below ten to the -9th power A/sq cm at 400 C while exhibiting good high temperature rectification characteristics. High temperature life test data is presented which shows exceptional stability of the V-I characteristics. R.J.F.

A GALLIUM PHOSPHIDE HIGH-TEMPERATURE BIPOLAR JUNCTION TRANSISTOR

T. E. Zipperian, L. R. Dawson, and R. J. Chaffin *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 59-61 refs (For primary document see N82-15311 06-33)
(Contract DE-AC04-76DP-00789)
Avail: NTIS HC A07/MF A01 CSCL 09C

Preliminary results are reported on the development of a high temperature (350 C) gallium phosphide bipolar junction transistor (BJT) for geothermal and other energy applications. This four-layer p(+)n(-)pp(+) structure was formed by liquid phase epitaxy using a supercooling technique to insure uniform nucleation of the thin layers. Magnesium was used as the p-type dopant to avoid excessive out-diffusion into the lightly doped base. By appropriate choice of electrodes, the device may also be driven as an n-channel junction field-effect transistor. The initial design suffers from a series resistance problem which limits the transistor's usefulness at high temperatures. R.J.F.

ELECTRICAL SWITCHING IN CADMIUM BORACITE SINGLE CRYSTALS

Tatsuo Takahashi and Osamu Yamada *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 67-70 refs (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

Cadmium boracite single crystals at high temperatures (> 300 C) were found to exhibit a reversible electric field-induced transition between a highly insulative and a conductive state. The switching threshold is smaller than a few volts for an electrode spacing of a few tenth of a millimeter corresponding to an electric field of 100 to 1000 V/cm. This is much smaller than the dielectric break-down field for an insulator such as boracite. The insulative state reappears after voltage removal. A pulse technique revealed two different types of switching. Unstable switching occurs when the pulse voltage slightly exceeds the switching threshold and is characterized by a pre-switching delay and also a residual current after voltage pulse removal. A stable type of switching occurs when the voltage becomes sufficiently high. Possible device applications of this switching phenomenon are discussed. R.J.F.

MINUS 55 TO PLUS 200 DEG C 12 BIT ANALOG-TO-DIGITAL CONVERTER

Lewis R. Smith and Paul R. Prazak *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 77-79 refs (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

A 12 bit successive approximation analog to digital converter that offers moderately high speed precision data conversion at a reasonable level of cost and complexity is studied. The ADCH10HT extends this capability over a temperature range of -55 to +200 C. No missing-code performance is maintained over the entire temperature range. The converter is completely self-contained with internal clock and +10 volt reference. The CMOS devices offer low power dissipation, so that the internal temperature of the hybrid circuit does not rise as much from self heating. In CMOS circuits, pn junction leakage currents are returned to the supplies so that the logic keeps working at temperatures up to 250 C. R.J.F.

PROCESS CHARACTERISTICS AND DESIGN METHODS FOR A 300 DEG QUAD OP AMP

J. D. Bessom and R. B. Patterson, III *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 81-84 ref Sponsored by Sandia National Lab., Albuquerque, N. Mex. (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

The results of process characterization, circuit design, and reliability studies for the development of a quad OP amplifier intended for use up to 300 C are presented. A dielectrically isolated complementary vertical bipolar process was chosen to fabricate the amplifier in order to eliminate isolation leakage and the possibility of latch up. Characterization of NPN and PNP junctions showed them to be suitable for use up to 300 C. Interconnect reliability was predicted to be greater than four years mean time between failure. Parasitic MOS formation was eliminated by isolation of each device. R.J.F.

HYBRID A/D CONVERTER FOR 200 DEG C OPERATION
Mark R. Sullivan and Jeffrey B. Toth *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 85-88 refs (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

A 12 bit A/D converter was designed and developed which will operate at 200 C with .05 linearity, 1/accuracy, 350 WSec conversion time, and only 455 mW power consumption. This product also necessitated the development of a unique three metal system in which aluminum wire bonding is done utilizing aluminum bonding pads, gold wire bonding to all gold areas, and employment of a nickel interface between gold and aluminum connections. This system totally eliminates the formation of a intermetallics at the bonding interface which can lead to bond failure. This product represents an advancement in electronics as it proved the operation of integrated circuits at high temperature, as well as providing information about both the electrical and mechanical reliability of hybrid circuits at 200 C. WIRELESS, IN-VESSEL NEUTRON MONITOR FOR INITIAL CORE-LOADING OF ADVANCED BREEDER REACTORS
J. T. DeLorenzo, E. J. Kennedy (Tennessee Univ., Knoxville), T. V. Blalock (Tennessee Univ., Knoxville), J. M. Rochelle, M. M. Chiles, and K. H. Valentine *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 89-92 refs (For primary document see N82-15311 06-33)
(Contract W-7405-eng-26)
Avail: NTIS HC A07/MF A01 CSCL 09C

An experimental wireless, in-vessel neutron monitor was developed to measure the reactivity of an advanced breeder reactor as the core is loaded for the first time to preclude an accidental critically incident. The environment is liquid sodium at a temperature of approx. 220 C, with negligible gamma or neutron radiation. With ultrasonic transmission of neutron data, no fundamental limitation was observed after tests at 230 C for > 2000 h. The neutron sensitivity was approx. 1 count/s-nv, and the potential data transmission rate was approx. 10,000 counts/s. B.W.

The 300 C electronics technology based on JFET thick film hybrids was tested up to 10 to the 9th power rad gamma (Si) and 10 to the 15th power neutrons/sq cm. Circuits and individual components from this technology all survived this total dose although some devices required 1 hour of annealing at 200 or 300 C to regain functionality. This technology used with real time annealing should function to levels greater than 10 to the 10th power rad gamma and 10 to the 16th power n/sq cm. B.W.

STUFFED Mo LAYER AS A DIFFUSION BARRIER IN METALLIZATIONS FOR HIGH TEMPERATURE ELECTRONICS
John K. Boah, Virginia Russell, and David P. Smith *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 111-114 refs (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

Auger electron spectroscopy was employed to characterize the diffusion barrier properties of molybdenum in the CrSi2/Mo/Au metallization system. The barrier action of Mo was demonstrated to persist even after 2000 hours annealing time at 300 C in a nitrogen ambient. At 340 C annealing temperature, however, rapid interdiffusion was observed to have occurred between the various metal layers after only 261 hours. The presence of controlled amounts of oxygen in the Mo layer is believed to be responsible for suppressing the short circuit interdiffusion between the thin film layers. Above 340 C, its is believed that the increase in the oxygen mobility led to deterioration of its stuffing action, resulting in the rapid interdiffusion of the thin film layers along grain boundaries. B.W.

HIGH TEMPERATURE (Al2O3) INSULATION AND LIGHT WEIGHT CONDUCTORS

Henry Walker *In* NASA. Lewis Research Center Proc. of the Conf. on High-Temp. Electron. 1981 p 123-219 (For primary document see N82-15311 06-33)
Avail: NTIS HC A07/MF A01 CSCL 09C

The of an aluminum conductor with an aluminum oxide insulation film was investigated. Aluminum oxide insulated wire or strip (with a melting point of 2050 C) is unique for applications in the electronic, missile, atomic reactor, aerospace, and aircraft industries. The oxide film is highly flexible, suitable for all windings of any size and shape of coil (magnetic). Briefly touched upon are the ultraviolet, proton gamma radiation uses, as well as high vacuum and cryogenic applications. Since the film is inorganic and chemically inert, it does not age or deteriorate in storage and has good dielectric properties (1000 volts per mil). B.W.

COMPONENT OUTAGE DATA ANALYSIS METHODS. VOLUME 1: OVERVIEW AND SPECIAL APPLICATIONS Final Report
J. A. Marshall, M. Mazumdar, and D. A. McCutchan Aug. 1981 219 p refs Sponsored by Electric Power Research Institute 2 Vol.
(EPRI Proj. 1468-1)
(DE81-904214; EPRI-EL-1980-Vol-1) Avail: NTIS HC A10/MF A01

Methods for improving the quality of outage statistics for power equipment are addressed. Statistical techniques were evaluated and applied to utility outage data to illustrate their use. Fitting distributions is discussed for interval estimation and verifying models of equipment failure and repair. Precision is gained by pooling data across similar experience/equipment categories; methods are demonstrated for testing data samples to be pooled. Similarly, use of regression analysis to uncover relationships and integrate information from dissimilar samples is illustrated. Errors in modeling equipment performance, e.g., neglecting dependences, are discussed and model verification by simulation is shown to be a powerful tool. Emphasis is given to infrequent events and small data samples; Bayesian analysis and model simplification (reducing the number of parameters estimated) are examined as remedies to data sparsity. DOE

PERFORMANCE AND COST ANALYSIS OF LARGE CAPACITOR BANKS USING WEIBULL STATISTICS AND MTBF
B. T. Merritt and K. Whitham 1 Jun. 1981 5 p refs Presented at the 3rd IEEE Intern. Pulsed Power Conf. Albuquerque, N. Mex., 1-3 Jun. 1981
(Contract W-7405-eng-48)
(DE81-024364; UCRL-85723; CONF-810659-21) Avail: NTIS HC A02/MF A01

Inertial confinement fusion projects have required increasingly larger capacitor banks. As bank size has increased, the need for high energy density capacitors has become apparent. Higher energy densities are achieved by increasing the dielectric stress while reducing life. Acceptable capacitor life is based on system mean time between failure (MTBF) for Nova, a 100 shot MTBF was deemed to be minimum. For a large population of capacitors, as in Nova, statistical analysis is required to evaluate system performance. The tradeoff between capacitor life and energy density can be characterized via Weibull statistics. A method of calculating capacitor bank reliability and capacitor bank costs based on Weibull statistics is given herein. DOE

HIGH VOLTAGE, MAGNETICALLY SWITCHED PULSED POWER SYSTEMS

J. P. VanDevender and R. A. Reber 1981 12 p refs Presented at the 3rd IEEE Intern. Pulsed Power Conf., Albuquerque, N.Mex., 1 Jun. 1981
(Contract DE-AC04-76DP-00789)
(DE81-026290; SAND-81-0754C; CONF-810659-28) Avail: NTIS HC A02/MF A01

The principles of magnetic switching are briefly described. Experiments on material properties and their relation to switch performance, risetime limitations, and core insulation are described. Magnetic switching is evaluated from a system perspective. An idealized pulse power system with 200 kJ or stored energy and a 40 ns output pulse is examined. The multi-megavolt electrical insulation requirements impose limitations on the switches. The cost of the magnetically switched system exceeds the cost of the conventional superpower generator system by up to 75%. The potential for reliability, reproducibility, and repetitive pulse capability must be evaluated for each application to offset the increased cost. DOE

CONTROL OF THE MINORITY CARRIER LIFETIME OF SILICON DEVICES USING ELECTRON IRRADIATION Final Report, Jul. 1980

Edgar Borchet, Joachim Dziewior, Dieter Silber, and Alois Sonntag Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 94 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-037; ISSN-0340-7608) Avail: NTIS
HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19.80

The turn off time (tq) of thyristors was lowered approximately 50% by electron irradiation of local sites on the devices. The on state voltage (VT) and the blocking characteristics (VR, VD) are not degraded whereas the turn-on power loss increases. Decreasing the lifetime in silicon power devices by high energy electron irradiation (12 and 15 MeV) of the total device area gives better data trade-off (VT - tq - VR, VD) as compared with gold diffusion. The thermal stability of the radiation induced recombination centers is, however, relatively low when the devices are annealed at 200 C for periods of 100 to 1000 hr. Author (ESA)

HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 16

Electron beam irradiation technology, applied for modeling of electrical semiconductor device parameters, was investigated, especially for producing fast switching devices with high blocking capability. Applicability of this method to local carrier lifetime adjustment was also studied. For adjusting the switching times of semiconductor devices, electron beam irradiation surpasses gold diffusion considerably as far as expenditure, accuracy and reproducibility are concerned. The ratio of on-state voltage to turn-off time which is inferior in comparison to gold diffusion be improved by adapting the device dimensions carrier lifetime was proved. Equipment and methods for series production were developed and tested with pilot production quantities. The basis for introducing this technology into production is now available. Author (ESA)

CHARACTERIZATION OF GaAs SUPERHIGH FREQUENCY FIELD EFFECT POWER TRANSISTORS IN THE NONLINEAR MODE Ph.D. Thesis [CARACTERISATION DES TRANSISTORS A EFFET DE CHAMP GAAS HYPERFREQUENCE DE PUISSANCE EN REGIME NON LINEAIRE]
Michel Goudelis May 1981 234 p refs In FRENCH
(ENST-E-81001) Avail: NTIS HC A11/MF A01

Different characterization methods for FET's are examined. Taking the variation of large signal parameters and a small signal model, equivalent circuit elements which have nonlinear behavior are sought while the variation in these elements is linked with voltage variations at their terminals. This modeling is independent of the test frequency and the impedances of the component. The mechanism of nonlinearity in FET's is explained. Simulation results show the utility of this model in broadband amplifier design. Author (ESA)

The use of plane wave spectra for the representation of fields in space and the consideration of antenna-antenna (and antenna-scatterer) interactions at arbitrary separation distances are discussed. The plane wave representation is eminently suitable for this purpose as well as for the expression of conventional asymptotic quantities of antenna theory, such as power gain, effective area, and polarization. The primary objective is to facilitate the critical acceptance and proper application of antenna and field measurements techniques deriving more or less directly from the plane wave scattering matrix theory of antennas and antenna interactions. A secondary objective is to present some recent and some new theoretical results based on this theory. GRA

RELATIONS FOR THE THERMODYNAMIC AND TRANSPORT PROPERTIES IN THE TESTING ENVIRONMENT OF THE LANGLEY HYPERSONIC CF4 TUNNEL
Kenneth Sutton Oct. 1981 40 p refs
(NASA-TM-83220) Avail: NTIS HC A03/MF A01 CSCL 20D

Thermodynamic and transport properties of gaseous CF4 that can be used in flow field computer codes and theoretical analyses for comparison of results with experimental data from the Langley Hypersonic CF4 Tunnel are presented. The thermodynamic relations which are based on thermally perfect but calorifically imperfect gas are adequate for the testing environment of the CF4 tunnel and are simpler to use than the imperfect gas relations required to define the complete expansion from the tunnel reservoir. Relations for the transport properties are based on the kinetic theory of gases in which published experimental data are used in the derivation of the relations. Extensive experimental data were located for viscosity and the derived relation should provide values for viscosity with errors of less than 1 percent. The experimental data for thermal conductivity were limited with significant disagreement between the various sources. The derived relation will probably provide values for the thermal conductivity with errors of no more than 5 percent which is within the accuracy of the experimental data. M.D.K.

INVESTIGATIONS OF FLOWFIELDS FOUND IN TYPICAL COMBUSTOR GEOMETRIES Semiannual Status Report, 1 Jan. - 31 Jul. 1981
D. G. Lilley and D. K. McLaughlin (Dynamics Technology, Inc., Torrance, Calif.) 31 Jul. 1981 243 p refs
(Grant NAG3-74)
(NASA-CR-165061; SASR-2) Avail: NTIS HC A11/MF A01 CSCL 20D

The flowfields of gas turbine combustion chambers were investigated. Six flowfield configurations with sidewall angles alpha = 90 and 45 deg. and swirl vane angles phi = 0, 45 and 70 deg. are characterized. Photography of neutrally-buoyant helium-filled soap bubbles, tufts, and injected smoke helps to characterize the time-mean streamlines, recirculation zones and regions of highly turbulent flow. Five-hole pitot probe pressure measurements allow the determination of time-mean velocities u, v and w. An advanced computer code equipped with a standard two-equation kappa-epsilon turbulence model was used to predict corresponding flow situations and to compare results with the experimental data. INFLUENCE OF PRECURSOR HEATING ON VISCOUS FLOW AROUND A JOVIAN ENTRY BODY Final Report, 1 Jan. - 31 Dec. 1977
S. N. Tiwari and K. Y. Szema Washington, D.C. NASA Oct. 1979 145 p refs
(Contract NAS1-14193-27)
(NASA-CR-3174) Avail: NTIS HC A07/MF A01 CSCL 20D

The influence of changes in precursor region flow properties (resulting from the absorption of radiation from the shock layer) on the entire shock layer flow phenomena was investigated. The axially symmetric case is considered for both the preheating zone (precursor region) and shock layer. The flow in the shock layer is assumed to be viscous with chemical equilibrium but radiative nonequilibrium. Realistic thermophysical and spectral models are employed, and results are obtained by implicit finite difference and iterative procedures. The results indicate that precursor heating increases the radiative heating of the body by a maximum of 7.5 percent for 116 km entry conditions. Author

GENERALIZED VARIATIONAL PRINCIPLES, VARIATIONAL PRINCIPLES AND DUAL EXTREMUM PRINCIPLES OF GASDYNAMICS FOR THE DIRECT PROBLEM OF TURBOMACHINE AIRFOIL CASCADES ON AN ARBITRARY STREAM SHEET OF REVOLUTION
Liu Gao-Lian *In its* Acta Mechanica Sinica (Selected Articles), No. 4, 1980 (FTDID(RS)T07078-81) 29 Oct. 1981 p 1-22 refs Transl. into ENGLISH from Acta Mechanica Sinica (China), no. 4, 1979 Presented at the Natl. Experience Exchange Meeting in the Thermodyn. Calculation, Design and Expt. of the Aerodyn. of Turbomachines (For primary document see N82-15362 06-34)
Avail: NTIS HC A04/MF A01 CSCL 20/4

Variational principles are derived for the direct aerodynamic problem of channels and airfoil cascades (with prescribed distributed mass injection and/or suction along the profile contours for blade cooling or boundary layer control) on an arbitrary stream sheet of revolution in order to provide a rigorous and sound theoretical basis for introducing and applying the finite element method to computational aerodynamics of turbomachine airfoils. Three generalized variational principles are developed and from them three families of variational principles are derived by means of successive transformations. A pair of dual extremum principles are shown to exist for homoentropic subsonic flows. In order to simplify the numerical treatment of various boundary conditions characterizing the complexity of the cascade problem all boundary conditions are converted to natural ones. J.M.S.

CALCULATION OF UNSTARTED-CHOKED REGIME OF SUPERSONIC AND TRANSONIC COMPRESSOR CASCADES
Cheng Jia-gang *In its* Acta Mechanica Sinica (Selected Articles), No. 4, 1980 (FTD-ID(RS)T-0707-81) 29 Oct. 1981 p 23-39 refs Transl. into ENGLISH from Acta Mechanica Sinica (China), no. 4, 1979 (For primary document see N82-15362 06-34)
Avail: NTIS HC A04/MF A01 CSCL 20/4

Unstarted-choked regime of supersonic and transonic cascade, is studied. A semiempirical method is given which allows for calculating operating incidence of this regime. This method also gives useful results under the condition of downstream throttle, or at various axial velocity density ratio. Other performance parameters such as total pressure loss, pressure ratio and low deviation angle may be obtained simultaneously. The calculating results obtained show this method is reliable. Because this method is simple and convenient, it may be adopted to analyze the aerodynamic performance of cascades and the influence of geometric parameters and dynamic parameters on cascade performance. THE NUMERICAL COMPUTATION FOR DIFFRACTION AND REFLECTION OF A TRAVELING SHOCK WAVE FROM AN OPEN END OF A SHOCK-TUBE
Du Xun, Wei Zhong-lei, Li Wen-xuan, and Wang Jia-jun *In its* Acta Mechanica Sinica (Selected Articles), No. 4, 1980 (FTD-ID(RS)T0707-81) 29 Oct. 1981 p 40-56 refs Transl. into ENGLISH from Acta Mechanica Sinica (China), no. 4, 1979 (For primary document see N82-15362 06-34)
Avail: NTIS HC A04/MF A01 CSCL 20/4

When a shock wave travels from an open end of shock-tubes an over-pressure field is induced and wave diagrams of shock diffraction and reflection form immediately. In general the outflow problem can be computed by solving the unsteady two dimensional gasdynamic equations. This problem is computed numerically, using Eulerian coordinates, fictitious viscosity, and finite difference method. In order to decide the boundary conditions for computation at the end of tube, analytical solution for the unsteady one dimensional flow in a shock-tube, and then the variations of the velocity, pressure and density of the flow at the open end of the tube with time. The present numerical results are in agreement with the experiments. J.M.S.

LIGHTWEIGHT MOVING RADIATORS FOR HEAT REJECTION IN SPACE Final Report
Karl Knapp 10 Nov. 1981 50 p refs
(Contract NAS8-34191)
(NASA-CR-161943; ARC-TN-1107) Avail: NTIS HC A03/MF A01 CSCL 20D

Low temperature droplet stream radiators, using nonmetallic fluids, can be used to radiate large amounts of waste heat from large space facilities. Moving belt radiators are suitable for use on a smaller scale, radiating as few as 10 kW from shuttle related operations. If appropriate seal technology can be developed, moving belt radiators may prove to be important for high temperature systems as well. Droplet stream radiators suitable for operation at peak temperatures near 300 K and 1000 K were studied using both freezing and nonfreezing droplets. Moving belt radiators were also investigated for operation in both temperature ranges. The potential mass and performance characteristics of both concepts were estimated on the basis of parametric variations of analytical point designs. These analyses included all consideration of the equipment required to operate the moving radiator system and take into account the mass of fluid lost by evaporation during mission lifetimes. Preliminary results indicate that low temperature droplet stream radiator appears to offer the greatest potential for improvement over conventional flat plate radiators. A.R.H.

The behavior of a rotary heat exchanger was analyzed with special regard to heat and mass transfer. Parallel to measurements at such a rotary heat exchanger with non-absorbant matrix a mathematic model was developed to simulate the heat and mass transfer. The correlation of experimental and theoretical results shows that the experimental data can be calculated by the mathematical model within an accuracy which is usual for calculating heat and mass transfer. Within a variation of several parameters for the working medium (humid air) the influences of operating conditions on the exchange characteristic of regenerative heat exchangers with rotating matrix were examined. A study of parameters with the working medium flue-gas, which was thought as a possible application of the mathematic model, confirms the results which were found with the working medium humid air. This report documents a demonstration calculation performed to evaluate the three dimensional Eulerian/Lagrangian linked hydrocode developed under this contract. The calculation consists of a staballoy rod impacting an armor plate at obliquity 65 degrees and velocity 1 km/sec. Calculational results compared favorably with experimental data. The linked calculation was completed with the use of about nine total CDC 7600 computer hours as compared to the estimated 25 hours if the calculation had been run with only the Eulerian code. DEVELOPMENT AND ADAPTATION OF CONDUCTION AND RADIATION HEAT-TRANSFER COMPUTER CODES FOR THE CFTL
J. C. Conklin Aug. 1981 39 p refs
(Contract W-7405-eng-26)
(DE81-028033; ORNL/TM-7854) Avail: NTIS HC A03/MF A01

RODCON and HOTTEL are two computational methods used to calculate thermal and radiation heat transfer for the Core Flow Test Loop (CFTL) analysis efforts. RODCON was developed at ORNL to calculate the internal temperature distribution of the fuel rod simulator (FRS) for the CFTL. RODCON solves the time-dependent heat transfer equation in two dimensional (R angle) cylindrical coordinates at an axial plane with user-specified radial material zones and time- and position-variant surface conditions at the FRS periphery. HOTTEL is a revision of an algorithm developed by C.B. Baxi at the General Atomic Company to be used in calculating radiation heat transfer in a rod bundle enclosed in a hexagonal duct. HOTTEL uses geometric view factors, surface emissivities, and surface areas to calculate the gray-body or composite view factors in an enclosure having multiple reflections in a nonparticipating medium. RAMAN-SCATTERING GAS TEMPERATURE MEASUREMENTS IN PARTICLE-LADEN FLOWS
W. L. Flower Jul. 1981 21 p refs Presented at the Symp. on Instrumentation and Control for Fossil Energy Processes, San Francisco, 8 Jun. 1981
(Contract DE-AC04-76DP-00789)
(DE81-029621; SAND-81-8608; CONF-810607-13) Avail: NTIS HC A02/MF A01

The feasibility of making time-averaged Raman-scattering temperature measurements in highly luminous flows was investigated in tests on the Sandia Atmospheric Combustor Exhaust Simulator facility. The diluted exhaust stream from a methane-burning combustor was seeded with 5 micrometer diameter fly ash particles. Test temperatures ranged from 900 K to 1450 K at particle densities up to 6000 particles/cc. A pulsed argon-ion probe laser and a gated detection system for enhancement of signal-to-background ratio were used. Scans of the Stokes Q-branch vibrational Raman spectrum of nitrogen were fit by calculated spectra to determine temperature. The Raman-scattered signal was small but measurable in all cases. There was no apparent laser-induced interference from either fluorescence or particle incandescence. Good agreement between Raman-scattering temperature measurements and radiation corrected thermocouple measurements was obtained. DOE

TIME-RESOLVED WAVE PROFILE MEASUREMENTS IN COPPER TO MEGABAR PRESSURES
L. C. Chhabildas and J. R. Asay 1981 7 p refs Presented at the 8th AIRAPT Conf. and 19th EHPRG Conf., Uppsala, 17 Aug. 1981
(Contract DE-AC04-76DP-00789)
(DE81-026109; SAND-81-1358C) Avail: NTIS HC A02/MF A01

Time-resolved measurements of copper at shock induced high pressures and temperatures are used to illustrate the capability of using such techniques to investigate high pressure strength. Continuous shock loading and release wave profiles were made to 93 GPa using veocity interferometric techniques. Fine structure in the release wave profiles from the shocked state indicates an increase in shear strength of copper to 1.5 GPa at 93 GPa from its ambient value of 0.08 GPa. DOE

ANALYSIS OF COLUMN TRACER EXPERIMENTS BY A STOCHASTIC-CONVECTIVE TRANSPORT METHOD

C. S. Simmons Apr. 1981 30 p Presented at the AGU Champman Conf. on Spatial Variability in Hydrologic Modeling, Fort Collins, Colo., 21-23 Jul. 1981
(Contract DE-AC06-76RL-01830)
(DE81-030088; PNL-SA-9478; CONF-810761-1) Avail: NTIS HC A03/MF A01

A stochastic-convective transport formulation for describing solute transport in porous media, and based upon solute travel time probability is presented. It is shown to include Fickian transport as a special subcase. It is further demonstrated that a travel time probability associated with a log-normal distribution of hydraulic conductivity will yield concentration breakthrough curves nearly equivalent to Fickian transport when the coefficient of variation in travel time is < or = 1. Laboratory measured hydrodynamic dispersion may be ascribed to local variations in hydraulic conductivity. The travel time formulation is shown to provide a direct link between measured dispersivity and the autocovariance of local flow velocity variation. Dispersivity is shown to manifest a scale effect by increasing in proportion to the length of a system when the velocity correlation range is greater than the length. Chemical absorption effects are described by simply scaling the travel time probability with a retardation factor. DOE

HEAT TRANSPORT AND CONDUCTION LAYERS IN GRAVITY-ASSISTED HEAT PIPES Ph.D. Thesis [WAERMEUEBERTRAGUNG UND LEISTUNGSGRENZEN IN SCHWERKRAFTUNTERSTUETZTEN WAERMEROHREN]

Hung Nguyen-Chi Feb. 1980 141 p refs In GERMAN; ENGLISH summary
(IKE-5-212; ISSN-0173-6892) Avail: NTIS HC A07/MF A01

The steady state performance and the limiting heat transport capability of gravity-assisted screen-wicked heat pipes with a liquid overfill are discussed in the present work. A semi-empirical correlation between the maximum heat flux density, or maximum heat transport rate, and various influence parameters, viz. tilt angle, fill charge, number of screen mesh layers, screen mesh size, operating temperature, heat pipe diameter and evaporator length, is derived. Moreover, the heat transfer phenomenon within the heat pipe as well as the effect of the screen structure on the bubble growth process is thoroughly investigated. Finally, the work confirms the complexity of the influence of screen mesh size and of the multiple-layer screen mesh configuration on the wall superheat required for the nucleation of the first bubbles, on the capillary force and on the wick porosity. CALCULATION OF THREE-DIMENSIONAL INSTABILITY MODES IN A BLASIUS BOUNDARY LAYER

Chen Mao-Zhang (Peking Inst. of Aeronautics and Astronautics) and P. Bradshaw May 1981 33 p refs Sponsored in part by Government of the People's Republic of China
(IC-Aero-81-01; ISSN-0308-7247) Avail: NTIS HC A03/MF A01

Transition from laminar to turbulent flow was investigated computationally for downstream flow. Wortmann's qualitative model which is a three dimensional structure composed of the basic flow and longitudinal counterrotating, overlapping vortex sheets inclined downstream was tested. The relation between eigenvalues for two dimensional and three dimensional disturbances was established. Numerical calculations of the spanwise component of the fluctuating velocity agree fairly well with Wortmann's measurements and substantiate the model.

EXPERIMENTAL INVESTIGATION OF THE INFLUENCE OF THE CASING GEOMETRY UPON THE FLOW CONDITIONS AND THE NOISE OF A CENTRIFUGAL FAN Ph.D. Thesis - Technischen Univ.,

Teofani Gikadi Feb. 1981 137 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-736)
(DFVLR-FB-81-20; ESA-TT-736) Avail: NTIS HC A07/MF A01; DFVLR, Cologne DM 23.30

Beginning with a casingless impeller with six backward curved blades, the influence of a small logarithmic volute casing with a cut-off clearance of delta r/R = 0.014 (R = impeller radius) upon the flow through the rotating impeller ducts was studied. It is found that there is a blockage of the flow in each impeller duct when passing the cut-off due to the small cut-off clearance. An optimization of the casing geometry regarding low noise and high fan efficiency lead to a logarithmic spiral with a large out-off clearance of delta r/R = 0.3. The noise was reduced by 22 dB without loss in fan efficiency. T.M.

FORMATION AND SPREADING OF EXPLOSIVE AND TOXIC GAS CLOUDS. A STUDY OF THE LITERATURE

Kenneth Nyren, Stellan Winter, Ola Hertzberg, and Edvard Karlsson Oct. 1981 98 p refs In SWEDISH; ENGLISH summary
(FOA-C-40141-C1) Avail: NTIS HC A05/MF A01

The outflow and aerosol formation at a leakage of pressurized condensed gas, gravity dispersion and the influence of the terrain on heavy gas, are emphasized. It is shown that gas escape, aerosol formation and dispersion of heavy gas on a plane surface are treated considerably more in international literature than the influence of the terrain on the behavior of a heavy gas. Models for calculating discharge and dispersion of heavy gas exist in several countries. Those models demand considerable background knowledge to be applied and recommendations are given how to plan the model work. T.M.

A method and device for measuring Faraday rotation of a received RF signal is described. A simultaneous orthogonal polarization receiver compensates for a 3 db loss due to splitting of a received signal into left circular and right circular polarization channels. The compensation is achieved by RF and modulation arraying utilizing a specific receiver array which also detects and measures Faraday rotation in the presence or absence of spin stabilization effects on a linear polarization vector. Either up-link or down-link measurement of Faraday rotation is possible. Specifically, the Faraday measurement apparatus utilized in conjunction with the specific receiver array provides a means for comparing the phase of a reference signal in the receiver array to the phase of a tracking loop signal related to the incoming signal, and comparing the phase of the reference signal to the phase of the tracking signal shifted in phase by 90 degrees. The averaged and unaveraged signals, are compared, the phase changes between the two signals being related to Faraday rotation.

(Ser-C-262; ISSN-0065-5325; ISBN-3-7696-9314-0)
Copyright. Avail: Issuing Activity

Single aerial photographs were empirically-statistically investigated, with emphasis on the stochastic aspects of the picture, for basic research into photogrammetric point determination. By making use of two series of wide angle and superwide angle shots and empirical-statistical analyses, the variance and covariance characteristics of the picture coordinates inside the picture and between different pictures were investigated for a sample of 5000 points. The results lead to answers for existing questions about the functional, and especially the stochastic, photogrammetric point determination model, and also to a better foundation for aerotriangulation. DESCRIPTION AND DISCUSSION OF THE NRL TGDCC

W. A. Hoppel and T. A. Wojciechowki *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 14-16 refs (For primary document see N82-15383 06-35)

Avail: NTIS HC A13/MF A01 CSCL 14B

The NRL thermal gradient diffusion cloud chamber (TGDCC) consists of two plates 7.5 cm in diameter separated by 1.25 cm and covered with saturated filter paper. The cylindrical wall separating the plates is glass. The top plate is at room temperature and the bottom plate is cooled with a thermoelectric cooler. The temperature difference is measured with several sets of thermocouples. The CCN concentration was determined from the video recording. This procedure of averaging the maximum count obtained on several successive recordings at the same supersaturation results in concentrations which are somewhat higher than concentrations calculated from an average across the plateau. T.M.

THE CCN COUNTER OF THE IOPG OF PUY DE DOME: MAIN CHARACTERISICS AND RESULTS OF MEASUREMENTS

Roger Serpolay *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 17-19 (For primary document see N82-15383 06-35)

Avail: NTIS HC A13/MF A01 CSCL 14B

In performing the data analysis of the measurements achieved during the Workshop with the device, a global approach was preferred rather than an individual analysis, in order to illustrate some main characteristics in the behavior of the device with respect to a mean behavior resulting from a general survey of all the equipments involved in each experiment. The device tends generally to overestimate the CCN concentrations measured near the high supersaturations and sometimes underestimates the concentrations close to 0.1% or 0.2% of supersaturation. Despite the fact that it belongs to a type of static diffusion chamber, it shows, however, similar spectra to those obtained with other types of chambers (continuous flow diffusion chamber and haze chamber). UMR DUAL MODE CCN COUNTER (MODES: CFD PLUS HAZE)

D. J. Alofs and M. B. Trueblood *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 20-22 refs (For primary document see N82-15383 06-35)

(Grant NSF ATM-79-24326)

Avail: NTIS HC A13/MF A01 CSCL 14B

The chamber consists of two vertical plates 100 cm long in the vertical direction and 13 cm wide, with a 0.8 cm spacing between the plates. The haze mode is used for the nuclei active at supersaturations (S) from 0.0133 to 0.173%. In this mode the two plates are kept at the same temperature (25 C). In the CFD mode the supersaturation is determined by the temperature difference between the two plates. About 40 minutes is required to obtain a spectrum (5 values of S in the CFD mode, plus 7 values of S in the haze mode). About half of this time is used to adjust the temperatures and flows; the rest is used in actual counting of the nuclei. Comparisons of the counter to other types of counters are reported. T.M.

A CLOUD CONDENSATION NUCLEUS SPECTROMETER DESIGNED FOR AIRBORNE MEASUREMENTS

Lawrence F. Radke, Stephen K. Domonkos, and Peter V. Hobbs *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 23-25 refs (For primary document see N82-15383 06-35)
(Contract NAS8-33148)
Avail: NTIS HC A13/MF A01 CSCL 14B

The spectrometer is a simple extension of the continuous flow diffusion chamber (CFDC) operated in the vertical mode. The principal new design features of the instrument are its rapid time response and ability to rapidly measure the CCN activity spectrum. The activity spectrum of CCN in an air sample is measured by simultaneously operating the spectrometer at four supersaturations. The CCN spectrometer consists of four essentially independent CFDC's in a parallel array. Each CFDC is 61 cm long, 10 cm wide, and consists of two vertical parallel plates 1 cm apart, maintained at different temperatures. Each CFDC has a single particle optical counter located at the center of its base. T.M.

AN AIRBORNE ISOTHERMAL HAZE CHAMBER

Edward E. Hindman *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 28-32 refs (For primary document see N82-15383 06-35)
(Contract N00014-79-C-0793)
Avail: NTIS HC A13/MF A01 CSCL 14B

Thermal gradient diffusion cloud chambers (TGDCC) are used to determine the concentrations of cloud condensation nuclei (CCN) with critical supersaturations greater than or equal to about 0.2%. The CCN concentrations measured with the airborne IHC were lower than theoretically predicted by factors ranging between 7.9 and 9.0. The CCN concentrations measured with the airborne IHC were lower than the concentrations measured with the larger laboratory IHC's by factors ranging between 3.9 and 7.5. The bounds of the supersaturation ranges of the airborne IHC and the CSU-Mee TGDCC do not overlap. Nevertheless, the slopes of the interpolated data between the bounds agree favorably with the theoretical slopes. T.M.

A DESCRIPTION OF THE UK METEOROLOGICAL OFFICE CCN COUNTER

M. Kitchen and E. Stirland *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 33-34 (For primary document see N82-15383 06-35)
Avail: NTIS HC A13/MF A01 CSCL 14B

The chamber is a thermal gradient diffusion type with the upper plate at room temperature and the lower plate thermoelectrically cooled. The light from a 25W projector bulb is focused in a beam of approximations 1x3 mm in the central part of the chamber. The light scattered by drops is viewed in the forward direction (40 deg) by a microscope and a sensitive photodetector. Experiments were performed to relate the peak output from the photocell with the maximum number of drops in the beam recorded photographically. The microscope is used to check the calibration at low concentrations of CCN. The results of the experiments and the performance of the counter are reported. T.M.

CLOUD CONDENSATION NUCLEUS COUNTER BY IMPACTOR SAMPLING TECHNIQUE

Takeshi Ohtake *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 35-36 ref (For primary document see N82-15383 06-35)
Avail: NTIS HC A13/MF A01 CSCL 14B

Unlike typical CCN counters, this device counts the numbers of water droplets condensed on aerosol particles sampled on a microcover glass at various different relative humidities. The relative humidities ranged from 75 percent to a calculated value of 110 percent. A schematic of the apparatus is shown. The individual CCN can be identified in an optical micrograph and scanning electron micrograph and may be inspected for their chemical composition later. T.M.

N82-15393*# York Univ., Downsview (Ontario).

DIFFUSION TUBE

R. Leaitch and W. J. Megaw *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 37-39 (For primary document see N82-15383 06-35)
Avail: NTIS HC A13/MF A01 CSCL 14B

The diffusion tube was designed to operate below about 0.25 percent of water supersaturation. It is simply a long tube lined on the inside with a damp chamois cloth, and heated isothermally to a few degrees centigrade above the incoming air. The diffusion coefficient for water vapor is slightly larger than that for heat, making it possible to supersaturate the airflow. This is the same principle by which transient supersaturations may occur in parallel plate cloud chambers. Only the diffusion of vapor and heat from the walls into the moving air are considered. T.M.

AN AUTOMATIC LIGHT SCATTERING CCN COUNTER

G. Garland Lala *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 40-41 ref (For primary document see N82-15383 06-35)
Avail: NTIS HC A13/MF A01 CSCL 14B

The counter is a static thermal diffusion chamber which has been modified to include an optical system for the determination of droplet concentration by the measurement of scattered light. The determination of concentration is made by measurement of the peak scattered light signal from the cloud of growing droplets which is a function of both the droplet concentration and chamber supersaturation. Because the formation of the peak is related to the rate of growth of the droplets and sedimentation, both of which are determined by supersaturation, the system calibration can be uniquely determined by comparison with an absolute counter such as a static diffusion chamber with a photographic recording system. T.M.

DESCRIPTION OF THE NRL ISOTHERMAL HAZE CHAMBER

William A. Hoppel *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 42-43 ref Sponsored in part by the Naval Air Systems Command (For primary document see N82-15383 06-35)
Avail: NTIS HC A13/MF A01 CSCL 14B

In the IHC the critical supersaturation is inferred from the measurement of the size of particles which have grown to their equilibrium size at exactly 100 percent RH. The largest size channel corresponds to a critical supersaturation of 0.014 percent. The growth time required for particles of this size to reach their equilibrium size exceeds the 110 second residence time in the IHC. Since the supersaturation spectrum is always very steep in this region, the contribution of these larger particles which have not yet attained their equilibrium size to smaller size channels is negligible. However, failure of these particles to reach their equilibrium size could result in a significant lowering of the count in the size channel corresponding to the smaller critical supersaturation. T.M.

MODIFIED MEE INDUSTRIES STATIC THERMAL GRADIENT DIFFUSION CLOUD CHAMBER

Randolph D. Borys *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 44-45 (For primary document see N82-15383 06-35)
Avail: NTIS HC A13/MF A01 CSCL 14B

The experiments performed at the Workshop were undertaken to confirm the calculated sample volume, determine the usable range of supersaturation, and minimum detectable size. Comparison of absolute CCN concentrations with other state-of-the-art continuous flow diffusion chambers at supersaturations near 1 percent indicated that the volume used produced CCN concentrations well within the range of CCN concentrations determined at the workshop. This agreement is interpreted to mean the sample volume was correct. Direct measurements of the beam geometry done in the laboratory indicated a factor of 4-5 error. This error is apparently due to the larger apparent visible beam diameter versus the actual usable beam diameter given the droplet illumination, chamber optical geometry, microscope optics and film characteristics. T.M.

STEADY GENERATION OF AEROSOLS WITH AN IMPROVED CONSTANT OUTPUT ATOMIZER

Jack Y. Das and Ulrich Katz *In its* The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 54-56 ref (For primary document see N82-15383 06-35)
(Contract NAS8-33820; Grant NSF ATM-79-21558)
Avail: NTIS HC A13/MF A01 CSCL 14B

It is common practice to generate laboratory aerosols of soluble materials with pneumatic atomizers. In a typical device, a solution of the substance to be aerosolized is injected into a jet of air and the liquid is broken up into very small droplets. After forced evaporation, a dry aerosol of the solute is produced. A number of commercially available devices were tested, and despite differences in design, all the atomizers tested suffered from short- and/or long-term fluctuations of their output particle number concentrations. The mechanisms responsible for atomizer instabilities are discussed and methods for alleviating these problems are considered. T.M.

CCN COMPARISONS OF STATIC DIFFUSION CHAMBERS

James E. Jiusto, R. E. Ruskin (Naval Research Lab.), and A. Gagin (Hebrew Univ.) *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 57-63 refs (For primary document see N82-15383 06-35)
Avail: NTIS HC A13/MF A01 CSCL 14B

Nine CCN counters of the static diffusion (SDC) type were compared with one another and with continuous flow diffusion (CFD) chambers. The nine SDCs showed a considerable amount of variation, largely attributable to newness and/or lack of prior calibration of some units. The five more consistent instruments agreed quite well, to within at least 20 percent of the NRL mobility analyzer and to within 10 percent at 1 percent supersaturation. There was satisfactory agreement between the more reliable SDC and CFD chambers. Author

CCN-SUPERSATURATION SPECTRA SLOPES (K)

James E. Jiusto and G. Garland Lala *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 64-68 refs (For primary document see N82-15383 06-35)
(Contract DAAG29-81-K-0019; Grant NSF ATM-76-24048-02)
Avail: NTIS HC A13/MF A01 CSCL 14B

Theoretically the slope k of a CCN-supersaturation spectrum should equal two thirds of the slope of the total (soluble) aerosol size distribution. Workshop results tended to verify this relation. The k values are markedly different depending on whether one is measuring ambient CCN concentrations at supersaturations S above or below approximately 0.1-0.2%. The larger k values for S approximately < 0.1% is consistent with the greater decrease in large particle concentration with increasing size. It is concluded that over the S range of 0.02% to 2%, two power fits (and k values) may sometimes suffice for a reasonable approximation of the CCN distribution. At other times, and with laboratory generated aeosols, such an approach is inadequate and requires refinement. T.M.

AEROSOL GENERATION AND DISTRIBUTION SYSTEM FOR THE THIRD INTERNATIONAL CLOUD CONDENSATION NUCLEI WORKSHOP
Ulrich Katz and Jack Y. Das *In its* Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 93-96 refs (For primary document see N82-15383 06-35)
(Contract NAS8-33820; Grant NSF ATM-79-21558)
Avail: NTIS HC A13/MF A01 CSCL 14B

In order to obtain identical samples participating CCN instruments and aerosol characterizing equipment were located along and connected to a 8.2 cm diameter aluminum tube through which the test aerosols were pumped directly from the source at very slight overpressure. Of the total of 29 experiments, 18 were carried out with artificial NaCl or (NH4)2SO4 aerosols. These were generated from salt solutions by pneumatic atomizers of special design to ensure high constancy of the aerosol output concentration. In three experiments with insoluble CCN (AgI, paraffin wax) the aerosols were generated thermally. In some of the tests, an electrostatic classifier was used for narrowing the particle size distributions. T.M.

ELEMENTAL COMPOSITION OF AEROSOLS IN FOURTEEN EXPERIMENTS OF THE CLOUD CONDENSATION NUCLEI WORKSHOP
William H. Mach and Richard R. Hucek *In* Desert Research Inst. The Third Intern. Cloud Condensation Nuclei Workshop Nov. 1981 p 97-98 refs (For primary document see N82-15383 06-35)
(Contract NAS8-33820; Grant NSF ATM-79-21558)
Avail: NTIS HC A13/MF A01 CSCL 14B

Aeosols were collected with two Ci impactors and analyzed with proton induced X-ray emission (PIXE) for chemical composition and to detect if contamination was present. One of the impactors sampled the generated aerosols; the other impactor sampled droplets from a diffusion cloud chamber. The purpose of the experiments was to test the feasibility of a study of the transfer of chemical elements from the fine particle sizes to the coarse particle sizes, after CCN are activated and cloud droplets are formed. The data indicated that sulfur-containing aerosols did exhibit the expected transfer. T.M.

ADVANCED MICROWAVE MOISTURE SOUNDER (AMMS) FOR WB-57F CCOPE MISSION Final Technical Report, 3 Apr. - 31 Oct. 1981
J. A. Gagliano and J. J. McSheehy Oct. 1981 48 p refs
(Contract NAS5-26528)
(NASA-CR-166752; A-2904) Avail: NTIS HC A03/MF A01 CSCL 14B

The AMMS, flown on the WB-57F Cooperative Convective Precipitation Experiment (CCOPE), collected data at three bands on either side of the 183.3 GHz water vapor line at + or - 2.25, + or - 5.00, and + or - 8.75 GHz. Data were also collected simultaneously at a single low-loss atmospheric window channel near 94 GHz. The AMMS scanner imaged the scene below the WB-57F over an angular range of + or - 45 degree about nadir with beam-widths of 2 degree and 1 degree for the 94 GHz and 183 GHz sensors, respectively. The radiometer system operated under control of the onboard microcomputer used to: store radiometric data on the AMMS flight recorder, operate the stepper motor driven scanner, and collect pertinent housekeeping data for the system. A portable ground support system was used following each CCOPE flight to provide quick-look data analysis. The CCOPE flight logs and tape of the AMMS data were delivered to NASA. A.R.H.

DEVELOPMENT OF A PROTOTYPE OF A TEST APPARATUS FOR THE DETERMINATION OF THE THERMAL CONDUCTIVITY IN SOLIDS, ON POWDERS AND FOAMS Final Report
Karl Bayreuther Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 49 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-052; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 10,30

The measuring methods required for the determination of thermal conductivity cross wire and parallel, are applied in the laboratories already for a long time, the cross wire method mainly for insulating materials, the parallel method for good heat conductors. The measuring principle of both methods is the same. From the temperature distribution of a sample heated constantly from the interior, the thermal conductivity is calculated, in the instationary methods in dependence of defined times. For tests to 1500 C the measuring arrangement is put into a furnace. The aim of the development intent should be the commercialization, automation and combination of the measuring methods. The constructed apparatus fulfills the required conditions. To generate the necessary test temperature a special chamber furnace is used, where measurements according to both methods can be carried out. The measuring run-off is controlled by a computer, data acquisition and data processing take place automatically. The measuring results are registered by a plotter in a data print out and shown in graphs. In several examples the function capacity of the apparatus has been approved. Author

IMPROVEMENTS OF PROXIMITY EXPOSURE TECHNIQUE FOR SMALLER LARGE-SCALE INTEGRATION PATTERN Final Report, Jun. 1980

Guenter Doemens, Bodo Dreisbach, Erich Rosshaupter, Dusan Sofronijevic, Hans Udo Sygulla, and Guenter Winterhalter Bonn Bundesministerium fuer Forschung und Technologie Apr. 1981 91 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-072; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19.16

The technique was improved from 5 micrometers to 3-3.5 micrometers resist pattern in the manufacturing process. The technological limits of this technique for light were estimated at 2 micrometers in the laboratory and 2.5 micrometers in production. Because of the lack of a suitable photo resist for wavelength approximately = 200 nm, these limits cannot be used in manufacturing. A prototype development for automatic wafer alignment reached its goals. The wafer distortion is found to be relatively small, nearly linear, isotropic, and it can be compensated. T.M.

ELECTRON RADIATION SYSTEMS FOR STRUCTURE PRODUCTION. PART 1: PHYSICAL FOUNDATIONS AND EXPERIMENTAL RESULTS Final Report, Mar. 1980

Klaus Anger, Juergen Frosien, Burkhard Lischke, and Hans Schuster-Woldan Bonn Bundesministerium fuer Forschung und Technologie Jun. 1981 102 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie 2 Vol.
(BMFT-FB-T-81-090-Vol-1; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 21,40

Microlithograph processes are required to manufacture VLSI semiconductors which are capable of producing extremely fine structures. Reducing electron projection systems were examined for this purpose. On the basis of theoretical considerations concerning the resolution and number of image elements, a reducing electron projector with a scale of 1:4 was developed. The imaging system with corrected compound optics has an optical capability of 37,000 resolvable lines per image field, and a distortion of 0.4 %. The exposure time required for electron lithographic production of 1 micron structures on 8 mm by 8 mm fields is around 2.5 s/sq cm. A highly accurate method of adjustment was developed for the illumination and imaging system. This is essential to reproducible generation of structures by an electron projection system. A new alignment method which yields a registration accuracy of 0.1 micron for multilayer exposures was demonstrated. N.W.

ELECTRON RADIATION SYSTEM FOR STRUCTURE PRODUCTION. PART 2: EQUIPMENT SYSTEMS AND DESIGN Final Report, Mar. 1980

Guenter Friedrich, Guenther Gorges, Burkhard Lischke, Reinhold Schmitt, and Mathias Sturm Bonn Bundesministerium fuer Forschung und Technologie Jun. 1981 198 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie 2 Vol.
(BMFT-FB-T-81-091-Vol-2; ISSN-0340-7608) Avail: NTIS HC A09/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 36.30

The physical foundation for the development of a microprojector is presented and the results achieved with this equipment are described. The basic considerations concerning the design of the mechanical and electronic equipment are discussed. New types of electron-optical lenses for wide beam diameters, precision systems for positioning the mask with respect to the wafer, and electronic measuring systems for highly accurate adjustment of the beam were developed. Structures with minimum sizes of 0.3 micrometers can by produced over image fields of 8 by 8 sq mm. The registration accuracy in the case of multi-layer exposures is 0.1 micrometers. T.M.

DEVELOPMENT OF A PROCESS CAMERA LENS WITH VARIABLE FOCAL LENGTH Final Report

Hans Grumpelt, Peter Hanke, Ernst Rothe, Manfred Schuck, Walter Smilga, and Hermann Walter Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 93 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-155; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19.40

Process cameras of today are equipped exclusively with fixed focal length lenses. The development of a process lens with variable focal length is described. The design principles of its optical, mechanical, and electronic groups of components are explained. The prototype of the new lens reaches the image quality of fixed focal length lenses. Author

RESEARCH ON MAGNETO-OPTICAL BIAS ELEMENTS FOR LASER GYROS Final Report

Rolf Gauert Apr. 1981 58 p refs In GERMAN; ENGLISH summary
(DFVLR-FB-81-21) Avail: NTIS HC A04/MF A01; DFVLR,

Cologne DM 15,60

Different magnetooptical bias techniques for laser gyros are discussed. The magnetic mirror in the configuration of the transverse Kerr-effect and the Faraday cell with ferromagnetic garnets in an external resonator are examined theoretically and experimentally. The magnetic mirror delivers acceptable results at the wavelength of 1.153 microns and the Faraday cell in the external resonator delivers good results at the wavelength of 0.633 microns. The calculations for the Faraday-mirror (which in principle is a Faraday cell) are promising. Other magnetooptical methods are discussed briefly. M.G.

CALIBRATION AND DATA CORRECTION PROCEDURES FOR FLOW METERS AND PRESSURE TRANSDUCERS COMMONLY USED BY THE COASTAL STUDIES UNIT

P. Nielsen and P. J. Cowell Jul. 1981 39 p refs
(Grant N00014-80-G-0001; NR Proj. 388-157)
(AD-A105594; CSU-TR-81/1) Avail: NTIS HC A03/MF A01 CSCL 14/2

This report describes calibration procedures and results for two types of instruments commonly used by the Coastal Studies Unit: a bidirectional ducted flow meter and a strain gage pressure transducer. These instruments each constitute a system comprising a sensor head which issues a pulsating signal and a control box which electronically integrates the pulses into an analogue voltage which is then recorded. It is the response characteristics of these systems as a whole that are examined herein. GRA

ULTRA-HIGH-VACUUM DOUBLE-AXIS GONIOMETER FOR USE WITH AN ELECTRON SPECTROMETER

Mark Shleifer and Gwyn P. Williams 1981 8 p Presented at the 2d Natl. Conf. on Synchrotron Radiation Instr., Ithaca, N.Y., 15-17 Jul. 1981
(Contract DE-AC02-76CH-00016)
(DE81-028470; BNL-29850; CONF-810750-2) Avail: NTIS HC A02/MF A01

A double-axis goniometer designed for moving and indexing an electron spectrometer for angle-resolved photoemission studies is described. A feature of the design is that the two rotations operate independently and either can be carried out with the analyzer at any position. The goniometer is designed to be installed in a 14 in spool piece which makes it possible to add it to an existing 14 in uhv system. DOE

PRODUCTION AND USE OF HIGH-GRADE SILICON-DIODE TEMPERATURE SENSORS

J. Sondericker 1981 8 p Presented at the Cryogenic Eng. Conf., San Diego, Calif., 10-14 Aug. 1981
(Contract DE-AC02-76CH-00016)
(DE81-030547; BNL-30005; CONF-810835-25) Avail: NTIS HC A02/MF A01

The development and application of silicon diode temperature sensors for cryogenic applications in ISABELLE is described. Selection of a stable silicon diode showing minimal junction voltage drop is discussed. A calibration cryostat consisting of an evacuated pot suspended in a liquid helium filled Dewar was constructed, and used to calibrate the sensors. The performance of 600 commercial and in house sensors used in ISA projects shows a failure rate of less than 1 per cent. Problems associated with cryogenic thermometry falling short of catastrophic failure are discussed. DOE

HYPER-FILTER-FLUORESCER SPECTROMETER FOR FUSION X-RAY DIAGNOSTICS

C. L. Wang 16 Jun. 1981 6 p refs Presented at the 10th European Conf. on Controlled Fusion and Plasma Phys., 14-19 Sep. 1981
(Contract W-7405-eng-48)
(DE81-029867; UCRL-86163; CONF-810906-7) Avail: NTIS HC A02/MF A01

The filter fluorescer spectrometer is a powerful tool for measuring X-ray spectrum from high fluence X-ray sources. However, this technique is limited to energies less than 120 keV, because there are no practical absorption edges available above this energy. A new method of utilizing the filter fluorescer system for X-ray spectral measurement above 120 keV is presented. The new apparatus is called hyper-filter-fluorescer spectrometer. DOE

LABORATORY AND FIELD PORTABLE SYSTEM FOR CALIBRATING AIRBORNE MULTISPECTRAL SCANNERS

W. W. Kuhlow 1981 5 p Presented at the SPIE Intern. Symp., San Diego, Calif., 24 Aug. 1981
(Contract DE-AC08-76NV-01183)
(DE81-029740; EGG-1183-1777; CONF-810810-23) Avail: NTIS HC A02/MF A01

A calibration and alignment system for airborne multispectral scanners which permit the procedures to be carried out in about two to three hours is described. This equipment can be quickly disassembled, transported with the scanner in all but the smallest single engine aircraft, and reassembled in a few hours. The subsystems of this equipment are commonly available from manufacturers of optical and electronic equipment. The other components are easily purchased, or fabricated. The scanner discussed is the Model DS-1260 digital line scanner. It is a dual-sensor system which is operated in one of two combinations of sensors: one spectrometer head (which provides simultaneous coverage in ten visible channels) and one thermal infrared detector, or simply two thermal infrared detectors. OPTIMIZATION OF MEASUREMENT SIGNAL PROCESSING AND DATA ACQUISITION FOR THE LASER TWIN FOCUS VELOCIMETER [OPTIMIERUNG DER MESSIGNALAUFBEREITUNG UND DER DATENSAMMLUNG FUER DAS LASER-ZWEI-FOKUS-GESCHWINDIGKEITSMESSVERFAHREN]

U. Schricker Jul. 1979 57 p refs In GERMAN
(Mitt-79-04) Avail: NTIS HC A04/MF A01

A laser twin-focus velocimeter was developed and automated for turbomachine applications. The required measuring time is substantially reduced. Optimization of signal processing speeds up measuring by a factor of 10. A special buffer storage system improves data recording. The adjustment and waiting periods are considerably shortened by automation. In rotating systems the measuring time is reduced by a factor of 20 using the velocimeter continuously instead of stroboscopically.

PHOTOLITHOGRAPHIC PROCESSES FOR SMALL STRUCTURES: INTRODUCTION AND TRIAL OF ELECTRON BEAM LITHOGRAPHY Final Report, Nov. 1979

Wolfgang Doerner, Andreas Hupe, Juergen Kaeker, Ralf Kastmann, and Gerd Leschke Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 140 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-199; ISSN-0340-7608) Avail: NTIS HC A07/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 29,40

Electron beam lithography was introduced for mask making in very large scale integration circuits. The vector-scan electron beam pattern generator Philips EBPG3 is described. The appropriate process line and the test patterns were followed by an extensive representation of mask processes for several electron-sensitive resists. Two programs that convert pattern data from the computer aided design format into the EBPG format as well as exposure experiments on silicon slices are described. Advantages as compared to light optics are more flexibility in producing circuits, shorter mask making time, and lower mask defect density. Author (ESA)

THE FAINT OBJECT CAMERA (FOC): EUROPEAN INSTRUMENT ASSOCIATED WITH THE SPACE TELESCOPE [LA FAINT OBJECT CAMERA (FOC.) INSTRUMENT EUROPEEN ASSOCIE AU SPACE TELESCOPE]

Michel Saisse 1981 21 p In FRENCH Presented at Reunion Franco-Sovietique, Moscow 16-22 Mar. 1981
Avail: NTIS HC A02/MF A01

The FOC instrument characteristics which are designed to be installed in orbit at the back of the space telescope after rendezvous with a space shuttle are discussed. The FOC consists of two cameras that operate respectively with apertures of F/96 and F/48; each camera has its own photodetector. The detectors are two dimensional and are linked with an optical system whose resolution is limited by diffraction. The five observational modes of the FOC are described. Besides the F/96 and F/48 optical modes, a high resolution (F/288, supplementing the F/96 mode with a Cassegrain system) mode, a coronagraphic mode, and a spectrographic mode are available. THE TAPERED ELEMENT OSCILLATING MICROBALANCE: A MONITOR FOR SHORT-TERM MEASUREMENT OF FINE AEROSOL MASS CONCENTRATION Final Report, Oct. 1977 - Dec. 1980

Harvey Patashnick and Georg Rupprecht Aug. 1981 41 p refs
(Grant EPA-R-805222)
(PB81-245219; EPA-600/2-81-146) Avail: NTIS

HC A03/MF A01 CSCL 14B

An instrument for short-term monitoring of ambient aerosol fine mass concentration was developed based on a device called a tapered element oscillating microbalance (TEOM). The detector consists of a tapered hollow tube fixed at the wide end and holding an exchangeable filter cartridge at the narrow end. Air is drawn through the filter cartridge down the hollow tube. Particulates deposit on the filter cartridge. The tapered tube is maintained in continuous oscillation in a clamped-free mode whose frequency is accurately monitored. As particulates load on the filter cartridge, the frequency changes in relation to the mass added. A microprocessor-based electronics system collects and processes the data. Output is printed in a format consisting of time and aerosol concentration level in microgram/cu m. GRA

PHOTOACOUSTIC DETECTION OF PARTICULATE CARBON
Charles A. Bennett and Richard R. Patty Aug. 1981 52 p refs
(Contract EPA-R-805332)
(PB81-245425; EPA-600/7-81-129) Avail: NTIS HC A04/MF A01 CSCL 14B

A photoacoustic technique for the mass monitoring of carbonaceous aerosols deposited on filter substrates was developed. The technique involves the use of a specially designed photoacoustic cell. Photoacoustic response is calibrated as a function of elemental carbon loading using laboratory-generated elemental carbon standards. The nature of the photoacoustic response is examined at several chopping frequencies using these calibration standards, and the physical principles necessary for an adequate interpretation of the experimental results is presented in detail. Practical considerations concerning ambient carbon monitoring are outlined; in particular, the perturbation due to the presence of scattering particulates is examined and limited experimental quantification of this perturbation is reported. OPTICAL PUMPED NEODYMIUM MINIATURE LASER TRANSMITTER Final Report, Oct. 1978
Siegfried Geckeler, Wolfgang Kruehler, Hans F. Mahlein, Rolf Plaettner, Gerhard Schiffner, Lutz Vite, and Gerhard Winzer Bonn Bundesministerium fuer Forschung und Technologie Jul. 1981 173 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-095; ISSN-0340-7608) Avail: NTIS HC A08/MF A01

The preparation and the properties of the most important stoichiometric Nd laser materials and miniature lasers made from them are considered as well as calculations for pumping these lasers with LEDs and for coupling them to the modulator. Both optical communication systems and the rival merits of neodym solid-state lasers and semiconductor lasers are considered. The following results are of particular interest: miniature lasers for 1.06 micrometer and in some cases for 1.32 micrometer fabricated from NdP5O14, NdAl3(BO3)4 and LiNd(PO3)4 with mirrors directly applied to their endfaces allowing CW operation at room temperature. The LNP laser with 1 mW threshold, 6% differential efficiency and a threshold pump power density of 4 kW/cu cm offers the best performance. The electrooptical coefficient expected for NdAl3(BO3)4 on the basis of lattice symmetry was found to be < 0.6 x 10 to the -12 power m/V. The Nd laser transmitter can be expected to cost considerably more than the future INGAP semiconductor laser transmitter. Author

THE SIGNAL TO NOISE RATIO OF A HETERODYNE LASER DETECTION SYSTEM
K. W. Getreuner Mar. 1980 90 p refs In DUTCH; ENGLISH summary
(Contract A77/KL/052)
(PHL-1980-11; TDCK-73843) Avail: NTIS HC A05/MF A01

The analysis of expected signal and noise powers as features of a continuous CO2 laser heterodyne detection system is described. Quantative calculations were performed for systems which are presently under construction. Only additive noise was considered. The impact on the system of detector characteristics is highlighted. In order to determine the equivalent electronic networks for two available detectors, impedance measurements were carried out. An analysis was made about the expected accuracy of range measurements based on amplitude modulation of the laser beam. Both sinus wave as well as binary pseudo noise code modulation techniques are considered. Expressions were derived for the minimum measuring time as a function of, e.g., the standard deviation of the range accuracy. A detailed analysis is given of the signal to noise aspects of the quadratic demodulation technique. T.M.

COMPACT 36 kJ ELECTRON BEAM SYSTEM FOR LASER PUMPING
L. G. Schlitt 31 May 1981 16 p Presented at the 3rd IEEE Intern. Pulsed Power Conf., Albuquerque, N.Mex., 1-3 Jun. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-024375; UCRL-85665; CONF-810659) Avail: NTIS A02/MF A01

An electron beam machine consisting of six modules is being constructed for the B amplifier of a KrF laser system. Each module consists of a diode, a 5 omega positive charged water dielectric Blumlein pulse forming line, and a five stage Marx generator. Separate 25 cm by 41 cm electron beams are formed in magnetically isolated diodes which when arranged in groups of three produce two nearly continuous 25 cm by 125 cm beams that enter the laser cell from opposite sides. The pulse forming lines operate at 450 keV and Produce 150 ns long pulses. The lines employ electrically triggered annular SF6 output switches. The two concentric transmission lines of each pulse forming line are charged in 1 microsec through symmetric circuits to reduce diode prepulse voltage. The six modules together with the laser cell occupy less than 15 sq m of floor space. DOE

ABERRATIONS AND FOCUSABILITY IN LARGE SOLID-STATE-LASER SYSTEMS
W. W. Simmons 1981 25 p refs Presented at the SPIE Intern. Symp., San Diego, Calif., 24-28 Aug. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-029914; UCRL-85645; CONF-810810-26) Avail: NTIS HC A02/MF A01

Solid state lasers for fusion experiments must reliably deliver maximum power to small (approximately .5 mm) targets from stand-off focal distances of 1 m or more. This requirement places stringent limits upon the optical quality of the several major components - amplifiers, Faraday isolators, spatial filters - in each amplifier train. Residual static aberrations in optical components are transferred to the beam as it traverses the optical amplifier chain. Although individual components are typically less than lambda/20 for components less than 10 cm clear aperture; and less than lambda/10 for components less than 20 cm clear aperture; the large number of such components in optical series results in a wavefront error that may exceed one wave for modern solid state lasers. Specific examples of the performance of large aperture components are presented. Design requirements upon the larger aperture Nova laser components, up to 74 cm in clear aperture are also discussed. T.M.

(Contract W-7405-eng-36)
(DE81-030138; LA-UR-81-2524; CONF-81810-24) Avail: NTIS HC A02/MF A01

The need for non-raytracing schemes in the optical design and analysis of large carbon-dioxide lasers like the Gigawatt, Gemini, and Helios lasers currently operational at Los Alamos, and the Antares laser fusion system under construction is described. The scheme currently used at Los Alamos involves characterizing the various optical components with a Zernike polynomial set obtained by the digitization of experimentally produced interferograms of the components. A Fast Fourier Transform code then propagates the complex amplitude and phase of the beam through the whole system and computes the optical parameters of interest. The analysis scheme is illustrated through examples of the Gigawatt, Gemini, and Helios systems. A possible way of using the Zernike polynomials in optical design problems of this type is discussed. Comparisons between the computed values and experimentally obtained results are made and it is concluded that this appears to be a valid approach. DOE

OPTICAL TOOLING FOR ANTARES
Walter Bauke, Albert C. Saxman, and Noel OKay 1981 9 p Presented at the Conf. on Optics '81, Los Alamos, N. Mex., 6 Apr. 1981
(Contract W-7405-eng-36)
(DE81-030256; LA-UR-81-2469; CONF-810429-39) Avail: NTIS HC A02/MF A01

The Antares laser system is a large (40 kJ) CO2 pulse laser system. High energy pulses are transmitted between buildings over path lengths exceeding 90 m. The optical elements are contained within large steel assemblies (power amplifiers, turning chambers, and target chamber) which must be positioned with tolerances of 0.75 mm. The subassemblies of optical components must be prepositioned to a precision of 0.25 mm. This precision can easily be obtained by first order surveying techniques and instrumentation. The use of a combination of traditional surveying techniques and modern optical tooling methods throughout the integration of building reference planes and the erection of major steel assemblies are described. The design and measured assembly tolerances are compared. DOE

NOBLE GAS HALOGEN LASER INDUCED FLUORESCENCE OF BENZENE: SOME OF ITS DERIVATIVES, DIFLUOROMETHYL RADICALS; AND CARBON MONOXIDE Thesis - Georg-August-Univ. [MIT EINEM EDELGAS-HALOGEN-LASER INDUZIERTE FLUORESZENZ VON BENZOL, EINIGEN SEINER FLUORDERIVATE, DEM DIFLUORMETHYLENRADIKAL UND KOHLENSTOFFMONOXID]
Walter Langel Dec. 1980 124 p refs In GERMAN
(MPIS-22/1980; ISSN-0436-1199) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 21

The dynamics of molecules excited by laser absorption into well defined vibrational states were investigated. An apparatus was built in order to study laser induced fluorescence. A noble gas halogen excimer laser (pulse energy 10 mJ for KrF) was also constructed. Fluorescence of gaseous or liquid substances was examined by a high resolution monochromator, a transient recorder and a computer. Through absorption of the KrF line (248.4 nm) of the excimer laser by benzene and its fluor derivatives, vibrationally excited levels in the first electronically excited singulet state were populated and the concomitant fluorescence was observed and resolved in spectrum and time. TECHNICAL AND SCIENTIFIC RESEARCH ACCOMPANYING THE PROJECTS ON 'NEEDLE MILLING', INCLUDING THE DETERMINATION OF SPECIFIC PROCESS PARAMETERS Final Report
Hans-Peter Wolf Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 72 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-HA-81-005; ISSN-0171-7618) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West

Germany DM 15,10

The new manufacturing process 'needle milling' was studied The first application is the discharge of surfaces on rolled products, such as sheet metal, pipes, sheet bars, and so on. This machining is to prepare final rolling operations. The methods used today do not meet the demands of humane working conditions (noise, dust, refinish by hand, pickling, pollution). The application of needle milling seems to be an effective alternative. On testing the applications in cooperation with industrial enterprises, the fundamentals of needle milling were defined and further possibilities of application were found. Author

ON THE EFFECTS OF THE POST-FABRICATION TREATMENT METHODS FOR WELDED STAINLESS STEELS

Juho Hakala and Tuula Purra Jan. 1981 40 p refs In FINNISH; ENGLISH summary Original contains color illustrations

(VTT-83; ISBN-951-38-1178-6; ISSN-0355-6395) Avail: NTIS HC A03/MF A01

Different chemical and mechanical cleaning techniques were applied to manual and MIG welded joints of stainless steels. The materials used were AISI 304, 316 and 321. The efficiency of the different cleaning techniques and the appearance of the surface were determined. The corrosivity of the methods in microscale was characterized. The corrosion behavior of the treated welds were tested by measuring the corrosion potential and the potential where an increase in the corrosion current can be seen on the anodic polarization curve. EVALUATION OF SHIELDED METAL ARC AND FLUX CORED METAL ARC WELDING CONSUMABLES FOR FABRICATION OF STAINLESS STEEL MAGNET CASES FOR 4K SERVICE

E. N. C. Dalder, O. W. Seth (Chicago Bridge and Iron Co.), and T. A. Whipple (NBS, Boulder, Colo.) 30 Jul. 1981 15 p refs Presented at the Cryogenic Eng. Conf., San Diego, Calif., 10-14 Aug. 1981

(Contract W-7405-eng-48)

(DE81-028851; UCRL-85564; CONF-810835-5) Avail: NTIS HC A02/MF A01

Of three highly restrained shielded metal arc (SMA) welds made in the flat position with large diameter Type E316L-15 welding electrodes supplied by different vendors, two welds showed adequate combinations of 4K tensile and K sub IC properties to be considered for use in manufacture of mirror fusion test facility (MFTF-B) superconducting magnet-cases. The poor performance of the third SMA weld is explainable, in part, by a combination of higher ferrite level and N2 concentration than in the other two SMA welds. Despite presence of undissolved metallic flux-constituents and porosity in a Type 316L flux cored metal arc weld, its 4K K sub Ic would be adequate for use on (MFTF-B). However, its 4K sigma y was slightly below MFTF-B requirements. DOE

Advances in aircraft R and D are discussed. Tribology is of special importance in the following areas: aircraft brakes, contact corrosion, rotor hubs, the functioning of transmissions after lubricant breakdown, and diagnostic methods. Applications for different fields of aeronautics are: problems with missiles and launch vehicles, problems with satellites, problems with aircraft, and problems with helicopters. Friction and wear are of constant concern and special attention is paid to self lubricating bearings and in-service wear detection (ferrography). Author (ESA)

THE UTILISATION OF ALCOHOL IN LIGHT DUTY DIESEL ENGINES Final Report

28 May 1981 41 p refs Sponsored by EPA

(PB81-244469; EPA-460/3-81-010; DP-81/935) Avail: NTIS HC A03/MF A01 CSCL 21G

Various approaches employed to facilitate the utilization of alcohols, methanol and ethanol, in light duty diesel engines were reviewed. The choice of which system to employ is most heavily influenced by the proportion of alcohol substitution which is required and the resulting engine first cost penalty which is deemed to be acceptable. Alcohol utilization by more or less conventional spark ignited engines appears to be far less problematical than conversion of diesel engines. GRA

FAILURE MODE ANALYSIS USING STATE VARIABLES DERIVED FROM FAULT TREES WITH APPLICATION

Robert J. Bartholomew 1981 11 p refs Presented at the ANS/ENS Topical Meeting on Probabilistic Risk Assessment, Port Chester, N.Y., 20-24 Sep. 1981

(Contract W-7405-eng-36)

(DE81-030239; LA-UR-81-2595; CONF-810905-3) Avail: NTIS HC A02/MF A01

Fault Tree Analysis (FTA) is used extensively to assess both the qualitative and quantitative reliability of engineered nuclear power systems employing many subsystems and components. FTA is very useful, but the method is limited by its inability to account for failure mode rate of change interdependencies (coupling) of statistically independent failure modes. The state variable approach (using FTA derived failure modes as states) overcomes these difficulties and is applied to the determination of the lifetime distribution function for a heat pipe thermoelectric nuclear power subsystem. Analyses are made using both Monte Carlo and deterministic methods and compared with a Markov model of the same subsystem. DOE

INFLUENCE OF THROAT AND PLATE THICKNESS ON THE FATIGUE STRENGTH OF FILLET WELDS
E. Haibach, R. Olivier, and W. Ritter 1981 69 p refs In GERMAN; ENGLISH summary
(LBF-FB-131) Avail: NTIS HC A04/MF A01

An investigation was carried out aiming at the influence of throat and plate thickness on fatigue strength of fillet welds with fatigue critical toe. The statistical test program refers to angular fillet welds made from steel MRSt 37-2 and includes twelve fabrication variants. The fillets were welded in the horizontal or flat position under a mixed gas atmosphere by means of the M.A.G. welding process: in the case of 10 mm plate thickness as single pass with 4 mm throat thickness and with case of 50 mm plate thickness as flat faced fillets by multiple pass with 20 mm or 35 mm throat thickness. At all considered variants, the fatigue strength decreased with increasing plate and throat thickness. Hot spot strain measurements made at the toe of the welds indicated that this was largely due to a geometric size effect which for fillet welds with a throat thickness of 4 mm, 20 mm and 35 mm implied a reduction of tolerable nominal stress with a ratio of 1 : 0.75 : 0.67. CATALOG OF EFFECTIVE WIDTH AND ULTIMATE LOADS OF LONGITUDINALLY STIFFENED PLATES [KATALOG MITTRAGENDER BREITEN UND TRAGLASTENLAENGSGEDRUECKTER, VERSTEIFTER PLATTENFELDER (BERECHNUNGSKONZEPT)]
K. Hutschenreiter Bonn Bundesministerium der Verteidigung 1981 109 p refs In GERMAN; ENGLISH summary
(BMVG-FBWT-81-9) HC A06/MF A01

Diagrams were used to determine the effective width and ultimate loads for eccentrically stiffened plates. The influence of plates and stiffeners were separated for numerical calculations. The effective widths were plotted dependent upon residual stresses, predeformations and lateral loads for the axially loaded plates with the aspect ratios 1/b = 2, 3 and 4. Simplified formulas (Perry-Robertson) are presented for the effective width and collapse of longitudinally stiffened plates. The effects of strain and bend of eccentric stiffeners, predeformations and plate buckling were considered. The reduced section modulus and ultimate moment of a ship's hull was calculated. For gamma/ gamma * < or less than 1, the permissible loads of the linear theory are greater than the ultimate loads of the imperfect structure. As a result, it is unsafe to calulate with gamma/gamma * = 1. Gamma/gamma * should be 4 or 5. A.R.H.

EVALUATION OF THE CRACK INITIATION LIFE BEHAVIOR OF FATIGUE LOADED AUTOMOTIVE COMPONENTS MADE FROM HIGH STRENGTH ALUMINUM ALLOYS Ph.D. Thesis - Technischen Hochschule
Dieter Hanschmann Mar. 1981 189 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-733)
(DFVLR-FB-81-10) Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 51,50

Since the fatigue process occurs mainly at stress raisers, the local stresses and strains are explicitely determined. Based on the local stresses and strains a cumulative damage analysis was performed. Since the cumulation damage under variable amplitude loading is significantly non-linear, a new damage evaluation concept is proposed which especially accounts for the load sequence effects. The analytical prediction method was applied together with several automotive companies. T.M.

FINITE-ELEMENT PROGRAM FOR CREEP ANALYSIS OF CONCRETE STRUCTURES
Zdenek P. Bazant, Edwin C. Rossow, and Geir Horrigmoe (Pavlo Multiconsult A.S.) 1981 8 p refs Presented at 6th Intern. Conf. on Struct. Mech. in Reactor Technol., Paris, 17 Aug. 1981 Prepared for Oak Ridge National Lab.
(Contract W-7405-eng-26)
(DE81-028071; CONF-810801-57) Avail: NTIS HC A02/MF A01

A new finite element program for the analysis of creep effects in concrete structures, is described. The program represents an extension of the general purpose finite element code NONSAP. The program uses a rate type creep law based on expanding the relaxation function in Dirichlet series. The creep law is linear, the aging is accounted for, and the temperature effects on creep rate as well as the rate of aging are considered. Material properties can be input either as empirical creep test data or as the double power law for creep. The program can automatically set up the creep parameter from partial empirical information. The program uses a step by step integration in time. DOE

ESTIMATE OF THE CONTRIBUTION OF LOAD TRANSFER TO THE YIELD STRENGTH AND HARDNESS OF A DUAL-PHASE STEEL

J. Gurland Jun. 1981 14 p refs Presented at the Conf. on Effects of Interfaces on Deformation and Fracture, Louisville, Ky., 11 Oct. 1981
(Contract DE-AC02-80ER-10556)
(DE81-025545; COO-3084-83; CONF-811022-1) Avail: NTIS HC A02/MF A01

The ratio of the average stresses in ferrite and martensite at yield of a dual phase steel was calculated from a shear lag model of load transfer, based on a shape parameter of the martensite particles. A stress ratio of 2.2 is determined for a specific steel. This value is compared to the stress ratio obtained from hardness and microhardness determinations. The results qualitatively and tentatively support the strengthening role of load transfer in dual phase steels. DOE

AXISYMMETRIC FINITE DEFORMATION MEMBRANE PROBLEMS
William W. Feng 12 Dec. 1980 4 p ref Presented at the Symp. on Fluid Mech. of Combust. Systems, Boulder, Colo., 22-24 Jun. 1981
(Contract W-7405-eng-48)
(DE81-030070; UCRL-85278; CONF-810621-6) Avail: NTIS HC A02/MF A01

The general formulations for solving a class of axisymmetric membrane problems are presented. The material nonlinearity, as well as the geometric nonlinearity, is considered. One method solves a set of differential equilibrium equations. The governing equations are reduced to three first order ordinary differential equations with explicit derivatives. The Ritz method, where a general potential energy functional valid for all axisymmetric deformed positions is presented. The geometric admissible functions that govern the deformed configuration are written in terms of a series with unknown coefficients. These unknown coefficients are determined by the minimum potential energy principle that of all geometric admissible deformed configurations, the equilibrium configuration minimizes the potential energy. DOE

EXPERIMENTAL AND THEORETICAL STUDY OF A TALL BUILDING SUBJECTED TO WIND LOADING
R. S. Mills 1981 9 p refs Presented at the 4th Natl. Conf. on Wind Eng. Res., Seattle, 26 Jul. 1981
(Contract DE-AC08-81NV-10145)
(DE81-029478; CONF-810742-2) Avail: NTIS HC A02/MF A01

Full-scale experimental observations of the wind-induced response of a building of moderate height show that dynamic considerations may be negligible for stress analysis of alongwind response. For analysis of a cosswind response and human perception, however, dynamic relatonships must be accurately modeled. The contribution of torsional response is also significant and may be produced by aerodynamic properties even when the building system appears to be structurally symmetric. Predictions of alongwind response of the building obtained from a developed analytical procedure show reasonable agreement with observed response. DOE

FREE-SURFACE VELOCITY MEASUREMENTS OF PLATES DRIVEN BY REACTING AND DETONATING RX-03-BB AND PBX-0404
L. M. Erickson, H. G. Palmer, N. L. Parker, and H. C. Vantine 13 Jul. 1981 6 p refs Presented at the APS Conf. on Shock Waves in Condensed Matter, Menlo Park, Calif., 23-25 Jun. 1981
(Contract W-7405-eng-48)
(DE81-026776; UCRL-86372; CONF-810684-50) Avail: NTIS HC A02/MF A01

Copper plates 90 mm in diameter, of thickness 0.25 mm and 0.5 mm, were accelerated by an adjacent 17 mm thick cylinder of RX-03-BB or PBX-9404-03. The explosvie was initiated by impact of a thick flyer from the LLNL 102 mm gun, providing either a reactive or fully detonating wave, by appropriate choice of flyer velocities up to 1.30 mm/micros. The free surface velocity of the plates were measured with a Fabry-Perot velocimeter. Excellent experimental free-surface velocity histories were obtained. Calculations of this history employing beta-burn and nucleation and growth high explosives models are in good agreement with fully detonating experiments. For reacting RX-03-BB, adjustments in the parameter are needed. The experimental technique gives records whose agreement with calculation is sensitive of the model and is therfore a good way of testing new high explosive models. Also, this method allows one to infer information about the reaction zone length. DOE

DYNAMIC SHEAR-WAVE VELOCITY MEASUREMENTS USING INTERFEROMETRIC TECHNIQUES
L. C. Chhabildas 1981 14 p refs Presented at the Intern. Congr. on Instrumentation in Aerospace Simulation Facilities, Dayton, Ohio, 30 Sep. 1981
(Contract DE-AC04-76DP-00789)
(DE81-026973; SAND-81-1135C; CONF-810939-1) Avail: NTIS HC A02/MF A01

An optical technique using velocity interferometers to determine the particle velocity changes associated with plane shear wave propagation is described. Two velocity interferometers are used to monitor different diffracted laser beams from a surface which undergoes both longitudinal and shear motion. Fringes produced in the interferometer are proportional to a linear combination of both the longitudinal and shear components of the free surface velocity. By obtaining two different recordings of the motion, the two components can be separated. Examples of shear wave interferometry applications are reported. DOE

EFFECT OF GAS PORES FROM SHOP-PRIMED PLATE MATERIAL ON THE FATIGUE STRENGTH OF LONGITUDINAL FILLET WELDS

R. Olivier and W. Ritter 1981 49 p refs In GERMAN; ENGLISH summary
(LBF-FB-160(1981)) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 40

Welding of shop-primed plate-materials usually leads to the formation of porosity defects by arising gas bubbles penetrating through the weld metal. These gas pores especially occur in fillet welds and may even reach the weld surface. The effect of gas pores of different size and density on the fatigue strength of fillet welds loaded in the longitudinal direction was examined. In contrast to fillet welds lying transversely to the loading direction, the portion of areas of gas pores or clustered pores to the whole load-carrying cross section remains largely irrelevant for fillet welds lying in the loading direction. The parameters in welding and finishing techniques are included under statistical aspects thus allowing generalized conclusions to be drawn on the fatigue behavior of longitudinal fillet welds with gas pores. The fatigue strength of longitudinal fillet welds with or without gas pores does not differ remarkably, although the pores prove to be the fatigue critical detail independently from their size. Author

LOCALIZED LOADS APPLIED TO SHELLS OF REVOLUTION

L. Depmeier (Erlangen-Nuernberg Univ., West Germany), D. Lambrecht (Erlangen-Nuernberg Univ., West Germany), and W. Nevermann (Erlangen-Nuernberg Univ., West Germany) Sep. 1980 164 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(KfK-CAD-155) Avail: NTIS HC A08/MF A01

The most important papers concerning thin shell theory, attempts of solution, and experimental investigations are summarized and evaluated. The development and testing of computer programs which are convenient for the calculation of stresses from local loadings in cylindrical, spherical and conical shells is discussed. The results achieved with these programs are demonstrated. A parametric study was conducted for the loading of a cylinder by a longitudinal moment acting on a rectangular area. The results are shown in diagrams which allow a fast evaluation of the occurring stresses. Author

N82-15471# Kernforschungszentrum, Karlsruhe (West Germany).

CALCULATION OF THE STRESSES AND THE FINITE DEFLECTIONS OF A PERFECT CIRCULAR CYLINDER SUBJECTED TO NON-AXISYMMETRIC LOADS

M. Esslinger (DFVLR, Brunswick), K. Kretschel (DFVLR, Brunswick), and H. W. Melzer (DFVLR, Brunswick) Aug. 1980 48 p refs In GERMAN; ENGLISH summary
(KfK-CAD-165; GL-DFL/100) Avail: NTIS HC A03/MF A01

A computation procedure for solving nonlinear shell equations in the case of nonaxisymmetric loading is presented. In the circumferential direction the state variables are expanded into Fourier series. In the direction of the meridian a segmentation method is applied. The transfer matrices are established by means of collocation. The application of the procedure is demonstrated by presenting several examples. Author

USING THE ENVELOPE OF RESONANCE PEAKS TO ESTIMATE POWER ABSORBED BY A FINITE STRUCTURE

R. J. Pinnington Mar. 1981 40 p refs Sponsored by Admiralty Marine Technology Establishment
(ISVR-TR-115) Avail: NTIS HC A03/MF A01

An absorbed vibration power measuring method applicable when a structure is sufficiently lightly damped for the vibrations to be governed by modal behavior is presented. Power input to the structure is found by measuring the power absorbed by each vibrational mode which is calculated from the resonance peak value of the point, or transfer inertance at selected points and the acceleration spectra at these points, measured under normal operating conditions. Cubic spline curves fitted through the resonance peak inertance values estimate power levels between resonances. It is found that the method is accurate in resonance regions, but not in the troughs between resonances. Author (ESA)

RESPONSE OF REINFORCED CONCRETE PLATE-COLUMN CONNECTIONS TO DYNAMIC AND STATIC HORIZONTAL LOADS

Denby G. Morrison and Mete A. Sozen Apr. 1981 266 p refs
(Grant NSF PFR-78-16318)
(PB81-237380; Structural-Research-Ser-490; UILU-ENG-81-2004; NSF/CEE-81024) Avail: NTIS HC A12/MF A01 CSCL 13M

The response of interior reinforced concrete plate column connections was investigated. Eight specimens were tested statically and dynamically. Other experimental variables were reinforcement ratio and the amount of superimposed vertical load. The statically tested specimens provided information on the influence of the change in reinforcement ratio and the amount of superimposed vertical load on the response to horizontal loading. An analysis model was developed to interpret the results from the statically tested specimens. The dynamically tested specimens were used to obtain data on the response of the specimens, the observed hysteresis, and calculated damping. GRA

Avail: NTIS HC A03/MF A01

Water management projects are outlined. The following propertis are investigated: surface water quality (toxicity, biodegradability, aquatic biology); drinking water quality; water treatment (inorganic, organic compounds, disinfection, instrumentation); distribution systems; sewerage systems; waste water treatment (economic aspects, pollution, pathogens, odor control); sludge utilization; groundwater and river pollution; tidal waters; instrumentation and computing. Author (ESA)

MODEL OF CLIMATE AND GLOBAL ECOLOGY c47
Vladimir Valentinovich Aleksandrov and Nikita Nikolayevich Moiseyev *In its* USSR Rept.: Earth Sci., No. 18 (JPRS-79631) 10 Dec. 1981 p 1-13 refs Transl. into ENGLISH from Priroda (Moscow), no. 9, Sep. 1981 p 68-71 (For primary document see N82-15476 06-42)
Copyright. Avail: Issuing Activity

Requirements for the development of climate and global ecology models are described. The activities of the Club of Rome are reviewed. Global ecological models based on the relationship between human civilization and the dynamic processes taking place in the environment, and requiring the determination of admissable loads on the biosphere, are discussed. Numerical modeling of the cycling of matter in nature, of human activity (based on economic and demographic processes), and climate models is described. J.D.H.

POTENTIAL CHANGE IN CLIMATE BY YEAR 2000 c47
O. A. Drozdov *In its* USSR Rept.: Earth Sci., No. 18 (JPRS-79613) 10 Dec. 1981 p 14-15 Transl. into ENGLISH from Novoye, V Zhizni, Nauke, Tekhn., Ser. Nauka o Zemle (Moscow), No. 8, Aug. 1981 p 32-34 (For primary document see N82-15476 06-42)
Avail: Issuing Activity

A warming trend in the climate by the beginning of the next century is postulated. An increase in precipitation in the north and in the subtropics, with an intensification of wind, is predicted. A slight reduction of precipitation in the temperature regions, with an increase in its annual variability, is predicted. J.D.H.

DEVELOPMENT AND EVALUATION OF AN AUTOMATIC LABELING TECHNIQUE FOR SPRING SMALL GRAINS Technical Report, 15 Nov. 1979 - 31 Dec. 1980
Eric P. Crist and William A. Malila, Principal Investigators Aug. 1981 67 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of Interior, and Agency for International Development ERTS
(Contract NAS9-15476; Proj. AgRISTARS)
(E82-10001; NASA-CR-161080; SR-EL-04065; ERIM-152400-3-T) Avail: NTIS HC A04/MF A01 CSCL 05A

A labeling technique is described which seeks to associate a sampling entity with a particular crop or crop group based on similarity of growing season and temporal-spectral patterns of development. Human analyst provide contextual information, after which labeling decisions are made automatically. Results of a test of the technique on a large, multi-year data set are reported. Grain labeling accuracies are similar to those achieved by human analysis techniques, while non-grain accuracies are lower. Recommendations for improvments and implications of the test results are discussed. Author

Specific case studies undertaken to demonstrate the usefulness of remote sensing technology to resource managers in California are highlighted. Applications discussed include the mapping and quantization of wildland fire fuels in Mendocino and Shasta Counties as well as in the Central Valley; the development of a digital spectral/terrain data set for Colusa County; the Forsythe Planning Experiment to maximize the usefulness of inputs from LANDSAT and geographic information systems to county planning in Mendocino County; the development of a digital data bank for Big Basin State Park in Santa Cruz County; the detection of salinity related cotton canopy reflectance differences in the Central Valley; and the surveying of avocado acreage and that of other fruits and nut crops in Southern California. Special studies include the interpretability of high altitude, large format photography of forested areas for coordinated resource planning using U-2 photographs of the NASA Bucks Lake Forestry test site in the Plumas National Forest in the Sierra Nevada Mountains. THE REDUCTION, VERIFICATION AND INTERPRETATION

OF MAGSAT MAGNETIC DATA OVER CANADA Progress Report

R. L. Coles, Principal Investigator, E Dawson, G. V. Haines, G. Jansen vanBeek, J. K Walker, and L. R. Newitt Jul. 1981 3 p Sponsored by NASA ERTS
(E82-10006; NASA-CR-164904; PR-3) Avail: NTIS HC A02/MF A01 CSCL 05B

Magnetic anomalies of lithospheric origin are weak at Magsat altitudes (20 to 30 nT at most), and are easily masked by much larger effects caused by field-aligned and other currents at high latitudes. Most of Canada lies under the influence of ionospheric currents in the auroral zone and polar cap. A more refined selection of quiet Magsat data allowed a revised scalar magnetic anomaly map of the whole region north of about 40 deg N latitude. Very preliminary vector anomaly maps and absolute vector component maps were derived. The scalar magnitudes show great promise for mapping the total force and anomaly fields. The Z vector data also appear to be good. The horizontal X and Y vector data are seriously contaminated with external fields and maybe other effects. A.R.H.

WHEAT CULTIVATION: IDENTIFICATION AND ESTIMATION OF AREAS USING LANDSAT DATA [CULTURA DO TRIGO IDENTIFICACAO E AVALIACAO DE AREAS ATRAVES DE DADOS DO LANDSAT]

Nelson deJesusParada, Principal Investigator, Francisco Jose Mendonca, Dall Arthur Cottrell, Antonio Tebaldi Tardin, David Chung Liang Lee, Yosio Edemir Shimabukuro, Mauricio Alves Moreira, and Angela Maria deLimaeFernandoCelsoSoaresMaia May 1981 5 p refs In PORTUGUESE Sponsored by NASA ERTS
(E82-10007; NASA-CR-164905; INPE-2054-RPE/300) Avail: NTIS HC A02/MF A01 CSCL 02C

The feasibility of using automatically processed multispectral data obtained from LANDSAT to identify wheat and estimate the areas planted with this grain was investigated. Three 20 km by 40 km segments in a wheat growing region of Rio Grande do Sul were aerially photographed using type 2443 Aerochrome film. Three maps corresponding to each segment were obtained from the analysis of the photographs which identified wheat, barley, fallow land, prepared soil, forests, and reforested land. Using basic information about the fields and maps made from the photographed areas, an automatic classification of wheat was made using MSS data from two different periods: July to September and July to October 1979. Results show that orbital data is not only useful in characterizing the growth of wheat, but also provides information of the intensity and extent of adverse climate which affects cultivation. The temporal and spatial characteristics of LANDSAT data are also demonstrated. Transl. by A.R.H.

QUANTITATIVE ANALYSIS OF DRAINAGE OBTAINED FROM AERIAL PHOTOGRAPHS AND RBV/LANDSAT IMAGES [ANALISE QUANTITATIVA DA DRENAGEM OBTIDA ATRAVES DE FOTOGRAFIAS AEREAS E IMAGENS DO RBV/LANDSAT]

Nelson deJesusParada, Principal Investigator, Antonio Roberto Formaggio, Jose Carlos Neves Epiphanio, and Mario Valerio Filho May 1981 29 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Reuniao Anual de SBPC Sponsored by NASA ERTS
(E82-10008; NASA-CR-164906) Avail: NTIS HC A03/MF A01 CSCL 08H

Data obtained from aerial photographs (1:60,000) and LANDSAT return beam vidicon imagery (1:100,000) concerning drainage density, drainage texture, hydrography density, and the average length of channels were compared. Statistical analysis shows that significant differences exist in data from the two sources. The highly drained area lost more information than the less drained area. In addition, it was observed that the loss of information about the number of rivers was higher than that about the length of the channels. Author

THE MINERALOGY OF GLOBAL MAGNETIC ANOMALIES Progress Report, Jan. - Sep. 1981

Stephen E. Haggerty, Principal Investigator 19 Sep. 1981 27 p ERTS
(Contract NAS5-26414)
(E82-10009; NASA-CR-164907) Avail: NTIS HC A03/MF A01 CSCL 08G

Progress is reported in developing predictive abilities to evaluate the potential stabilities of magnetic minerals in the Earth crust and mantle by: (1) computing oxidation state profiling as a function of temperature and pressure; (2) compiling data on basalts to establish validity of the oxidation state profiles; (3) determining Fe-Ni alloys in association with magnetitie as a function of temperature and oxidation state; and (4) acquiring large chemical data banks on the mineral ilmenite which decomposes to mineral spinel in the presence of high sulfur or carbonate environments in the lower crust upper mantle. In addition to acquiring these data which are related to constraining Curie isotherm depths, an excellent correlation was found between MAGSAT anomaly data and the geology of West Africa. A.R.H.

GEOLOGIC APPLICATIONS OF THERMAL-INERTIA MAPPING FROM SATELLITE Final Report

Terry W. Offield, Principal Investigator, Kenneth Watson, and Susanne Hummer-Miller Jul. 1981 109 p refs Original contains imagery. Original imagery may be purchased from NASA Goddard Space Flight Center, (Code 601), Greenbelt, Md. 20771. Domestic users send orders to 'Attn: National Space Science Data Center'; non-domestic users send orders to 'Attn: World Data Center A for Rockets and Satellites'. HCMM
(NASA Order S-40256-B)
(E82-10011; NASA-CR-164818) Avail: NTIS HC A06/MF A01 CSCL 08B

In the Powder River Basin, Wyo., narrow geologic units having thermal inertias which contrast with their surroundings can be discriminated in optimal images. A few subtle thermal inertia anomalies coincide with areas of helium leakage believed to be associated with deep oil and gas concentrations. The most important results involved delineation of tectonic framework elements some of which were not previously recognized. Thermal and thermal inertia images also permit mapping of geomorphic textural domains. A thermal lineament appears to reveal a basement discontinuity which involves the Homestake Mine in the Black Hill, a zone of Tertiary igneous activity and facies control in oil producing horizons. Applications of these data to the Cabeza Prieta, Ariz., area illustrate their potential for igneous rock type discrimination. Extension to Yellowstone National Park resulted in the detection of additional structural information but surface hydrothermal features could not be distinguished with any confidence. A thermal inertia mapping algorithm, a fast and accurate image registration technique, and an efficient topographic slope and elevation correction method were developed. Author

ERSYS-SPP ACCESS METHOD SUBSYSTEM DESIGN SPECIFICATION
R. C. Weise, Principal Investigator Sep. 1980 74 p Sponsored by NASA, USDA, Dept. of Commerce, Dept. of Interior, and Agency for International Development ERTS
(Contract NAS9-14350; Proj. AgRISTARS)
(E82-10015; NASA-CR-161039; MU-11-00300; JSC-16918) Avail: NTIS HC A04/MF A01 CSCL 02C

The STARAN special purpose processor (SPP) is a machine allowing the same operation to be performed on up to 512 different data elements simultaneously. In the ERSYS system, it is to be attached to a 4341 plug compatible machine (PCM) to do certain existing algorithms and, at a later date, to perform other to be specified algorithms. That part of the interface between the 4341 PCM and the SPP located in the 4341 PCM is known as the SPP access method (SPPAM). Access to the SPPAM will be obtained by use of the NQUEUE and DQUEUE commands. The subsystem design specification is to incorporate all applicable design considerations from the ERSYS system design specification and the Level B requirements documents relating to the SPPAM. It is intended as a basis for the preliminary design review and will expand into the subsystem detailed design specification. Author

A GLOBAL ATLAS OF GEOS-3 SIGNIFICANT WAVEHEIGHT DATA AND COMPARISON OF THE DATA WITH NATIONAL BUOY DATA
J. D. McMillan Wallops Island, Va. NASA. Wallops Flight Center Nov. 1981 163 p refs

(Contract NAS6-2639)
(NASA-CR-156882) Avail: NTIS HC A08/MF A01 CSCL 08C

The accuracy of the GEOS-3 significant waveheight estimates compared with buoy measurements of significant waveheight were determined. A global atlas of the GEOS-3 significant waveheight estimates gathered is presented. The GEOS-3 significant waveheight estimation algorithm is derived by analyzing the return waveform characteristics of the altimeter. Convergence considerations are examined, the rationale for a smoothing technique is presented and the convergence characteristics of the smoothed estimate are discussed. The GEOS-3 data are selected for comparison with buoy measurements. The GEOS-3 significant waveheight estimates are assembled in the form of a global atlas of contour maps. Both high and low sea state contour maps are presented, and the data are displayed both by seasons and for the entire duration of the GEOS-3 mission. E.A.K.

ANALYSIS OF SATELLITE OBSERVATIONS: THEORETICAL STUDIES ON THE SAMPLING PROBLEM [ANALYSE VON SATELLITENBEOBACHTUNGEN - THEORETISCHE UNTERSUCHUNGEN ZUM SAMPLING PROBLEM]

Hans Joachim Preuss 1981 68 p refs In GERMAN; ENGLISH summary
(Mitt-31; ISSN-0069-5882) Avail: NTIS HC A04/MF A01

In a general mission analysis, some orbital and measuring characteristics are simulated and their influence on the sampling investigated. The important role of a satellite with a moderate inclination (approximately 60 deg) is shown; with the drifting orbit homogeneous sampling of diurnal variations and of radiance distributions is possible in a global scale within about 15 days. More complex scan modes (off track, rotary or conical) may improve the angular sampling, especially in case of Sun synchronous satellites, but for studies in small temporal and spatial scales a system with at least three satellites is necessary. The general results are applied on the determination of the radiation balance. By means of models for the diurnal variations and anisotropic behavior, measurements are created and sampling errors demonstrated. Author

NEW BASELINE SYSTEM Final Report

In its Additional Studies of Earth Resources Syn. Aperture Radar Payload Oct. 1980 46 p refs (For primary document see N82-15500 06-43)
Avail: NTIS HC A06/MF A01

A baseline system with an incidence angle of around 45 deg was specified for the Earth resources SAR payload and its operation at smaller angles was investigated. The basic system design and method of analysis are described. The choices of pulse repetition frequency (PRF) for different incidence angles, the problem of ambiguities and their evaluation and the antenna beam patterns are covered along with the selection of major system parameters (beam pattern, PRF's and incidence angles). The detail and the baseline system suggested is analyzed in terms of the image quality specifications. Two more aspects of the SAR system, the transmitter power requirements and the variation in ground range resolution with incidence angle, are discussed. A listing of the basic results for four different incidence angles is given. J.M.S.

N82-15502# Marconi Co. Ltd., Chelmsford (England). Communications Research Div.

SQUINTED SAR SYSTEM Final Report

In its Additional Studies of Earth Resources Syn. Aperture Radar Payload Oct. 1980 32 p refs (For primary document see N82-15500 06-43)
Avail: NTIS HC A06/MF A01

It is found that for conventional SAR systems pointing broadside to the satellite track it is impossible to obtain the required swarth width at several incidence angles with the same antenna design. It is suggested that the swath width might be increased by 'squinting' the beam forwards or backwards. A feasibility study of such a system is discussed. J.M.S.

BIOLOGICAL PATCHINESS IN RELATION TO SATELLITE THERMAL IMAGERY AND ASSOCIATED CHEMICAL MESOSCALE FEATURES M.S. Thesis

Ronald Wayne Phoebus Jun. 1981 63 p refs
(AD-A105757) Avail: NTIS HC A04/MF A01 CSCL 08/1

The presence of biological patches, or communities, can have a direct effect on Naval operations, scientific research, and fisheries. It is shown that remote infrared satellite sensing may be used as a real-time tool to accurately locate thermally and biologically significant features. Several physical, chemical, and biological variables were sampled in the surface layer of mesoscale thermal features which were located using satellite imagery. The bio-chemical sampling produced replicate results from which the distribution of biomass could be inferred. Possible explanations are advanced for patch forming mechanisms and biomass distribution. Author (GRA)

STRUCTURAL EVOLUTION OF THREE GEOPRESSURED-GEOTHERMAL AREAS IN THE TEXAS GULF COAST

Charles D. Winker, Robert A. Morton, and Deborah D. Garcia 1981 13 p refs Presented at the 5th Geopressured-Geothermal Energy Conf., Baton Rouge, La., 13 Oct. 1981
(Contract DE-AC08-79ET-27111)
(DE81-029799; CONF-811026-9) Avail: NTIS HC A02/MF A01

Detailed analysis of geological and seismic data from several geopressured geothermal areas (Cuero, Blessing, Pleasant Bayou) reveals similarities in structural-stratigraphic relationships that form geopressured aquifers as well as differences in structural complexity and evolution that characterize the different areas. In these examples, geopressured sandstones are isolated on the updip side by downfaulting against shelf-slope shales, and on the downdip side by unfaulting against transgressive marine shales. Moreover, they are isolated above and below by thick sequences of transgressive shale or interbedded sandstone and shale. Prospective reservoirs are found where delatic and associated sandstones (distributary channel, delta front, barrie-strandplain) were deposited seaward of major growth faults and near the shelf margin. PRELIMINARY ANALYSIS OF GRAVITY AND AEROMAGNETIC SURVEYS OF THE TIMBER MOUNTAIN AREA, SOUTHERN NEVADA

M. F. Kane, M. W. Webring, and B. K. Bhattacharyya 1981

143 p refs
(Contract DE-AI08-78ET-44802)
(DE81-029462; DOE/ET-44802/T2; USGS-Open-File-81-189) Avail: NTIS HC A07/MF A01

Gravity and aeromagnetic surveys revealed details of subsurface structure and lithology. Information caused by volcanic events accommodated along straight line faults combining to give a curvilinear appearance to regional structure is suggested. The magnetic data suggest that rock units may have been altered, perhaps thermally, from their original state. The gravity data indicate that the south part of Timber Mountain is underlain by relatively dense and possibly intrusive rock, like that which crops out along its southeast side. The gravity data also suggest that the Silent Canyon caldera may extend considerably south of its presently indicated southern limit and may underlie much of the area of Timber Mountain. The most areas appear to be more rectangular or triangular than annular in shape. The southern part of Timber Mountain caldera is separated from the Yucca Mountain area to the south by a triangular horst. The structural relations of the rock units making up the horst are complex. Several linear terrain features in the southern part of the caldera area are closely alined with geophysical features, implying that the terrain features are fault controlled. DOE

GEOGRAPHIC ANALYSIS OF THERMAL EQUILIBRIA: A BIOENERGETIC MODEL FOR PREDICTING THERMAL RESPONSE OF AQUATIC INSECT COMMUNITIES Technical Progress Report, 1 Jul. 1980 - 31 Dec. 1981

R. L. Vannote and B. W. Sweeney 28 Aug. 1981 65 p refs
(Contract DE-AC02-79EV-10259)
(DE81-029680; DOE/EV-10259/2) Avail: NTIS HC A04/MF A01

A conceptual model describing the effects of natural and altered temperature regimes on laval growth and adult size and fecundity of hemimetaboloyus aquatic insects is tested and modified. The central hypothesis is that the stability of a given population (i.e., the ability to recover from serious reduction in numbers by environmental perturbations or fluctuations) within the geographic range of a species reflects mainly a dynamic equilibrium between temperature and individual growth, metabolism, reproductive potential, and generation time. In this context, a thermal regime is viewed as optimum for a species when individual body weight and fecundity is maximized. The model predicts that geographic range extension away from a location with an optimum thermal regime would be associated with temperature induced changes in the rate and efficiency of energy use, developmental processes, and generation time. DOE

RESERVOIR STABILITY STUDIES

T. J. Doherty Jul. 1981 9 p refs Presented at Mech. Magnetic and Energy 1981 Ann. Contractors Review Meeting, Washington, D.C., 24 Aug. 1981
(Contract DE-AC06-76RL-01830)
(DE81-030099; PNL-SA-9782; CONF-810833-9) Avail: NTIS HC A02/MF A01

Stability criteria for large underground reservoirs in salt domes, hard rock caverns, and porous rock structures for air storage in utility applications were studied. Reservoir stability commercialization of compressed air energy storage (CAES) systems was emphasized. A state-of-the-art assessment, numerical model development and experimental studies culminating in field research, was formulated. Site specific geotechnical design evaluations using methodologies to assess hard rock carvem stabilty, implementation of in-mine research on the response of domal salt, integrated laboratory and field study facilities to assess developed predictive methods and determine in situ response of a porous media reservoir to air injection are completed. OPTIMAL MIX OF ADJUSTMENTS TO FLOODS

T. L. Morin, W. L. Meier, Jr., and K. S. Nagaraj Jun. 1981 106 p refs Sponsored by Office of Water Research and Technology
(PB81-240533; TR-139) Avail: NTIS HC A06/MF A01 CSCL 13B

Developing a general methodology for the solution of the optimal mix of adjustment problems is addressed. It is recognized that the overall problem has an underlying sequencing nature which can be exploited in order to use a dynamic programming solution approach which bears distinct similarities to the sequencing approaches used in electric generation planning problems. Algorithmic details and computational refinements are also discussed. Data requirements and implementation details are also discussed and details of an application to a real world problem are given. COAL RESOURCES AND SULPHUR EMISSION REGULATIONS: A SUMMARY OF 8 EASTERN AND MIDWESTERN STATES Final Report, Apr. 1979 - Mar. 1981
Richard A. Chapman and Marcella A. Wells May 1981 112 p refs Prepared for Versar, Inc., Springfield, Va.
(Contract EPA-68-02-3136)
(PB81-240319; EPA-600/7-81-086) Avail: NTIS HC A06/MF A01 CSCL 13B

Coal resources, current coal use, and the effectiveness of SO2 control strategies for use by coal users, regulators, and administrators in future coal related decisions were analyzed. The eight major eastern and midwestern coal producing states are discussed and each state's analysis includes a general overview of the coal industry, an overview of coal properties, a description of major coal seams, an analysis of the quantity of coal available to meet various SO2 emission regulations, and information regarding the sulfur content of coals used by utilities in 1979. Physical coal cleaning and the use of low sulfur coal as viable emission control strategies are emphasized. The coal assessment processor model was developed to determine the quantity of coal that would be available in each state to meet various SO2 emission regulations using one or a combination of alternative SO2 control technologies. SATELLITE POWER SYSTEM: CONCEPT DEVELOPMENT AND EVALUATION PROGRAM. VOLUME 7: SPACE TRANSPORTATION

Nov. 1981 258 p refs Prepared in cooperation with NASA. Johnson Space Center, Houston, Tex.
(NASA-TM-58238) Avail: NTIS HC A12/MF A01 CSCL 10A

During the several phases of the satellite power system (SPS) concept definition study, various transportation system elements were synthesized and evaluated on the basis of their potential to satisfy overall SPS transportation requirements and their sensitivities, interfaces, and impact on the SPS. Additional analyses and investigations were conducted to further define transportation system concepts that will be needed for the developmental and operational phases of an SPS program. To accomplish these objectives, transportation systems such as the shuttle and its derivatives were identified; new heavy-lift launch vehicle (HLLV) concepts, cargo and personnel orbital transfer vehicles (COTV and POTV), and intra-orbit transfer vehicle (IOTV) concepts were evaluated; and, to a limited degree, the program implications of their operations and costs were assessed. The results of these analyses were integrated into other elements of the overall SPS concept definition studies. Author

PROCESS DEVELOPMENT FOR LARGE-SCALE PRODUCTION OF CdS THIN FILM SOLAR CELLS SPUTTERED COPPER SULFIDE LAYERS AND CADMIUM SULFIDE-COPPER SULFIDE HETEROJUNCTIONS. APPLICATION OF HIGH RATE SPUTTERING USING HOT-PRESSED TARGETS Final Report

Werner Mueller, Wolf-Dieter Muenz, Karl Radler, and Karl-Heinz Schuller Bonn Bundesministerium fuer Forschung und Technologie Apr. 1981 158 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-069; ISSN-0340-7608) Avail: NTIS HC A08/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 32.30

A method was developed for the manufacturing of stoichiometrically composed copper sulphide-layers and of polycrystalline CdS-layers using a diode sputtering process. Heterojunctions were produced with a Cds-layer-thickness of 6 micrometers and on solarelectric efficiency of 1%. High rate sputtering cathodes were developed and their suitfulness, when sputtering CdS, was tested. Using high rate sputtering the sputtering rate of targets with 200 mm diameter could be increased by the factor 5 to 9 nm/sec. T.M.

HC A05/MF A01; Fachinformationszentrum, Karlruhe, West Germany DM 16

Mercury can react with Raney nickel to form the alloy NiHg4. This intermetallic compound is the basis of an excellently rechargeable positive electrode material. In combination with cadmium it forms a rechargeable cadmium/mercury oxide cell which can be operated under hermetically sealed conditions. Since both electrodes are thermodynamically stable in aqueous alkaline electrolytes, the self discharge rate of the cell is very low and hence the Coulomb efficiency even at very low charge rates in the order of 1000 - 2000 hrs. is higher than 95%. The cadmium/mercury oxide cells can be cycled more than a hundred times. These cells are particularly qualified to serve as an energy storage in combination with photovoltaic cells. Author

NICKEL-IRON BATTERY OF HIGH ENERGY DENSITY Final Report, Jul. 1980

Guenter Kraemer, V. Antony Oliapuram, Karl-Wilhelm Lexow, and Karl-Georg Horn Bonn Bundesministerium fuer Forschung und Technologie Jul. 1981 163 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-100; ISSN-0340-7608) Avail: NTIS HC A08/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 32,80

The energy and power densities of conventional Nickel-Iron accumulators at about 26 wh/kg (5 h) and 18 w/kg (1 h) respectively are rather low. By using active materials of high utilization, electrode construction with low-weight support, light cell containers, and less electrolyte with gas recombination specific values of 45 wh/kg (5 h) and 35 w/kg (1 h) can be obtained as well as short-time load peaks of about 100 w/kg. An elastic casing is an essential feature of the new battery. The reversible pressure-volume changes can be used as a state-of-charge indicator. Production procedures, experimental results and recommendations for use are given. A 1 kwh batter has been completed. Author

SOLAR POWER SYSTEMS SMALLER THAN 500 W FOR MILITARY USE

P. P. M. M. Wittgen Nov. 1979 27 p refs In DUTCH; ENGLISH summary
(Contract A78/KL/125)
(PML-1980-06; TDCK-73397) Avail: NTIS HC A03/MF A01

A literature search of the feasibility of using photovoltaic cells for the energy supply of low power-consuming military equipment is presented. Progress in the technology of solar cells in the coming years offers good prospects for the use of photovoltaic systems. A hybrid system consisting of an array of solar cells combined with secondary batteries in a sunny climate is capable of supplying equipment with energy. Climatic conditions in the Netherlands and the northern part of Germany are too bad for a fully self-supporting year round system. Especially in winter the intensity and quantity of the radiation is too low. In these northern regions the hybrid solar system can only be used when additional primary or secondary batteries are accepted in the winter period. J.D.H.

DEVELOPMENT OF A CADMIUM SELENIDE THIN FILM SOLAR CELL Final Report, Mar. 1980

Edmund Rickus Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 85 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-109; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17,85

Examinations of the physical and chemical structure of thin CdSe films and their surfaces show that not only the electronic structure, but also the orientation and morphology of the semiconductor layer have a strong influence on the photovoltaic properties of the cells. The MIS structures with a chromium back contact, a 2 nm thick undoped CdSe layer, a 4 to 5 nm thick ZnSe layer, and a 20 nm thick gold layer show efficiencies of more than 6% related to a radiation f 100 mW/sq cm reaching the CdSe layer. At the present stage of development, efficiencies of more than 4% can be realized with very simple, not yet optimized ZnS antireflection coatings. As the analysis of current-voltage characteristics shows, the open circuit voltage and the presently relatively low fill factor can be enhanced by improved doping. This gives a realistic goal of about 10% efficiency for further work. Author

INVESTIGATION OF MEDIUM AND HIGH TEMPERATURE PHASE CHANGE MATERIALS FOR THERMAL ENERGY STORAGE Final Report, Apr. 1980

Dietmar Heine, Friedrich Hesse, and Dieter Steiner Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 110 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-149; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 23,10

Investigations in the temperature ranges 200 to 450 C and 700 to 900 C, are reported. These investigations comprise the corrosion of structural materials together with promising storage materials and the thermal stability and the melting and freezing behavior of the storage materials. The mass losses of sheet metal samples were measured from the corrosion tests, and thickness reduction and corrosion rate were calculated. The corrosion type was determined using microscopes. Furthermore, melting and freezing curves were continually measured during cycling tests. The thermal stability of the storage materials was thereby determined as a function of the melting and freezing properties. The combinations mild steel with NaNO3, boiler steel with KCl-ZnCl2, NaNO3 and MgCl2-NaCl, and NiCu30Fe with KCl-ZnCl2 were found to be compatible in the temperature range 200 to 450 C.

ORGANIC FLUIDS FOR THE PRACTICAL USE IN ENERGY CONVERSION SYSTEMS OF SOLAR POWER PLANTS Final Report, Jun. 1980

Guenther Schmidt, Dietmar Wolf, and Eberhard Raesch Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 76 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-154; ISSN-0340-7608) Avail: NTIS HC A05/MF A01

With respect to their specific performance, the most promising organic fluids were determined for their practical use in Rankine cycles operating in the temperature range between 150 and 400 C. For these fluids, the process cycle efficiencies were compared for different temperature levels. Laboratory experiments with a great number of fluids and lubricants results in the estimation of the operation limit in Rankine Cycles. A test facility consisting of a heating system, an organic Rankine cycle and a control and measurement system was designed, built, and put into operation for testing various working fluids. Author

HIGH EFFICIENT COLLECTOR FOR SMALL SOLAR-POWERED FACILITIES Final Report

Eugen Obermayr, Wolfgang Molt, Dieter Schneller, and Klaus Speidel Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 100 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-156; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 21

A series of preliminary investigations and laboratory tests were performed as a basis for developing a new type of solar collector. The vacuum flat plate collectors are actually evaporators, where the working medium is evaporated within the collector itself. Prototypes of direct evaporation collectors were constructed and tested. In the temperature range seen for this application (130 - 150 C), the collector efficiency is about 40 - 50 percent.

DEVELOPMENT OF A PROCESS FOR AN INEXPENSIVE PRODUCTION OF THIN FILM SOLAR CELLS ON AN INDUSTRIAL SCALE Final Report, Jul. 1980

Norbert Ruecker Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 32 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-159; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 6,70

A process was developed for an inexpensive production of CdS/Cu(x)S solar cells on an industrial scale. Using a pre-covering evaporated thickness of 3 micron Cd-films exhibit a grain size of more than 3 micron. Cadmium can be converted to alpha-CdS by a thermal treatment in a H2S-containing atmosphere. It is expected that the time of conversion can be reduced by optimizing the process. The CdS grain size is some tenths of a micron on the surface; below the surface it increases. The resistivity of converted CdS-layers can be enhanced in a definite manner by exposure to a glow discharge containing H2S. Using this technique the connection of the CdS-layer to the substrate by means of Cd-metal is guaranteed. Further investigations should be extended to thicker layers. The Cu(x)S-film should be formed by thermal evaporation.

THE MIT ABU EL KOM SOLAR DEMONSTRATION PROJECT IN EGYPT. PHASE A: SOLAR THERMAL INSTALLATIONS Final Report, Mar. 1980

Friedrich Reinmuth Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 71 p refs In GERMAN; ENGLSH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-164; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 14,90

Maintenance-free solar installations were tested under unfavorable operating conditions in a village in Egypt. Thirty-five simple domestic hot water installations, designed as natural circulation systems of a collector surface of 2 sqm each and a 120 liter boiler mounted on the roof were examined. These installations were completely mounted and commissioned. The performance and efficiency of the systems were satisfactory.

COMPARISON OF CONCEPTS FOR SOLAR-HEATED OR SOLAR-DRIVEN ABSORPTION AND COMPRESSION COOLING MACHINES FOR AIR CONDITIONING AND FOOD PRESERVATION PURPOSES, PHASE 1 Final Report, Nov. 1978

Herbert Grallert, Manfred Herbricht, and Martin Margulies Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 91 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-165; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19,10

For the cooling power range of about 10 to 500 kW and for cooling temperatures of +20, 0, and -20 C, a comparison was made between solar heated absorption machines and compression machines, which are driven by a solar heated Rankine cycle. Comparison criteria are C.O.P., energy prices, and application risks. All partial efficiencies and costs were determinated by component analyses. For several cooling loads an annual system simulation was performed using MBB computer programs. Furthermore, the electric energy demand for absorption cooling systems was estimated and initial application recommendations are given.

ROLE OF LARGE SCALE ENERGY SYSTEMS MODELS IN R&D PLANNING

J. Lamontagne Nov. 1980 13 p refs Presented at the ORSA/TIMS Conf., Colorado Springs, 9 Nov. 1980
(Contract DE-AC02-76CH-00016)
(DE81-026058; BNL-29751; CONF-801128-3) Avail: NTIS HC A02/MF A01

The development of alternative technologies to provide new sources of energy and extend the lives of current ones is discussed. The influence of model results on energy policy makers who are not knowledgable about flaws or uncertainties in the models, errors in assumptions in model inputs which can result in faulty forecasts, the overall usefulness of energy system models, and model limitations are discussed. It is concluded that energy models should be clearly related to specific issues and methodologies should be clearly related to specific decisions, and allow adjustments to be easily made for alternative assumptions and for additional knowledge gained during the evolution of the energy system. FEASIBILITY ANALYSIS OF GEOTHERMAL DISTRICT HEATING FOR LAKEVIEW, OREGON Final Report

23 Dec. 1980 93 p refs Prepared for Northwest Geothermal Corp., Portland Oregon
(Contract DE-AC51-79ET-27229)
(DOE/ET-27229/T1) Avail: NTIS HC A05/MF A01

A substantial resource capable of supporting extensive residential, commercial and industrial heat loads is indicated. Good resource productivity is expected with water temperatures of 200 F at depths of 600 to 3000 feet in the immediate vicinity of the town. Preliminary district heating system designs were developed for a Base Case serving 1170 homes, 119 commercial and municipal buildings, and a new alcohol fuel production facility; a second design was prepared for a downtown Mini-district case with 50 commercial users and the alcohol plant. Capital and operating costs were determined for both cases. Initial development of the Lakeview system has involved conducting user surveys, well tests, determinations of institutional requirements, system designs, and project feasibility analyses. DOE

COMPRESSED-AIR ENERGY-STORAGE TECHNOLOGY: PROGRAM OVERVIEW

L. D. Kannberg Jul. 1981 7 p Presented at the Mech., Magnetic and Underground Energy Storage Ann. Contractor's Rev. Meeting, Washington, D.C., 24 Aug. 1981
(Contract DE-AC06-76RL-01830)
(DE81-030103; PNL-SA-9780; CONF-810833-8) Avail: NTIS HC A02/MF A01

A new technology designed to reduce the consumption of oil in the generation of electric power was developed. The program has two major elements: reservoir stability studies and second generation concepts studies. The reservoir stability studies are aimed at developing stability criteria for long term operation of large underground reservoirs used for compressed air storage. The second generation concepts studies are aimed at developing new concepts that will require little or no petroleum fuels for operation. The program efforts are outlined and major accomplishments towards the objectives of the program are identified. DOE

CHARACTERIZATION OF RADIATION-CROSSLINKED, HIGH-DENSITY POLYETHYLENE FOR THERMAL ENERGY STORGE APPLICATIONS

Ruth B. Whitaker, Stephen M. Craven, Donald E. Etter, and Eugene F. Jendrek 1981 8 p refs Presented at the 11th North Am. Thermal Anal. Soc. Conf., New Orleans, 19 Oct. 1981
(Contract DE-AC04-76DP-00053)
(DE81-024915; MLM-2836-OP; CONF-811014-1) Avail: NTIS HC A02/MF A01

Characterization of the crosslinked, form stable high density polyethylene (HDPE) pellets produced by electron beam radiation crosslinking, and the effects of crosslinking on crystallinity and heat of fusion were studied. Methods used include differential scanning calorimetry, Fourier Transform Infrared Spectroscopy (FTIR), and X-ray diffraction measurements. It is indicated that the crosslinking occurs primarily in the amorphous regions of the polyethylene. The FTIR spectroscopy was used to estimate the relative amounts of crosslinking occurring with the varying radiation dosages, and the uniformity of crosslinking throughout the pellets. It is found that the amount of crosslinking from the outside to the center of the pellets is uniform, which assists in maintaining long term form stability in the pellets. DOE

INDIVIDUAL BIOMASS FACILITY REPORTS. SUPPLEMENT TO SOME EMPLOYMENT AND EARNINGS IMPLICATIONS OF REGIONAL BIOMASS ENERGY UTILIZATION: NEW ENGLAND AND THE CORNBELT STATES

Joanna R. Little, Sharon E. Bell, Larry M. Blair, Ruth M. Gove, Wayne Stevenson, and Robert F. Tamura Aug. 1981 155 p
(Contract DE-AC05-76OR-00033)
(DE81-028523; ORAU-181B) Avail: NTIS HC A08/MF A01

Research was conducted to determine the direct employment and earnings implications of regional biomass energy utilization. Details of the primary data collected during the course of the investigation are provided. A case studies approach was used to observe and analyze various biomass energy systems. Visits were made to existing biomass facilities and data on their operation and employment requirements were collected. Information on planned or potential future facilities was also obtained. When this information was analyzed, a fairly accurate picture of the current situation as well as the rate and direction of future development in biomass was attained. Separate descriptions are included for each facility visited or for each interview obtained. The facility reports are organized according to fuel cycle (wood-fuel, alcohol-fuel, municipal solid waste facilities, others). DOE

LOW-COST MIRROR CONCENTRATOR BASED ON INFLATED, DOUBLE-WALLED, METALLIZED, TUBULAR FILMS Final Report
J. L. Schwendeman, G. L. Ball, III, J. W. Leffingwell, and C. E. McClung Jul. 1981 121 p refs
(Contract DE-AC04-78AL-04227)
(DE81-027813; MRC-DA-944; ALO-4227-6) Avail: NTIS HC A06/MF A01

A potentially low cost, inflatable plastic solar mirror concentrator based on segments of a cylinder joined along the length of the collector on a plane passing through the axis of the absorber tube was designed and built. This design results in a savings of approximately 40% in the amount of window and mirror material and in a savings of about 20% of the land area occupied by a single collector when compared to a fully cylindrical one. The type of construction permits the assembling of the mirror/window envelope to the collector without disturbing the collector frame, absorber tube, or the associated plumbing. Aluminum foil plastic laminates were used as an alternative to aluminized polyester films, because of their potential low cost and durability. Specially ultraviolet stabilized and polyester scrim reinforced flexible polyvinyl chloride film was developed for use as the outer cover material. DOE

EXPLORATORY STUDY OF COAL-CONVERSION CHEMISTRY Quarterly Report, 20 Jun. 1980 - 19 Sep. 1981
4 Mar. 1981 35 p refs
(DE81-016136; DOE/ET-14855/12) Avail: NTIS HC A03/MF A01

The mechanism of cleavage of key bond types present in coals, and catalysis of conversion in CO-H2O systems are described. Catalytic carbon-carbon and carbon-oxygen bond cleavage in coal related diphenylmethane and diphenyl ether structures were measured. The homogeneous scission of carbon-oxygen bonds in diphenyl ether structure was also studied. The CO-H2O conversion level is obtained with aqueous solutions either at a starting pH above 12.6 or in neutral solutions with water soluble catalysts present. Catalysts, including the potassium or sodium salts of molybdate, chromate, manganate, and tungstate was studied and it is found that all are effective in the 3000 to 6000 ppM range. The nitrate was converted to ammonium ion and formate was detected in the product aqueous phase. It is found that catalytic quantities of sodium formate in CO/H2O at pH 7 are effective in the conversion. DOE

N82-15553# Stoller (S. M.) Associates, New York.
POTENTIAL CONTRIBUTION OF CURRENTLY OPERATING NUCLEAR-FUELED ELECTRIC-GENERATING UNITS TO REDUCING US OIL CONSUMPTION
R. H. Koppe, Eric A. J. Olson, and Kenneth R. VanHowe 30 Sep. 1980 56 p Prepared for ORNL
(Contract W-7405-eng-26)
(DE81-030497; ORNL/Sub-80/40416/1) Avail: NTIS HC A04/MF A01

The prospect for performance improvement in the 62 operating light water reactors was examined. It is found that in the short term, capacity factor improvement of about 16 percent can be achieved, in response to a short term energy crisis. In the long term a gain of 18 percent can be achieved. Such gains represent a decrease in equivalent oil consumption of approximately 350,000 barrels a day. Potential increases in the operating power level of these units, are evaluated. This total short term power level increase would be equivalent to 138,000 barrels of oil per day. DOE

N82-15554# Department of Energy, Washington, D. C. Office of Energy Management and Extension.
ANNUAL REPORT TO THE PRESIDENT AND THE CONGRESS ON THE STATE ENERGY CONSERVATION PROGRAM FOR CALENDAR YEAR 1980
Jul. 1981 40 p
(DE81-025862; DOE/CE-0016) Avail: NTIS HC A03/MF A01

The activities of the fifth year's operation (December 1979 through December 1980) of the state energy conservation program are reported. The program requires states to develop and implement plans that will reduce projected energy consumption by 5% or more in 1980. Five program measures required to be eligible for financial assistance under the plan and three program measures under a supplemental plan are described and outlined. The details of program operation and results to date are reported. Program management in a description of selected innovative state Program measures are described. The President's Program for economic recovery is evaluated. DOE

TECHNOLOGY CHANGE AND ENERGY CONSUMPTION: A COMPARISON OF RESIDENTIAL SUBDIVISIONS
L. A. Nieves and A. L. Nieves 1981 38 p Presented at the 56th Ann. Conf. of the Western Econ. Assoc., San Francisco, 2-6 Jul. 1981
(Contract DE-AC06-76RL-01830)
(DE81-030075; PNL-SA-9049; CONF-810757-2) Avail: NTIS HC A03/MF A01

The energy savings in residential buildings likely to result from implementation of the building energy performance standards (BEPS) were assessed. The goals were to: compare energy use in new homes designed to meet or exceed BEPS levels of energy efficiency with that in similar but older homes designed to meet conventional building codes, and to survey the home owners regarding their energy conservation attitudes and behaviors and to ascertain the degree to which conservation attitudes and behaviors are related to residential energy use. The consumer demand theory which provides the framework for the empirical analysis is presented. The sample residences are described and the data collection method discussed. The definition and measurement of major variables are presented. DOE

N82-15556# Minnesota Geological Survey, St. Paul.
MOORHEAD DISTRICT HEATING, PHASE 2 Final Report
R. E. Sundberg Jan. 1981 429 p refs
(Contract DE-AC02-79CS-20074)
(DE81-029689; DOE/CS-20074/1) Avail: NTIS HC A19/MF A01

The feasibility of developing a demonstration cogeneration hot water district heating system was studied. The district heating system would use coal and cogenerated heat from the Moorhead power plant to heat the water that would be distributed through underground pipes to customers or their space and domestic water heating needs, serving a substantial portion of the commercial and institutional loads as well as single and multiple family residences near the distribution lines. The technical feasibility effort considered the distribution network, retrofit of the power plant, and conversion of heating systems in customers' buildings to use hot water from the system. The system would be developed over six years. The economic analysis consisted of a market assessment and development of business plans for construction and operation of the system. Rate design methodology, institutional issues, development risk, and the proposal for implementation are discussed. DOE

SOME THERMOELECTRIC PROPERTIES OF THE LIGHT RARE EARTH SESQUISELENIDES (R2Se/SUB3-X/)
T. Takeshita, B. J. Beaudry, and K. A. Gschneidner, Jr. 1981 5 p refs Presented at the IECEC Conf., Atlanta, 9-14 Aug. 1981
(Contracts W-7405-eng-82; WPAS-AE-15-25)
(DE81-025526; IS-M-329; CONF-810812-29) Avail: NTIS HC A02/MF A01

Rare earth sesquiselenides of the Th3P4 structure which show variable electric properties over their homogeneity range.

i.e., ranging from metallic to semimetallic to semiconducting were analyzed. The composition change is due to the formation of metal vacancies in the Th_3P_4 structure with no vacancies at R_3Se_4 and 4.75 at. % vacancies at R_2Se_3. The rare earth sesquiselenides are refractory materials and of interest for high temperature thermoelectric applications. Preliminary results of thermoelectric power and electrical resistivity measurements on the light lanthanide sesquiselenides are presented. DOE

N82-15558# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

DESIGN AND ECONOMICS OF DIRECT-CONTACT SALT HYDRATE STORAGE SYSTEMS

John D. Wright May 1981 9 p refs Presented at the 2nd World Congr. of Chem. Eng., Montreal, 4-9 October 1981
(Contract EG-77-C-01-4042)
(SERI/TP-631-1163; CONF-811007-3) Avail: NTIS HC A02/MF A01

A salt hydrate latent heat storage system in which oil is injected at the bottom of the container and exhanges heat as it floats to the top where it is pumped back to the heat source is described. Two experiments are described: (1) to reliably inject the oil into the salt phase; and (2) to minimize the carryover of salt hydrate into the oil, which can be done using two stage coalescer filters. Three systems are described and compared: a standard liquid based sensible heat storage system, a latent heat storage design where oil is the heat transfer fluid throughout the system, and a latent heat storage system where ethylene glycol/water is used in the collectors and oil in the storage tank. DOE

WIND SPEED SIMULATION FOR ECONOMIC EVALUATION OF WIND ENERGY CONVERSION SYSTEMS

J. V. Ramsdell, G. F. Athey, and M. Y. Ballinger Jul. 1981 14 p refs Presented at the 4th U.S. Natl. Conf. of Wind Eng. Res., Seattle, 26-29 Jul. 1981 Submitted for publication
(Contract DE-AC06-76RL-01830)
(DE81-030077; PNL-SA-9149; CONF-810742-3) Avail: NTIS HC A02/MF A01

A time series model was developed for the simulation of wind speeds. The model provides for the incorporation of systematic seasonal variation of the mean speed, standard deviation, and correlation of speeds. It also provides for incorporation of the systematic diurnal variation of the mean speed and the standard deviation. As a demonstration of the model capabilities, a number of simulations were using model parameters derived from data previously collected. The results of analyses of both sets of data, the simulated set and the real data, were compared. In general the major features found in the analyses of the real data are identifiable in the corresponding analyses of the simulated data. The primary difference between the two data sets is in the frequency of high wind speeds. The frequencies of hourly and daily average wind speeds greater than two standard deviations above the mean are underestimated slightly by the model. DOE

OXIDATION OF METAL SULFITES BY IODINE FOR USE IN THERMOCHEMICAL HYDROGEN CYCLES

C. F. V. Mason and M. G. Bowman 1981 6 p refs Presented at the 4th Intern. Energy Agency Annex 1 Workshop on Thermochem. Hydrogen, Julich, West Germany, 23-25 Sep. 1981 Submitted for publication
(Contract W-7405-eng-36)
(DE81-030253; LA-UR-81-2477; CONF-810942-5) Avail: NTIS HC A02/MF A01

It is noted that thermochemical hydrogen cycles involving metal sulfates offer an alternative to sulfuric acid which is corrosive and has high energy requirements for drying prior to its thermal decomposition. The formation of such metal sulfates in conjunction with a low temperature hydrogen formation step is discussed. The following reaction was studied: $MgSO_3(c) + MgO(c) + I_2(g)$ yields $MgSO_4(c) + MgI_2(c)$. Although magnesium sulfite appears promising for this oxidation, a search was conducted for alternative metal sulfites which fit the following criteria for use: (1) sulfate must decompose in the temperature range available (< 1400 K); (2) iodide must hydrolyze easily; and (3) salts must not be rare, toxic, or expensive. Lanthanum and titanium fit these criteria.

MICRO-HYDROPOWER IN THE UNITED STATES

R. O. Haroldsen and F. B. Simpson 1981 9 p refs Presented at WATERPOWER 1981 Conf., Washington, D.C., 22 Jun. 1981
(Contract DE-AC07-76ID-01570)
(DE81-028271; EGG-M-02781; CONF-8106137-5) Avail: NTIS HC A02/MF A01

The interest and problems relating to the development of micro-hydropower, i.e., capacities of less than 100 kW, was assessed. A total of 62 individuals from 10 states and 4 groups, i.e., developers, A/E firms, equipment manufacturers, and state and federal agencies, were polled to determine their perceptions of the advantages and disadvantages of micro-hydro developments and the needs for such developments. Financing, technical assistance, and help with the economic analysis and regulatory aspects of micro-hydro development appeared to be the paramount needs. Whether or not a specific site can be successfully developed depends on site conditions. A micro-hydro plant discussed as an example is shown to be a poor investment, e.g., maximum $200 per month return on $60,000 investment.

SPECTRAL RESPONSE MEASUREMENTS FOR SOLAR CELLS

J. S. Hartman and M. A. Lind 1981 20 p refs From Com. Photovoltaics Meas. Workshop, Vail, Colo., 27-29 Jul. 1981
(Contract DE-AC06-76RL-01830)
(DE81-030097; PNL-SA-9751; CONF-810748-2) Avail: NTIS HC A02/MF A01

An overview of spectral response measurements, measurement systems, and potential measurement problems are described relative to the characterization of solar cells. Measurement systems are outlined for determining the spectral response, external quantum efficiency, and internal quantum efficiency of solar cells. Practical system components and measurement systems are presented along with their potential advantages and weaknesses. Finally, several solar cell properties (linearity, spatial uniformity, etc.) are discussed which must be considered before a measurement system can be designed to evaluate a specific type of solar cell.

PHOTOELECTROCHEMICAL SOLAR CELLS: STABILIZATION OF SMALL-BAND-GAP SEMICONDUCTOR IN AQUEOUS SOLUTION BY SURFACE-ATTACHED ORGANIC CONDUCTING POLYMER

Arthur J. Frank Sep. 1981 13 p refs Presented at the Intern. Conf. on Low-Dimensional Conductors, Boulder, Colo., 10-14 Aug. 1981
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-030312; SERI/TP-233-1388; CONF-810864-1) Avail: NTIS HC A02/MF A01

Surface-attached polypyrrole films are shown to produce a marked improvement in the stability of n-type single-crystal and polycrystalline Si against oxidation in an aqueous electrolyte. The current production of n-type polycrystalline Si coated with polypyrrole deteriorates less than 30% during 122 hr of irradiation whereas the unprotected bare electrode stops producing photocurrent within 30 s. The polymer protection of the n-type single-crystal Si is significantly less than that of the polycrystalline material because of differences in the adhesion of the polymer film to the electrode surfaces. The adhesion strength is shown to depend on various surface properties of Si and other electrode materials. Moreover, the surface morphology of the electrode affects the topography of the growing surface of the polypyrrole film. Requirements are discussed for the applications of organic conducting polymers to photoelectrochemical devices utilized for solar energy conversion.

ENVIRONMENTAL PROGRAMS FOR OCEAN THERMAL ENERGY CONVERSION (OTEC)

P. Wilde Jul. 1981 10 p refs Presented at the Oceans 1981 Conf., Boston, 16 Sep. 1981
(Contract W-7405-eng-48)
(DE81-028876; LBL-12977; CONF-810911-2) Avail: NTIS HC A02/MF A01

The ocean thermal energy conversion (OTEC) which provides documented information on the effect of proposed operations on the ocean and the effect of oceanic conditions on the plant is discussed. The associated environment program consists of archival studies in potential areas serial oceanographic cruises to sites or regions of interest, studies from various fixed platforms at sites, and compilation of such information for appropriate legal compliance and permit requirements and for use in progressive design of OTEC plants. Four classes of environmental concerns are identified: (1) redistribution of oceanic properties; (2) chemical pollution; (3) structural effects and (4) socio-legal economic.

COMPARATIVE THERMAL PERFORMANCE OF DIRECT GAIN, TROMBE, AND SUNSPACE WALLS

H. T. Ghaffari and R. F. Jones 1981 8 p refs Presented at the 6th Natl. Passive Conf., Portland, Ore., 8-12 Sep. 1981 sep
(Contract DE-AC02-76CH-00016)
(DE81-030546; BNL-29970; CONF-810925-21) Avail: NTIS HC A02/MF A01

The natural thermal storage features of the Brookhaven superinsulated house were analyzed and verified. These include the Trombe and sunspace passive-solar-collection walls and the superinsulated south-facing wall. The thermal contributions of each system were demonstrated. Several thermal characteristic factors, in relation to each design for the hourly and daily period, were assessed. Further, the interior temperature fluctuations and the reductions in the required auxiliary energy with regard to incorporated passive designs were evaluated.

HEATING AND COOLING APPLICATIONS OF ATRIUMS AND ATTACHED GREENHOUSES: A STATE-OF-THE-ART REPORT
Dec. 1980 113 p refs
(Contract DE-AC03-80SF-11511)
(DE81-022181; DOE/SF-11511/T1) Avail: NTIS HC A06/MF A01

The current state-of-the-art in atrium designs is described and its deployment status throughout the US is reported. Individual and computer subject searches of atriums and greenhouse were completed. An annotated bibliography of each reference reviewed was prepared and are listed in three categories: system characteristics; existing attached greenhouses and atriums, and current greenhouse design criteria. Atriums are defined; a classification scheme was developed; and operating modes are discussed. Atrium locations are identified by region. Simplified approaches to sizing atrium elements, emphasizing greenhouse materials, are discussed. DOE

PASSIVE-SOLAR RETROFIT STUDY FOR THE UNITED STATES NAVY
William O. Wray and Charles R. Miles (Naval Civil Engineering Lab., Port Hueneme) 1981 6 p ref Presented at the Solar World Forum, Brighton, U.K., 23-28 Aug. 1981
(Contract W-7405-eng-36)
(DE81-030250; LA-UR-81-2500; CONF-810865-3) Avail: NTIS HC A02/MF A01

The purpose of the study was to determine the energy savings obtainable in concrete block buildings from several passive solar heating strategies. A procedure involving the use of test cell data and computer simulation was employed to assess the merits of six retrofit options. The six strategies selected were chosen on the basis of providing a series of options that will deliver increasing energy savings at the cost of correspondingly increased levels of commitment. DOE

SERI SOLAR-ENERGY-STORAGE PROGRAM
Charles E. Wyman Aug. 1981 3 p refs Presented at the Ann. DOE Active Solar Heating and Cooling Contractors Rev. Meeting, Washington, D.C., 14-16 Sep. 1981
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-029476; SERI/TP-620-1344; CONF-810912-11) Avail: NTIS HC A02/MF A01

The program provides research, system analysis, and assessments of thermal energy storage and transport in support of the Thermal Energy Storage Program of the DOE Division of Energy Storage Technology; emphasis is on thermal energy storage for solar thermal power and process heat applications and on thermal energy transport. Currently, research is in progress on direct-contact thermal energy storage and thermochemical energy storage and transport. In addition, SERI is directing the definition of new concepts for thermal energy storage and supporting research on thermal energy transport by sensible and latent heat media. SERI is performing systems analyses of thermal energy storage for solar thermal application and coordinating thermal energy storage activities for solar applications. DOE

N82-15577# California Univ., Berkeley. Lawrence Berkeley Lab. Energy and Environment Div.
OVERVIEW OF ACTIVE SOLAR ABSORPTION/RANKINE COOLING PROGRAM
Michael Wahlig, Al Heitz, Harry Angerman, Ron Glas, and Mashuri Warren Jul. 1981 7 p Presented at the Active solar Contractors' Review Meeting, Washington, D.C. 9-12 Sep. 1981; sponsored by DOE
(Contract W-7405-eng-48)
(DE81-028041; LBL-13054-Rev; CONF-810912-13) Avail: NTIS HC A02/MF A01

The individual absorption and Rankine projects along with the main features and accomplishments/status of each and future plans were identified. The absorption program, was three active component development projects, four systems field test projects, one advanced fluid study project and one advanced cycle study project. Rankine program, includes five active component development projects, two system field test projects, and one advanced study project. DOE

VERIFICATION OF BLAST BY COMPARISON WITH MEASUREMENTS OF A SOLAR-DOMINATED TEST CELL AND A THERMALLY MASSIVE BUILDING
Brandt Andersson, Fred Bauman, William Carroll, Ronald Kammerud, and Nina Friedman Apr. 1981 12 p refs Presented at the 3rd Ann. Systems Simulation and Econ. Anal. Operational Results Conf., Solar Energy Div., Reno, Nev., 27 Apr. - 1 May 1981; sponsored by ASME
(Contract W-7405-eng-48)
(DE81-029883; LBL-11387; CONF-810405-16) Avail: NTIS HC A02/MF A01

Temperatures were compared in a direct solar gain test cell and temperatures were predicted. The comparisons were performed for two distinct climate period. The test cell configuration and weather data manipulations, quantitative evaluations of the comparisons between measured and predicted interior temperatures, limitations of the comparisons, and sensitivities of the simulation results to uncertainties in the measured parameters are examined. In the second study, comparisons of BLAST predictions to temperatures and loads measured in a massive structure were carried out. The tests verifying the program's ability to: (1) calculate full scale building loads; and (2) accurately model hybrid cooling using forced ventilation. DOE

N82-15579# Ames Lab., Iowa.
TRANSWALL: A MODULAR VISUALLY TRANSMITTING THERMAL STORAGE WALL Status Report
J. F. McClelland, R. W. Mercer, L. Hodges, R. F. Szydlowski, P. H. Sidles, R. G. Struss, J. R. Hull (Argonne National Lab., Ill.), and D. A. Block 1980 8 p refs Presented at the Intern. Solar Energy Soc. Conf., Brighton, England, 24-27 Aug. 1980
(Contract W-7405-eng-82)
(DE81-029821; IS-M-345; CONF-8008123-1) Avail: NTIS HC A02/MF A01

The Transwall a semitransparent thermal storage wall system that offers a number of advantages over conventional direct gain and Trombe wall approaches is examined. Progress is reported in the design, fabrication, installation, and operation of a glass and aluminum prototype system. A facility for year round performance testing of the system is described and preliminary summer season thermal test data are presented. Thermal performance modeing results that predict heat loss reduction with a heat mirror coating on Transwall to be comparable to that obtained with R6 night insulation are reported. DOE

USE OF OXIDE DECOMPOSITIONS IN ADVANCED THERMOCHEMICAL HYDROGEN CYCLES FOR SOLAR HEAT SOURCES. APPLICATION OF THE TRICOBALT TETRAOXIDE-COBALT MONOXIDE PAIR

W. M. Jones and M. G. Bowman 1981 9 p refs Presented at Intern. Energy Agency Annex 1 Workshop on Thermochem. Hydrogen, Julich, West Germany, 23 Sep. 1981

(DE81-030235; LA-UR-81-2628; CONF-810942-6) Avail: NTIS HC A02/MF A01

The concept of utilizing oxide decompositions in advanced thermochemical hydrogen cycles for solar heat sources is introduced. It allows direct transmission of energy to the process through an air window. Reaction (2) gives a high concentration of MgI2 that would be favorable for (3). The solutions contain iodine dissolved as polyiodide, partly offsetting this advantage. It is indicated that reaction (2) is slow at 150 C. It is surmised that the mechanism of (2) consists of the iodine disproportionation reaction (6), followed by reaction (7). It was found that (6) was relatively fast and with a good yield at 150 C. Reaction (7) is sufficiently slow at 150 C to account for the slowness of (2). The yield of (7) is proportional to the square root of the time, suggesting that iodate must diffuse through an adherent, accumulating C0304 layer. DOE

(Contract BMFT-PLE-ET-4060-A)

(BMFT-FB-T-81-050; ISSN-0340-7608) Avail: NTIS HC A11/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 41,10

Latent heat storage materials and appropriate heat exchangers for solar heating applications, such as house heating and domestic hot water production were investigated. The melting and freezing characteristics and the effects of thermal cycling on a total of 12 substances, including paraffins, fatty acids and salt hydrates, were investigated and their corrosive interaction with five conventional construction materials was determined. The poor thermal conductivity of the heat storage materials requires the development of a modular finned heat pipe heat exchanger with increased heat transfer characteristics. A cost analysis is provided and comparisons with hot water storage indicate that latent heat storage has the potential of becoming economically more attractive than the former for domestic hot water production. DEVELOPMENT OF GAS PHASE METALLIZED PLAQUES FOR ELECTRODES OF STORAGE BATTERIES, IN PARTICULAR FOR NICKEL OXIDE ELECTRODES Final Report, Jul. 1979

Rolf Linkohr and Herman Schladitz (Physikalisch-Chemisch Forchungslab.) Bonn Bundesministerium fuer Forschung und Technologie Jun. 1981 87 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-053; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 18,30

Nickel oxide electrode plaques for alkaline batteries were developed by nickel carbonyl vapor deposition plating on large fiber plaque substrates made of carbon. The most promising technique is the one in which carbonyl gas flows continuously through the carbon felt, allowing continuous processing as well as improved uniformity of the nickel distribution. Structural strength, electrical resistance, heat conduction, and gas permeation of the plaques were approximated by simple models which are borne out by experimental comparison it is indicated that electrochemical measurements in half cell arrangements are reached for nickel savings, capacity per unit area, and current capability. EXPERIMENTAL STUDY FOR RECHARGEABLE SEALED Ni/Cd WATCH BATTERIES Final Report

Helmut Haelbig Bonn Bundesministerium fuer Forschung und Technologie Aug. 1981 87 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-129; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 18,30

The potential feasibility of using Ni/Cd cells as energy storage devices in electronic wrist watches powered by solar cells was evaluated. It is shown that the necessary special requirements can only be met, if the following conditions are fulfilled: a minimal capacity of 35 mAh in a cell of the dimensions 11,4 mm in diameter and 5,1 mm in height; and a hermetic seal to prevent leakage. Long periods of overcharge with currents higher than 50 microns must be avoided in order to achieve a service life of 10 years. The minimal charge current must be 350 mA to provide an autonomy of 6 months, with a discharge current of 5 micro A. J.M.S.

DOWNED DEAD WOODY FUEL AND BIOMASS IN THE

NORTHERN ROCKY MOUNTAINS
James K. Brown and Thomas E. See Jul. 1981 52 p refs
(PB81-240517; FSGTR/INT-117) Avail: NTIS
HC A04/MF A01 CSCL 02F

Weights and volumes of downed woody material in diameter classes of one-fourth to 1, 1 to 3, and greater than 3 inches and forest floor duff depths were summarized from extensive inventories in nothern Idaho and Montana. Biomass loadings are shown by cover types and habitat types within National Forests. Total downed woody biomass ranged from 5 tons per acre in ponderosa pine to 33 tons per acre in cedar-hemlock. Loadings generally increased with increased productivity, but varied greatly with stand age. Fuels tended to become predictably high in overmature stands but unpredictable in young, immature, and mature stands. Forest fuel succession is discussed in relation to tree mortality, fuel buildup, and depletion. GRA

(ISSN-0072-4130; ISBN-3-88148-186-9) Avail: Issuing Activity

As MMH is the upper limit of the atmospheric layer in which vertical mixing through convection occurs, it is a measure of the atmospheric dispersion and dilution capability of air pollution. As air pollution is more critical on dry days, days with precipitation and/or temperature decrease at the surface after the radiosonde ascent were treated separately and in less detail. The daily values of MMH were divided in 200 and 500 m classes and mean numbers of occurrences of each class were computed for months, seasons and the year as well as monthly averages. The results are represented in tables and diagrams and discussed. Seasonal and regional effects on the formation of the mixing height are identified. Selected weather situations are discussed and the correlation between mixing height and pollution level is established.

RESULTS OF THE THIRD INTERNATIONAL CONGRESS ON NOISE EFFECTS: AS A PUBLIC HEALTH PROBLEM; BIOLOGICAL DISTURBANCES; EFFECTS ON BEHAVIOR Final Report, Feb. 1979

Sieglinde Rehm, Gerd Jansen, Eckhard Gros, and Barbara Griefahn Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 44 p In GERMAN; ENGLISH summary Presented at Freiburg, West Germany, 25-29 Sep. 1978 Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-HA-81-013; ISSN-0171-7618) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 9,30

The essentials of the German governmental program on humanization at work-places as well as noise effects research since the Dubrovnik-Congress 5 years ago were presented by about 100 scientists from different countries all over the world. Topics cover: (1) noise induced hearing loss; (2) noise and communication; (3) noise induced extraaural physiological effects; (4) influence of noise on efficiency and behavior; (5) noise induced disturbances of sleep; (6) noise induced community reactions; (7) noise and animals; and (8) noise and other physical and/or chemical agents affecting men. Proposals for near future research requirements and priorities of noise effects research are developed.

ECOLOGICAL EFFECTS ASSESSMENT: REQUIREMENTS VS STATE-OF-THE-ART

D. H. McKenzie, J. M. Thomas, and L. L. Eberhardt May 1981 31 p refs Presented at the 3rd Conf. on Waste Heat Management and Utilization, Miami, Florida, 12 May 1981
(Contract DE-AC06-76RL-01830)
(DE81-028092; PNL-SA-9292; CONF-810545-5) Avail: NTIS HC A03/MF A01

Current requirements and the state-of-the-art in ecological effects assessments in regard to nuclear power plants are studied. The current cooling system approaches, data collection programs, and ecological effects assessments are discussed. A timely review and evaluation of current practice is called for. The magnitude of economic and environmental resources being committed to cooling system alternatives mandates that the decision-making process result in as many optimal choices as possible. In addition, the resources being devoted to environmental data collection and integration provide considerable motivation for providing meaningful input to the decision-making process. It is maintained that the input should be as quantitative and as free from subjective content as is reasonably possible. An alternative viewpoint suggests that the past several decades of experience be considered but a first step, and the current task to be one of designing a second step.

EVALUATION OF THE USEFULNESS OF ECOLOGICAL SIMULATION MODELS IN POWER PLANT IMPACT ASSESSMENT

G. L. Swartzman, R. T. Haar, and D. H. McKenzie May 1981 12 p refs Presented at the Intern. Symp. on Energy and Ecological Modelling, Louisville, Ky., 20 Apr. 1981
(Contract DE-AC06-76RL-01830)
(PNL-SA-9096; CONF-810488-2) Avail: NTIS HC A02/MF A01

Comparisons were made of the equations, rationale, data sources, and parameter values of 26 simulation models of fish and zooplankton population dynamics and energetics and results were compared in standard notation and units, process by process. The major process categories considered were composition, predation, metabolic processes, assimilation, growth, fecundity, recruitment, and mortality. A model simulation language was built to compare model equations process by process allowing convenient interchange of model equations for any process module. This simulator was parameterized to a test site, Lake Keowee, South Carolina, on which resides the Oconee nuclear power station. Model parameter estimation and comparison of these models with biological monitoring data allows evaluation of ecosystem models from the standpoint of prediction of behavior under normal and perturbed conditions, organization of data into an ecosystem framework, and evaluation of data to address impact questions.

SPECIATION OF AQUEOUS CONTAMINANTS - ROLE OF THE GEOCHEMICAL MODEL

Everett A. Jenne Jul. 1981 15 p refs Presented at the NBS Workshop on Aqueous Speciation of Dissolved Contaminants, Gaithersburg, Md., 18-20 May 1981
(Contract DE-AC06-79RL-01830)
(DE81-029976; PNL-SA-9584; CONF-810588-4) Avail: NTIS HC A02/MF A01

It is noted that a combination of accurate, selected analytical determinations and a competent geochemical model constitutes a means of achieving a thorough and reliable aqueous speciation of waters for the evaluation of societal risks resulting from anthropogenic inputs from energy related technologies. A reliable calculation of the distribution of species requires analytical determination of: (1) the quantity of each element in true solution; and (2) the amount of quantitatively and/or environmentally important aqueous species which are in disequilibrium. Due to the: (1) very numerous organic compounds which may be present; (2) the absence of Gibbs free energy and enthalpy data defining the association of these organic compounds with trace and major elements; and (3) the lack of competence of speciation-solubility models for organic ligands, the quantity of organic, trace-element complexes must, at the moment, be addressed analytically. HYDRODYNAMIC AND CHEMICAL MODELING OF HEAVY METALS IN ASH POND LEACHATES Progress Report, 1 Jul. 1980 - 31 Aug. 1981

Thomas L. Theis, David J. Kirkner, and Aaron A. Jennings Aug. 1981 55 p refs
(Contract DE-AC02-79EV-10253)
(DE81-028510; DOE/EV-10253/2) Avail: NTIS HC A04/MF A01

Models which are capable of describing both the physical and chemical factors which affect the transport of solutes through a porous media were developed. Complex solution and soil chemical interactions which are known to be of importance in the leachates and soils associated with wastes produced from energy production are emphasized. One dimensional saturated flow multi-solute finite element models for flow in a homogeneous medium were developed. The derivation of the governing equations is summarized and the numerical techniques and algorithms used to achieve a solution are described.

THREE-DIMENSIONAL, FINITE ELEMENTAL MODEL FOR SIMULATING HEAVIER-THAN-AIR GASEOUS RELEASES OVER VARIABLE TERRAIN

Robert L. Lee, Philip M. Gresho, Stevens T. Chan, and Craig D. Upson Aug. 1981 17 p refs Presented at the NATO/CCMS 12th Intern. Tech. Meeting on Air Pollution Modeling and its Applications, Menlo Park, Calif., 25-28 Aug. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-028689; UCRL-85520; CONF-810841-1) Avail: NTIS HC A02/MF A01

A 3 dimensional finite element model was developed to predict the dispersion processes associated with heavier than air gaseous releases in the atmosphere. Both 2 dimensional and 3 dimensional examples presented to demonstrate the flexibility of the model in simulating the motion of the vapor cloud generated after a liquid natural gas spill over flat or variable terrain. Also presented are results to justify the slightly more complex generalized anelastic model rather than one employing the Boussinesq and/or hydrostatic approximation, which are routinely used for planetary boundary layer flows but can be inappropriate for this application. DOE

X-RAY METHODS FOR THE CHEMICAL CHARACTERIZATION OF ATMOSPHERIC AEROSOLS

J. M. Jaklevic and A. C. Thompson May 1981 20 p refs Presented at the Conf. on X- and Gamma-Ray Sources and Appl., Ann Arbor, Mich., 10 Jun. 1981 Sponsored in part by EPA
(Contract W-7405-eng-48)
(DE81-028874; LBL-12493; CONF-810647-10) Avail: NTIS HC A02/MF A01

The use of X-ray methods for the chemical characterization of atmospherical aerosol particulate samples are described. The methods are based on the emission, absorption, and scattering of X-ray photons emphasizing optimization for the nondestructive analysis of dilute specimens. Techniques include: photon induced energy dispersive X-ray fluorescence, extended X-ray absorption fine structure spectrocopy using synchrotron radiation and high rate X-ray powder diffractometry using a position sensitive gas proportional counter. The chemical compositions of size segregated aerosol particulate samples obtained with dichotomous samples were measured by one X-ray analysis method. The multiple elemental analyses obtained from X-ray fluorescence can be used as a cross check on the major compounds observed by powder diffraction. DOE

REAL-TIME COARSE-PARTICLE MASS MEASUREMENTS IN A HIGH-TEMPERATURE/PRESSURE COAL-GASIFIER PROCESS TREATMENT

J. Wegrzyn, J. Saunders, and W. Marlow 1981 7 p Presented at the Conf. on High Temp., High Pressure Particulate and Alkali Control in Coal Combust. Process Streams, Morgantown, W. Va., 3-5 Feb. 1981
(Contract DE-AC02-76CH-00016)
(DE81-030039; BNL-29953; CONF-810261-1) Avail: NTIS HC A02/MF A01

A sampling system that employs a probe appropriate for direct extracted sampling of erosive range particulate matter from a coal gasifier outlet or a high pressure fluidized bed combustor was constructed. The sampling system consists of four modules: (1) a null balance extractive probe with injection through a porous lined tube to minimize wall loss; (2) a stem type virtual impactor to seperate coarse from fine particles; (3) a filter tape collector; and (4) a beta gauge total mass detector. A stem type virtual impactor seperates at ambient gas stream conditions the coarse particles from the sampling stream so that at filtration no condensible vapors, fine particles or reactive gases pass through the filter tape. This system provides coarse particle mass flux data with a time resolution of 30 seconds or better. Sampling requirements for high temperature, high pressure aerosols are defined and discussed. DOE

REGIONAL LOAD-CURVE MODELS: SCENARIO AND FORECAST USING THE DRI MODEL Final Report

H. D. Platt Aug. 1981 283 p Sponsored by Electric Power Research Inst.
(EPRI Proj. 1008)
(DE81-904192; EPRI-EA-1672-Vol-3) Avail: NTIS HC A13/MF A01

Regional load curve models were constructed for 32 regions that were created by aggregating hourly load data from 146 electric utilities. The forecast scenario is described and the forecast resulting from the use of this scenario is presented. The highlights of this forecast are two observations: first, peak demands will once again become winter phenomena. In the heating season, the model is reponsive to the number of heating degree hours, the penetration rate of electric heating equipment, and the rate at which this space conditioning equipment is utilized. Winter season demands grow more rapidly than demands in other seasons and peaks begin to appear in winter months. Secondly load factors begin to increase in the forecast, reversing the trend which began in the early 1960s. Nationally, load factors do not leap upwards, instead they increase gradually. DOE

ASSESSMENT METHODOLOGY FOR THE AIR QUALITY IMPACT OF RESIDENTIAL WOOD BURNING

Frederick W. Lipfert 1981 20 p refs Presented at the Intern. Conf. on Residential Solid Fuels, Portland, Oreg., 1 Jun. 1981
(Contract DE-AC02-76CH-00016)
(DE81-029373; BNL-29763; CONF-810674-4) Avail: NTIS HC A02/MF A01

Firewood usage varies inversely with population density, resulting in an implied limit to the density of usage. Tests of wood stoves indicate that emissions of particulates vary inversely with heat demand, such that nighttime emissions at low combustion rates may be worse than those during maximum heat demand conditions. Finally, atmospheric dispersion rates are coupled to the driving forces of space heating so that nighttime emissions tend to have a disproportionately large impact on ambient air quality. The air quality impacts of increased residential wood fuel used were assessed. It is indicated that in flat terrain primary ambient standards are not threatened by residential wood combustion. DOE

KINETICS OF REACTIONS IN A WET FLUE GAS SIMULTANEOUS DESULFURIZATION AND DENITRIFICATION SYSTEM

S. G. Chang, D. Littlejohn, and N. H. Lin Jul. 1981 36 p refs Presented at the ACS Symp. on Advan. in Flue Gas Desulfurization, Atlanta, 30 Mar. - 3 Apr. 1981
(Contract W-7405-eng-48)
(DE81-029853; LBL-13063; CONF-810394-1) Avail: NTIS HC A03/MF A01

A number of processes for simultaneous removal of SO2 and NO sub x are discussed. They are based on either the oxidation of relatively insoluble NO to more soluble NO2 or the employment of a water soluble ferrous chelating compound as a catalyst to aid in the absorption of the insoluble NO. These ferrous compounds have the ability to form complexes with the NO and thus promote the absorption of the NO. Once in solution NO sub x can be reduced by the absorbed SO2 to form molecular N2, N2O or reduced nitrogen compounds such as NOH(SO3)2(-2), NH(SO3)2(-2), NH2SO(-) and NH4(+); while SO2 is oxidized to sulfate. The kinetics and mechanisms of reactions involved in this system are discussed. DOE

FUNDAMENTALS OF NITRIC OXIDE FORMATION IN FOSSIL-FUEL COMBUSTION Progress Report, 29 Sep. - 28 Dec. 1980

Thomas Houser and Michael E. McCarville Aug. 1981 19 p refs
(Contracts DE-AC21-76ET-10592; EX-76-C-01-2018)

(DE81-030329; DOE/ET-10593/T2; FE-2018-19) Avail: NTIS HC A02/MF A01

The rate and products of oxidation of HCN and the influence of additives, benzene, cyclohexane, toluene, acetylene and CO, on the rate and products were studied. The only significant oxidation products in the absence of additives were CO2, H2O and N2. The complex order indicates that a complex chain mechanism is operating, however, the activation energy appears too large for a chain or surface mechanism. HCN consumption dropped drastically and benzene consumption was reduced a small amount even at higher oxygen concentrations in the reactor. No change in products was observed. It suggested that CO and acetylene produce an intermediate during oxidation that does not form when benzene oxidizes. DOE

ELEMENTAL COMPOSITION OF ATMOSPHERIC FINE-PARTICLES EMITTED FROM COAL BURNED IN A MODERN ELECTRIC POWER PLANT EQUIPPED WITH A FLUE-GAS DESULFURIZATION SYSTEM

J. M. Ondov Jul. 1981 19 p refs Presented at the Am. Chem. Soc. Meeting, Las Vegas, Nev., 1 Dec. 1980
(Contract W-7405-eng-48)
(DE81-030073; UCRL-85035; CONF-801266) Avail: NTIS HC A02/MF A01

Mechanisms of fine particle formation and chemical enrichment in the flue-gas desulfurization system are dicussed. Improved control devices drastically affect the quantity, chemical composition, and physical characteristics of fine particles emitted to the atmosphere from these sources. Fly ash aerosols were sampled upstream and downstream from a modern lime slurry, spray tower system installed on a 430 Mw(e) coal utility boiler. The concentrations of up to 35 elements and estimates of the size distributions of particles in each the fly ash fractions were determined by instrumental neutron activation analysis and by electron microscopy. INDOOR AIR QUALITY

C. D. Hollowell Jun. 1981 13 p refs Presented at the Inst. of Gas Res. Conf., Los Angeles, 28 Sep. - 1 Oct. 1981
(Contract W-7405-eng-48)
(DE81-029857; LBL-12887; CONF-810909-4; EEB-Vent-81-17) Avail: NTIS HC A02/MF A01

Common sources of indoor air pollution in buildings, the specific pollutants emitted by each source, the potential health effects, and possible control techniques are discussed. Rising energy prices, have generated an incentive to reduce ventilation rates and thereby reduce the cost of heating and cooling buildings. Reduced ventilation in buildings increases exposure to indoor air pollution. It is suggested that reduced ventilation adversely affects indoor air quality unless appropriate control strategies are undertaken. The strategies used to control indoor air pollution depend on the specific pollutant or class of pollutants encountered, and differ depending on whether the application is to an existing building or a new building under design and construction. The first course of action is prevention or reduction of pollutant emissions at the source. DOE

WORKSHOP ON INDOOR AIR QUALITY RESEARCH NEEDS

1980 350 p refs Proceedings of Conf. in Leesburg, Va., 3-5 Dec. 1980
(DE81-026488; CONF-801259; EPA-600/7-81-118) Avail: NTIS HC A15/MF A01

Indoor air quality research needs including the monitoring of indoor air quality, report of the instrumentation subgroup of indoor air quality, health effects, and the report of the control technology session are reported. Risk analysis studies addressing indoor environments are summarized. DOE

N82-15613# Pacific Northwest Lab., Richland, Wash.

ASSESSMENT OF THE LONG-RANGE TRANSPORT OF RESIDENTIAL WOODSTOVE FINE-PARTICULATE EMISSIONS FOR TWO FUTURE UNITED STATES ENERGY SCENARIOS

K. J. Allwine, Jr. May 1981 17 p refs Presented at the Intern. Conf. on Residential Solid Fuels, Portland, Oreg., 1-4 Jun. 1981
(Contract DE-AC06-76RL-01830)
(DE81-030096; PNL-SA-9606; CONF-810674-5) Avail: NTIS HC A02/MF A01

The impact of solar energy technologies (especially woodstoves) on regional scale fine particulate air quality resulting from direct-energy-use sources was analyzed. It is shown that significant interregional transport of fine particulates occurs especially into the three northeastern regions of the US. It is indicated that concentrations are low relative to any current particulate standards. Both maximums occurred in the Middle Atlantic region. It is predicted that the concentrations in the eastern five regions will decrease from 1975 to 2000 (both scenarios) whereas the opposite is true for the five western regions. The contributions from woodstoves are projected to increase in all regions. The majority of this increase is due to woodstoves. For the three northeastern regions more than 50% of the impact of each region is from outside the respective region. DOE

TECHNIQUE FOR PLANNING AND MANAGING INDUSTRIAL GROWTH FROM THE AIR-QUALITY STANDPOINT

K. Jerry Allwine 23 Mar. 1981 10 p ref Presented at the Spring Point Source Modeling and Ambient Air Quality Monitoring Speciality Meeting, Renton, Wash., 2 Apr. 1981
(Contract DE-AC06-76RL-01830)
(DE81-028342; PNL-SA-9419; CONF-810393-1) Avail: NTIS HC A02/MF A01

A technique was developed for summing modeled air quality impacts from many sources onto a common grid. The computed concentration fields can come from any air quality model provided the same period of meteorology is used. At present the computed concentration fields from EPA models CRSTER and ISC can be overlayed onto the grid. The current area of application is for a 100 km by 100 km area but could be expanded to any management unit. Current application of the technique and potential uses in planning and managing industrial growth are discussed. T.M.

INVESTIGATIONS IN A LABORATORY PLANT FOR REHEATING SCRUBBED FLUE GASES BY MEANS OF HEAT EXCHANGERS Final Report, Oct. 1980

Mohammed Yoqub Chughtai Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 96 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-005; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West

Germany DM 20

Reheating used to reduce SO2 emission from coal or oil fired power plants is discussed. Tube and plate heat exchangers were tested under scrubbed clean gas conditions. Extensive removal of the droplets contained in the clean gas, evaporation by means of recirculation, and cleaning of the heat exchanger with steam are adequate in avoiding or removing scale, either individually or combined. Laboratory as well as power plant investigations of flue gas show that Inconel 625 test specimens have the highest corrosion resistance as compared with other coated and noncoated materials. ENVIRONMENTAL CONTROLS ON THE COMPOSITION OF THE SURFACE MICROLAYER IN LAKE MICHIGAN
James E. Mackin, Robert M. Owen, and Philip A. Meyers Sep. 1980 48 p refs
(PB81-239006; UMICH-SG-80-203; ; NOAA-81062915) Avail: NTIS HC A03/MF A01 CSCL 08G

Surface microlayer and subsurface (1 m) water samples were collected at ten stations along the major axis of Lake Michigan and in the ten major rivers which flow into the lake to determine the processes which influence the composition of the surface microlayer. Dissolved and particulate phase concentrations of the elements Ca, Cu, Fe, K and Mn were determined. Associations revealed by these analyses indicate that the composition of fluvial microlayers is controlled by localized factors, related to the geology of individual drainage basins, while open lake microlayers are influenced by broad scale physio-chemical interactions. Results of an evaluation of coal cleaning as a means of controlling SO2 emissions from coal fired stationary sources are presented. Coal cleaning was examined in the light of various existing and proposed SO2 emissions regulations to determine applications in which the technology would be most useful. Barriers were identified that prevent wider application of coal cleaning. Actions are described which should be taken to overcome these barriers. Much information about coal is compiled as resource data on the coal reserve base, present and projected coal production, coal cleanability, current and projected coal use by utilities and industry, size and age distribution of coal fired facilities, and the nature of coal contracts. Environmental impacts of coal cleaning are compared with those of other sulfur removal strategies such as flue gas desulfurization and the use of low sulfur coal. Similarly, costs of the various SO2 control alternatives are compared. GRA

MONITORING TECHNIQUES FOR CARBON FIBER EMISSIONS: EVALUATION 8 Final Report
Edward T. Peters, Kenneth T. Menzies, Edward J. Cook, and Michael Rossetti Aug. 1981 81 p refs
(Contract EPA-68-02-3275)
(PB81-247413; EPA-600/2-81-145) Avail: NTIS HC A05/MF A01 CSCL 13B

An evaluation of available measurement methods for continuously monitoring the number and mass of carbon fibers emitted from source operations was conducted. A total of eleven candidate monitoring methods were identified based on contact (electrical), locally sensing (optical, microwave) and remote sensing (microwave, radar). Each method was rated on the basis of measurement (sampling), detection and instrumental parameters, and their useful concentration and length range were compared to three emission scenarios representing textile weaving machining and waste incineration. Five methods have merit for certain conditions and are recommended for further study. GRA

AIR QUALITY ANALYSIS FOR THE 1984 HIGH ALTITUDE REPORT TO CONGRESS: SUMMARY OF RESULTS
Mark Wolcott Apr. 1981 71 p refs
(PB81-247702; EPA-AA-TEB-81-17) Avail: NTIS HC A04/MF A01 CSCL 13B

Four types of control strategies were considered. These strategies are examined first without an inspection and maintenance program for light duty vehicles alone and in combination with similar trucks. Next, these strategies are assumed to include an inspection and maintenance program. Changes in each of the three major mobile source pollutants, carbon monoxide, nonmethane hydrocarbons, and oxides of nitrogen, are examined for their ambient air quality effects in Denver, Colorado Springs, Albuquerque, and Salt Lake City. Other factors include the modified linear rollback model, the National Emission Data System, a source contribution factor, design values, background pollution, stationary sources, growth and retirement rates, emission rations, and air quality projections. HEAVY-DUTY ENGINE BASELINE PROGRAM AND NO SUB X EMISSION STANDARD DEVELOPMENT (1972-73)
Timothy Cox, Zachary Diatchun, Thomas Nugent, Glenn Passavant, and Larry Ragsdale Mar. 1981 69 p refs
(PB81-244030; EPA-AA-SDSB-81-01) Avail: NTIS HC A04/MF A01 CSCL 13B

The statutory NOx emission standard for 1985 heavy duty engines was determined. The standard is based on a 75% reduction from the average measured emissions for uncontrolled (1972-73 model year) gasoline fueled heavy duty engines program established the amount of NOx emissions from the uncontrolled heavy duty gasoline-fueled engines. A baseline testing this program consists of four sectons: (1) engine procurement; (2) restorative maintenance; (3) testing the engine emission levels by transient test procedure; and (4) determination of the average measured emissions. PROCEEDINGS OF THE CONFERENCE ON WOOD COMBUSTION ENVIRONMENTAL ASSESSMENT Progress Report, Oct. 1980 - Jun. 1981
Franklin A. Ayer, comp. 1981 330 p refs Proceedings of conf. held at New Orleans, 21-24 Feb. 1981
(Contract EPA-68-02-3170)
(PB81-248155; EPA-600/9-81-029; IERL-RTP-1235) Avail: NTIS HC A15/MF A01 CSCL 13B

Residential wood combustion information is presented. An overview of environmental assessment activities, specific emissions and heating efficiency assessments, emissions control techniques and residential wood combustion issues and their resolution are discussed. High concentrations of polycyclic organic matter (POM) in residential wood stove emissions were verified. High POM concentrations in the indoor environment of homes with wood stoves were reported. High ambiemt values were not attributed to residential wood combustion. Emission control techniques which were considered for controlling organic emissions included secondary combustion and the introduction of a combustion catalyst. GRA

EFFECTS OF COAL FLY-ASH DISPOSAL ON WATER QUALITY IN AND AROUND THE INDIANA DUNES NATIONAL LAKESHORE, INDIANA Final Water-resources Investigation Report
Mark A. Hardy Apr. 1981 73 p refs
(PB81-238479; USGS/WRD/WRI-81-073; USGS/WRI-81-16)
Avail: NTIS HC A04/MF A01 CSCL 13B

Dissolved constituents in seepage from fly ash settling ponds bordering part increased trace elements, and gross alpha and gross beta radioactivity in ground water and surface water downgradient from the settling ponds. It is suggested that concentrations of some dissolved trace element are greater beneath interdunal pond 2 than in the pond. It is found that calcium concentrations are greater in ground water downgradient from the settling ponds than in the ponds. Where organic material is present downgradient from the settling ponds, concentrations of arsenic, fluoride, molybdenum, potassium, sulfate, and strontium were greater in the ground water than in the ponds. In contrast, the concentrations of cadmium, cooper, nickel, aluminum, cobalt, lead, and zinc are less. GRA

EVALUATION OF SOLVENT LOSS FROM VAPOR DEGREASER SYSTEMS. PHASE 2 AND 3: EFFECT OF CROSSCURRENT AIR VELOCITY ON CONTROL SYSTEM PERFORMANCE Final Report, Jul. 1970 - Nov. 1980
R. W. Gerstle and E. S. Schindler May 1981 99 p
(Contracts EPA-68-02-2535; EPA-68-02-2907)
(PB81-246308; EPA-600/2-81-072; PN-3280-C; PN-3481-1)
Avail: NTIS HC A05/MF A01 CSCL 13B

Pollution reduction capabilities of vapor degreasers fitted with add-on control systems were evaluated. Solvent loss from degreasing systems of various design was assessed, and the test conditions, procedures, results, and conclusions are reported. Tests were performed to evaluate the effects of different variables on the rate of solvent loss from degreasers. The variables tested include the following degreaser control options and operating conditions: freeboard ratio, load cross sectional area, refrigerated freeboard chiller, hoist speed, lip exhaust, crosscurrent air velocity, degreaser size, solvent type, an automatic cover. The factor most likely to ensure long periods of operation with minimum solvent loss, regardless of the mix of control options are ensured by installation in an area where crosscurrent velocity is minimized. DEMONSTRATION OF WELLMAN-LORD/ALLIED CHEMICAL FGD TECHNOLOGY: DEMONTRATION TEST SECOND YEAR RESULTS Final Report, Feb. 1973 - Oct. 1979
R. C. Adams, S. W. Mulligan, and R. R. Swanson Aug. 1981 410 p refs
(Contract EPA-68-02-3174)
(PB81-246316; EPA-600/7-81-140) Avail: NTIS HC A18/MF A01 CSCL 13B

The performance over a 2 year period of a full scale flue gas desulfurization (FGD) is reported. The process is regenerable, employing sodium sulfite wet scrubbing, thermal regeneration of the spent scrubber solution, and reduction to elemental sulfur of the recovered SO2. Process energy requirements, primarily for thermal regeneration of the scrubber solution and subsequent recovery of SO2, were quite large, amounting to 12 percent of the boiler heat input derived from fuel. Operation and performance occurred after some modification to the boiler to increase inlet flue gas temperature and after implementing FGD plant improvements identified during initial operation. GRA

THE USE OF LIDAR FOR EMISSIONS SOURCE OPACITY DETERMINATIONS: SECOND EDITION
Arthur W. Dybdahl Jul. 1981 399 p refs Sponsored by EPA
(PB81-246662; EPA-330/1-79-003-R) Avail: NTIS HC A17/MF A01 CSCL 13B

Lidar can be used to measure the opacity of particulate emissions from stationary sources. Extensive test results support the promulgation of the lidar technique as an alternative to trained visible emissions observers (VEO). Three tests demonstrate lidar precision and accuracy: one using an aerosol chamber to generate a controlled particulate plume, the second using an optical generator to simulate lidar return signals, the third using fabricated screen targets of constant fixed opacity. Advantages of lidar over VEOs are the ability to measure opacity during darkness and independently of background contrast conditions, and also the lidar is not subject to time and endurance constraints. Requirements and procedures needed to facilitate routine use of lidar were developed. GRA

DISEQUILIBRIUM OF HYDROGEN SULFIDE IN GROUND WATER BY AERATION Final Report
Joseph Dwight Ritchey 24 Apr. 1981 119 p refs
(Grant NSF ISP-80-15077)
(PB81-244717; NSF/ISP-81011) Avail: NTIS HC A06/MF A01 CSCL 13B

Removal of hydrogen sulfide gas by aeration as a result of bubbling air through water in the well before it is pumped out of the ground was examined. Evaluation of water analyses indicated three processes that caused reduction in the concentration of hydrogen sulfide gas: (1) hydrogen sulfide gas was released from water to air by gas transfer indicated by a strong 'rotten egg odor', characteristic of hydrogen sulfide gas that was emitted from the wellhead; (2) hydrogen sulfide gas was oxidized to elemental sulfur evidenced by an increase in dissolved oxygen measured in water samples and by clouding of pumped water; and (3) hydrogen sulfide gas was partially ionized indicated by an increase in the pH and the redox potential of water samples. This field study demonstrates that in-well areation is an effective method of hydrogen sulfide gas removal in domestic wells with potential application in larger installations. GRA

POTENTIAL ENVIRONMENTAL PROBLEMS OF ENHANCED OIL AND GAS RECOVERY TECHNIQUES Final Report

Ron Beck, Robert Shore, Terry Ann Scriven, and Melinda Lindquist Aug. 1981 297 p refs
(Contract EPA-68-03-2648)
(PB81-240186; EPA-600/2-81-149) Avail: NTIS HC A13/MF A01 CSCL 13B

This report provides: (a) an identification of and analysis of available data regarding EOR/EGR related pollutants; (b) an assessment of potential environmental impacts and an identification of possible controls; and (c) recommendations as to research needs. The following processes were studied: steam injection, in situ combustion, carbon dioxide miscible flooding, micellar/polymer flooding, alkaline flooding, improved waterflooding, advanced hydraulic fracturing, chemical explosive fracturing, and directional drilling. The existing EOR/EGR environmental impact information (published and unpublished) is critically reviewed and summarized. The effect of EOR/EGR processes on air quality, groundwater quality, water quantity, noise levels, and secondary impacts is the main area of analysis. GRA

COMPILATION OF AIR POLLUTANT EMISSION FACTORS: HIGHWAY MOBILE SOURCES Final Report

Mar. 1981 408 p
(PB81-238305; EPA-460/3-81-005) Avail: NTIS HC A18/MF A01 CSCL 13B

The emission factors and calculation methodology is used in the MOBILE2 computer program are summarized. The emission factors are presented for eight individual vehicle types in three regions of the country. This document describes the basic test procedures used to collect the hydrocarbon (HC), carbon monoxide (CO), and oxides of nitrogen (NOx) emissions and the generalized emission factors calculation equations. The emissions presented in this document are the basic exhaust emissions, the crankcase and evaporate HC emissions, January 1 basic exhaust emission levels, and idle exhaust emissions. Further, nonmethane HC fractions and particulates are presented to adjust the emissions for various ambient and vehicle usage conditions such as speed, temperature, and humidity for NOx. GRA

REVIEW AND UPDATE OF MODELING ANALYSIS OF CARBON MONOXIDE EMISSIONS IN MECKLENBURG COUNTY, NORTH CAROLINA Final Report

Jul. 1981 115 p
(Contract EPA-68-02-3509)
(PB81-248841; EPA-904/9-81-080) Avail: NTIS HC A06/MF A01 CSCL 13B

The carbon monoxide emissions were analyzed by state-of-the-art modeling techniques. The techniques were used to forecast ambient CO concentrations at three existing monitoring sites as well as at other anticipated hotspots where high concentrations might occur. Locations where ambient violations may occur at the end of 1987 are indicated. The results will be used to compile a control plan for the scheduled state implementation plan revision in 1982 which will show these hotspots in compliance with the ambient standard by the end of 1987.GRA

COMMUNITY NOISE ASSESSMENT MANUAL: STRATEGY GUIDELINES FOR DEVELOPING A COMMUNITY NOISE CONTROL PROGRAM
Jul. 1981 232 p 2 Vol.
(Contract EPA-68-01-3921)
(PB81-244352) Avail: NTIS HC A11/MF A01 CSCL 13B

Communities are assisted in determining, in an objective manner, the efficient application of funds for reducing the adverse effects of noise in their community. Since the number of possible combinations of noise sources and corresponding countermeasures to reduce their impact can be quite large, a computer based approach is therefore used to develop optimum scenarios for noise control expenditures. This manual utilizes an optimization computer model, which selects the most cost effective noise abatement measures and the amount of money which should be spent on each. The primary criterion for optimization is based on economic and acoustical data gathered in the community. GRA

QUANTIFYING ENVIRONMENTAL IMPACTS
C. A. Shenk and William Riley May 1981 46 p refs
(PB81-244915; EPA-910/9-81-086) Avail: NTIS
HC A03/MF A01 CSCL 13B

The inclusion of environmental impacts in cost effectiveness determinations is examined. Methodologies and research used for quantifying those impacts were reported. A methodology to assess the cost effectiveness of proposed electric power projects was developed. Difficulties in physically measuring environmental impacts and in subsequently placing dollar values on them are discussed. Impact mitigation costs and expert judgement techniques are reviewed to determine the appropriateness for this process. Property structuring of the decision making process to avoid the need for comparing completely unlike alternatives is suggested. GRA

UTILIZATION OF EARTHWORMS AND MICROORGANISMS IN STABILIZATION, DECONTAMINATION AND DETOXIFICATION OF RESIDUAL SLUDGES FROM TREATMENT OF WASTEWATER Final Report
Roy Hartenstein 16 Feb. 1981 19 p
(Grant NSF PFR-78-09331)
(PB81-236481; NSF/CEE-81009) Avail: NTIS
HC A02/MF A01 CSCL 13B

The feasibility of using earthworms in management of municipal sludges was examined. Results of tests on two earthworm species, Eudrilus eugeniae and Eisenia foetida, are reported. The following observations were made. (1) toxicity of worm casts to the earthworms signifies the need to retain E. foetida in its source of food (activated sludge) as long as, or slightly longer than, the time required to convert the sludge into castings; (2) knowledge of the quantity of material passing through the earthworm gut per unit of time, for a particular ingestible sludge, permits prediction of sludge quantity manageable per unit time; and (3) E. foetida fails to gain weight rapidly, if at all, on unlimited supplies of certain organic materials. GRA

NATIONAL PERFORMANCE AUDIT PROGRAM: 1979 PROFICIENCY SURVEYS FOR SULFUR DIOXIDE, NITROGEN DIOXIDE, CARBON MONOXIDE, SULFATE, NITRATE, LEAD AND HIGH VOLUME FLOW
Berne I. Bennett, Robert L. Lampe, and John C. Puzak Apr. 1981 64 p refs
(PB81-239402; EPA-600/4-81-025) Avail: NTIS
HC A04/MF A01 CSCL 07D

Sample material, simulating ambient air pollution samples as closely as possible, are furnished to participating laboratories. Surveys of hi-vol sample flow are conducted annually using a modified orifice. The various sample materials are monitored by the Quality Assurance Division to assure that samples are stable, of uniform composition and are representative of pollutant concentration levels encountered under field sampling conditions and that all materials conform to prescribed standards of accuracy. Sample materials are required to be similar enough to true air pollution matrices not to introduce unrealistic conditions of sample preparation or impose handling techniques that are not a part of the normal monitoring and analytical activity. A major survey objective is the assessment of routine analytical performance. GRA

ULTRAVIOLET DISINFECTION OF A SECONDARY WASTEWATER TREATMENT PLANT EFFLUENT Progress Report, Nov. 1977 - Feb. 1980
O. Karl Scheible and Carlene D. Bassell Aug. 1981 167 p refs Prepared in cooperation with Northwest Bergen County Sewer Authority, Waldwick, N.J.
(Grant EPA-R-804880)
(PB81-242125; EPA-600/2-81-152) Avail: NTIS HC A08/MF A01 CSCL 13B

Ultraviolet disinfection of a full-scale secondary effluent was investigated during a 13 month field study. The experimental program was designed to demonstrate the feasibility of achieving a fecal coliform density of 200 MPN/100 ml by ultraviolet irradiation; to determine the efficiency of ultraviolet disinfection relative to dosage, power consumption, and effluent water quality; and to assess the utility of the full-scale unit relative to O&M requirements. The impact of photoreactivation was investigated during the field program. Uniform procedures for the calculation of dose and the sizing of ultraviolet systems were also developed. Second order dose-response relationships were developed and were found to provide a rational expression of the microbial response to ultraviolet dose. GRA

COMPLEXITY OF SHORT PERIOD P SEISMOGRAMS: WHAT DOES SCATTERING CONTRIBUTE?
A. Douglas, J. A. Hudson (Cambridge Univ., England), and B. J. Barley Jul. 1981 57 p refs
(AWRE-O-3/81; BR79646) Copyright. Avail: Issuing Activity

The complexity of the P-coda is reviewed. The coda of short period P seismograms, including the precursors to PP, are waves scattered in the crust and uppermost mantle. Scattering effects are separated from those of simple reverberation in plane parallel layered models and observed seismograms and models computed using simple Earth and source models are compared. Broadband seismograms were used since they display ground displacement over a wider frequency range than SP seismograms. It is shown that although the arrivals between P and PP appear to have a wide energy spectrum, they consist mainly of scatter waves at short periods, and reflected and converted waves at long periods. TRANSMISSION AND EMISSION OF THE ATMOSPHERE; CONTINUED MEASUREMENTS AND ANALYSIS OF THE DATA
W. A. P. Denissen Nov. 1979 33 p refs In DUTCH; ENGLISH summary
(PHL-1979-50; TDCK-73427) Avail: NTIS HC A03/MF A01

Measurements are presented of the transmission and the emissions of the atmosphere in the infrared spectral region, carried out with the teleradiancemeter. Special attention is given to the measurements performed in autumn of 1978, under different meteorological conditions. A great part of the measurements were done at low values of the visual range. The experimental accuracy is pointed out in relation to the source and ambient temperature. The measured results are compared with transmission calculations, done by means of a computer program, incorporating the LOWTRAN 3B program. M.G.

GEOMAGNETIC AND MAGNETOTELLURIC SOUNDINGS IN THE AREA OF THE CENTRAL EUROPEAN RIFT SYSTEM Final Report, Jun. 1980

Michael Lee Richards, Urich Schmucker, Erich Steveling, and Juergen Waterman Bonn Bundesministerum fuer Forschung und Technologie Aug. 1981 76 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie and EEC
(BMFT-FB-T-81-111; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 16

The conductivity structure connected with the Central European rift system was investigated with regard to geothermal energy sources using methods of geomagnetic depth sounding and magnetotelluric sounding. Sensors, a data acquisition system, and a software package for data handling and data analysis were developed. During a test campaign in the Leinegraben area and two field campaigns in the Rheingraben area, geoelectric and geomagnetic variations in the period range from 6 seconds to 24 hours were registrated. At base sites in the Rheingraben and the Black Forest, models of the vertical profile of the electrical conductivity were determined, while at sites in between the lateral conductivity variations were investigated. The perturbation of magnetic field in the region of the Rheingraben is strong and frequency dependent. The higher frequencies (low penetration depths) show the influence of the graben sedimentary structure, filling only the narrow graben area, and strong currents along the center of the graben. The lower frequencies (deeper penetration depths) reflect the deeper, probably broader conductivity structure. Author

AN INVESTIGATION OF ATTENUATION, SCATTERING AND SITE EFFECTS ON REGIONAL PHASES

Zoltan A. Der, Anne Donnell, and Pamela J. Klouda VELA Seismological Center 23 Mar. 1981 100 p refs
(Contract F08606-79-C-0007; DARPA Order 2551)
(AD-A105995; SDAC-TR-81-4; VSC-TR-81-11) Avail: NTIS HC A05/MF A01 CSCL 17/10

Investigation of regional phase amplitudes at a large number of LRSM sites showed a pronounced increase of Pn, Pg, and Lg amplitudes at sedimentary structures relative to hard rock. In the early part of the coda and the main part of the wavetrain for Lg, lower order modes generated by mode conversion at local inhomogeneities must be present to explain the site variations and the coherence structure of Lg. A modification of Aki's scattering theory is presented to explain such observations. Analysis of the late coda of Lg showed high crustal Q values at RKON and much lower values of OB2NV. At OB2NV the crustal Q appears to be frequency dependent, increasing from 200 to about 600 in the 1 to 10 Hz band. Author (GRA)

SCHLUMBERGER RESISTIVITY STUDY OF THE JEMEZ SPRINGS REGION OF NORTHWESTERN NEW MEXICO

Chris Pearson and Fraser Goff 1981 5 p refs Presented at the Geothermal Resources Council Ann. Meeting, Houston, Tex., 25-29 Oct. 1981
(Contract W-7405-eng-36)
(DE81-025302; LA-UR-81-1806; CONF-811015-10) Avail: NTIS HC A02/MF A01

Schlumberger resistivity soundings made in the Jemez Mountains of northwestern New Mexico, near the village of Jemez Springs, are presented. Three areas that have potential as low temperature geothermal reservoirs were identified. The areas are characterized by a localized zone of very low resistivity which represents the extent of geothermal water and correlates with the location of hot springs or recent volcanic rocks. Resistivities increase rapidly toward the margins of the anomalies, suggesting either variable porosities or variable temperatures and salinities in the reservoirs. DOE

TEMPERATURE HISTORIES IN GEOTHERMAL WELLS: SURVEY OF ROCK THERMOMECHANICAL PROPERTIES AND DRILLING, PRODUCTION, AND INJECTION CASE STUDIES

Malcolm A. Goodman Albuquerque Sandia National Labs. Jul. 1981 86 p refs
(Contract DE-AC04-76DP-00789)
(DE81-029957; SAND-81-7128) Avail: NTIS HC A05/MF A01

Thermal and mechanical properties for geothermal formations are tabulated for a range of temperatures and stress conditions. Data were obtained from the technical literature and direct contacts with industry. Heat capacity, conductivity, diffusivity and undisturbed geothermal profiles are presented. Mechanical properties include Youngs modulus and Poisson ratio. Two GEOTEMP thermal simulations of drilling, production and injection are reported. Actual drilling, production, and injection histories were simulated. Results are documented in the form of printed GEOTEMP output and plots of temperatures versus depth, radius, and time. Wellbore temperatures during drilling as a function of depth; bit temperatures over the drilling history; cement temperatures from setting to the end of drilling; and casing and formation temperatures during drilling, production, and injection are discussed. SURFACE SCIENCE OF HETEROGENEOUS CATALYSIS: POSSIBLE APPLICATIONS IN ATMOSPHERIC SCIENCES
G. A. Somorjai Jun. 1981 15 p refs Presented at the Atmospheric Chem. Soc. Conf. on Atmospheric Sci., Albany, N.Y., 23 Jun. 1981
(Contract W-7405-eng-48)
(DE81-028135; LBL-12986; CONF-8106147-1) Avail: NTIS HC A02/MF A01

The catalyzed reactions of carbonaceous deposits and water vapor and the possible importance of trace metals and high surface area alumina silicates in atmospheric chemistry are discussed. The molecular details of heterogeneous catalytic processes and techniques were developed to determine the atomic surface structure, the composition, and oxidation states in the surface monolayer. The structure of the calaytic surface influences the surface chemical bonds of adsorbed molecules. Additives which are often electron donors (alkali metals) or electron acceptors (halogens) change the oxidation state of surface atoms, block sites, or change the surface structure and influence the surface reactivity. Two rigorous radiative transfer codes called SOLTRAN and BRITE are described. SOLTRAN was constructed from an atmospheric transmission code which uses a layered atmosphere model between sea level and 100-km altitude. This code includes no scattered radiation in its output. The BRITE code uses a Monte Carlo method and a layered atmosphere model, and accounts for both scattering and absorption. Spectra produced using the BRITE code are illustrated, and the use of SOLTRAN and BRITE for photovoltaic applications was demonstrated. Spectral comparisons between SOLTRAN, BRITE, and a spherical harmonics code are presented. Recommendations are made for improving the codes. DOE

THE AEROS RETARDING POTENTIAL ANALYZER Final Report, Nov. 1980
Karl Spenner Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 114 p refs IN GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-007; ISSN-0170-1339) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 23,90

Analyzer was developed for in situ measurements of the most important thermal plasma parameters. An experiment was successfully flown on the two research satellites AEROS A and B. Plasma density, the electron and ion temperature, the most dominant ion constituents, and the superthermal electron fluxes were determined. A comparison with other independent measurements demonstrated the high reliability of the AEROS results and the improvement over other probe measurements. The achieved know-how was used for a number of other projects, e.g., in the NASA Pioneer Venus Program. Author (ESA)

Atmospheric drag was analyzed in order to determine the atmospheric total density at perigee by the orbital drag technique. The principle of this technique, reduction of radio interferometer and radar observations, and the results of an orbit improvement procedure are presented. The aerodynamic drag coefficient of a cylindrical spin stabilized satellite was determined for all angles of attack. Measured values of the total atmospheric density and mass spectrometer data agree. The inverse orbital drag method was developed for full orbit comparisons. The COSPAR international reference atmosphere was adapted, using AEROS A mass spectrometer data. Experiences gained with a mass spectrometer and incoherent scatter data atmospheric model, based on all neutral gas measurements, are summarized. Negative ionospheric storms and the morphology of the thermospheric response to geomagnetic disturbances were studied. Author (ESA)

ONE AND TWO DIMENSIONAL MODELING OF THE PLANETARY BOUNDARY LAYER [EIN- UND ZWEIDIMENSIONALE MODELLIERUNG DER PLANETARISCHEN GRENZSCHICT]
Wolfgang Behnke Dec. 1980 65 p refs In GERMAN
(Mitt-29) Avail: NTIS HC A04/MF A01

One and two dimensional models of the planetary boundary layer were developed. The models are based on the shallow water equations with the turbulent kinetic energy equation as closure law. The one dimensional model is only slightly affected by initial values, but strongly by boundary conditions. The effect of closure laws on the results of the model in case of horizontal homogeneity as well as for highly inhomogeneous surfaces was studied. Two difference methods were compared for the two dimensional model. Temperature profiles obtained by the two dimensional model are extremely well corroborated by the measured values. The importance of orography in the investigation of the boundary layer jet flow is shown. Author (ESA)

RADIATION CHARACTERISTICS OF CLOUD FIELDS [STRAHLUNGSEIGENSCHAFTEN VON WOLKENFELDERN]
Johannes Schmetz Jan. 1981 76 p refs In GERMAN
(Mitt-30) Avail: NTIS HC A05/MF A01

The influence of the micro and macrostructure of clouds on radiation characteristics was investigated, starting from radiation measurements on clouds and simultaneous measurements of microphysical characteristics. One dimensional radiation transport models were verified and the three dimensional model was qualitatively corroborated. The importance of the macrostructure as compared to the microstructure is clarified with a simple parameterization of the clouds macrostructure. The macrostructure dominates the integral radiation characteristics of a pierced cloud layer. Aircraft measurements under a pierced cloud cover show

the nonlinear dependence of solar transmission on the covering degree. the three dimensional model show qualitatively different behavior with respect to the zenith dependence of albedo and transmission of a cube shaped single cloud as compared to a cloud field.

The AEROS-B electron density impedance probe (IP) with its main theoretical aspects, technical solution and data acquisition and data reduction are described. The IP subsystems which includes the IP sensor and electronic groups, such as resonance frequency and phase measurement, sensor potential control, measuring program control, and inflight calibration are discussed. Absolute electron densities with high accuracy and spatial resolution in the altitude range 220 to 900 km are measured. Comparisons with accompanying AEROS-B experiments as well as synoptic measurements from ground stations and other satellites are presented. Geophysical phenomena, such as the midlatitude electron density trough, the South Atlantic anomaly, and polar density fluctuations are investigated. Author (ESA)

The response of the thermosphere during a magnetic substorm was studied in a sounding rocket mass spectrometer experiment. The instrument, laboratory calibration procedure, data analysis, and geophysical conditions during the launch are described. It is shown that the ion concentrations are greatly enhanced by the storm activity. Primary ionization rates are derived from the measured altitude profiles of singly ionized O, NO and O_2 ions by a one dimensional model, ion chemistry and transport. The rates are compared with the rates calculated from the energetic electron fluxes measured with an auroral particle spectrometer.

WATER WAVES GENERATED BY THREE DIMENSIONAL BED MOTION: ABSTRACT
J. J. Chang and J. J. Lee 1980 7 p refs Abstract of paper to be presented at the Intern. Tsunami Symp., Japan, 25-29 May 1981
(Grants NSF ENV-77-01599; NOAA-NA-80-AA-D-00100)
(PB81-238172; NSF/RA-800553) Avail: NTIS HC A02/MF A01 CSCL 08K

Dipole dislocation of the sea floor with a finitie aspect ratio (length/width of the bottom dislocation) is reported. The method for three dimensional bed motion in the case of rectangular bed upthrust of finite aspect ratio was applied. A potential flow is assumed; thus the velocity potential satisfies Laplace's equation and linearized boundary conditions. Fourier transform for the spatial variables and the Laplace transform for the time variable are applied. Results on water surface profiles for different lengths/widths of bottom dislocation were obtained and features of generated wave patterns were found. Programs for obtaining wave profiles along any arbitrarily chosen coordinates by a mathematical plantom are developed.

CLOUD-ENCOUNTER AND PARTICLE-CONCENTRATION VARIABILITIES FROM GASP DATA
Gregory D. Nastrom (Control Data Corp., Minneapolis), James D. Holdeman (NASA. Lewis Research Center, Cleveland), and Richard E. Davis Dec. 1981 245 p refs
(NASA-TP-1886; L-14483) Avail: NTIS HC A11/MF A01 CSCL 04B

Summary statistics, tabulations, and variability studies are presented for cloud encounter and particle concentration data taken as part of the NASA global atmospheric sampling program. Cloud encounter was experienced in about 15 percent of the data samples; however, the percentage varies with season, latitude, and altitude (particularly distance from the tropopause). In agreement with classical storm models, the data show more clouds in the upper troposphere in anticyclones than in cyclones. The concentration of particles with a diameter greater than 3 micron also varies with time and location, depending primarily on the horizontal extent of cloudiness. Some examples of the application of the statistical data to the estimation of the frequency of cloud encounter and laminar flow loss to be expected on long range airline routes are also presented. AN AUTOMATED TECHNIQUE FOR ESTIMATING DAILY PRECIPITATION OVER THE STATE OF VIRGINIA Final Report
Walton A. Follansbee and Lloyd W. Chamberlain, III Sep. 1981 95 p refs
(Contract NAS6-2947)
(NASA-CR-156883) Avail: NTIS HC A05/MF A01 CSCL 04B

Digital IR and visible imagery obtained from a geostationary satellite located over the equator at 75 deg west latitude were provided by NASA and used to obtain a linear relationship between cloud top temperature and hourly precipitation. Two computer programs written in FORTRAN were used. The first program computes the satellite estimate field from the hourly digital IR imagery. The second program computes the final estimate for the entire state area by comparing five preliminary estimates of 24 hour precipitation with control raingage readings and determining which of the five methods gives the best estimate for the day. The final estimate is then produced by incorporating control gage readings into the winning method. In presenting reliable precipitation estimates for every cell in Virginia in near real time on a daily on going basis, the techniques require on the order of 125 to 150 daily gage readings by dependable, highly motivated observers distributed as uniformly as feasible across the state. ANALYSIS OF METEOROLOGICAL SATELLITE LOCATION AND DATA COLLECTION SYSTEM CONCEPTS Final Report, 3 Jun. - 3 Dec. 1981
R. G. Wallace and D. L. Reed Dec. 1981 96 p refs
(Contract NAS5-26604)
(NASA-CR-166763; TR-1989) Avail: NTIS HC A05/MF A01 CSCL 04B

A satellite system that employs a spaceborne RF interferometer to determine the location and velocity of data collection platforms attached to meteorological balloons is proposed. This meteorological advanced location and data collection system (MALDCS) is intended to fly aboard a low polar orbiting satellite. The flight instrument configuration includes antennas supported on long deployable booms. The platform location and velocity estimation errors introduced by the dynamic and thermal behavior of the antenna booms and the effects of the presence of the booms on the performance of the spacecraft's attitude control system, and the control system design considerations critical to stable operations are examined. The physical parameters of the Astromast type of deployable boom were used in the dynamic and thermal boom analysis, and the TIROS N system was assumed for the attitude control analysis. Velocity estimation error versus boom length was determined. There was an optimum, minimum error, antenna separation distance. A description of the proposed MALDCS system and a discussion of ambiguity resolution are included. S.L.

THE BEHAVIOR OF SURFACE WIND AND THERMODYNAMIC FIELDS IN THE PRESENCE OF DEEP CONVECTION
Henry J. Cooper and Michael Garstang May 1981 257 p refs
(Contract DAAG29-80-K-0053; Grant NSF ATM-78-08865)
(AD-A105895; TR-5; ARO-16816.2-GS) Avail: NTIS HC A12/MF A01 CSCL 04/2

Surface wind measurements, in fine mesh networks to calculate surface divergence on the convective scale are presented. After the initiation of a convective scale feedback mechanism by the peninsular scale forcing, downdraft induced convergence maintains and intensifies the convective scale activity long after the peninsular scale forcing has passed its peak. A feedback mechanism between the larger and convective scale is established. It is suggested that decline in the efficiency of the convective scale feedback mechanism is related to the rate of change in the peninsular scale forcing. The evolution of the convective activity from a condition of weak convection to a condition of deep convection depends upon the amount of moisture mixed up into the lower cloud layer by the shallower convection. It is shown that diurnal convective process is a very efficient mechanism in the vertical mixing of water vapor, and a relatively inefficient mechanism in production of rainfall. E.A.K.

SATELLITE OBSERVED PLANTETARY ALBEDO AND ITS PARAMETERIZATION Final Report
Alan Robock and Robert Lutz Apr. 1981 42 p refs
(Contract NA79AA-D-00094)
(PB81-238974; NOAA-81062918) Avail: NTIS HC A03/MF A01 CSCL 04B

Planetary albedo data derived from satellites were compared. The variability of the albedo were calculated using the continuous data set of Winston et al. The data were also compared to a parameterization of Thompson. Because of the different observation methods and the variability of the data, it is impossible to say whether any of the data collections of the parameterization gives the best values for planetary albedo. The parameterization was inverted to use the data to calculate cloudiness, but this did not give consistent results. GRA

A MODEL FOR CALCULATING THE ABSORBED DOSE TO POPULATIONS TAKING LOCAL WEATHER STATISTICS INTO CONSIDERATION
Leif Svensson Oct. 1981 17 p refs
(FOA-C-40140-A3) Avail: NTIS HC A02/MF A01

A mathematical model of the parameters needed to assess radiation absorbed by populations exposed to radiation released in nuclear reactor accidents is presented. The model is based on the Gaussian model for atmospherical dispersion of radionuclides. Probability of giving the number of individuals receiving absorbed doses greater than specified dose limits are calculated. The probability of an accidental release is not taken into account. A core meltdown accident at a 1700 MWth boiling water reactor was simulated. It is found that the highest irradiation occurs for Pasquill class D weather, windspeed 15 m/sec and no precipitation. CLIMATOLOGY OF HIGH DAMAGING WIND IN ILLINOIS
Stanley A. Changnon, Jr. 1980 50 p refs
(PB81-234767; ISWS/RI-95/80) Avail: NTIS
HC A03/MF A01 CSCL 04B

Although there is a lack of definitive data, historical data from 43 cooperative substations and 6 first order stations, plus recent wind sensor data from two (short-period) dense networks and a 10-year sample of recorded wind speed data at one location, were used to develop basic climatological information on high winds in Illinois. Spatial and temporal variations in both averages and extremes were treated to dimensionalize the incidence of days with high winds. Among the conclusions are that damaging straight line winds peak in the spring and are least frequent in early fall. Summer thunderstorms are the major producers of high winds, but in all other seasons deep low center passages are the major cause. GRA

Current cloud data obtained by operational environmental satellites was documented. Daily global satellite imagery is recorded in condensed form as a guide to data stored in the NOAA archives and is designed to help users select data for research and climatological use. The polar hemispheric mosaics reproduced in this catalog are derived from the advanced very high resolution radiometer (AVHRR (GSC)) data, and prepared daily by high speed computers. Visible and infrared swaths obtained while the satellite is northbound are used in the 15L mosaics from TIROS-N and the infrared channel only in the 17L mosaics from NOAA-6. NOAA-7 will include both the infrared and visible mosaics from the 14L pass. Infrared data swaths obtained during southbound passage of TIROS-N are labeled 03L, NOAA-6 are labeled 07L and NOAA-7 will be labeled 02L. GRA

GLOBAL OCEAN TIDES. PART 7: THE DIURNAL PRINCIPAL SOLAR TIDE (P1). ATLAS OF TIDAL CHARTS AND MAPS Final Report

E. W. Schwiderski May 1981 88 p refs Sponsored in part by the National Geodetic Survey
(AD-A105612; NSWC/TR-81-220) Avail: NTIS HC A05/MF A01 CSCL 08/3

In Part 1 (Schwiderski, 1978a) of this report, a unique hydrodynamical interpolation technique was introduced, extensively tested, and evaluated in order to compute partial global ocean tides in great detail and with a high degree of accuracy. This novel method has been applied to construct the diurnal principal solar (P1) ocean tide with a relative accuracy of better than 5 cm anywhere in the open oceans. The resulting tidal amplitudes and phases are tabulated on a 1 deg X 1 deg grid system in an atlas of 42 deg X 71 deg overlapping charts covering the whole oceanic globe. A corresponding atlas of global corange and cotidal maps is included to provide the reader with a quick general overview of the major tidal phenomena. The specifying hydrodynamical parameters of the model are listed along with quoted sources of empirical tide data, and significant tidal features are explained and discussed. As expected, since the periods of the diurnal tides P1 (24.07h) and K1 (23.93 h) differ by only 0.14 h, these two tides resemble very closely each other (compare Part 4). Significant differences occur only in regions of rapid tidal variations. Of course, P1 resembles also the diurnal O1 tide but to a visibly lesser degree (see Part 5).

SALINITY OF DEEP FORMATION WATERS, TEXAS GULF COAST: PRELIMINARY RESULTS

R. A. Morton, J. S. Posey, and C. M. Garrett, Jr. 1981 10 p refs Presented at the 5th Geopressured-Geothermal Energy Conf., Baton Rouge, La., 13 Oct. 1981
(Contracts DE-AC08-79ET-27111; DE-AC08-79ET-27112)
(DE81-029773; CONF-811026-6) Avail: NTIS HC A02/MF A01

The vertical variation in salinity was studied. Salinities are lowest in the transition zone, but in many areas, salinities of geopressured reservoirs tend to gradually increase with depth. High salinities at depth explained by hyperfiltration and proximity to salt domes are discussed. Both mechanisms are responsible for high salinities in the Frio Formation; however, concentrated brines are not necessarily indicative of salt dissolution as shown by water analyses from south Texas. This area is far removed from any known salt accumulations and yet salinities of formation water from some fields are greater than 200,000 ppM. Reservoirs that are stratigraphically equivalent but separated by minor faults produce waters with similar salinities. The greatest differences in salinity are found in stratigraphically separated reservoirs. DOE

LASER DEPTH SOUNDING IN THE BALTIC SEA

Haakan Klevebrant, Joergen Lexander, Ove Steinvall, and Anders Widen May 1981 45 p refs
(FOA-C-30219-E1) Avail: NTIS HC A03/MF A01

Tests were made over areas with different water clarities. Simultaneous sea truth measurements were done from boats. Maximum depth penetration of more than 30 m is obtained, in good agreement with theoretical estimation. Mapping of an area close to a large ship route shows good agreement between sonar and laser profiles down to 20 m depth. The experiment demonstrates the great potential of a laser bathymeter for remote monitoring of depth and turbidity in Swedish coastal water. A scanning system gives a significant reduction of cost and increases the speed of data collection for hydrographic charting.

PROCEEDINGS OF A SYMPOSIUM ON PRELIMINARY RESULTS FROM THE SEPTEMBER 1979 RESEARCHER/PIERCE IXTOC-1 CRUISE

Donald K. Atwood Dec. 1980 533 p refs Symp. held at Key Biscayne, Fla., 9-10 Jun. 1980
(PB81-246068; NOAA-81071401) Avail: NTIS HC A23/MF A01 CSCL 08J

A complete listing of the types and numbers of samples collected is given. Compounds resulting from photooxidation experiments conducted on IXTOC-1 crude oil were the same as those found in situ in the area of the spill plume. These same compounds were formed by microbial action in microcosm experiments conducted in the dark on board the Researcher, but in differing amounts and ratios. It is concluded that the entire microbial community responds to the spilled oil and that a population of petroleum degrading bacteria can grow rapidly enough to consume the oil at relatively rapid rates. OVERPRESSURED MARINE SEDIMENTS. VOLUME 3: THERMAL CONDUCTIVITY, ELECTRICAL RESISTIVITY, AND PERMEABILITY OF SATURATED SEDIMENT AT VARIOUS POROSITIES Final Report

James Keith Enderby and Louis J. Thompson 14 Jul. 1981 120 p refs
(Grant DI-14-08-0001-17289)
(PB81-243578) Avail: NTIS HC A06/MF A01 CSCL 08J

The thermal conductivity of sea water saturated clays, kaolinite, illite and bentonite, and sea water saturated Ottawa sand was determined in both the horizontal and vertical direction. All clays showed anisotropic thermal conductivity. The horizontal thermal conductivity of illite and bentonite was independent of porosity. The horizontal thermal conductivity of kaolinite increases as porosity decreased. It is found that the saturated clay electrical resistivity substantially decreases as either the applied voltage or duration of test increased. The same trend was observed in both the horizontal and vertical direction using either alternating current or direct current. GRA

HEALTH STABILIZATION PROGRAM c52
James K. Ferguson *In its* STS-1 Med. Rept. Dec. 1981 p 19-21 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06E

The objective of the HSP is to provide an environment surrounding the prime and backup crewmen which will reduce or eliminate the exposure of the crew to infectious agents. The program limited the access of large numbers of newspersons to the crew and enabled the identification and medical examination of all VIP's who visited the crew. Although several primary contacts were observed not wearing masks at required times, the great majority of primary contacts did wear masks. The STS-1 program effectively kept 38 known ill persons out of crew work areas and thereby prevented crew exposure and possible illness. T.M.

N82-15716*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.
EMERGENCY MEDICAL SERVICES SYSTEM (EMSS) c54
Sam E. Pool *In its* STS-1 Med. Rept. Dec. 1981 p 23-27 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06E

The objective of the EMSS was to provide the ill or injured crewman with rapid access to the appropriate level of medical care. In order to meet the objective, the following factors were carefully considered in developing the EMSS for STS-1: accessibility to health care centers, personnel, training, experience, transportation, response times, communications, medical records, and special environmental hazards. The system is described along with flight surgeon staffing and deployment. T.M.

CREW MEDICAL TRAINING c52

James M. Vanderploeg *In its* STS-1 Med. Rept. Dec. 1981 p 29-30 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06E

Each astronaut's initial training in the medical disciplines occurred during the first year following selection. The medical curriculum encompassed approximately 16 hours of instruction during the year. The principal areas covered include: the central and peripheral nervous systems; the auditory and vestibular systems; the visual system; dental health; the cardiovascular system; the pulmonary system, gastrointestinal system, and genitourinary system; and the musculoskeletal system. For each of these areas the astronauts were taught the basics of anatomy and physiology. In addition, they were introduced to physical examination techniques, diagnosis, and treatment of the more common ailments of the different organ systems. T.M.

SHUTTLE ORBITAL MEDICAL SYSTEM c52

James M. Vanderploeg *In its* STS-1 Med. Rept. Dec. 1981 p 31-36 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06E

The system was designed to provide treatment for life threatening emergencies and to permit diagnosis and treatment of all less severe injuries and illnesses. It is intended to sustain the medical needs of a two man crew for up to 7 days. The system is described and a detailed list of the equipment in the emergency medical kit is presented. The prescribed medical training in the performance of emergency procedures, the use of diagnostic equipment, the performance of therapeutic modalities, and the knowledge of the medical kits contents is discussed. T.M.

VALIDATION OF PREDICTIVE TESTS AND COUNTERMEASURES FOR SPACE MOTION SICKNESS c52

Jerry L. Homick *In* the STS-1 Med. Rept. Dec. 1981 p 37-38 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06E

Inflight observations, supported by a series of pre and postflight data collection procedures, on STS-1 crewmembers in an effort to validate ground based tests which may be predictive of susceptibility to the space motion sickness syndrome are presented. Crew procedures were implemented which enabled acquisition of data to be used in validating motion sickness countermeasures. T.M.

N82-15720*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

CREW CARDIOVASCULAR PROFILE c52

Michael W. Bungo *In its* STS-1 Med. Rept. Dec. 1981 p 39-45 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06P

Cardiovascular data was acquired in the operational mode of the flight. Heart rate and blood pressure responses are presented for each crewman. There were definable points in the mission which produce cardiovascular stress as measured by heart rate response. The stand test in both the PLT and CDR show evidence for a relative hypovolemia and perhaps a resetting of arterial regulation. The anti-G suit and G sub z acceleration effects are discussed. The anti-G suit proved to be a rather simple yet relatively effective device for increasing tolerance to +G sub z acceleration. The STS-1 flight profile produced no operationally significant alterations in G tolerance. T.M.

N82-15721*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

BIOCHEMISTRY AND ENDOCRINOLOGY RESULTS c52

Carolyn S. Leach *In its* STS-1 Med. Rept. Dec. 1981 p 47-49 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06P

Blood (plasma or serum) biochemistry findings show postflight decreases below preflight findings for uric acid triglycerides, and AST. Postflight increases above preflight values were observed in glucose, cholesterol, BUN, calcium phosphate, angiotensin I, aldosterone, insulin, T3, T4, HGH, ACTH and GGTP. It is suggested that special attention should be given to the fluid and electrolyte intake in the astronauts so that homeostatic perturbations are not consequential. T.M.

N82-15722*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

HEMATOLOGICAL AND IMMUNOLOGICAL ANALYSES c52

Gerald R. Taylor *In its* STS-1 Med. Rept. Dec. 1981 p 51-52 refs (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06P

The analyses conducted on the cellular blood components of the primary and backup crewmembers indicated that for the one month period preceding the flight, there were no unusual variations in the cellular blood components of the crewmembers. However, there were alterations in both of the primary crewmembers after the flight. The explanation is that there was a phase decrease in fluid volume. Concomitant with this fluid imbalance there is also evidence to support an absolute decrease in mean erythrocyte volume, a peripherial lymphopenia, and a marked decrease in blastogenic response of lymphocytes to in vitro mitogenic challenge. T.M.

N82-15723*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

MEDICAL MICROBIOLOGY OF CREWMEMBERS c52

Duane L. Pierson *In its* STS-1 Med. Rept. Dec. 1981 p 53-58 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06E

A surveillance program consisting of microbial monitoring of the flight crews (prime and backup) and the spacecraft (including surfaces, food, air and water) is described. Samples were obtained from the crews and the Orbiter at specified times and were evaluated by quantitating the number of microorganisms and identifying the pathogenic and potentially pathogenic microbes. Quantitative values for total microorganisms per sample site were relatively low both pre- and postlaunch except for three sites which exhibited some microbial buildup during the flight. The circulating air in the Orbiter displayed a sharp increase in the number of airborne bacteria and fungi immediately prior to launch. T.M.

FOOD AND NUTRITION c54

Richard L. Sauer and Rita M. Rapp *In its* STS-1 Med. Rept. Dec. 1981 p 59-62 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06H

The menu used during STS-1 is shown in terms of food items and food forms (irradiated, freeze-dried, or beverage). The estimated mean daily inflight nutrient consumption per crewman is presented. Recommended quantities of specific nutrients are reported. T.M.

N82-15725*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

THE POTABLE WATER c54

Richard L. Sauer *In its* STS-1 Med. Rept. Dec. 1981 p 63-66 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06K

Periodic samples of the potable water were obtained preflight and a series of samples were taken postflight to determine the continuing microbiological and chemical quality of the water. Those parameters of nonmedical concern which were exceeded included total organics and color. Other parameters included nickel concentration, total bacteria count, and chromium concentration levels. T.M.

N82-15726*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.

SHUTTLE TOXICOLOGY c52

Wayland J. Rippstein *In its* STS-1 Med. Rept. Dec. 1981 p 67-75 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06T

Space flight toxicity standards and methods for control and evaluation of candidate spacecraft materials selection and/or use are described. The development of methods and hardware for removal of spacecraft contaminants is discussed. The analytical chemical data obtained from the two Orbiter vehicles (OV-101 and OV-102) were reviewed. The Enterprise (OV-101) is shown to be an extremely clean vehicle, whereas the Columbia (OV-102) outgassed a significant number and quantity of contaminant gases. T.M.

N82-15727*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.
RADIOLOGICAL HEALTH c52
Charles M. Barnes *In its* STS-1 Med. Rept. Dec. 1981 p 77-78
(For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06R

Dosimeters were provided for development within the crew compartment and on the astronauts flight garments to detect radiation encountered by the space crew during the mission. The STS-1 mission encountered geomagnetically trapped electrons and protons on 13 low altitude passes through the South Atlantic anomaly. The orbital inclination was such that encounters with the outer belt horn was negligible. Radiation dose to the crew from the above events was estimated to be 5 millirad. Total PDL measured dose to the crew from all sources during the STS-1 mission was 20 millirad. T.M.

FEASIBILITY STUDY (PHASE A) FOR A LIFE SCIENCE DOUBLE RACK ENVISAGED FOR THE SPACELAB MISSION D1 Final Report, Oct. 1980
Rolf Baur, Karl-Ludwig Bitzer, Helmut Preiss, and Peter Schiller Bonn Bundesministerium fuer Forschung und Technologie Sep. 1981 83 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-037; ISSN-0170-1339) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17,40

The lifescience double rack which is envisaged for a flight in the Spacelab mission D1 enables the performance of biomedical and botanical experiments. Besides experiment specific boxes, the double rack contains multi-user facilities like a standard botanical equipment, an oscilloscope and two centrifuges, furthermore stowage containers for auxiliary equipment. For late access and early retrieval equipment, stowage lockers in the middeck are available and in addition middeck freezers can be used during flight. A concept for the life science double rack was worked out including the flight and ground operations and the ground support equipment. Author

CONCEPT STUDY OF A LIFE SCIENCES PAYLOAD ELEMENT (PLE) FOR THE SL-D1 MISSION Final Report, Nov. 1980
Peter Junk, Heinrich Stegen, Wolfgang Haebel, and Manfred Ott Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 184 p refs Partly in GERMAN and ENGLISH Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-038; ISSN-0170-1339) Avail: NTIS HC A09/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 34,70

Twelve life sciences experiments were selected as candidates for the Spacelab (SL)-D1 mission. They are combined to form a payload element (PLE). Experiment requirements were analyzed and completed, and technical concepts for the PLE were proposed. Interfaces were defined and missions assurance, operational, testing, and ground support aspects were considered. Most of the experiment requirements are within the capability which is supplied by the Space Transportation System, except the total stowage volume required for sample stowage in the orbiter mid deck. Also crew time is a critical parameter. The technical design concepts of the experiments are based on first Spacelab payload hardware or on existing commercial equipment, which has to be modified for SL. For realizing the SL-PLE, 32 months were estimated, starting from a definition phase. M.G.

FUNDAMENTALS OF AERONAUTICAL AND AEROSPACE MEDICAL SCIENCE

Cai Qiao, Feng Genquan, and Yan Yuanfu 17 Jul. 1981 956 p Transl. into ENGLISH of the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 344 p (AD-A102298; FTD-ID(RS)T-1802-80) Avail: NTIS HC A99/MF A01 CSCL 06/5

The biological and physiological effects of flight environments were examined along with the types of environments themselves. The environments discussed are of three major types: the external environment, the cabin environment, and the internal environment of the body. Emphasis is placed on acceleration stresses and high gravity environments, flight safety and health, and the human body's reaction to the particular stresses discussed. For individual titles, see N82-15737 through N82-15762.

THE DEVELOPMENTAL HISTORY OF AERONAUTICAL AND AEROSPACE MEDICAL SCIENCE c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 4-8 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Early research is emphasized. Several experiments in balloon flight and pressurized cabins are discussed. Problems arising from aeronautical development in World War 1 such as frostbite, hypoxia, decompression sickness, and flight fatigue are discussed. The influences of space navigational development on aerospace medicine are also discussed. The relationship between aircraft flight environment and spacecraft environment is considered. T.M.

N82-15738# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

ENVIRONMENTAL CONDITIONS OF AVIATION AND SPACE NAVIGATION c54

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 9-24 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-52)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Three types of environments are discussed: the space environment, the inner cabin environment, and the environment in the human body. Atmospheric conditions encountered in aviation and space flight were reviewed. Medically related aircraft and spacecraft environmental conditions are summarized and include low pressure, lack of oxygen, decompression, explosive decompression, and oxygen poisoning. T.M.

N82-15739# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

GENERAL LAWS OF AVIATION AND SPACE NAVIGATION ENVIRONMENTAL EFFECTS ON THE HUMAN BODY c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 25-34 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

The effects of environmental conditions on the human body are brought about within various complex relations. The so-called action of a single condition is only the most outstanding manifestation in a certain dynamic process. The physiological changes and pathological process of the human body in space navigation as well as their reasons and reaction mechanisms were analyzed. The following factors are discussed: the qualities and composition of the environmental factors; the functioning state of the organism at the time; and man's subjective dynamic role. T.M.

N82-15740# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

MEDICAL PROBLEMS OF GRAVITATIONAL CHANGES AND POWERED FLIGHT c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 35-37 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Three types of gravitational change are discussed: overweightness, angular acceleration, and noise produced by air vibration. Overweightness is considered as a large increase in the gravitational force such as impact. The vestibule-autonomic nervous system reactions and motion sickness caused by angular acceleration are covered. Aerodynamic noise tolerances are discussed. T.M.

N82-15741# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

INJURY AND PROTECTION OF OVERWEIGHTNESS c54

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 38-129 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Physiological acceleration and acceleration stresses are summarized. Acceleration protection in high gravity environments is emphasized. The physics of angular acceleration and impact acceleration were reviewed. The physiological effects of high gravity are presented in detail along with pilot performance results due to such stresses. T.M.

THE PHYSIOLOGICAL EFFECT OF LOW-AIR-PRESSURE ANOXIA c52
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 337-398 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Anoxia, a problem of the atmospheric environment in aerospace medicine, is discussed extensively. Discussion is limited to the physiological effects of anoxia caused by low air pressure. More specifically, the effects on the human respiratory, circulatory, nervous, and metabolic systems are detailed. M.D.K.

N82-15749# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
CAISSON DISEASE c52
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 398-426 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

The causal factors of Caisson Disease, a problem of the atmospheric environment in aerospace medicine, are discussed. Physiological effects of the disease on the human respiratory, circulatory, digestive, and skeletal systems are considered. Effects on body organs and tissues and attendant shock and fainting are also discussed. The physiological effects (mechanical and biochemical) of the formation of bubbles inside body tissues, the main cause of Caisson Disease, are detailed. Pressurization treatment and suggested procedures for adaptation and training as preventative measures are also discussed. M.D.K.

N82-15750# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
DANGERS OF EXPLOSIVE DECOMPRESSION c52
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 427-439 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Explosive decompression, drastic decompression at an ascent rate of over 1.5 km/sec, in space ships is either caused by structural damage or collision with a large meteor. The physiological effects of explosive decompression, a problem of the atmospheric environment in aerospace medicine, are discussed. Specific effects on the physiological tolerances of the human respiratory (bubble formation), digestive, nervous, and circulatory systems and attendant effects on body organs are considered. Suggestions for developing adaptation, training, and preventative methodology to handle explosive decompression are given. M.D.K.

N82-15751# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
OXYGEN TOXICATION c52
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) p 440-456 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Oxygen poisoning, oxygen toxication, will be induced if the oxygen partial pressure is over 176 mm Hg and the duration is too long. The physiological effects of oxygen poisoning, a problem of the atmospheric environment in aerospace medicine, is discussed. Effects on the human respiratory and circulatory systems, hearing and vision, and body tissues are considered. Suggestions for fire prevention, safety measures, and protective equipment for use in pure oxygen environments are given. M.D.K.

THE RELATIONSHIP OF BODY TEMPERATURE TO ENVIRONMENTAL TEMPERATURE c52
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 457-476 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

The unresolved problem of fluctuations in environmental temperature in aeronautics and space travel and the attendant physiological effects on the human body are considered. Environmental temperature requirements, namely optimal and tolerable temperatures, the damage done to the human body by cold and heat, and its prevention are discussed. The human body's inherent mechanisms and their responses in regulating normal body temperature are also reviewed. M.D.K.

N82-15753# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

COMFORTABLE TEMPERATURE AND TOLERABLE TEMPERATURE c54

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 477-506 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)

Avail: NTIS HC A99/MF A01 CSCL 06/5

The range of temperature during flight which makes people feel comfortable was examined. During passenger flights or space travel, the cabin temperature is kept in a range comfortable for the crew and passengers. However, this comfortable temperature range cannot always be maintained. Flighters always have to sacrifice comfort for speed, any complicated temperature regulation facilities adds extra weight and volume to the plane, and slow it down. The comfortable temperature range required to maintain flying ability and operational efficiency is the acceptable temperature. The comfortable, tolerable and acceptable temperatures are discussed. E.A.K.

THE PHYSIOLOGICAL EFFECT OF HEAT AND ITS PREVENTION c52

In its Fundamentals of Aeron. and Aerospace Med Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 507-534 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)

Avail: NTIS HC A99/MF A01 CSCL 06/5

The actual physiological effects of heat and preventive measures are discussed. The following issues are examined: (1) change of skin temperature and internal body temperature; (2) perspiration rate; (3) change of cardiovascular systems, respiration, and metabolism; (4) effects of heat; (5) sensitivity to temperature; (6) heat stroke; (7) heat adaptation; (8) heat damage prevention. E.A.K.

N82-15755# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

THE EFFECT OF COLD AND THE COLD PREVENTION c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 535-554 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)

Avail: NTIS HC A99/MF A01 CSCL 06/5

The effects of cold, and cold prevention are described. Physiological responses to low temperatures are outlined: (1) physiological effects and damaged of cold; (2) local frostbites and injuries caused by cold; (3) effects of cold on flying ability; (4) factors affecting physiological responses to cold; (5) adaptation to cold; (6) clothing. E.A.K.

N82-15756# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

IONIZING RADIATION AND ITS BIOLOGICAL EFFECTS c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 555-630 Transl. into ENGLISH from "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)

Avail: NTIS HC A99/MF A01 CSCL 06/5

The biological effects of ionizing radiation are outlined. The following issues are discussed: (1) units of ionizing radiation; (2) radiation environments in space travel (solar cosmic radiation, terrestrial radiation zones); (3) radiation intensity during air and space travel (cosmic radiation in supersonic jets); (4) mechanism of radiation biological effects; (5) biological target theory; (6) radiation damage; (7) limitations of radiation safety. E.A.K.

OTHER BIOLOGICAL EFFECTS OF RADIATION c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 631-707 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)

Avail: NTIS HC A99/MF A01 CSCL 06/5

The application of lasers in aerospace technology, its biological effects, and protective measures are discussed. The light simulated radiation has special characteristics of collimation and coherency, and its light pressure and destructive power is much greater than common light. Various types of lasers are solid gas, chemical, semiconductor and their light waves which have several thousand different wavelengths from ultraviolet to infrared. The use of laser technology in industrial health, and scientific research, and its use in military affairs and national defense is outlined. In the military, lasers have not only become effective measures in communications, aiming, reconnaissance, observations, night vision and navigation, but they can also be used directly as deadly weapons. E.A.K.

N82-15758# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

VISUAL PROBLEMS IN AVIATION AND SPACE NAVIGATION c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) p 708-739 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)

Avail: NTIS HC A99/MF A01 CSCL 06/5

Visual problems encountered on aerospace navigation are discussed. Vision depends on the stimulation of visible light for realization and visible light is a type of electromagnetic radiation. The wavelength of visible light is 3,800-7,500 angstrom and photon energy lies in the range of 3.1-16.5 electron volts. After entering a high altitude or outer space, many differences occur between the visual environment and the Earth's surface, presenting aerospace medical science with many special problems concerning vision. E.A.K.

SPACE NAVIGATION LIFE QUARANTEES c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 740-822 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)

Avail: NTIS HC A99/MF A01 CSCL 06/5

Requirements for and the provision of a normal living environment and the necessary supplies of food, water, gases, and hygenic and medical safequards during space flight are discussed. The human metabolism is reviewed. Food supply and preparation methods, oxygen supply and methods of handling waste gases, the water supply and water regeneration, closed life support systems and subsystems and environmental sanitation are described. Space suit and helmet design are considered. Medical treatment and first aid, the medical experiences of the Apollo astronauts, and emergency requirements for forced landing on Earth in desert, ocean, and polar regions and the basic survival kit are discussed. The biological clock and diurnal rhythm are considered. J.D.H.

N82-15760# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

CABIN POLLUTION c54

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 822-873 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense

Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

Possible pollutants existing in closed aircraft and spacecraft cabins and methods for the handling and disposal of these pollutants are described. Pollutants from fuel, waste gases, and rubber articles are considered. Excretions from the human body including gases, perspiration, feces, urine, and gastrointestinal tract gases are also sources of pollution. Pollutants originating from high altitudes and outer space, such as high altitude ozone and cosmic space radiation, are considered. J.D.H.

N82-15761# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

AVIATION MEDICAL GUARANTEES c52

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 874-889 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

The medical requirements for pilots and air crew and how to guarantee their safety, work capabilities, and physical health in the air are discussed. The various characteristics of flight work are described. Psychological and physical preparation of air crews for flight stress are considered. J.D.H.

N82-15762# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.

SPACE NAVIGATION MEDICAL GUARANTEES AND MEDICAL SUPERVISION c52

In its Fundamental of Aeron. and Aerospace Med. Sci. (FTD-ID(RS) T-1802-80) 17 Jul. 1981 p 890-919 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

The medical requirements for astronauts and how to guarantee their safety, work capabilities, and physical health during space flight are discussed. The characteristics of flight work are described. Psychological and physical preparation of astronauts for flight stress are considered. Special consideration is given to the medical selection of astronauts and the medical guarantees and supervision required during training, and prior to, during, and after space flight. J.D.H.

ECOLOGICAL AND TECHNOLOGICAL PROBLEM OF BIODAMAGES

I. A. Kozlova and E. Z. Koval *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 13 (JPRS-79639) 10 Dec. 1981 p 13-15 Transl. into ENGLISH from Mikrobiol. Zh. (Kiev), v. 43, no. 2, Mar. - Apr. 1981 p 267-268 (For primary document see N82-15763 06-51)
Avail: Issuing Activity

The problem of biodamages is the ecological-technical problem of modern times, encompassing a wide circle of questions related to the study of organism-destruction from microorganisms, rodents and birds which cause damage to an enormous number of materials, resources, products and equipment and the need to develop means for protection from biovergrowth, biodamage and biocorrosion. Topics discussed in 15 scientific reports on new directions in research on this global problem are summarized. A.R.H.

N82-15767# Joint Publications Research Service, Arlington, Va.

CONFERENCE ON PLANT VIROLOGY

V. G. Krayev *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 13 (JPRS-79639) 10 Dec. 1981 p 16-18 Transl. into ENGLISH from Mikrobiol. Zh. (Kiev), v. 43, no. 2, Mar. - Apr. 1981 p 269-270 (For primary document see N82-15763 06-51)
Avail: Issuing Activity

The basic diseases affecting agricultural ornamental plants in Poland and efforts to identify new viruses and produce resistant varieties of farm crops were reviewed in a conference attended by 70 scientists from 7 countries. Other topics discussed include: (1) the influence of viral diseases of plants and animals on food products and the productivity of livestock; (2) methods for diagnosing viral diseases and their comparative effectiveness; (3) characteristics of new viruses, strains, and isolates of plant viruses in various countries and their distribution in the seeding of cultured plants such as alfalfa, potatoes, peanuts, tomatoes, cucumbers, tabacco, and raspberries; (4) the epidemiology of viral diseases and practical means of combatting them; and (5) advances in photovirology. A.R.H.

52 AEROSPACE MEDICINE

Includes physiological factors; biological effects of radiation; and weightlessness.

REMOTE MEDICAL DIAGNOSIS SYSTEM (RMDS) UTILIZATION STUDY Technical Progress Report, Dec. 1980 - May 1981

I. Stevens and C. Zekan (WESTEC Services, Inc.) 18 Aug. 1981 44 p refs
(Contract N00123-81-D-0353)
(AD-A105559; NOSC-TR-700) Avail: NTIS HC A03/MF A01 CSCL 06/5

Remote medical diagnosis systems are being successfully utilized for consultation in rural health care programs and private radiology practices. Consultation over RMDS-type systems reduces medical referrals and evaluations and assists in making triage decisions with a greater degree of confidence. RMDS-type systems can be used effectively for teleradiology consultations. The utilization of RMDS on ships and at remote shore sites has the potential for improved diagnoses. Nonphysician health care providers are more inclined to use telemedicine than physicians. GRA

APPLICATIONS OF NUCLEAR TECHNIQUES FOR IN VIVO BODY COMPOSITION STUDIES AT BROOKHAVEN NATIONAL LABORATORY

S. H. Cohn, K. J. Ellis, D. Vartsky, A. N. Vaswani, and L. Wielopolski 1981 42 p refs Presented at the IAEA Conf. on Nucl. Based Tech. for In Vivo Study of Human Body Composition, Upton, N.Y., 22 Jun. 1981
(Contract DE-AC02-76CH-00016)
(DE81-029922; BNL-29959; CONF-8106151-1) Avail: NTIS HC A03/MF A01

A series of technical developments and their clinical application in various nuclear technologies is described. These include the development of a portable neutron activation facility for measuring cadmium in vivo in kidney and liver, a technique for the measurement of body iron utilizing nuclear resonant scattering of gamma rays, a noninvasive measure of the skeletal levels of lead by an X-ray fluorescence technique, and the development of a pulsed Van de Graaff generator as a source of pulsed neutrons for the measurement of lung silicon. DOE

N82-15773# Massachusetts Inst. of Tech., Cambridge.

MYOCARDIAL PERFUSION SCINTIGRAPHY USING A NEW TECHNIQUE, THE MESH CHAMBER Progress Report, 1 Sep. 1978 - 1 May 1981

Louis S. Osborne and B. Leonard Holman Aug. 1981 16 p
Prepared in cooperation with Harvard Medical School
(Contract DE-AS02-78EV-04969)
(DE81-027995; DOE/EV-04969/3) Avail: NTIS HC A02/MF A01

Myocardial perfusion scintigraphy performed after the injection of a potassium analogue during exercise to detect transiently ischemic myocardium due to coronary artery disease was examined. The limitation in the implementation of the technique for the screening of patients with coronary artery disease is the lack of a high resolution, positron detecting system. The positron multiwire proportional counter solves this problem. The dispersion of the absorbing material is achieved by stringing wires of high Z material, such as tungsten, in a cross pattern. The wire layers are at graded voltages, the ionization from the photoelectrons is drifted through the stack and picked up by sense wires operating in the proportional mode. Positron annihilation detectors are self collimating. The acquisition of events over a multiplicity of angles allows 3 dimensional reconstruction. The combination of large solid angle, high efficiency and a short source half life minimizes radiation dose to the patient. DOE

N82-15774# Pacific Northwest Lab., Richland, Wash.

PROBLEMS IN EVALUATING HEALTH EFFECTS OF OCCUPATIONAL AND ENVIRONMENTAL EXPOSURES

Ethel S. Gilbert 1981 23 p refs Presented at the Conf. on Statistical and Epidemiological Methods in Ionizing Radiation, Berkeley Springs, W. Va., 6-10 Jul. 1981
(Contract DE-AC06-76RL-01830)
(DE81-028440; PNL-SA-9632; CONF-810755-1) Avail: NTIS HC A02/MF A01

The problems involved in analyzing and interpreting radiation exposure data are addressed. Existing standards for exposure are based primarily on estimates of health effects obtained by extrapolation from effects of high level exposures. Occupational and environmental exposures provide one source of data. Populations exposed in this manner were studied. Because of the size of most of the groups and the magnitude of the exposures received the amount that can be learned from such populations is severely limited. Many of these problems are illustrated by study of the effects on mortality of occupational exposure to radiation at the Hanford plant. DOE

NON-INVASIVE PULMONARY ARTERIAL PRESSURE MEASUREMENT Final Report, 1 Jun. 1976 - 30 Nov. 1980

John T. Reeves 8 Jun. 1981 124 p
(Contract NO1-HR-6-2920)
(PB81-239410; NIH-NO1-HR-62920-1F) Avail: NTIS HC A06/MF A01 CSCL 06P

Pulmonary arterial pressure by noninvasive means based on measurement of hemodynamic variables, particularly pulse wave velocity, instantaneous blood flow and pulmonary arterial diameter was measured. An esophageal approach showed good pulmonary arterial flow patterns from the esophagus. A dual range gated Doppler from the front obtained Doppler flow pulses in the main pulmonary artery. A body plethysmographic technique recorded flow at the most distal part of the pulmonary vascular bed, the microcirculation. In humans undergoing right heart catheterization, pulse wave velocity was an excellent correlation of pressure in the low range. It is suggested that the scator at higher pressures is due to variations in artery diameter and wall stiffness. It is concluded that a hemodynamic approach is feasible using known techniques if the problem of measuring pulse wave velocity can be solved. GRA

N82-15777# National Bureau of Standards, Washington, D.C. National Engineering Lab.
A HEAT TRANSFER ANALYSIS OF SCALD INJURY Final Report
Robert L. Pelle, Jr. Jul. 1981 69 p refs
(PB81-238503; NBSIR-81-2320) Avail: NTIS HC A04/MF A01 CSCL 06E

Numerical solutions for skin tissues temperature during scald injury events are obtained and utilized in conjunction with a thermal injury criterion, to predict critical exposure levels for various heated fluids. A one dimensional tissue model of the type used by Love is employed to determine the initial tissue temperature distribution. The bio-heat equation for tissue heat transfer is then solved via an implicit finite difference technique, subject to convective heating and cooling at the surface. The sensitivity of the critical exposure level to variation in tissue properties and convective heating coefficients is investigated. Thermal injury thresholds are presented for various fluids along with bounds to reflect uncertainty in assumed tissue properties. The results obtained are in good agreement with existing experimental scald injury data. GRA

Gerald R. Taylor *In its* STS-1 Med. Rept. Dec. 1981 p 51-52 refs (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06P

N82-15723*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.
MEDICAL MICROBIOLOGY OF CREWMEMBERS
Duane L. Pierson *In its* STS-1 Med. Rept. Dec. 1981 p 53-58 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06E

N82-15726*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.
SHUTTLE TOXICOLOGY
Wayland J. Rippstein *In its* STS-1 Med. Rept. Dec. 1981 p 67-75 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06T

N82-15727*# National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.
RADIOLOGICAL HEALTH
Charles M. Barnes *In its* STS-1 Med. Rept. Dec. 1981 p 77-78 (For primary document see N82-15711 06-51)
Avail: NTIS HC A06/MF A01 CSCL 06R

N82-15737# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
THE DEVELOPMENTAL HISTORY OF AERONAUTICAL AND AEROSPACE MEDICAL SCIENCE
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 4-8 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15738# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
GENERAL LAWS OF AVIATION AND SPACE NAVIGATION ENVIRONMENTAL EFFECTS ON THE HUMAN BODY

In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 25-34 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15740# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
MEDICAL PROBLEMS OF GRAVITATIONAL CHANGES AND POWERED FLIGHT
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 35-37 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15742# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
HARMFULNESS OF VIOLENT IMPACT AND AIRFLOW SHOCKS
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 131-162 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15743# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
HUMAN BODY REACTION TO VIBRATION
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-08) 17 Jul. 1981 p 163 223 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15744# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
THE EFFECTS OF ROTATION AND OSCILLATION: AERIAL SICKNESS
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 195-223 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15747# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
NOISE AND SENSE OF HEARING
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 296-335 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15748# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
THE PHYSIOLOGICAL EFFECT OF LOW-AIR-PRESSURE ANOXIA
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 337-398 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
Avail: NTIS HC A99/MF A01 CSCL 06/5

N82-15749# Air Force Systems Command, Wright-Patterson AFB, Ohio. Foreign Technology Div.
CAISSON DISEASE
In its Fundamentals of Aeron. and Aerospace Med. Sci. (FTD-ID(RS)T-1802-80) 17 Jul. 1981 p 398-426 Transl. into ENGLISH from the book "Fundamentals of Aeronautical and Aerospace Medical Science" Peking, National Defense Industry Publishers, Jun. 1979 (For primary document see N82-15736 06-51)
